Notwithstanding the gloomy prognostications indulged in by some cronkers after the Spring Meeting, the Nippon Race Club inaugurated its first Autumnal gathering with great *déclat*. All who take an interest in the Club must have regretted that the popular former secretary—Mr. Keawick, was not present to witness the success for which he worked so hard. However, the club has been fortunate enough to secure an efficient substitute and the arrangements on Wednesday went off without a hitch of any kind. That most important functionary in racing matters, the clerk of the weather, did his very best to help and supplied an opening day which left nothing to be desired. The heavy rain of the previous morning had laid the dust, and the course itself was in capital running condition. The fair sex were in great force and their tasteful costumes made quite brilliant the grand stand erected by the club, in lieu of the rickety old structure which the typhoon of the 3rd instant did good service by overthrowing. Several native visitors of distinction patronized the meeting among whom were Their Imperial Highnesses the Princes Arisugawa-no-miya, and Higashi Fushimi-no-miya, General Saigo, His Excellency and Miss Inouye, Madame Uyeno, &c., &c., and the following distinguished foreigners:—The German, Russian, and Austrian Ministers, H.B.M. Chargé d'Affaires, Mr. Kennedy; Admiral Clitz, U.S.N., and others. A Japanese band contributed in no slight degree to the general enjoyment. The programme was not as full as it might have been, Japanese-owned ponies being rather scarce. This, however, is a feature which we hope will disappear intime. As we already remarked, the Nippon Race Club has reason to be proud of the Autumn meeting, and we trust always to see as pleasing a combination of fair ladies, gallant squires, good racing, good attendance, good weather, and good music.

The following is the result of the various events decided:—

1.—**THE GRIFFINS' PLATE.**—Value \$200. For Japan Ponies that have never run in a Race in Tokio or Yokohama. Weight as per scale. Five Furlongs. Entrance, \$10.

Mr. Yamashima's <i>Giokuto</i> , 10st....	...	1
" R. Chief's <i>Chaff</i> , 10st. 6lbs....	...	2
" R. Chief's <i>Chuckie</i> , 10st. 6lbs....	...	3
" Phillippus's <i>Wanzel</i> , 10st. 8lb....	...	0
" Hijikata's <i>Hiden</i> , 9st. 12lbs....	...	0
Count Diesbach's <i>Loafer</i> , 10st. 2lbs....	...	0
Mr. Hugo's <i>Kuromatsu</i> , 10st. 2lbs....	...	0
" Hugo's <i>Kirin</i> , 10st....	...	0
" Buchanan's <i>Captain</i> , 10st. 10lbs....	...	0
" King's <i>Moudjik</i> , 10st. 10lbs....	...	0

This race brought out the full field of ten competitors, only one pony being scratched. The ponies got away to a rather poor start, *Chuckie* at once taking the lead closely followed by his stable companion. At the trees the field had begun to straggle, but the two ponies maintained their positions. On entering the straight *Giokuto* caught them up, full of running, in spite of his losing at least two lengths by rounding the corner badly: a splendid race now ensued between the three ponies, whips being freely used, but *Giokuto's* jockey rode his pony out well and landed him a winner by a neck, *Chaff* coming in second and *Chuckie* third. Time, 1 min. 23 sec.

2.—**THE HALF-BRED MAIDEN PLATE.**—Value \$150. For Half-Bred Ponies that have never run in a Race in Tokio or Yokohama. Weight as per scale. Five Furlongs. Entrance \$5.

Mr. Yamashima's <i>Tachibana</i> , 10st. 6lbs....	...	1
Mr. Sagara's <i>Iki</i> , 10st. 8lbs....	...	2
Mr. Yamashima's <i>Sakigaki</i> , 10st. 8lbs....	...	3

A small field of three faced the starter who got them off with an excellent start, but a very hollow race ensued. *Tachibana* at once took the lead and increasing his distance at every stride, cantered in a easy winner by as much as he liked, *Iki* being second and *Sakigaki* third. Time 1 min., 7 sec.

3.—**THE FUJIYAMA CUP.**—Value \$150. For Japan Ponies. Weight as per scale. 1 Mile. Entrance, \$5.

Count Diesbach's <i>Jim Hills</i> , 10st. 4lbs. ....	1
Mr. Hugo's <i>Katerfelto</i> , 10st. 4lbs. ....	2
Mr. R. Chief's <i>Chuckie</i> , 10st. 6lbs. ....	0

A bad start occurred again owing to an attempt made by *Jim Hills* to bolt, and when his jockey pulled him back he got behind, and the start was a regular straggle, *Jim Hills* being possibly four lengths behind: *Chuckie* made a bolt to the rails and lost whatever chance he ever might have had. *Jim Hills* and *Katerfelto* managed to get level at the half-mile post and maintained this position until nearing home, when *Jim Hills* responded gamely to a call from his jockey and won by about two lengths. Time 2 min. 21½ secs. *Chuckie* was ridden round the course about one hundred yards behind the others.

4.—THE GRIFFIN SWEEPSTAKES.—Value \$—. For China Subscription Griffins only. Weight as per scale. 1 Mile. Compulsory Entrance of \$20; \$10 returned if forfeit declared before 4 P.M., on Wednesday, the 20th October.

Mr. Durant's <i>Dresden China</i> , 10st. 8lbs. ....	1
Mr. Kennedy's <i>n/a. Centaur</i> , 10st. 8lbs. ....	2
Mr. Philippus's <i>Schneider</i> , 10st. 8lbs. ....	3
Mr. Durand's <i>Paladin</i> , 10st. 10st. 5lbs. ....	0
Count Diesbach's <i>Victor</i> , 10st. 5lbs. ....	0
Mr. Hugo's <i>Kickshaw</i> , 10st. 11lbs. ....	0
Mr. Cope's <i>Penryn</i> , 10st. 2lbs. ....	0
Mr. Buchanan's <i>Old Blue</i> , 10st. 11lbs. ....	0
Mr. E. Mason's <i>Heather Bloom</i> , 10st. 8lbs. ....	0

This race brought out every pony entered and naturally attracted much interest. Some difficulty was experienced in getting the griffins into line, and they started rather badly, *Penryn* at once taking the lead. On reaching the top of the hill, *Penryn* was first *Paladin* second, and *Schneider* third closely followed by *Dresden China* after which there was a gap. This order was pretty well maintained until the ¼ mile post was reached when the ponies began to set more together. *Penryn* succumbed to *Dresden China*, who, after a final struggle with *Centaur* and *Schneider*, who both challenged him, won amid great enthusiasm by about a length and a half. Time 2 min., 24 sec.

5.—THE RIKUGUNSHO CUP.—Value \$—. Presented. For Japan Ponies. Weight as per scale. Half a Mile. Entrance, \$10.

Count Diesbach's <i>Oyama</i> , 10st. 2lbs. ....	1
Mr. Sagara's <i>Higan</i> , 10st. ....	2
Mr. Hijikata's <i>Matsuo</i> , 10st. 2lbs. ....	3
Mr. Okochi's <i>Chibi</i> , 10st. 2lbs. ....	0
Mr. Buchanan's <i>Annandale</i> , 10st. 6lbs. ....	0

Five ponies entered for this event. *Oyama* got away with the lead, *Higan* close at his heels and the others perhaps three lengths behind. The old favourite went away from the beginning and won by many lengths. Time, 61½ secs.

6.—THE NAVY AND VISITORS' CUP.—Value \$—. Presented. For Japan and China Ponies. Japan Ponies, non-winners at this Meeting 5 lbs. allowance. China Ponies, weight as per scale. Three-quarters of a Mile. Entrance, \$10.

Mr. Kennedy's <i>n/a. Skedaddle</i> , 10st. 2lbs. ....	1
" Durant's <i>Dartmoor</i> , 10st. 5lbs. ....	2
" E. Mason's <i>Chief Mongolian</i> , 10st. 11lbs. ....	3

The three ponies entered for this race appeared at the post. After four false starts they got off well together, *Skedaddle* with the lead, the *Chief* being close behind. At the quarter-mile post *Dartmoor*, who until then had been in the rear a little, picked up and an exciting ding-dong struggle ensued, resulting in *Skedaddle* winning by three-quarters of a length, in spite of the excellent way in which *Dartmoor* responded to the call of his jockey. *Chief Mongolian* was a close third. Time, 1 min. 37 sec.

7.—THE AUTUMN CUP.—Value \$150. For Half-Bred Ponies. Weight as per scale. Winners at the Spring Meeting 7 lbs. extra. Three-quarters of a Mile. Entrance, \$5.

Count Diesbach's <i>Admiral Rous</i> , 11st. 7lbs. ....	1
General Saigo's <i>Asagao</i> , 10st. 9lbs. ....	2
Mr. Matsumura's <i>Gioso</i> , 10st. 4lbs. ....	3
Mr. Durand's <i>Phoenix</i> , 10st. 6lbs. ....	0

For this race four ponies came to the post, *Bow René* having been scratched. The usual delay in starting occurred, the number of false starts being about a dozen. When the ponies did eventually get off *Asagao* led, *Gioso* being second and *Admiral Rous* third, *Phoenix* bringing up the rear. They passed

the quarter-mile post and the trees in the same order, but immediately afterwards the *Admiral* came through and won easily by about three and a half lengths, *Asagao* coming in second and *Gioso* third. Time, 1 min. 36½ secs.

8.—THE MONGOLIAN CUP.—Value \$150. For China Ponies. Weight as per scale. One Mile and a Quarter. Entrance, \$5.

Mr. Osborn's <i>Bonny Doon</i> , 10st. 8lbs. ....	1
" Hugo's <i>Kinsatz</i> , 10st. 11lbs. ....	2
" Mason's <i>Chief Mongolian</i> , 10st. 11lbs. ....	3
" R. Chief's <i>Clown</i> , 10st. 5lbs. ....	0
Count Diesbach's <i>Gled</i> , 10st. 2lbs. ....	0
Mr. Akroyd's <i>Kingfisher</i> , 10st. 11lbs. ....	0
" Durant's <i>Daisy Chain</i> , 10st. 8lbs. ....	0

A field of seven ponies came out for this race. Another bad start occurred. *Gled* led the way; *Chief Mongolian's* jockey exercised a great want of judgment in pushing him up the hill, while Mr. Loxton on *Gled* held back judiciously. At the five furlongs *Daisy Chain* came up to the fourth place, *Black Velvet* being second. Just as the trees were reached, *Bonny Doon* and *Kinsatz* came forward, and a contest which made this race the best of the day now took place; each jockey was doing all he knew, but the owner of *Bonny Doon* rode his mount out in his well-known style and finished magnificently a winner by possibly a head, the second pony *Kinsatz* being so close up that it appeared first of all to have been a dead heat. *Chief Mongolian* was third, giving out about a hundred yards from home. Time 2 min. 49½ secs. The winner received a most deserved ovation as he rode in to weigh, as nothing but his riding gave him the race.

9.—THE KUNAISHO PRIZE.—An Object d'Art, with \$50 added. For Japan Ponies. Weight as per scale. Winners of No. 3 or 6 excluded. Three-quarters of a Mile. Entrance, \$5.

Count Diesbach's <i>Oyama</i> , 10st. 12lbs. ....	1
Mr. Matsumura's <i>Shiro-toriga-take</i> , 10st. 2lb. ....	2
" R. Chief's <i>Chuckie</i> , 10st. 6lbs. ....	3

This race was an hour late and was run almost in the dark. *Oyama* and *Shiro-toriga-take* went off at a terrific pace, *Chuckie* being some lengths behind. At the trees *Shiro-toriga-take* was two lengths ahead, but *Oyama* quickly overhauled him and won without difficulty by two lengths. Time 1m. 45½ sec.

#### SECOND DAY.—THURSDAY, 28TH OCTOBER.

The weather was again excellent, though different from the first day, as there was no sunshine. A much better attendance both of natives and foreigners was observable and rather more enthusiasm was displayed. The band of the U.S. *Richmond* which, thanks to the courtesy of Admiral Clift and the officers has become quite a local institution, enlivened the proceedings with an excellent programme.

1.—THE MAIDEN PLATE.—Value \$100. For Japanese Ponies that have never won a Race in Tokio or Yokohama. Weight as per scale. Half a Mile. Entrance, \$5.

Mr. Sagara's <i>Higan</i> , 10st. ....	1
Mr. R. Chief's <i>Chaff</i> , 10st. 6lbs. ....	2
Mr. King's <i>Moudjik</i> , 10st. 10lbs. ....	3
Mr. Durand's <i>Pluton</i> , 10st. 8lbs. ....	0
Count Diesbach's <i>Loafer</i> , 10st. 2lbs. ....	0
Mr. Hugo's <i>Kiria</i> , 10st. ....	0

For the first race six ponies came to the post; some difficulty in getting them away was caused by the fractiousness of *Kiria* who bolted once nearly to the trees. At last a fair start was effected when *Kiria* shot ahead, but his previous exertions had pumped him, and on entering the straight he was collared by *Chaff*, *Moudjik* and *Higan*, between whom a good race ensued, resulting in the first named pony winning by two lengths. Time 1 min. 4 sec.

2.—THE BRITANNIA CUP.—Value \$—. Presented. For Japan and China Ponies. Japan Ponies scale weights. China Ponies, 7 lbs. extra. Winners at the meeting 7 lbs. extra, accumulative for China Ponies. One Mile. Entrance \$10.

Mr. Durant's <i>Dartmoor</i> , 10st. 12st. ....	1
Mr. E. Mason's <i>Chief Mongolian</i> , 11st. 4lbs. ....	2
Mr. Hugo's <i>Kinsatz</i> , 11st. 4lbs. ....	3

Three ponies faced the starter for this event. *Kinsatz* bolted the whole length of the straight before the ponies got into line, he was stopped and brought back and a start effected, *Chief Mongolian* being rather behind. At the hill *Dart-*

*moor* was leading, but the *Chief* repented his tactics of yesterday, and forced the running up the hill. From thence to the straight the two ponies were neck and neck, *Kinsatz* bringing up the rear. Nearing home *Dartmoor* came ahead and won a capital race by a length and a half in the good time of 2 min. 14½ seconds.

3.—THE KENREI CUP.—Value \$—. Presented by the Governor of Kanagawa. For Half-Bred Ponies. Weight as per scale. Half a Mile. Entrance, \$5.

Mr. Matsumura's <i>Gioso</i> , 10st. 4lbs.	...	1
General Saigo's <i>Asagawo</i> , 10st. 2lbs.	...	†
Count Diesbach's <i>Warwick</i> , 10st. 8lbs.	...	†
Mr. Durand's <i>Phaniz</i> , 10st. 6lbs.	...	0

As noted above four ponies started for this race, *Warwick* being a strong favourite. *Gioso* got off with the lead after some delay had occurred and the pace was excellent throughout as the time will indicate. On entering the straight the other jockies attempted to come up but in vain, and *Gioso* won by about two lengths, *Asagawo* and *Warwick* running a dead heat for second place. Time 59½ seconds.

4.—THE MITSU BISHI CUP.—Value \$150. Presented. For Japan Ponies. Weight as per scale. Winners of 1 Race at the Meeting 7 lbs. extra; of 2 or more Races, 10 lbs. extra. Ponies that have not started in a previous Race at the meeting excluded. One Mile and a quarter. Entrance, \$5.

Count Diesbach's <i>Jim Hills</i> , 10st. 11lbs. (7lbs. extra)	...	1
Mr. R. Chief's <i>Chuckie</i> , 10st. 6lbs.	...	2

Only two ponies faced the starter, and the race was a moral for *Jim Hills* all the way in spite of his seven pounds penalty. His jockey rode him as he liked and kept alongside the other pony until near home, when he let him out and won by two lengths. Time 3 min. 14 sec.

5.—THE LOTTERY CUP.—Value, \$—. Presented. For Japan and China Ponies. Weight as per scale. Half a Mile. Entrance, \$10.

Count Diesbach's <i>Oyama</i> , 10st. 2lbs.	...	1
Mr. Durant's <i>Dartmoor</i> , 10st. 6lbs.	...	2
Mr. E. Mason's <i>Chief Mongolian</i> , 10st. 11lbs.	...	3
Mr. Matsumura's <i>Shiro-tori-gatake</i> , 10st. 2lbs.	...	0
Count Diesbach's <i>Victor</i> , 10st. 5lbs.	...	0

For this race five came out, when *Dartmoor* bolted badly, after which another bad start occurred, *Chief Mongolian* being some lengths behind. *Oyama* and *Shiro-tori-gatake* were close together up to the trees when the former went ahead, and *Dartmoor* and *Chief Mongolian* who had picked up came along also. A good race then ensued and *Oyama* beat *Dartmoor* (whose jockey rode capitally) by a short head, *Chief Mongolian* third. Time 60½ seconds.

6.—THE NEGISHI CUP.—Value \$150. For Japan Ponies. Weight as per scale. Winners at the Meeting 10 lbs. Extra. Five Furlongs. Entrance, \$5.

Mr. Buchanan's <i>Annandale</i> , 10st. 6lbs.	...	1
Mr. R. Chief's <i>Chaff</i> , 10st. 6lbs.	...	2
Mr. Hugo's <i>Kirin</i> , 10st.	...	3
Mr. Okochi's <i>Chibi</i> , 10st. 2lbs.	...	0

Four ponies came to the post for this event. A capital start was effected and the ponies were pretty close together until reaching the distance when *Annandale*, who was the favourite for the race, took the lead and won by about a length. Time, 1 min., 22½ secs.

7.—THE GERMAN CUP.—Value \$—. For China ponies. Weight as per scale. Winner of No. 8, 1st day, 7 lbs. extra. Subscription Griffiths 7 lbs. allowance. One mile and a Half. Entrance, \$10.

Mr. R. Chief's <i>Clown</i> , 10st. 5lbs.	...	1
Kennedy n/s <i>Skedaddle</i> , 10st. 2lbs.	...	2
Osborn's <i>Bonny Doon</i> , 11st. 1lb. (7lbs extra)	...	3
Kennedy n/s <i>Centaur</i> , 10st. 1lb.	...	0
Durand's <i>Paladin</i> , 9st. 12lbs.	...	0
Count Diesbach's <i>Gled</i> , 10st. 2lbs.	...	0
Mr. Hugo's <i>Kinsatz</i> , 10st. 11lbs.	...	0
Cope's <i>Penryn</i> , 9st. 9lbs.	...	0
Durant's <i>Daisy Chain</i> , 10st. 8lbs.	...	0
Philippus's <i>Schneider</i> , 10st. 1lb.	...	0

This race brought out a good field of ten ponies. After considerable delay had occurred a fair start was effected.

Passing the Grand Stand for the first time, *Penryn* led followed by *Skedaddle*; up the hill the order was *Skedaddle*, *Daisy Chain*, *Penryn*, *Paladin*, *Bonny Doon*, *Clown*, *Kinsatz* and *Gled*. At the half mile *Clown* came ahead, *Skedaddle* being second, followed by *Penryn* and *Kinsatz*. At the quarter mile *Bonny Doon* came up and on entering the straight collared the leaders. A most exciting race now occurred and it looked as if *Bonny Doon* was to win, but *Clown* and *Skedaddle* both came along with a rush near the winning post, and the former won by a neck, *Bonny Doon* being about a head behind *Skedaddle*. Time, 3 min., 26 secs. which is very creditable.

8.—THE SHIMOSA CUP.—Value \$150. For Half-Bred Ponies. Weight as per scale. Winner of No. 7, 1st day, 7 lbs. extra other Winners at the Meeting 5 lbs. extra. One Mile. Entrance, \$5.

General Saigo's <i>Bon René</i> , 10st. 8lbs.	...	1
Count Diesbach's <i>Admiral Rous</i> , 11st. 7lbs. (7lbs. extra)	...	2

The race was looked upon as of considerable interest, it being a moot point whether the *Admiral* with his penalty could beat *Bon René*. The pair got off well together and kept side by side, until reaching the quarter-mile post, when *Bon René* forged slightly ahead, the *Admiral's* rider tried to get up alongside again but could not manage it and *Bon René* won a splendid race by a neck. Time, 2 min. 12 sec.

9.—THE FLYAWAY STAKES.—Value \$100. For Japan Ponies. Weight as per scale. Winners at the Meeting excluded. Three-quarters of a Mile. Entrance, \$5.

Mr. Hugo's <i>Katerfelto</i> , 10st. 4lbs.	...	1
Mr. R. Chief's <i>Chaff</i> , 10st. 6lbs.	...	2
Mr. R. Chief's <i>Chuckie</i> , 10st. 6lbs.	...	3
Mr. Durand's <i>Pluton</i> , 10st. 8lbs.	...	0

Owing to the general style of Yokohama punctuality this race, as occurred with the last event on the first day, came off in the dark. *Katerfelto* got off with the start, and never being pressed won by two lengths, *Chaff* being second. Time 1 min., 42½ secs.

### THIRD DAY.—FRIDAY, 29TH OCTOBER.

The weather was again as propitious as it had been throughout the meeting, although for part of the afternoon the sun was felt considerably. There was a larger attendance both of natives and foreigners than on either of the preceding days. The Imperial Marine Band performed excellently and received great applause. The following is the result of the races:—

1.—THE HURDLE RACE.—Value \$100. For China and Japan Ponies. Japan Ponies weight as per scale. China Ponies 7 lbs. extra. Once round and a Distance. Entrance, \$5.

Count Diesbach's <i>Checkmate</i> , 11st. 1lb.	...	1
Mr. Hugo's <i>Kickshaw</i> , 11st. 4lbs.	...	2
Mr. Buchanan's <i>Annandale</i> , 10st. 6lbs.	...	3

Three ponies entered for this event. *Kickshaw's* jockey had great trouble in getting him over the trial hurdle. *Annandale* took the lead from the start, but shied badly at the first hurdle, when he eventually jumped standing. He recovered his lost ground up the hill, but *Checkmate*, who was leading, balked at the second hurdle and *Annandale* copied him. *Kickshaw* got over all right and so did *Checkmate* at his second attempt, but it took some time before *Annandale* did. At the next hurdle all three refused, but *Checkmate's* jockey succeeded in getting him over, after which he gave no more trouble but won as he pleased. *Kickshaw* was second, and, later on, *Annandale* third. Time 3 mins. 42 secs. We regret to say that Mr. Loxton, who rode *Checkmate*, received a severe strain from his mount's bad behaviour, which seriously affected his riding in the later races.

2.—THE JAPAN CONSOLATION.—Value \$—. For all beaten Ponies at the Meeting. Weight as per scale. Five Furlongs. A Sweepstakes of \$10 each.

Mr. Hijikata's <i>Atsuo</i> , 10st. 2lbs.	...	1
R. Chief's <i>Chaff</i> , 10st. 6lbs.	...	2
Hugo's <i>Kirin</i> , 10st.	...	3
Philippus' <i>Wenzel</i> , 10st. 8lbs.	...	0
R. Chief's <i>Chuckie</i> , 10st. 6lbs.	...	0
Count Diesbach's <i>Loafer</i> , 10st. 2lbs.	...	0
Mr. Hugo's <i>Kuronatsu</i> , 10st. 2lbs.	...	0

On arriving at the post *Kirin* tried hard to bolt, but at the next attempt the ponies got away fairly well. *Chaff* being somewhat behind. *Kirin* at once took the lead, followed by *Matsuo* who caught him up at the trees. *Chaff* now came up, and *Kirin* fell back. *Chaff* made a good show but could not manage it, and *Matsuo* won by a length and a half. Time 1 min. 20½ secs.

3.—THE HALF-BRED CONSOLATION.—Value \$— For all beaten Half-Bred Ponies at the Meeting. Weight as per scale. Three quarters of a Mile. A Sweepstakes of \$10 each.

General Saigo's <i>Asagaro</i> , 10st. 21lb. ...	1
Count Diesbach's <i>Warwick</i> , 10st. 81lb. ...	2
Mr. Durand's <i>Phoenix</i> , 10st. 61lb. ...	0

For this event only three ponies faced the starter. On the flag being lowered *Warwick* would not go, and when he was persuaded into doing so, he had lost some eighteen or twenty lengths. *Asagaro* meantime was well ahead. At the quarter mile post *Warwick* overhauled *Phoenix*, but could not get near *Asagaro* who won in a canter. Time 1 min. 38½ secs.

4.—THE CHINA CONSOLATION.—Value \$— For all beaten Ponies at the Meeting. Weight as per scale. Once round and a Distance. A Sweepstakes of \$10 each.

Count Diesbach's <i>Gled</i> , 10st. 21lb. ...	1
Mr. Hugo's <i>Kinsatz</i> , 10st. 11lb. ...	2
Mr. Akroyd's <i>Kingfisher</i> , 10st. 11lb. ...	3
Mr. Durand's <i>Paladin</i> , 10st. 61lb. ...	0
Mr. Philippus's <i>Schneider</i> , 10st. 81lb. ...	0

A good start was effected for this race. On passing the stand *Kinsatz* led, *Schneider* being second, and *Paladin* third. At the three quarter mile post all the ponies were well together. At the half-mile post the order was *Kinsatz*, *Gled*, *Kingfisher* and *Paladin*. On entering the straight *Gled* collared *Kinsatz* and a splendid struggle ensued, both jockies riding their very utmost. The ponies passed the judge's box so close together that it appeared to be a dead heat, but it was decided in favour of *Gled* by a short head. Time 2 min. 38½ secs.

5.—THE COMMITTEE CUP.—Value \$— Presented. Champion Race for Japan Ponies. Weight as per scale. One Mile. Entrance \$10.

Count Diesbach's <i>Jim Hills</i> , 10st. 41lb. ...	1
Count Diesbach's <i>Oyama</i> , 10st. 21lb. ...	0

This race was only a walk over as both ponies belong to the same stable. *Jim Hills* cantered round, and *Oyama* trotted after him.

6.—THE RACING STAKES.—Value \$— Champion Race for Half-Bred Ponies. Weight as per scale. One Mile. Entrance \$10.

General Saigo's <i>Bon René</i> , 10st. 81lb. ...	1
Count Diesbach's <i>Admiral Rous</i> , 11st. ...	2

This event proved an easy victory for *Bon René*. The two ponies were neck and neck until the trees, where *Bon René* came ahead and won by three lengths, to the immense delight of the natives. Time 2 min. 10½ secs.

7.—THE FRENCH CUP.—Value \$— Champion Race for China Ponies. Weight as per scale. One Mile and a Quarter. Entrance \$10.

Mr. Kennedy n/a. <i>Skedaddle</i> , 10st. 21lb. ...	1
Osborn's <i>Bonny Doon</i> , 10st. 81lb. ...	2
Durant's <i>Dartmoor</i> , 10st. 51lb. ...	3
R. Chief's <i>Cloven</i> , 10st. 51lb. ...	0
E. Mason's <i>Chief Mongolian</i> , 10st. 11lb. ...	0

A good start was effected for this race. On passing the stand *Dartmoor* led, closely followed by *Chief Mongolian*. The positions were not materially changed until the half-mile post was reached, when *Skedaddle* closed up and at the trees went ahead; whips were freely used, but he maintained his lead and won by three lengths. Time 3 min. 47½ sec.

8.—THE SAYONARA STAKES.—Value \$200. A Handicap for Japan, Half-Bred, and China Ponies. The Handicap to be framed as soon as possible after the last Race on the 2nd day. One Mile. Entrance, \$10.

Mr. Buchanan's <i>Annandale</i> , 10st. 01lb. ...	† 1
Count Diesbach's <i>Gled</i> , 10st. 61lb. ...	† 2
Mr. Durant's <i>Daisy Chain</i> , 10st. 81lb. ...	† 3
Durant's <i>Phoenix</i> , 11st. 21lb. ...	0
Hugo's <i>Katerfello</i> , 9st. 101lb. ...	0
Hugo's <i>Kinsatz</i> , 11st. 01lb. ...	0
E. Mason's <i>Heather Bloom</i> , 9st. 71lb. ...	0

For the Sayonara Stakes seven ponies entered, the owner of *Admiral Rous* considering it useless to run him with thirteen stone on his back. The start was very bad. Up the hill *Katerfello* led, with *Annandale* second. At the half-mile post *Daisy Chain* had caught up *Annandale*, *Gled* being close up. At the trees *Katerfello* fell behind and *Daisy Chain* followed his example. A grand race now took place between *Gled* and *Annandale*, who passed the post so close together that the judge gave it as a dead heat. Time 2 min. 15 secs. The race was run again between the two ponies after a little breathing time. A good start was effected but *Annandale* had the pace of *Gled* and eventually won by about a length. Time 2 min., 19 secs.

BETTOES' RACK.—Japan Ponies. Three-quarters of a mile. Weight, 130 lbs.

<i>Jim Hills</i> ...	1
<i>Katerfello</i> ...	2
<i>Chaff</i> ...	3
<i>Loafer</i> ...	0
<i>Chuckle</i> ...	0

Won very easily. The rider being the well known "little Dick" who promises, when he is stronger, to make a capital jockey.

BETTOES' RACE.—China Ponies.—Three-quarters of a mile. Weight, 130 lbs.

<i>Skedaddle</i> ...	1
<i>Dartmoor</i> ...	2
<i>Chief Mongolian</i> ...	3
<i>Pemryn</i> ...	0
<i>Paladin</i> ...	0
<i>Checkmate</i> ...	0
<i>Victory</i> ...	0

Won easily. The rider being the same as before. Time 1 min. 37½ secs.

## SHANGHAI LETTER.

SHANGHAI, 20th October, 1880.

The Shanghai community must be a very obstinate one. The Japan papers keep on telling us of all sorts of alarming occurrences at Peking, and acquaint us with phases of the differences between Russia and China that we never dreamt of, and yet, in face of all these startling facts, we refuse to be alarmed, but go on selling our grey shirtings and losing on our tea and silk in the most approved fashion. Li Hung-chang and Tso Tsung-t'ang are coming to deadly blows; the present dynasty is going to be shaken, or, perhaps swept away, and anyhow a serious struggle for political ascendancy is imminent, and yet we shortsighted and thick-headed residents in Shanghai don't seem to care much about the impending changes—at least they don't seem to upset us in the way that the Japan people would seem to think they ought to. We are too dense. A long course of uninterrupted commercial prosperity has blinded our intellects and dulled our perceptions, and we are indebted to the Japan papers for their disinterested care for our future welfare, as shown by their endeavours to awaken us from our stupor by calling our attention to the serious aspect of affairs in China. We can boast of three daily newspapers in this model settlement, but they all fall short of their duty, as they fail to represent matters in a true light, and leave it to the Japan papers to set us right as to the position of affairs at Peking. How thankful we ought to be that the Japan papers are so well posted about China politics, and that they are good enough to give publicity to their knowledge. We must discard our own papers, and depend on those of Japan,—accept the advice the latter give, heed their warnings, and, as Chinese official proclamations always conclude, tremble and obey.

The Autumn race meeting is now close at hand, and as some of the lotteries have already been held, the favourites have been in a measure declared. *Earl Oscey*—or *Folle Farine* as he used to be—holds his position as by far-and-away the best of the Griffins, but it is doubtful if he will be started for the Maiden's Race. The owner has another pony that he favours in *Earl Hereward*, and it is significant that he has not bought *Earl Oscey* at the lotteries. Mr. Bill has two good Griffins in *First Clarionett* and *Cello*, and *Louis d'Or* and *Prince Charming* are superior to many that are entered. About Mr. Risk's stable opinion is divided, and it is thought that the best of the new

*Straths* will be reserved for the Hongkong meeting. Mr. Risk was not happy at the last colonial races, and wishes to retrieve his laurels. The Shanghai St. Leger is the great race of the meeting. Mr. Wight's *Viceroy* was a favourite for this, but has unfortunately gone lame, and will have to be scratched. Mr. Fungus' *Prejudice* is perhaps looked upon with most favour, and Mr. Risk's *Strathaird*, Mr. J. S. Fearon's *Ricochet*, Mr. Bill's *First Violin* and *Second Violin* and Mr. Minor's *Earl Hereford* are considered likely, and the race will probably lie with the ponies I have named. The entries generally have not been good, the principal falling off being in the Griffins, as this Autumn only twenty-seven ponies are entered against forty-seven last year. There was not so much choice for owners this year, owing to the exportation of ponies from the North being forbidden on account of war requirements. We had therefore to depend on the mobs of Griffins that had started overland before the troubles with Russia had begun, and got no ponies down by steamer. Rejections were, therefore, more numerous in proportion to purchases than usual, as the steamer Griffins are picked animals that are worth the heavy freight that has to be paid for their passage, and, therefore, more likely to make their appearance on race days than the overland Griffins. For the St. Leger there are only twenty ponies entered against twenty-seven last Autumn, and in nearly all the other races there is a considerable falling off. The Shanghai Stakes Race, for which entry is compulsory, shows that there are sixty-eight ponies in training, exclusive of Hackers. The lotteries have not been good this year. A Portuguese subject has started a sweepstakes for the meeting with the view of attracting Chinese subscribers, but what is right and proper for foreigners is not considered so for the natives, for the Municipal Council officially requested the Portuguese Consul to put a stop to the Sweepstakes. The Consul, rightly enough, replied that he could not forbid his subject that which was permitted to others, and so the Autumn Sweepstakes are still advertised, though the Chinese who purchase tickets are threatened with prosecution at the Mixed Court. It would be interesting to know why these Sweepstakes are considered immoral and illegal, and yet that the usual Race lotteries are not so.

The Autumn Regatta was held on Monday and Tuesday of this week, and was remarkable for the triumph of the German crew. The weather was beautifully fine, and there was a good attendance of spectators, whose chief interest was centered in the International Eight-oared Race between a German and a Scotch crew. The Germans won easily, and repeated their victory the next day in a Four-oared Race against both a Scotch and an English crew. Several other races took place, but the meeting was rather slow, owing to the tedious delays that took place on both days, so that the concluding races were rowed by moonlight. The unfavourable state of the tide was accountable for a good deal of this delay, but it none the less detracted from the interest of the meeting. The best event of the meeting was the Double Sculling Race for one mile, which resulted in a dead heat, but it took place so late in the evening that nothing was visible of it.

Major Bridgford has returned to the East, visiting China again as the agent for Sir William Armstrong & Co., in order to instruct the Chinese in the proper use of Armstrong guns. The major is staying here for a short time, and will eventually proceed to Tientsin and Peking, but he will probably manage to pay his old friends in Japan a visit before he returns to England again.

Mr. K. A. Mowat, the Assistant-Judge, returned here by the last French Mail and has resumed his duties on the bench. Mr. Wilkinson left for Hongkong by the *Diomed* yesterday morning, and proceeds home by the Mail from that port. Mr. Wilkinson has done his work well here, but was, perhaps, too fond of trial by jury, as he sent a case for trial the other day which involved the stealing of an opium pipe valued at three dollars, and to decide this important case twenty British subjects, who must have said with Banquo

A heavy summons lies like lead upon me,  
had to attend at the Court, and waste at least an hour of the busiest part of the day until a jury of five were chosen from among them. But the most extraordinary legal proceeding

that we have heard of for some time is the great nun abduction case, that was tried lately at Ningpo before Dr. E. C. Lord, the American Consul at that port. This worthy was, and I suppose is, a missionary, and from the very first has shown his prejudice against the accused Barnet. The alleged offence was committed at Wenchow, and would probably not have been heard of had not Barnet, who was a tide waiter in the Custom's Service, fallen out with the commissioner at that port. The superior actually requested the Taotai to institute legal proceedings, and hence a result of which all right-minded Americans must be thoroughly ashamed. Dr. Lord tried the case first at Wenchow with American Naval officers as assessors, and found Barnet guilty against the opinion of the assessors, but the trial was quashed by the U.S. Minister as the Court had not been properly constituted. Then Dr. Lord changed the venue, and Barnet, who had lost his place in the Customs, had to proceed to Ningpo for trial, and not only pay his own expenses for doing so, but those of the Marshal in charge of him. At Ningpo the case was heard with three Associates, two of whom were missionaries, with the result that everyone must have anticipated. The evidence for the prosecution utterly broke down, notwithstanding that torture had been applied by the Mandarins to one of the principal witnesses, and yet this Christian missionary, Dr. Lord, found Barnet guilty again, in direct opposition to the opinion of the three associates and, in defiance of the law which was laid before him by the counsel for the defence, insisted on passing a sentence of one year's imprisonment and a fine of \$500. The case is, of course, appealed to the Minister, and it is to be hoped, for the sake of law, justice and Christianity, that Barnet will escape the persecution of the eminent missionary who has twice tried him. Dr. Lord, I may add, has not followed the precept of Paul, for he has been the husband of five wives. During the trial of this case the counsel for the defence indulged in many a passage of arms, and was constantly reproved by the Court, and yet the papers report the following strange occurrence.

"The Court (to Mr. Henderson)—Will you remain to tiffin?"

Mr. Henderson—You asked me a few days ago and I refused. You said in your note you would apologise.

The Court—I have not rendered any apology to you and you have rendered none to me.

Mr. Henderson—I will accept the invitation to tiffin."

And we must presume that Mr. Henderson did remain to tiffin, though matters are conducted in a strange way in the U. S. Court at Ningpo, or the reporters are not up to their work.

## PARIS LETTER.

PARIS, 4th September, 1880.

The anniversary of the tenth year—a respectable longevity for a Constitution in this country—passed as unperceived as a memorial mass for Louis Philippe, or the rejoicings on Michelmas Day, sacred to the Comte de Chambord, new geese and landlords—Irish excepted. Not a dinner was celebrated in honor of the sinking of the second empire, a shipwreck so full of good fortune for France. Victor Hugo did not address an Olympian postscript to any one, nor did Emile Girardin indulge in a leader of pure logic. The Communists might be excused for not applauding a Government that had strong objections against arson, assassination, and chaos in general. Not a sober Republican journal indulged in a boeuf; Paul de Cassagnac never refreshed himself by a screech that the restoration of Imperialism was at hand, and Prince Napoleon gave no sign of political life. As usual, an old journal appeared, for the occasion only, with its stereotyped cuts and ancient history, but no one seemed to be in the least curious about the march on the Parliament House, or the evacuation of the Tuileries "by the Spaniard," the title by which the Empress popularly lives in hearts she leaves behind. Indeed a new journal devoted to *cochons* (pigs)—the most insulting of epithets that Frenchmen can throw at one another's heads—was brought out, and as it was sold, folded and underhand, the vendor having an ink pencil to write any address dictated, he did a roaring trade, and many persons received the coarse sheet as a personal compliment addressed in souvenir of some obliging act of their lives. The Empire is down among the dead men, thinks France very truly; so there let it lie; it cannot pretend to *resurgam* on its hatchment.

The decrees against the Jesuits have been executed—the disciples are broken up, not banished, so far as France is concerned. Disqualified to live as communities, they can as private individuals, and even become professors in those colleges—at

present organized on a secular and lay basis—from which they have just been expelled. But the Government can now inspect their teachings, at any hour out of the number fixed for studies, exclude any anti-patriotic volume or anti-modern society, and as a *coup de grace*, can close the establishment. The chapels in connection with the colleges are permanently shut up. Neither they, nor any place of worship, can be opened without permission of the authorities. The execution of this second and last stage of the law passed off with supreme indifference on the part of the public. The ministry will next month introduce a bill regulating the rights of association. It would be best, under a republic, to have no exclusions, as there ought not to be any privileges.

Sarah Bernhardt had only one position to achieve—that of becoming a subject of diplomacy. At her Copenhagen banquet the German minister toasted "*La Belle France*," when Sarah added, as a rider, "to all France." Leaving the minister to settle the affair with Bismarck, the French are proud of Sarah's wit, and honor her in a marked manner, to show the German Hebrews that they can have here what they have not in Berlin, an abiding city. However, the Theatre Française has not invited the erratic ex-member to reënter the fold, nor sponged out the 200,000 fr. damages they obtained against her for taking French leave of the corporation.

The old Emperor William is not condemned for his annual Bruce address to his army in memory of the victory of Sedan. It is a thing that had to be done—a ration that soldiers look forward to. Not that the French are pleased at the painful reminiscence. Few people cherish an affection for those who chastise them, empty their pockets, and take Rob Roy possession of their goods and chattels. Criticism is directed to that part of the address which renders thanks to Providence for being on the side of the Krupp cannons in 1879, and on arms of death in general.

For the last ten years there has been a profound change in France, and, perhaps, elsewhere, respecting the introduction of Middle Ages barbarism, as exemplified in bellicose piety, and the alleged tenderness of Heaven for human combat. Neither the French nor the German people desire war. Both are now strong, and the conquered of yesterday is an equal to-day. The reactionary journals of France and Italy are ever harping on the approaching war between the two nations. It only exists in their imagination. France, no more than Germany, forgets Sedan. She remembers very vividly Alsace, without the mourning favors in the caps of the Alsaciens, who have remained French, being necessary to recall the amputation. But it is not by an appeal to arms that Alsace is expected to be regained, but in the constitutional and social decomposition of the Empire, which has for its base but the two eyes of Bismarck, and for corroding forces the triumph of arbitrary Government, and a crushing taxation.

Something like a scandal has existed for a few days in connection with the War Office. Two high functionaries have been reported to be selling to the Prussians information bearing on the strength of the French army of reserve. When the accused demanded explanation and disavowal, under threat of duels, it is officially announced that no foul play had been practised, no treason indulged in. There is nothing new in the washing of the family linen in public; a bucket full, more or less, makes no great difference. But the odd matter lies in the belief that there is something to sell. Now, both the French and the Germans know their relative strength, to the last cannon, the last man, and the last horse. An Ambassador has been described—before the age of telegraph—as an honest man sent abroad to tell lies. Now military attachés are honorable men sent abroad to spy into the defensive resources of a nation. In modern battles there is no mystery. The strategy consists in what power can concentrate the greatest number of men at a certain point, in the shortest time. France can only attack Germany by the Luxembourg, and Altkke has arranged against an ugly rush in that quarter. But Germany can still march, almost unopposed, from Metz into the bowels of the land, till arrested by the new and formidable defences, extending for thirty miles, of a radius round the capital, and too large, this time, for the iron belt of a siege. France has, unfortunately, her strategic net-work of railways yet to complete on her eastern frontiers, so would be backward in the concentration of troops. As for armaments, every fort capable of holding a rifled cannon possesses that peace-maker. Respecting the number of soldiers, Germany has only to make the total of the numbers in all France capable of bearing arms; plus the women, for the latter will enter largely on the scene in case of a coming struggle. In reference to the new fortifications round the capital, why it was only last year the German journals gave a minute description of them—and this was the channel by means of which Parisians first learned that henceforward they were denizens of a military camp.

It is something like an agreeable change for the journals to attack Protestantism after laying siege to the miracles and pilgrimages to Lourdes for weeks. It appears that those who profess adhesion to the thirty-nine articles of the Westminster Confession of Faith, are enemies of good cooking. Only

Catholics know how to prepare the little man wants here below, as beef and mutton, veal and venison show. If this fact could be brought home to men's businesses and bosoms, many would be justified in a recantation as fully as if he or she were destined to change their creeds to qualify for the occupation of a throne; for the "*Paris is worth a mass*" doctrine of Henry IV. applies to stomachs as well as to fortunes. M. Zola contributes an article of indictment. For him the false modesty of the virtuous nations of the north is exercising a lamentable influence on the land of Rabelais, Montaigne and Molière. He does not say whether his "*Nana*" was an outcome of Protestantism.

Vitriolism is the fashionable weapon of revenge. A rejected paramour has thrown a vial-full into the face of his former mistress, as she was taking a glass of beer with a new lover. She had the fatal gift of beauty and is hardly eighteen. One eye has been burnt out, and, to quote the medical report, "*save this, she is not disfigured*." Scandalized, at the recent trial of three audacious scoundrels some twenty-one years of age, for murder and robbery, a Free Masons' society has petitioned the Government asking that every individual who has been three times convicted be banished the country for life. France has devoted great attention to experiments in criminal reform, but she has not found the philosopher's stone. Her scourge is rather juvenile than adult delinquency.

We begin to experience the first tinge of Autumn weather, and observe its effects by the ladies patronizing thick frocks for afternoon driving and promenading. Another indication is the feverish excitement of sportsmen preparing for "*the twelfth*," when the shooting season opens in the zone which includes Paris. Dogs, ammunition, guns, these are the chief occupations; there is one shadow falls across their chamber door—the poachers. These gentry not only kill the most game, but do so with next to impunity. They are an Association; if a member is arrested in the act, he has the best counsel engaged to defend him, and the necessary funds will be forthcoming to pay the fine—not crushing. He is also the friend, as well as the enemy, of St. Hubert; for many a sportsman would enter Paris with an empty bag, were he not at hand to fill it at market prices. Then, thus charged, note the pompous strut of the gunner, as he marches along the Boulevards, holding a hired dog—or the dog him—in leash, bag of game slung behind, like the minstrel boy's harp, who to the wars had gone. Partridges are rare birds this year, but quails and hares are plentiful. An old sportsman recommends the carrying of a pistol which can fire explosive balls, in case of being attacked by wolves or wild bears. The principal shooting lodges round Paris are owned by Israelites—the name given to rich Jews. Now their little Tauner fast commences on the 12th, and terminates on the 22nd, when not a gun must be heard, nor the scratch of a pen, nor the click or a coin in the dwellings of the descendants of Father Abraham for ten days.

Those who are embarrassed as to what to eat this month, and their name ought to be legion—should note that a good authority recommends thrushes fattened on grapes; or trout, and eggs cooked in any of the 600 orthodox ways.

The Bishop of Beauvais is proverbial for his parsimony. Lately he encountered a poor farmer, a friend of early years, who recounted his history. He had lost his wife and his cow: "*But, I find it odd, Monseigneur; every one will aid me to obtain a wife, but none will assist me in replacing the cow.*"

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

#### COURT, POLITICAL AND OFFICIAL.

The *Nichi Nichi Shinbun* states that the Hon. Jno. A. Bingham, the United States Minister, was granted an audience with His Majesty the Emperor at 2 p.m. on the 22nd instant.

The same paper informs its readers that, owing to indisposition, His Excellency General Yamada, Privy Councillor, has not attended his office since the 21st instant.

Colonel Kabayama was appointed Chief of Police on the 23rd instant.

Mr. Nomura, the Governor of the Kanagawa, returned to Yokohama on the 22nd instant after a tour of inspection in his prefecture.

His Excellency Privy Councillor Oki gave an entertainment on the 22nd instant at his private residence in Nagato-cho, Tokio, to a number of prominent Japanese officials and a member of the United States Legation.

We notice by the *Choya Shinbun* that the Emperor passes from eight to ten o'clock a.m. daily, in study. His Majesty subsequently attends at the Council of State and listens to the discussions upon the various questions which arise, and after

his return to the palace, which usually takes place at about two o'clock in the afternoon, he spends an hour or so in conversation with one or other of the Imperial Chamberlains respecting the topics of the day, and general subjects. The Emperor then amuses himself in riding or shooting for the remainder of the day.

His Excellency Matsukata, Home Minister, has been appointed President of the Commission appointed to arrange for the display of Japanese products at the Melbourne Exhibition.

The local branch at the Bonin Islands of the Board of Commerce has been closed.

The infant Prince, Haru-no-Miya, will be presented to the Emperor on the 3rd of next month, that being His Majesty's birthday.

We read in a native journal that on the occasion of the Emperor visiting the Council of State three or four days ago, the Minister of the Interior presented His Majesty with a report upon the condition of agriculture in Japan. One of the Privy Councillors then came forward and, addressing the Emperor, pointed out that there has been no famine in the Empire during His Majesty's reign. The reduction of the land-tax, he observed, the payment of the tax in money instead of in kind, and the increased price of rice, had all contributed to making the agricultural classes wealthier than at any previous time in the history of the country.

A native paper states that His Majesty the Emperor has been unable to attend the meetings of the Cabinet during the last few days owing to a severe cold. He has now, however, recovered and attended the Cabinet on the 27th instant.

The *Nichi Nichi Shinbun* informs us that the Chinese Minister and his wife will shortly return to their native land.

From the same paper we learn that His Excellency Sano, Minister of Finance, visited the Oji Paper Mill the day before yesterday.

His Excellency Hanabusa, Minister Resident for Corea, will, according to the *Mainichi Shinbun*, leave for Corea about the 15th proximo.

Another journal announces the return to Tokio on the 27th instant of General Kuroda, Chief of the Colonization Commission, who recently went on a hunting expedition to Urawa, in the prefecture of Saitama.

The *Nichi Nichi Shinbun* says that on the third of next month, being the birthday of the Emperor, His Majesty will leave the palace at 8.30 a.m. for the Hibiya parade ground to witness a review, which will be held there, weather permitting.

We read in the *Mainichi Shinbun* that Colonel Kabayama, Head of the Police attended by under Police Inspector Adachi, paid a visit of inspection to all the police stations and prisons in Tokio on the 28th instant.

From the same source we learn that His Excellency Hanabusa, Minister Resident for Corea, who leaves on or about the 15th instant for his post, entertained Their Excellencies Inouye and Uyeno at a farewell banquet on the 28th instant, at the country residence of Mr. Okura Kihachiro. On his departure he will be attended by a number of Marines who will form the guard of the Legation.

Another journal reports that on the 27th instant during a sitting of the Cabinet, Mr. Okuma was taken suddenly ill and had to return to his house.

#### NAVAL AND MILITARY.

The *Daini Teibo Kan* left Yokohama on the morning of the 21st instant on a surveying cruise.

From the native papers we learn that the camp of instruction at the Narashino plains is being broken up, now the winter season is approaching. His Imperial Highness Field-Marshal Prince Arisugawa, and General Saigo, returned to Tokio on Saturday last, and on the following day a battalion of infantry attached to the Kiododan. A regiment of cavalry will leave the camp about the middle of next month.

In the dockyard at Yokosuka, the *Banjo Kan* is being made ready to relieve the *Amaki Kan* on the Korean station.

According to the *Nichi Nichi Shinbun* it has been determined to offer every hospitality to Admiral Lessoffsky and his officers during their stay in Yokohama en route to Chinese waters. Admiral Enomoto, the Japanese Naval Minister, and Privy

Councillor Admiral Kawamura will be the host of the famous Russian Admiral and Diplomat, while the official residence at Mita, Tokio, formerly occupied by Admiral Kawamura and at present by the Assistant Foreign Minister, His Excellency Wooyeno, will be placed at the disposal of the visitors.

Having undergone a thorough overhaul at Yokosuka, the *Rinjo Kan* started on a trial trip of her engines as far as Shimizu on Tuesday last. If everything is found satisfactory the vessel will leave at once for Australia.

Admiral Enomoto, the Minister of the Navy, has visited Yokohama and inspected the men-of-war.

According to a return lately prepared there are 1,550 horses attached to the army in active service, and 207 at the remount establishment. The latter figure shows a deficiency of 180 horses, so that number is to be purchased.

We read in another native paper that an artillery officer in the German army has forwarded to the Japanese Government a scheme for providing for the defence of one thousand ri of the shore by four men only! The inventor claims that the coast line of this Empire could be defended by thirty-six men. The proposal is now being considered.

The *Nichi Nichi Shinbun* says that His Imperial Highness General Prince Higashi-Fushimi, Commander-in-Chief of the Imperial Guard, held a review of the household troops on the Hibiya parade ground yesterday.

We read in another paper that on the 27th instant, His Excellency Admiral Enomoto, Minister for the Navy, left Yokohama in the *Moshun Kan* and visited Yokosuka, where he inspected the *Nisshin Kan* now occupying the large dock, and a torpedo boat which has just been completed. His Excellency returned to Yokohama the following morning.

According to a vernacular journal it is resolved that the *Rinjo Kan* is to leave Yokosuka on the 1st November for Shimizu, where she will remain some days to have her engines tested; after this has been effected she will return to Shinagawa and sail thence to Australia.

#### TRADE, INDUSTRIES AND FINANCE.

A vernacular journal reports that the Specie Bank has determined to export, direct, 3,000 bales of silk.

We gather from native sources that the rice crop in the provinces of Tsuruga and Totomi is less than was estimated, and prices have consequently risen.

Having completed all the preliminary arrangements, the Sailing Ship Company commenced business in the head office at No. 26, Koamicho, Tokio, on the 26th instant.

"With a view to further develop the breeding of sheep upon their farm at Sengoku," writes the *Hochi Shinbun*, "Messrs. Shibusawa, Masuda and Komatsu, have applied to the Agricultural Bureau for the gratuitous loan of one hundred choice sheep."

According to the *Bukka Shimpō* the returns of the coast fisheries this season have been very large, and prices have consequently fallen. Many farmers too left off employing fish as manure. A dried cake made from the waste left after compressing herrings for their oil in the Hokkaido, is being shipped to Tokio, where it has been used upon the fields with great success.

We read in a vernacular paper that with a view to diminish expenditure, the Government has resolved to sell all its unnecessary buildings and also some of the manufactories. The paper says that this is indeed good news for Japan.

"It has been told us" writes the *Hochi Shinbun*, "that the German merchants, Messrs. Simon, Evers & Co. of No. 25, Yokohama, have sent a memorial to a certain Privy Councillor, proposing the negotiation of a foreign loan in order to remedy the present financial crisis. This is really disinterested kindness."

A native contemporary informs its readers "that the recent rise in specie was at first a great source of satisfaction to foreigners, but when in consequence of the rise our merchants stopped all purchases of foreign articles, the former are in a great state of mind, and wonder that if this continues for several months they will be ruined and compelled to give up business."

## MISCELLANEOUS.

According to a native paper, a telegraph station is to be established at Fujisawa on the Tokaido, in compliance with a request from the people of that place.

The *Mainichi Shinbun* says that the officers of the Police Department intend to erect a monument to the memory of the late General Kawaji, formerly head of the Police.

Another vernacular journal states that on the 21st instant, a telegram was received to the effect that the poorer classes in Toyama had arranged to raise a serious riot, but were pacified by the authorities.

Recently we reproduced from the *Nichi Nichi Shinbun* a return of the number of people living in the city of Tokio proper. The same journal mentions that the population of the suburbs, including the six districts comprised within the jurisdiction of the Tokio Fu, is 273,225 men, women, and children.

A correspondent of the *Akebono Shinbun* writes as follows:—"The goods which you recently sent us have fetched particularly good prices. It is a great source of annoyance to us that a steamer leaves this port only once in sixty days. At night, it is unsafe to go out in consequence of the number of tigers that roam abroad."

Three native students who have passed the curriculum of the Tokio University, left for England in the *Malacca* on Saturday last, in order to complete their education.

"Mr. Herbert Spencer," writes the *Hochi Shinbun*, "the great learned man and renowned philosopher of England, is about to make a tour round the world and will visit Japan on his way."

An advertisement in the vernacular journals states that on and after the 1st of next month the first train in the morning will leave Shinbashi and Yokohama at 8 o'clock in the morning instead of 7 o'clock as has been the case during the summer months. The last train at night will leave the termini at 10 o'clock, and all freight must be delivered before 6 p.m.

In the *Nichi Nichi Shinbun* we find a glowing account of the prosperous condition of affairs in the arsenal at Yokosuka. Our contemporary states "that the establishment is now very busy, and the *Kasuga*, *Azuma*, *Seiki*, *Banjo*, *Keibin*, and *Chiyoda Kan*, together with the *Kioisai Maru* No. 1, have all recently arrived there for repairs. At present the *Nishin Kan* occupies the large dry dock, where her old plates are being replaced with new ones. In the smaller dry dock is the Mitsui Bishi Company's side-wheel steamer the *Seikio Maru* undergoing repairs which will, it is expected, be completed about the middle of next month. The cabin fittings of the *Jingei Kan*, the Imperial yacht, are nearly finished, but work has been stopped for the present on the two men-of-war in course of construction. A large torpedo boat is almost ready for launching, and the *Iwaido Maru*, built to the order of the Colonization Department, will shortly leave on a trial trip. The paucity of dock accommodation is much felt and interferes greatly with the operations of the establishment. This want will, however, soon be remedied, as very satisfactory progress has been made with the large new dock now being excavated by prison labour. The work turned out at Yokosuka has been very favourably spoken of by foreigners whose vessels have been repaired there. When the French flag-ship, the *Champlain*, was so badly injured on the coast of Yesso, the damage was made good at Yokosuka, and the French officers gave it as their opinion that the work would not have been done so well or promptly at the famous French arsenal at Toulon. It appears, therefore, that great progress is being made at Yokosuka in the art of shipbuilding. This affords us much pleasure and we are happy to give the foregoing particulars from information furnished to us by a gentleman who recently visited the dockyard."

A letter from Corea, published in the *Nichi Nichi Shinbun* states, that the leading members of the Embassy which recently visited Japan, held a great council in the capital on the 6th instant, at which upwards of eighty high dignitaries of state attended. The subjects for discussion were the desirability or otherwise of restricting the present intercourse between Corea and Japan, improving the National Army, and entering the comity of Asiatic states. The result of the deliberations is not mentioned.

Japan's principal comic paper, the *Maru Maru Chinbun*, received an order from the Police Department to cease publica-

tion on Tuesday last. All numbers of the offensive number (183) were prohibited from being sold, and those remaining on hand were confiscated. The paper has since been released from suspension.

On the same day that the *Maru Maru* came to grief, the editor of the *Tokio Keizai Zasshi* was mulct to the tune of fifty yen for publishing an article on the revision of the Distillation tax, which the authorities considered calculated to bring the laws into contempt.

In the *Hochi Shinbun* appears a telegram from Hakodate, announcing the arrival from New York of the *Gerard C. Tobey* with railway plant. The vessel anchored close to the pier at Otarunai and the cargo—engines, rails, &c.—was landed at once. A trial trip was made on the section between Temiya and the tunnel on the 24th instant. A light construction engine was used and the trial proved very satisfactory.

Introduced by Mr. Tokuno, a number of French gentlemen went over the Government Printing office the other day. The native journal which records the circumstance states, that the visitors were much surprised at the completeness of the establishment in every particular.

The town of Himeji in the province of Banashu, is to be connected by telegraph with that of Toyo-oka, in Ikuno. Telegraph communications are also to be opened between Fujiyeda in the province of Suishin, and Jibu, in Mina, on the 1st of November.

We have the native authority for stating that the telegraph lines across the hills, connecting the post town of Honjo in the prefecture of Saitama with all the post towns in the prefecture of Nagano, have been completed and are to be opened on and after the first of next month.

The *Nichi Nichi Shinbun* contains the following paragraph which it says is joyful news, as it implies a great reduction of expenditure:—"From the beginning of next month the foreign employés on the Tokio-Yokohama railway are to be replaced by Japanese, or as soon as their present contracts expire. The same step will be taken with the foreigners employed in the machinery department and the survey of the road itself."

A correspondent of the *Mainichi Shinbun* writes as follows:—"With a view to determine if it was the fact that the Korean authorities had really prevented the delivery of rice to Japanese merchants, as was alleged, the Japanese Consul at Fusan despatched on the 5th instant a number of subordinates in a sailing ship to Kiosai-yo. On their arrival these officers had an interview with the Korean authorities of the prefecture; they next visited Basan-po, Shogen-fu and Toyei, at all of which places they inquired of the officials and the naval and military officers as to whether they had taken the step complained of. At Toyei there are large barracks, and the officers tried to prevent the party from landing. Matters at one time looked critical, but were eventually smoothed over. The officials returned to Fusan and have reported the result of their enquiries to the Consul."

On the 26th of September a *soirée* was given on board the *Amaki Kan*, to which the Japanese Government officials, some Japanese gentlemen, and the Korean naval officers were invited. A very pleasant evening was passed."

## ARRIVAL OF THE ENGLISH MAIL.

Simla, 18th September.—The Fine Arts Exhibition was opened this afternoon by his Excellency the Viceroy who delivered a long and eloquent address. The attendance was small.

Capetown, 23rd September.—On the 20th instant, 1,200 Basutos attacked Molales' Lock and 5,000 Mafetang. Both attacks were repulsed after severe fighting.

Allahabad, 24th September.—At the scene of the Naini Tal disaster (which is sadder even than the first report indicated), the soldiers and coolies are doing excellent work. The post is still disorganized, and the road is difficult.

London, 26th September.—Lady Ripon leaves Brindisi on November 8th. She remains in Egypt one week and embarks on the steamer *Cathay* on the 18th November.

Bank Shares:—Oriental Bank Corporation, £22; Chartered Bank, £24; Chartered Mercantile Bank £24; and Hongkong and Shanghai Bank, £40 10s.

Kandahar, 8th September.—We expect to hear daily of some declaration regarding the future of the city, as if we are to leave it during the next cold weather it is time some of the large army congregated about it should be on the move. The Bengal Division numbers nearly 10,000 men; the regular garrison, including troops we brought down from Kelat-i-Ghilzai, is nearly 6,000 while General Phayre has another 6,000 with him. To enable half this force to march back to Sibi at once, should be the aim of all our efforts now; for General Phayre's arrival does away with the necessity for retaining the Bengal Division. General Phayre himself arrived yesterday, accompanied by Major Wood. Captain Cook Collis, and Lieutenant Phayre, Aides-de-Camp. Another sepoy of Jacob's Rifles has turned up at Kokaran, stating that he and several other Mahomedans were kept prisoners at Ashoo Khan, all the Hindus captured being killed. Arms and ammunition are said to be hidden in the village. Acting on this information, General Hugh Gough sent two squadrons to the village with orders to search the place and bring in the head mullick and all the villagers prisoners.

Two deaths of officers have occurred in the Kandahar garrison lately—namely, Lieutenant-Colonel Shewell, Deputy Commissary-General, who was wounded in the sortie of the 16th August, Lieutenant Whitlock, 1st Grenadiers, from dysentery.

Allahabad, 20th September.—There is no news of importance from Kandahar. During the present week Mr. Lyall leaves Simla for Kandahar, where he will superintend the settlement of affairs.

Simla, 21st September.—General Roberts reached Sagi yesterday morning. Sir Robert Sandeman proceeded to Chaman, and arranged with General Baker the measures for the punishment of the Aitchakzais. General Baker's brigade arrived at Chaman yesterday morning, and will commence operations against the Aitchakzais to-day. Sir R. Sandeman and General Roberts will reach Quetta on the 22nd. General Macgregor's Brigade marches on the 23rd from Quetta towards India, three battalions of the R.A., and 100 sabres Central India Horse proceeding *vid* Kuch to re-establish posts on the proposed line of railway. The remaining battalions of the brigade, and the rest of the Central India Horse go by Sibi. The brigade will be concentrated again at Gundakin Duff. No further news has been received from the troop which proceeded to Maiwand. Colonel St. John reports that all is quiet; but the villages round Kandahar are still nearly empty of their inhabitants. The weather at Kandahar is daily getting cooler. Muhammad Sandik Khan writes from Kelat-i-Ghilzai that all is quiet there.

Kandahar, 22nd September.—General Phayre's troops and 8,000 men under Wilkinson have camps between Bari and Argandab. The first brigade is at Girbab; General Browne's 2nd brigade is in the cantonments, and Walker's 3rd brigade is at the Argandab canals to protect the supply of water. There are 12,000 about Kandahar. General Roberts has started from Sagi to Quetta.

Kandahar, 25th September.—All well. The Highlanders, Goorkhas, and the Jacobabad battery march to Quetta, and the Beluchis to Chaman. Nearly all the sick have been taken, the troops having no extra blankets and but a few

coats. The brigade has returned from Maiwand after constructing a large cairn and burying the dead. The Lancers remain here.

## THE JAPANESE PRESS.

## ON THE ENCOURAGEMENT OF INDUSTRIES.

(Translated from the *Choya Shinbun*.)

A CORRESPONDENT asks:—"How is it that while we find many people throughout the Empire who busy themselves about politics, there are only a very few who pay any attention to the subject of industries? there are daily attempts made to insist on the establishment of a National Assembly, but they originate in the empty heads of students. We warn the public against these vague theoretical societies, and advise them to direct their attention to the encouragement of industries. Unfortunately, however, these societies have become very numerous and present a great obstacle to the prosperity of the country."

There is doubtless a certain amount of truth in these remarks, as we know for a fact that our young students, as soon as they have received a bare smattering of education, talk about political affairs in a manner calculated to promote disturbances, so that as far as this is concerned we are in accord with the writer; but as regards the encouragement of industries we have our own opinions. If the writer means to imply that this is the duty of the Government, we cannot agree with him.

The difference between our exports and imports is one of the causes that have brought about the present financial difficulties of Japan. This difference is attributable to the want of encouragement held out to our industries, which consequently obliges us to draw our supplies from abroad. If then we have any industries by which this could be obviated, they should most certainly be encouraged; but we do not consider this to be the duty of the Government. Its duty is the protection of the community, and has nothing to do with the direction or encouragement of trade. Whether the country is ruled by a King or is a Republic, the fact remains that the Government has nothing to do but to control the nation. If then it mixes itself up with the doings of the people, although it does so from an idea of promoting their welfare and interests, we cannot but conclude that it has exceeded its bounds, as its real duty towards the people is to protect them. Considering the matter practically, it is evident that the encouragement of industries by the Government would entail unnecessary officials and expenses, which would all prove prejudicial to any advance being actually made; how therefore could such a step be described as a means for promoting the prosperity of the country? It is not in conformity with reason that the Government should interfere with the undertakings of the people: should the people alone attend to them?

If the Government insists upon a policy of interference, to whom could the work be trusted? Some one may suggest, into the hands of the merchants. But this body of the community, even if they accepted the trust by order or persuasion of the Government, would not aim at benefitting the country but avail themselves of the opportunity given to them by the authorities, and borrow money to benefit their own selfish and usurped interests. If we allow such short-sighted and narrow-minded men to conduct the encouragement of industries, they will simply fill their own pockets. Their labours, so far from benefitting the country, would actually put obstacles in the way of those who are honestly directing their attention to the subject, with a view to promoting the welfare of the state. This latter is the class that is required; independent and respectable men who take as much interest in the affairs of the nation as they do in their own private matters. Our countrymen, however—especially among the merchants—are attached to old customs, and may possibly adopt a policy of submission, as habit becomes a second nature. They know there is a Government but they do not know that they have their country also, but believe it is the property of the Government and not of the people, so that when they talk about doing anything on behalf of the nation, they really mean on behalf of the Government. The idea of encouraging industries and thus diminishing imports would never have occurred to them, and even if

we recommend it to their consideration, would they know how to set about it? The only course is to let the people understand that Japan is their own, and the only way to accomplish this is to establish a National Assembly. Those who talk about encouraging industries, instead of obtaining representative institutions first of all, are decidedly wide of the mark.

### INTERFERING WITH LECTURES IN KANAGAWA.

(Translated from the *Choya Shinbun*.)

THE Government makes laws, and the people obey them. As long as the latter do so, they enjoy freedom of speech, action, and assembly, and need not tolerate any interference with such privileges. The Local Governments have simply to execute the orders of the Central Government. They are controlled by the laws just as the people are, and cannot exceed them. If the people wish to avail themselves of the liberty allowed them and the Local Governments attempt to interfere with them, we must stigmatise such a course of action as illegal in the extreme, and undeserving of obedienc.

As long as we, who are of the people, observe the Press Laws laid down by the Government, we enjoy full liberty of speech; how then shall we tolerate the Local Governments when, contrary to the law, they attempt to close our mouths? As long as we, the people, observe the Meeting Regulations framed by the Government we have the liberty to debate and lecture as freely as we like; what reason is there then for allowing the Local Governors, exceeding the limits of these Regulations, to prevent our holding meetings. We have a Government over us, whose laws and regulations whatever they may be, we are bound to observe; but if the Local Governors, who are just as much bound to obey these laws, choose to exceed their authority and to interfere with the affairs of the people, we assert that the Executive Powers have set the example of breaking the laws, so how can they hope the people will respect them?

Take the case of the excellent Meeting Regulations issued by the Government last April. Although we cannot explain why they were issued, they in no way forbid public meetings, and consequently—within the limits of the law—we can freely form societies for lectures or debates. Under these regulations, political societies have been established in Tokio and other places, and public lectures, under the permission of the police, have increased daily in number. But in the prefecture of Kanagawa, it would appear that these Regulations have some especial influence. If this is not the case, what is the reason that all the lectures on political subjects have been dropped of late? The prefecture of Kanagawa is close to the Capital, the seat of Government. It possesses an open port, a number of large towns, and not long ago meetings where lectures on political subjects were delivered were very popular throughout the prefecture. In Yokohama, Fuchiu, Minomiya, Itsukaichi, Yoshino, Kobosawa, Hachioji and Hino, men of weight in each locality have formed societies which used to invite persons to lecture every month on various subjects. It was believed that the intention was gradually to introduce similar societies into other localities. No sooner, however, were the Meeting Regulations enforced, than the lectures in the prefecture of Kanagawa suddenly stopped. Were the people in this prefecture intimidated by the Regulations? Those who take an interest in politics in Fuchiu and Hachioji are just as anxious as before to hold these meetings. Do the Kanagawa authorities consider that these lectures are, invariably, injurious to the peace of the country? We are completely at a loss to comprehend what is the matter. We have been informed that in this prefecture it is not allowed to deliver a lecture even on the subject of literature or law. Can it be that the Meeting Regulations of the prefecture of Kanagawa differ materially from those in force throughout the remainder of the country? The people of Kanagawa, living under the same Government, and observing the same laws as their more fortunate countrymen, are deprived of the liberty of speech. What an unhappy lot is theirs!

Among all the three cities and thirty-five prefectures, Kioto is particularly distinguished for its peculiar political administration. Formerly in that city there were no

lecture meetings, and when an attempt to establish them was organised, it was, indirectly, opposed by the authorities. Recently, however, the obstacles have been removed, and a great meeting was held at which the public was instructed, for the first time, about the principle and intention of lectures. No one can interfere with true principles and if the people shelter themselves under the broadegis of the law, even the executive officials cannot attack their conduct.

Are the responsible men in the prefecture of Kanagawa inferior to those of Kioto? If not, the people themselves are to blame for having submitted to the first trifling troubles they have encountered. We can find nothing in the regulations controlling public meetings that forbids lectures on political subjects.

### LAW REPORT.

#### IN H. I. R. M.'S CONSULAR COURT.

Before A. PELIKAN, Esq., Consul and Judge.

Messrs. S. CARCANO and REYNAUD, Assessors.

Saturday, the 23rd day of October, 1880.

JAN DE BOER v. S. SEREBRENKOFF, agent for the owners of the Russian steamer *Nordenskjöld*.

This was a claim to recover the sum of \$8,992.70 salvage expenses, &c., and \$1,283 commission on the value saved. The defendant admitted his indebtedness to the extent of \$2,189.49 salvage, but disputed the commission claimed and left that to be settled by the Court.

Mr. Kirkwood again appeared for the plaintiff and Mr. Dallas for the defendant.

Mr. Kirkwood called

George Whitfield, who being sworn said:—I am a mechanical engineer. At the beginning of the present month I inspected, at the request of the plaintiff, a steam-pump, boiler and centrifugal pump, which were lying near the *Nordenskjöld*. Both the pumps and the boiler were damaged. The boiler had the blow cock broken and one of the tubes burnt through; both the circulating tubes were filled with salt and sand. Out of the six fire-bars for the boiler four were broken. The centrifugal pump had one of the feet broken off, and the impeller inside was slightly broken. The steam-pump appeared to have been greatly worn by sand, and the hose pipe also. The slide-rod for the small engine was slightly bent. What I have termed the foot of the pump might also be called a flange. There are two other flanges which are not broken. The slide-rod mentioned by me is the same as the valve-spindle. Pumping out the *Nordenskjöld* on a sandy beach would probably dirty the pump inside with salt and sand, but an expert would have taken care to keep the boiler clear by means of the blowcock. However as the blowcock was broken off, the sand and salt in the boiler probably could not be avoided. I cannot say to what extent the boiler was injured with the sand and salt before the blowcock was broken off. I have heard that the northern coast of Japan is very dangerous. Considering that the pumps and apparatus were taken to the place where the vessel was stranded, and worked there in pumping out the ship, I do not think the damage sustained by the pumps and boiler is, under the circumstances, excessive. In doing such work machinery has always to go through a considerable amount of hard work, and a certain amount of risk is invariably encountered. I repaired the machinery for the plaintiff before he left for Hakodate. It was then all in good working order. I limited the working pressure for the boiler at 40 lb. to the square inch, which is nearly equal to three atmospheres. The pumps were both in good order, the centrifugal being new.

Cross-examined by Mr. Dallas:—When I inspected the pumps, boiler, &c., early this month, they were only damaged in parts. A new boiler of the kind, I work up to 60 lbs. The boiler in question being old I placed the limit at 40 lbs. to be perfectly safe, although I had tested it up to 60 lbs. It is not difficult to knock off a blowcock with a single blow of a hammer. I have seen a tube of a boiler burnt before. It was one of the tubes of a fire-engine in Yokohama. If the blowcock had been in perfect order, the boiler might, in the hands of an incompetent person, have become so choked with salt and sand that the tubes

burnt. Supposing that a fully competent person was in charge of the boiler and everything in perfect working order, I do not think that a period of one hour and a half after the blow-cock had been broken off, would be sufficient to choke the boiler with salt and sand so that the tube could be burnt. The burning coals rest on the fire-bars which are liable to be burnt through in course of time, and have to be replaced. I think the foot of the centrifugal pump may have been broken by the pump having been allowed to fall during transport. The impeller inside the centrifugal pump is movable. It could be repaired or a new impeller made and fitted without having to make a new pump. The suction-pipe was of indiarubber with spiral of wire inside; it is separate from the pump and fastens to it with screws. The suction pump must occasionally be renewed. The slide-rod of the steam-pump can easily be straightened. The steam-pump was not new when taken to Hakodate.

By the Court:—I estimate that the damage I observed can be readily repaired for about \$200. After such repairs the apparatus will be able to work as well as before the injuries were sustained. I think the depreciation in value has not been more than five per cent. at outside. Under the circumstances and the work that was done, I think the damage which has taken place might have been anticipated. Centrifugal pumps are specially adapted for working in water containing sand and gravel. The boiler supplies steam to the steam-pump which acts as a pump for pumping out the vessel, and also putting the centrifugal pump in motion. The pressure in the boiler being limited to 40 lbs. makes no difference to the centrifugal pump. I call the pump the machine that has one cylinder for steam and one for water.

The Court then adjourned to Monday at 2 p.m.

Monday, the 25th day of October, 1880.

Upon the Court reopening at 2 p.m., a discussion took place as to whether Mr. Kirkwood was to call Captain Carst in evidence as a witness solely, or an expert.

Mr. Dallas left the matter to the Court. The opinion of Captain Carst would only be on the necessity of making the purchases stated.

The Court decided to admit the evidence.

John Carst, sworn, stated:—I am a master mariner, and have no connection with the defendant in this case. I had until June last year. I have been in business in Yokohama for fifteen years, and hold a diploma as a master mariner. The articles mentioned in the bill (produced) were all bought from me, and paid for by the plaintiff, Mr. Jan de Boer. Some were new, and some were second-hand. I think I charged about fair market rates. I took the steam-pump on board myself. I am proprietor of the Diving Company of Yokohama.

Oriaff Nelson, sworn, stated:—I went in the *Otome* as far as as Uruga with Jan de Boer, when I received instructions from the mate of the *Nordenskjöld* that I could return. I left Yokohama for the scene of the shipwreck on the 5th of April, with Captain Johannsson and Mr. Serebrenikoff. From the time that I arrived, Mr. Jan de Boer and his assistant did their very best as regards the working and salvage until the ship reached Yokosuka. I have not seen the plaintiff drunk, but I have heard him abusing the coolies. I have a certificate as a second engineer. It is now on board the *Nordenskjöld*. I have never passed any examination, but hold a certificate from the ship on which I was. According to Swedish laws a man can take a place as second engineer without requiring a certificate. However, a thoroughly incompetent man could not do so, because he has to prove that he has had at least three years' experience with machinery. I was a fireman on board the *Nordenskjöld*. This was in the spring of the present year. I know the engineer, von der Gland. He had charge of the pumps and machinery connected with the salvage operations until the *Nordenskjöld* floated, but when this was effected the machinery of the ship was quite as much under my control as his. She got off very early in the morning; perhaps between four and five o'clock. I consider that one engineer was not sufficient to superintend the salvage operations.

Cross-examined by Mr. Dallas:—I cannot say how often

I have seen Mr. Gland drunk. I have seen him so drunk that he could only go about on all-fours.

Mr. Dallas said that he would like to ask the witness whether the story that he was heard to give yesterday was true, and, if so, would he repeat it?

Mr. Kirkwood said that all Mr. Dallas could do was to ask questions.

Witness:—I will repeat what I said with pleasure. On a certain Friday Mr. Gland came on board the *Nordenskjöld*, which was then at Tokio, and asked me to bring the blacksmith, and I went with him to see plaintiff, where I heard that the Russian Consul had summoned the carpenter and myself as witnesses in this case. I told the plaintiff that I had not seen the Russian Consul since the 10th of July. He then offered to pay my passage to Europe if I would depose that the Consul had instructed me what to say, and would also give me a bonus of some hundred dollars. I told him that if I was summoned I should be obliged to tell the truth, and could not think of accepting any money. Mr. Jan de Boer then went to Yokohama, and I returned to the ship.

His Honour here asked the plaintiff if he had been able to follow the evidence of the witness.

The plaintiff replied that he could not understand a word of it; and on the evidence being read over to him he denied having had any such conversation as described. Except on such occasions as when the witness dropped in casually at his house, he had never been on terms of intimacy with him. He remembered Mr. Serebrenikoff coming on board the ship on one occasion when there was so little water in the boiler that it was necessary to rake out the fires and let the boiler cool down. If the boiler had been filled up with water at the time, an explosion would have been inevitable.

Mr. Serebrenikoff addressed the Court and testified to the competency of the last witness who, he said, had always done his work as an engineer thoroughly.

Tuesday, the 26th day of October, 1880.

On the Court reopening,

Mr. Dallas said that he wished to take the evidence of the chief officer of the *Nordenskjöld* before that of the captain, if the Court had no objection.

Anton Johannsen was then called, and stated:—I am twenty-nine years of age, and a Protestant. I am chief officer of the *Nordenskjöld*.

The witness was here sworn, and continued:—I have been at sea eleven years, two years as a subordinate, and nine years as a master. I joined the *Nordenskjöld* on the 30th of May, and had eight or ten men put under my orders. In the beginning of June the plaintiff came on board, and created a disturbance with the workmen. A Japanese was engaged in stowing the suction hose away. The plaintiff took up a broom and threw it at the Japanese because he was too slow, but I do not actually know if he struck the Japanese or not.

His Honour asked Mr. Dallas what particular point he intended to establish by the evidence of this witness. The Japanese themselves had made no complaints against the plaintiff about ill-treatment. He wished to comprehend clearly what Mr. Dallas intended to prove by the evidence of this witness.

Mr. Dallas:—Well, really, that instead of the plaintiff saving the *Nordenskjöld*, the ship actually saved him. I mean that, had it not been for assistance rendered to him by the ship, he could not have carried out his agreement.

His Honour:—In your reply you state that, in consequence of the brutality of the plaintiff, the Japanese Government refused to supply him with workmen.

Mr. Dallas:—I wished to state that if Mr. Serebrenikoff and the plaintiff had agreed better together, the operations would have been greatly facilitated.

His Honour said that he did not see what that had to do with it.

At this point the Court retired to consult. After returning.

Edward Hans Johannsen stated:—I am thirty-six years of age, and at present captain of the steamer *Nordenskjöld*.

After being sworn, the witness continued:—I have been at sea for the last twenty years. I have a certificate of competency as a master mariner. I got it last year, but I have navigated in that capacity for ten years.

Mr. Dallas here wished to put in a map, showing the position of the wreck.

Mr. Kirkwood raised an objection, because this was the first he had heard or seen of the map. He ought to have been allowed to compare it with some other map beforehand.

Witness:—I arrived at the scene of the shipwreck on the 15th of August, at which time the steam-pump, &c., were at Hanasaki. The plaintiff had not arrived at the ship when I got there. Ogishi was a little nearer to the wreck than Hanasaki. It would be easier to call in at the former than the latter place. I do not know any special reason for the plaintiff fixing upon Hanasaki as a convenient locality to disembark his apparatus, any more than Ogishi. Mr. Kirkwood said that his client was quite willing to explain his reasons for choosing Ogishi, if he was permitted.

His Honour said this was not necessary at present.

Witness:—I transported all the machinery connected with the boiler, &c., from Hanasaki to Ogishi. I noticed when the boiler was landed that a tube was faulty. I am not certain if it was the same as that burnt later on, because I did not see that one until we arrived recently at Shinagawa. The number of hands employed on the salvage operations was insufficient and the plaintiff declined to engage more. It used to be very hard work to get them to to turn out in the morning. On two occasions I had to lend the plaintiff six coolies. I believe that the reason why the workmen all absented themselves, was because they thought the plaintiff would not treat them properly.

Mr. Kirkwood suggested that all the questions now being asked affected matters already admitted in the plaintiff's petition.

Witness:—I should like to explain how the plaintiff did not, in my opinion, conduct the salvage operations properly. On the 5th of May, when he, Mr. Serebrenikoff, and myself went to the scene of the wreck, I saw plaintiff strike a Japanese. The Kaitakushi officials had promised to supply him with ten workmen and two carpenters. The plaintiff had a contract with the Kaisakushi, and another at the Russian Consulate. I recollect that the Kaitakushi made an offer to buy the vessel as she stood for 25,000 yen plus \$100 per diem until she was floated. After the vessel floated, I reprimanded the plaintiff for being about to knock a shackle out of a chain by which the vessel was fastened to the shore without having another hawser laid out. I suggested fastening the ship with one, which proved successful. A Japanese boat engaged in the salvage operations was injured by this action of the plaintiff.

The Court adjourned until 5 p.m.

At 5 p.m. when the Court reassembled

Witness continued:—If I had not prevented Mr. Jan der Boer from knocking loose the cable, until another one was laid out, the vessel must have gone ashore. When she had moved, and swung round into another position, I think she was slightly worse off than before.

Mr. Kirkwood said that he could not see what all this had to do with the case.

The Court ruled that it was admissible as being evidence on the salvage operations.

Witness:—The plaintiff said to me on his arrival at the scene of the wreck that he should write to the Russian Consul at Yokohama, and tell him that the vessel was not in the position in which he had expected to find her at all. The defendant did not take actual part in the salvage operations but he urged the plaintiff to use the utmost expedition. The Japanese authorities, on the 5th May, made a categorical refusal to render the plaintiff any assistance. The Japanese interpreter said that it was the plaintiff's own fault that he could not get Japanese workmen. The interpreter came from Nemoro with our officers. On the 5th of May, I myself superintended operations as the plaintiff had put the men under my orders then. He undertook to act as an interpreter because I could speak no Japanese. He could not get the coolies to work for him, because they did not like his conduct to them. I always kept command of the workmen until the vessel arrived at Yokohama. The principal damage to the steamer was a hole in the stern. The plaintiff repaired it with six pieces of sheet iron on the outside, but the next morning all his repairs were found to have been carried away. The hole was eventually closed by the carpenter and two Japanese belonging to the ship.

They took some time but the work was well done. When I arrived at the scene of the shipwreck the door of the depot was broken, and all the stores were scattered on the ground.

His Honour asked what this had to do with the case.

Mr. Dallas explained that, in his reply, his client had denied the statement of Mr. Gland in connection with the quarrel at the depot of stores, and he wished to have the evidence of this witness about the subject.

Witness:—I consider that Mr. von der Gland rendered but little assistance towards saving the *Nordenskjöld*, he was frequently not in a condition to do his work properly. I remember that on the 27th of May he disappeared at three p.m. either sick or drunk, I don't know which, but at any rate, he was absent until four o'clock next day; the time was a critical one in the operations and Mr. Nielson and myself were left alone in the engine room. He more than once reversed the suction pipe in order to make the engine work at high pressure. I do not know when the blowcock was broken off. It was after the vessel had arrived at Okishi that I heard that it had happened. I remember when the engines were stopped and the fires drawn because there was so little water in the boilers that to have added more would have caused an explosion.

The defendant here said that the plaintiff had done his utmost to injure him, to delay the salvage operations, and embroil him with the Japanese Government; he thought it was particularly essential that evidence on the plaintiff's conduct should be taken. He didn't ask this from spite but to shew how he delayed the operations in order to disgust him (defendant) with the whole affair.

After a short discussion on the subject, Mr. Dallas said that he would not ask any more questions.

Cross-examined by Mr. Kirkwood:—The steam-pump and engines on board the *Nordenskjöld* were under the charge of the plaintiff. I have given orders about them sometimes. I never directed the work without first consulting the plaintiff. I have never assisted at salvage operations before. I had an interpreter with me. When I came to Nemoro I did not require him as I had the plaintiff. Mr. Jan der Boer engaged six coolies after the 5th of May. It may have been about the 20th of May. I saw the flange of the pump broken; it was done by the ship's carpenter. I gave the orders to move the pump and helped to lift it myself. The carpenter broke the flange when trying to nail it down. He was in too great a hurry to use screws. The plaintiff gave me money for expenses. Until we arrived at Yokohama, Mr. Gland kept the engineer's logbook. Mr. Nielsen could have kept it if he had cared about it. Until the *Nordenskjöld* floated I directed the operations and pointed out the various positions where we wished anchors dropped.

By the Court:—I directed the salvage operations myself. The plaintiff did not conduct them.

The case was then adjourned until Saturday the 30th instant at 10 a.m. when Mr. Carcano has been delegated by the Court take the evidence of the carpenter of the *Nordenskjöld* as the vessel is shortly to leave Yokohama.

## THE FRANKLIN EXPEDITION.

The *New York Herald* contains a very interesting narrative of Lieutenant Schwatka's search for relics of the ill-fated expedition of Sir John Franklin, from which we make the following extracts:—

Depot Island, North Hudson Bay, August 1st, 1880.

My previous letter closed with the testimony of the Inuit woman Ahluanyah regarding the lost explorers of the Franklin expedition, and the conclusions derived therefrom.

When she had finished her statement we gave her some needles, spoons, a tin pan and other articles that well repaid her for the trouble she had taken to reach us. Here was a woman who had actually seen the poor, starving explorers, and her story was replete with interest for us. Every word she uttered seemed fraught with the dread tragedy and she appeared to share our interest, for her face was full of expression. At times it was saddened with the recital of the piteous condition of the men, and tears filled her eyes as she recalled the sad scene at the tent place where so many had perished and their bodies became food for wild beasts. It would seem from what she related to-day that the party

who perished in the inlet that we visited yesterday was part of the same that Ahlangyah met on King William Land. She and her friends could not get across Simpson Strait, while the white men kept on over the rotten ice, probably at last compelled to take to their boat, and then, at the mercy of the wind and ice, after losing others of their number near Pfeffer River and Todd Islands, had drifted into the inlet where the dead bodies were found with the boat. How long it took them to reach this place will probably never be known, but there is little doubt that they were in a desperate condition; in fact, as we subsequently learned from other witnesses, there were almost unmistakable evidences of their being compelled to resort to cannibalism until at last they absolutely starved to death at this point. At least all but one, whose remains were found during the summer after our visit here, about five miles further inland.

We secured one valuable relic here in the sled seen by Sir Leopold McClintock in Erebus Bay, which at that time had upon it a boat, with several skeletons inside. Since the sled came into the hands of Inuits it has been cut down several times. It was originally seven feet longer than at present, the runners about two inches higher and twice as far apart. But even in its present state it is an exceedingly interesting memento. We have carefully preserved it in the condition in which it has been in constant use by the Esquimaux for many years. We met other portions of this tribe at intervals of from six to ten miles along this coast until we reached Seaforth Point, where we crossed to King William Land and left them behind until our return in the following September.

On the evening the 4th of June we met a young man, named Adlekok, who during the summer previous had found a new cairn erected by white men near Pfeffer River, which had never been seen by any other Inuits. Near by were three graves and a tent place in which he found a pair of wire gauze snow goggles, which we bought from him. This information seemed of sufficient importance to be followed up immediately before any other natives should find and rob the cairn. Consequently the next day Lieutenant Schwatka and I took a light sled with Toolooah to drive and Adlekok as guide, and visited the spot. We took a day's rations with us to use in case we did not get back that night and started with a head wind and storm that confined our view to the immediate vicinity of the sledge. Our guide, however, took us through this trackless waste of smooth ice a distance of over twenty-five miles without deviation from the direct line, with no landmarks or sun to steer by; but on he went with the unerring instinct of a dog, until we struck the land at the western banks of Pfeffer. Arrived at the cairn we found it as he said, "a white man's cairn" unmistakably, but before proceeding to take it down we examined it carefully and found scratched on a clay stone with the point of a sharp instrument,

and on the opposite side

ETERNAL HONOR TO THE DISCOVERERS OF  
THE NORTH WE—

and knew it to be the cairn erected by our countryman, Captain Hall, over the bones of two of Franklin's men which he speaks of having found here. A portion of the inscription was lost by the breaking off of a piece of the stone on which it was written. We did not take down the monument, but after making a hasty sketch, returned to camp, having travelled over fifty miles in ten hours.

At this camp we found another interesting relic in a pine board that seems to have been part of the head of a bunk or other permanent fixture, and has the initials "L. F." in brass tacks upon it. This was picked up on the west coast of Adelaide Peninsula, near where the ship went down that drifted through Victoria Strait, and may serve to identify that vessel, thus proving a most interesting and valuable historic relic. At the next camp, which was our last stopping place on the mainland, we met an old woman named Tooktoocheer, widow of Pooyetah, who was among the first to visit the boat place we saw a few days ago. We were somewhat disappointed in her as a witness, for she was so old that her memory was at fault and she would

wander about to different places and relate circumstances without explanation. Her son, who was present at the interview, was a lad of about twelve years when he visited the boat place with his parents and retained a vivid recollection of the place. His testimony, therefore, proved to be what we had hoped of his mother's. All the time he was talking the old woman sat nodding approval as the circumstances he was relating were recalled to her memory. His name is Ogzenekjenwoek, and he is an aruketko or medicine man in his tribe. The recollection of the boat place was somewhat impressed upon his mind by the explosion of a can of powder with which he and another lad were playing after the articles were found there. The effects of the explosion came near proving fatal at the time, and when I met him during the fall on King William Land he told me he had never entirely recovered from the shock.

I give the interview with Tooktoocheer and her son as I recorded it in my notebook at the time, so that each reader may draw his own conclusions. Some of the statements will undoubtedly appear strange, but in the main they are perfectly intelligible and exceedingly interesting. Tooktoocheer said she was from Okbillegeok (Pelly Bay of the charts), a portion of the Netchillik country. She is the widow of Pooyetah, spoken of by Sir John Ross and Captain Hall. She appeared to be about seventy years old, and was an object of high esteem by her people, as was evinced in the care that bestowed upon her comfort. She said she had never seen any of Franklin's men alive, but saw six skeletons on the mainland and an adjacent island—four on the mainland and two on the island. This she pointed out on the southern coast near 95 degrees west longitude. There were no graves at either place. Her husband was with her at the time and seven other Inuits. This was when she was at the boat place west of Richardson Point. In fact, she seemed to have the two places somewhat mixed up in her mind, and Ogzenekjenwoek took up the thread of the narrative here. In answer to a question which we asked his mother he said he saw books at the boat place in a tin case, about two feet long and a foot square, which was fastened, and they broke it open. The case was full. Written and printed books were shown him and he said they were like the printed ones. Among the books he found what was probably the needle of a compass or other magnetic instrument, because he said when it touched any iron it stuck fast. The boat was right side up and the tin case in the boat. Outside the boat he saw a number of skulls. He forgot how many, but said there were more than four. He also saw bones from legs and arms that appear to have been sawed off. Inside the boat was a box filled with bones; the box was about the same size as the one with books in it.

He said the appearance of the bones led the Inuits to the opinion that the white men had been eating each other. What little flesh was still on the bones was very fresh; one body had all the flesh on. The hair was light; it looked like a long body. He saw a number of wire snow goggles, and alongside the body with flesh on it was a pair of gold spectacles. (He picked out the kind of metal from several that were shown him.) He saw more than one or two pairs of such spectacles, but forgot how many. When asked how long the bodies appeared to have been dead when he saw them, he said they had probably died during the winter previous to the summer he saw them. In the boat he saw canvas and four sticks (a tent or sail), and a number of watches, open faced; a few were gold, but most were silver. They are all lost now. They were given to the children to play with and have been broken up and lost. One body—one with flesh on—had a gold chain on, fastened to gold earrings and a gold hunting case watch with engine turned engraving attached to the chain and hanging down about the waist. He said when he pulled the chain it pulled the head up by the ears. This body also had a gold ring on the ring finger of the right hand. It was taken off and has since been lost by the children in the same way that the other things were lost. His reason for thinking that they had been eating each other was because the bones were cut with a knife or saw. They found one big saw and one small one in the boat; also a large red tin case of smoking tobacco and some pipes. There was no cairn there. The bones are now covered up with sand and seaweed, as they were lying just at high water mark. Some of the books were taken home

for the children to play with and finally torn and lost, and others lay around among the rocks until carried away by the wind and lost or buried beneath the sand.

His statement in reference to one of the deceased wearing a watch by a chain attached to his ears appears strange, but I give the statement as he made it. The chain may in some way have become attached to the ears, or, ridiculous as the story sounds, there may have been some eccentric person in the party who wore his watch in that way, and if such should prove to be the case this would certainly identify him beyond doubt. While the old woman sat in our igloo giving her statement or trying to recollect the circumstances I succeeded in getting a good portrait sketch of her, which attracted considerable interest among the natives, and Ogzenekjeuwock, who toward the latter part of the interview had begun to exhibit symptoms of impatience, turned quickly around as soon as he had finished and asked to have his portrait taken also, in which I accommodated him, much to his gratification.

In reviewing the testimony of the foregoing witnesses it appears confirmatory of the opinion that the skeletons found at this place were the remains of some of the party who were seen by Ahlanyoh and her friend on Washington Bay. She said that "Tooloosh," "Agloocar" and "Doktook" wore spectacles, and spectacles were found at the boat place. Gold watches being found there is also an evidence that there were officers in the party. It is probable that the five men who had a tent on shore near the Inuit tupics were all officers. It is also a very natural deduction that the books that were found in a sealed or locked tin case, which had to be broken open by the natives, were the more important records of the expedition and in charge of the chief surviving officers, as it is not probable that men who were reduced to the extremity that these were, and having to drag everything by hand, would burden themselves with general reading matter. The boat, judging from the relics that we found, was a very heavy one and copper bottomed, for most of the kettles that we saw in use among the Netchilliks were made of sheet copper that they said came from this and the other boats in Erebus Bay. But the boat was an absolute necessity and could not be abandoned. There is no doubt, however, that everything superfluous had been dropped from time to time until nothing remained that could possibly be dispensed with, and such books as they had, besides the Nautical Almanac and Ephemeris, if indeed under the circumstances they would carry even them, were probably the most important records of the expedition.

During the year and a half that the *Erebus* and *Terror* were frozen fast in Victoria Strait the officers had probably surveyed the adjacent shores very carefully and had undoubtedly made observations that were highly important. Especially would this be the case with their magnetical observations, as they were right upon the magnetic pole. We saw some tall and very conspicuous cairns near Cape Felix, which had no records in them and were apparently erected as points of observation from the ships. As their terrible experience commenced after abandoning the vessels it is probable that their time previous to that was occupied in a manner creditable to themselves and exceedingly valuable to all interested in scientific work. The records of these observations were in all probability contained in the tin box which Ogzenekjeuwock speaks of as having been found and lost beyond recovery.

An old Netchillik, named Ockarnawole, stated that five years ago he and his son, who was also present in the igloo, made an excursion along the northwestern coast of King William Land. Between Victory Point and Cape Felix they found some things in a small cask near the salt water. In a monument that he did not take down he found between the stones five jackknives and a pair of scissors, also a small flat piece of tin, now lost; saw no graves at this place, but found what from his description of the way the handle was put on was either an adze or a pickaxe. A little north of this place found a tent place and three tin cups. About Victory Point found a grave, with a skeleton, clothes and jack-knife with one blade broken. Saw no books. In a little bay on the north side of Collinson Inlet saw a quantity of clothes. There was plenty of snow on the ground at the time they were there.

Viewing this statement in the light of our subsequent search upon this ground I am inclined to believe that the

grave they found was not at Victory Point, but was Irving's grave, about three miles below there. We saw no evidence of any grave at Victory Point, though we made a particularly extended search around that entire section of the country. The little bay spoken of is also probably the little bay where Lieutenant Irvings's Grave was discovered. There is a little bay on the north side of Collinson Inlet, but Lieutenant Schwatka and I visited it several times without finding any traces of clothing or any other evidences of white men having been there, and from what we saw at other places it seems almost impossible that there could have been much there as late as five years ago without some indications remaining. The vicinity of places where boats had been destroyed or camps where clothing was found were invariably indicated by pieces of cloth among the rocks, at greater or less intervals, for a long distance, sometimes as far as one or two miles on either side, and it would be almost impossible to escape seeing the principal point when led to it by such gradually cumulative evidence.

From this camp we went in two marches to Cape Herschel, where we left the heaviest of our baggage, with Joe and the other Inuits, taking only the white men of the party, with Tooloosh and his family and Owanark, Equeesik's youngest brother, to assist in the management of the sled, and started for Cape Felix on the 17th. We left instructions with Joe to remain at Cape Herschel as long as they could find enough to eat there, but if there was more game further down the coast or on the mainland to go there, and leave stones to indicate their route so that Tooloosh would know where to look for them when we returned from Cape Felix. We took a course but little west of north, and at night encamped at the head of Washington Bay. Here we left the salt water ice and started across land, keeping the same direction, with the intention of striking Collinson Inlet near its head. Our surprise can then be imagined when, after two days' travelling we came out on Erebus Bay, which we thought was far to the west. This discrepancy was afterward accounted for when we found, by a comparison with the position of points between Cape Jane Franklin and Cape Felix, established by Sir James Ross, and confirmed by the officers of the *Erebus* and *Terror*, that Cape Herschel is really about eighteen or twenty miles further west than mapped on the Admiralty charts.

The travelling across land was exceedingly heavy and tedious, owing to the softening condition of the snow and to the lakes being covered with water to the depth of about six or eight inches. In the morning the slight crust on the snow, formed during the night, would break through at nearly every step, while during the rest of the day it was simply wading through slush or water.

We found the salt water ice also in a bad condition for travelling. It was very old ice and as hummocky as it is possible for ice to be. We usually kept near the coast, where we found pretty good sledging; but one day we took the hummocks, to avoid a great detour that following the shore ice would have entailed upon us, and did it to our sorrow. The fall snows and winter winds had piled up around and among the hummocks, filling in the interstices, so that, were the snow frozen, the sledging would not have been so very difficult; but the sun had already poured his rays upon it, day and night, for so long a time that the snow was soft and nearly every step would break through.

Sometimes we would sink to our waists and then our legs would be dangling in slush and water without finding bottom. The sled would often sink so that the dogs could not pull it out, light as was the load, and when we would gather round to help them we could only get an occasional foothold, perhaps by kneeling in a hummock or holding on with one hand while we pulled with the other. Even the dogs could not pull to any advantage. Some would be floundering in the slush and water while others were scrambling over the broken ice, and yet under all these disadvantages we were able to make a march of ten miles through the skill and experience of our Inuit dog driver. Without the assistance of dogs and natives it is altogether probable that we would not have been able to accomplish more than two or three miles at the best, and I can well understand that Dr. Hayes had so much difficulty in crossing Smith Sound through the heavy hummocks in the spring of 1861. But at the same time I feel pretty well

convinced that with plenty of good dogs and competent native drivers to manage the sledges there is no ice in the Arctic that would prevent an average march of ten miles a day with light loads during the long days of spring. I would not even stipulate for such an exceptionally excellent guide and driver as our faithful Toolooah. Such as he are rare anywhere and especially so among the Esquimaux. He is not only the best hunter in his tribe, but the best dog driver and the most energetic man I have seen among all the tribes with whom I have come in contact. He is more like a first-class white man in that respect than an Esquimaux, and there is a legend in his tribe that he was never known to be tired. It is certain that to him more than to all the other natives with us combined is due the success of our enterprise.

When the weather was unpropitious for hunting and we would be without food it was nothing more than the usual Inuit custom to say "*Ma-muk-poo-noi*" ("No good"), and sit down to wait for the weather to improve. But under such circumstances I have known our brave hearted Toolooah rise equal to the emergency and go out to hunt for game until he found it. The others would perhaps go out and look around for a short time, and if they saw no game would come in, while he would not get in until nearly midnight if, as was seldom the case, he came in empty handed. I remember one time where we were without food, and moving into a portion of the country which we knew to be but thinly stocked with game. The hunters all went out, though the weather was thick with snow, and the only probability of seeing reindeer being that they might stumble upon them unobserved by the accident of approaching them towards the wind. The others came in about noon discouraged, having seen no game. Toolooah, on the contrary, did not get in until about five hours later; then he came in for the dogs, to bring in three reindeer that he had killed a few miles north of the camp. He went out in a southwesterly direction, and started to make a circuit of the camp on a radius of about five miles. By this ingenious course he came upon the fresh tracks of three reindeer, and at once started in pursuit, determined to follow them until he came up to them. The days were short, and he had to move rapidly, so that he absolutely ran about twelve miles until he overtook and killed them. I merely mention this incident to show the kind of metal our Toolooah is made of, not as a sample of Inuit character, but as a remarkable contrast to it.

Our ten-mile march through Erebus Bay occupied fifteen hours, and we were all pretty well worn out when we reached the shore and encamped, still some distance below Franklin Point. We laid over the next day, for Toolooah, who had exerted himself even beyond his great powers of endurance, was still quite exhausted, and though he expressed his readiness to resume the journey Lieutenant Schwatka did not think it sufficiently urgent to run the risk of breaking him down altogether, not only out of personal regard for the noble fellow, but as he was our sole dependence and losing his services would be a sad if not altogether fatal disaster to the entire party.

During the day I shot two of an apparently distinct species of snipe to preserve their skins for the Smithsonian Institution collection. One of them was distinguished by a sweet, simple song, somewhat similar to the lark, its silvery tones gushing forth as if in perfect ecstasy of enjoyment of sunshine and air, at the same time rising and poising itself upon its wings. It seemed almost inhuman to kill the sweet little songster, particularly as it was the only creature I saw in the Arctic that uttered a pleasant note. All other sounds were such as the scream of the hawk and the gull, the quack of the duck, the yell of the wolf, the "Ooff! ooff!" of the walrus or the bark of the seal. All harsh and unmelodious, save the tones of this sweet little singer. Nothing but starvation or scientific research could justify the slaughter of one of these innocents. I believe I shut my eyes when I pulled the trigger of my gun, and I know my heart gave a regretful thump when I heard the thud of its poor, bleeding body upon the ground. When we started for Franklin Point the next day Lieutenant Schwatka concluded to follow Toolooah's advice and keep upon the smooth ice near the shore, even though it should increase the distance marched. Our experience of the hummocks of Victoria Straits was not one that we were anxious to repeat. We had a short stretch of

similar work in crossing the mouth of an inlet just below Franklin Point and were glad enough when we got through. The thermometer registered 37 degrees in the shade and 60 degrees in the sun. There was scarcely any wind and coats were a burden of which we had soon to relieve ourselves. The heat while walking was quite as exhausting as 98 degrees in the shade at New York. We saw a number of seals on the ice opposite the mouth of the inlet, and Toolooah shot one which was an unusually big specimen. In fact, the average of those we have seen in this part of the country is much larger than those at Hudson's Bay.

During the entire day and night small flocks of ducks were flying swiftly past the tent, and so unaccustomed are they to meeting human beings in that wilderness that they would be almost directly on the tent before they saw it, which only caused them to deviate a little to the right or left or put on a little more steam. Lieutenant Schwatka seated himself on a rock alongside the tent, with his double-barrelled, breech-loading shot gun in his hand, and in a short time stopped three, two drakes and a duck. The drakes are exceedingly pretty, especially about the head and neck. The head is of a pale olive-green hue, a fashionable color in silks a few years ago, and known by the extraordinary name of "elephant's breath." This gradually merges into a very pale, warm gray, the line of demarcation between it and the very dark brown which constitutes the general color of the body being very abrupt. The bill is of a vermillion red, and surmounted by a bright orange colored crest, with a black border as positively marked as if of black tape. At this season we usually see the drakes flying together and the ducks in separate bands, reminding one of the division of sexes in a country meeting house. We often came upon an immense body of drakes sitting upon the edge of an ice floe, looking very much like a regiment of huzzars at a distance drawn up in time of battle. The duck is not so gaudy as her husband. She is quite contented in a full suit of mottled brown and olive gray, presenting a texture on the back somewhat similar to the canvas back species of Chesapeake Bay. About half-past ten o'clock in the evening Toolooah and I walked up to the crest of a ridge north of camp to see if there were any points still to the north of us in this meridian. We found the coast bearing off well toward the eastward and then toward the northeast, and knew it to be the upper coast of Franklin Point. We also saw a reindeer, which Toolooah shot before returning to camp.

When we left Franklin Point the four white men of the party kept upon the land near the coast, and left the sled in charge of the Inuits to follow along the shore ice. The snow was entirely off the ridges and only lay in great patches of soft slush in the valleys and upon occasional marshes. We spread out on the land so as to cover as much ground in our search as possible, moving like a long line of skirmishers, with instructions that in case we saw anything that we did not understand or which required further investigation to make signals to assemble. In this way before reaching Collison Inlet we found the graves of two white men, near one of which was lying the upper part of a skull, while within the pile of stones we found the upper maxilla with two teeth and a piece of the cheekbone. No other human bones were found, but these were laid together for burial on our return, when we could give a more thorough search.

The next day we laid over at Cape Jane Franklin to make a preliminary search of the vicinity. Lieutenant Schwatka and I went up Collinson Inlet, but saw no traces of white men. Henry and Frank, who had been sent up the coast, were more fortunate. About a mile and a half above camp they came upon the camp made by Captain Crozier, with his entire command from the two ships, after abandoning the vessels.

There were several cooking stoves, with their accompanying copper kettles, besides clothing, blankets, canvas, iron and brass implements, and an opened grave, where were found a quantity of blue cloth, part of which seemed to have been a heavy overcoat, and a part probably wrapped around the body. There was also a large quantity of canvas in and around the grave, with coarse stitching through it and the cloth, as if the body had been encased as if for burial at sea. Several gilt buttons were found among the rotting cloth and mould in the bottom of the grave, and a lens, apparently the object glass of a marine telescope.

Upon one of the stones at the foot of the grave Henry found a medal, which was thickly covered with grime, and was so much the color of the clay-stone on which it rested as to nearly escape detection. It proved to be a silver medal, two and a half inches in diameter, with a bas relief portrait of George IV., surrounded with the words.

GEORGIUS III. D. G. BRITANNIARUM  
REX, 1820.

on the obverse, and on the reverse a laurel wreath surrounded by

SECOND MATHEMATICAL PRIZE, ROYAL  
NAVAL COLLEGE.

and enclosing

AWARDED TO JOHN IRVING, MIDSUMMER,  
1830.

This at once identified the grave as that of Lieutenant John Irving, third officer of the *Terror*. Under the head was found a figured silk pocket handkerchief, neatly folded, the colors and pattern in a remarkable state of preservation. The skull and a few other bones only were found in and near by the grave. They were carefully gathered together, with a few pieces of the cloth and the other articles, to be brought away for interment where they may hereafter rest undisturbed. A reburial on King William Land would be only until the grave was again found by the natives, when it would certainly be again torn open and despoiled.

The day after this discovery was made by the men, we moved camp to the vicinity of the grave and spent two days in searching for other matters of interest, but there was still some snow on the ground and little ponds in the vicinity of the articles were partly frozen so that an exhaustive search was impossible. Upon our return from Cape Felix, on the 11th of July, we found the snow entirely gone and the ponds near the shore nearly all dry, we therefore had little difficulty in completing the search at that time. Among the various articles found was a brush with the name "H. Wilks" cut in the side, a two-gallon stone jug stamped "R. Wheatley, wine and spirit merchant, Greenheith, Kent," several tin cans, a pickle bottle and a canvas pulling strap, a sledge harness marked with a stencil plate "T 11," showing it to have belonged to the *Terror*. We also found a stocking rudely made of a piece of blanket, showing that they were in need of good stockings, which are so essential to the comfort of the Arctic traveller. For this purpose nothing is so good as the fur of the reindeer, but next to that well made woolen stockings are the best. It was heartrending to see this mute testimony to their destitution.

At our second visit Tooloonah's wife found in a pile of stones, where had formerly stood the cairn seen by Lieutenant Hobson, a piece of paper which had weathered the storms of more than twenty Arctic winters. It was with much difficulty that I could open it without tearing it, while all stood around in anxious expectancy, confident that it was an additional record from Captain Crozier, as it was in a tattered and weather-beaten condition.

This, however, proved only to be a copy of the Crozier record, found by Lieutenant Hobson of McClintock's expedition. The document, which mentions *inter alia* the death of Sir John Franklin, will be so familiar to our readers that we do not republish it.

We next set about digging for the record that Captain McClintock proposed to bury ten feet true north from the centre of the cairn and a foot below the surface, but though we dug a deep trench four feet wide from the centre of the cairn, due north, for a distance of twenty feet, nothing was found, and the inference is that Captain McClintock either failed to deposit the record or that changes in the surface of the ground have brought it to light, and it has either been stolen by natives or washed into the sea.

Some of the articles found were strewn along the beach for a long distance on either side of the pile of clothing and heavy implements, and were covered up with snow when we first visited the spot. There was a large quantity of cask hoops near by, but no wood. Even the handles of the shovels and pickaxes had been sawed off, probably by the natives who first found the place.

This was evidently the spot where the crews landed when

they abandoned the ships, and, as Lieutenant Hobson says, it appeared as if they had selected only what was necessary on their sledge journey. It would further appear that when the party reached the southern coast of King William Land after a tedious and wasting journey, and found themselves fast fading away without being able to reach the mainland, a small party was sent back to the ships for provisions. The testimony of the Ookjoolik, who saw the ship that sank off Grant Point, showed that there were some stores on board even then, though only a small quantity. It is probable that Lieutenant Irving was the officer in charge of this return party, and that he died after reaching the camp. It is also probable that these people, who, according to the Ookjoolik testimony, drifted with the ship to the island off Grant Point, were also of this party, and, with the sailors' instinct, preferred to stick to the ship to returning to the already famishing party which they left with scarcely any better prospects on the south coast. The appearance of the boat place on Erebus Bay seems to indicate that it floated ashore after the ice broke up and had previously been abandoned by those who were able to walk. That skeletons were found in the boat by those who saw it before it was destroyed, and near by by our party, would seem to indicate that the whole party were in a desperate condition at the time, otherwise the helpless ones would not have been abandoned.

Such a state of affairs could scarcely have occurred on their southern trip, and is a strong indication of a return party. Lieutenant Irving's death had not occurred when they first left the vicinity of Cape Jane Franklin, or it would have been mentioned in Captain Crozier's record, which was written the day before they started for Bock's River. That the boat on Erebus Bay drifted in is evident from its being found just at high-water mark where the debris is still visible. At the time the party returned under Lieutenant Irving the sleds could not have been dragged along that line, as the snow would have been off the ground just then and probably was gone when the large party got that far on their way south as the testimony of the natives who met them in Washington Bay shows that they moved exceedingly slow. That there were men on the ship that drifted down Victoria Strait is additional reason for believing that they returned, for Captain Crozier in his record accounts for all the survivors being with him. It is possible that those who went out to the ship were caught there by the ice breaking up, and could not rejoin their companions on the shore, if indeed there were any there, which is doubtful, for we saw no skeletons at the camping place except Lieutenant Irving's. The ice broke up in Erebus Bay and Victoria Strait the year we were there on the 14th of July, and it is probable that it was as late as that when the return party reached the camp near Lieutenant Irving's grave.

We left Irving Bay on the 30th of June, caching all our heavy stuff in order to lighten the sled as much as possible, and reached Cape Felix on the 3rd of July, having laid over one day on the north side of Wall Bay. We saw no traces of the Franklin expedition until we arrived at our place of encampment, near Cape Felix. The walking, however, was developing new tortures for us every day. We were either wading through the hillside torrents or lakes, which, frozen on the bottom, made the footing exceedingly treacherous, or else with sealskin boots, rendered soft by constant wetting, painfully plodding over sharp clay stones, set firmly in the ground, with the edges pointing up, or lying flat and slipping as we stepped upon them and sliding the unwary foot into a crevice that would seemingly wrench it from the body. These are some of the features of a walk on King William Land, and yet we moved about ten miles a day and made as thorough a search as was possible. All rocky places that looked anything like opened graves or torn down cairns—in fact, all places where stones of any kind seemed to have been gathered together by human hand—were examined, and by spreading out at such intervals as the nature of the ground indicated covered the greatest amount of territory. Lieutenant Schwatka carried his double-barrelled shotgun and killed a great many ducks and geese, and I, with my Sharp's rifle, got an occasional reindeer. We were now on a meat diet exclusively, as and most of it was eaten almost as soon as killed, we all suffered more or less from diarrhoea. Nor did we have any other food until nine months later when we

reached the ship *George and Mary* at Marble Island, except a few pounds of corn starch, which we had left at Cape Herschel, when we started for Cape Felix on the 17th of June. In due course of time, however, we got used to the diet, and experienced no greater inconvenience from it than did our native companions.

Where we encamped, which was about three miles south of Cape Felix, was what appeared to be a torn down cairn and a quantity of canvas and coarse red woollen stuff, pieces of blue cloth, broken bottles and other similar stuff, showing that there has been a permanent camping place here from the vessels, while a piece of an ornamented china tea cup and cans of preserved potatoes showed that it was in charge of an officer.

Our flag waved from the highest point of King William Land throughout the day following, which we were altogether too patriotic to forget was Independence Day. After firing a national salute from our rifles and shotguns our day's work was resumed. Henry and Frank were sent to explore the two points further along the coast, while Lieutenant Schwatka and I searched the vicinity of the camp and about a mile inland. It was a dismal, foggy day, but we derived great comfort from occasional glimpses of our country's flag through the lifting fog, the only inspiring sight in this desolate wilderness—a region that fully illustrates "the abomination of desolation" spoken of by Jeremiah the prophet.

The next day Lieutenant Schwatka went further inland, Frank and Henry down the coast, and I took Toolooah, with the sled, and went around the point toward Cape Sidney, keeping well out on the ice to see if any cairn might have been erected to attract attention from that direction. On the way we stopped and took down a cairn that I had seen on the day of our arrival. We found nothing in it though, the earth beneath it being soft. We dug far down in the hope of finding something to account for its existence, as Toolooah believed, though he was not certain, that it was a white man's cairn. I did not go as far as Cape Sidney, which had been my intention, as a thick fog, which came up as we left the cairn, rendered the trip useless for the purpose intended, as we could only get occasional glimpses of the shore and could not see inland at all.

Lieutenant Schwatka found a well-built cairn or pillar seven feet high on a high hill about two miles back from the coast, and took it down very carefully without meeting with any record or mark whatever. It was on a very prominent hill from which could plainly be seen the trend of the coast on both the eastern and western shores, and would most certainly have attracted the attention of any vessels following in the route of the *Erebus* and *Terror* though hidden by intervening hills from those walking along the coast. The next day Frank, Toolooah and I went with Lieutenant Schwatka to take another look in the vicinity of the cairn and to see if with a spyglass we could discover any other cairn looking from that hill, but without success. It seemed unfortunate that probably the only cairn left standing on King William Land, built by the hands of white men should have had no record left in it, as there it might have been well preserved. When satisfied that no document had been left there the inference was that it had been erected in the pursuit of the scientific work of the expedition, or that it had been used in alignment with some other object to watch the drift of the ships. Before leaving we rebuilt the cairn and deposited in it a record of the work of the Franklin search party to date.

We left Cape Felix on the 7th of July, reluctantly satisfied that Sir John Franklin had not been buried in that vicinity. The minuteness of our search will appear in the number of exploded percussion caps, shot and other small articles that were found in various places. The Inuits who were with us evinced a most remarkable interest in our labours, and with their eagle eyes were ever finding things that would have escaped our attention. Everything they did not fully understand they brought to us, and though many of such things were of no account they were not discouraged. Since Toolooah had found the inscription scratched on a clay stone on the monument erected by Captain Hall over the remains near Pfeiffer River he had ever been watchful, and often, while away from camp hunting, he has come upon a stone near a demolished cairn or on some conspicuous place which had marks on that he thought might be writing. These he invariably

brought into camp, though often compelled to carry them a long distance, in addition to a load of meat. We always praised his effort in that line, and were pleased to notice that he did not get discouraged by repeated failures to discover something of interest. He is as untiring in his efforts to aid us in our search as in securing food, and there is always a degree of intelligence displayed in whatever he undertakes that is wholly foreign to Inuit character. Even the stones that he brought into camp bore marks that were most astonishingly like writing. You could almost read them. If we had not been so straitened for transportation we would have brought some of these remarkable specimens home.

Captain T. F. Barry, of the schooner *Eothen*, against whom the serious accusation is made by the lately returned Franklin search expedition of carrying away provisions from Depot Island which should have been left there for the use of the party, thereby reducing them to the necessity of living on seal-skin diet for several days, met a *Herald* reporter yesterday at the office of Alexandre Brothers, the owners of the vessel, with an emphatic denial of the charges. He made the following statement:—

"On August 10th, 1878, I provided the search party at Depot Island with twenty fathoms of whale line, forty fathoms of lance warp for dog harness, three small tents, which belonged to the *Eothen*, and which I traded for a larger tent when cast away the year previous in the bark *A. Houghton*, 128 pounds of coffee, five pounds of tea, twenty pounds of soap, four barrels of pork (raw), one barrel of flour, four skinning knives, two washtubs, two water pails, two camp stools, ten gallons of vinegar, sails, needles and twine, and six casks containing 3,624 pounds of bread. In 1879 at Marble Island I also gave them two eight-inch butcher knives, one barrel of pork (cooked), one barrel of molasses and an American ensign.

"The *Eothen* is now out of port, which I regret very much, as the log containing these entries is aboard her, but the list is correct, as it was made at the time and was afterward copied into the log book. Instead of taking the 5,000 pounds of bread which my instructions authorized me to give them, they only took the amount stated in the list, leaving in my charge the remaining 1,876 pounds. This, together with whatever provisions I had left, I agreed to leave for them at Depot Island in the spring. Early in January, 1879, Colonel Gilder, of the search party, with three natives, came on board the *Eothen*, at Marble Island, where I had gone into winter quarters, and the following week Lieutenant Schwatka arrived with a party of twenty-three Esquimaux. I fed them all till the 10th of March on the remainder of the bread, and when they went away only 300 pounds of bread was left. This was further depleted by August to about one hundred pounds, as they turned over to my care a woman and three children, with instructions to feed them from the stores of the party. As I had agreed to leave this for them at Depot Island I attempted to reach that place in August, but was prevented by thick and stormy weather and by the prevalence of scurvy among my men, thirteen of whom were down with that disease when I gave up the trial and turned around for home. I reached St. Johns in September, sick, and was obliged to leave my vessel at that port in charge of the mate."

"I want," continued Captain Barry, "to say a word in answer to the story in this morning's *Herald*, which implies that my account of how I came by the Franklin spoon is highly improbable. This accusation should have been made in Hudson's Bay in presence of Captain Potter when we were all there together. I got the spoon, as I have stated before, from a native in exchange for an iron one in the spring of 1877 while cast away near Cape Fullerton. Captain Potter never saw the spoon, nor did he know that I had any such thing. I was with Captain Potter in 1872 when he found his three spoons, and remained with him after that for three months, during which time I never heard of his missing any of them. I don't know the name of the native of whom I got my spoon, but I do know that any story of how the spoon came into my possession different from the way in which I have stated is a lie."

When Captain Barry had finished his statement the owners of the *Eothen*, who were present, denounced him for his action toward the search party. They censured him for not reaching Depot Island as he had agreed, and characterized his conduct as cowardly. He should, they said,

have reached that point, and, so far as they could see, there was no tangible reason why he did not do so. From his own statement it was evident that he left Hudson's Bay a full month sooner than he should have, as it is well known that vessels usually remained in those waters till September. They also berated him for deserting his ship at St. Johns, claiming that after he left her many articles of value disappeared, and that if they had not sent after her she would have been there still. To these censures Captain Barry replied, as in his statement above, that he could not get to Depot Island and that he was too sick at St. Johns to remain on board.

"I am not to blame for what happened on the *Eothen* after I left her," he said, "nor am I responsible for the articles lost. I gave you on my arrival at New York a complete list of everything on board."

"No, you did not," said Mr. Alexandre; "your list did not agree with the contents of the vessel. We found on board her not the small amount of provisions we expected from your account, but enough to last a ship's crew fifteen months," and turning to the reporter he continued, "There were stores of all kinds; not much bread, it is true, but plenty of flour, pork, canned meats, molasses, &c., which we afterward sold, but which should have been left on Depot Island."

This pointed attack, backed up by what the owners claim is positive proof, elicited a statement from Captain Barry that these provisions must have been purchased at St. Johns or on the way home. This the owners denied, as the packages, they say, they knew were in the vessel when she started. Captain Barry refused to say anything more in answer to the reporter's questions, withdrawing from the interview with the remark that when the log of the *Eothen* came to hand he could prove his story, and that enough had already been said in the papers as to what he had done.—*New York Herald*.

#### OLD BARBLE'S HOUSE.

"Peter, my boy," said old uncle Barble, "when I die, I leave you this house of mine. You'll find it a snug place to retire to when you give up business."

Snug, indeed; for uncle Barble's house was situated on the esplanade of W-on-the-Sea. It boasted a commanding view of the ocean, a carriage-sweep in front, and a fine garden behind. It was a house which had always conferred on its owner some prestige in W——, for folks wondered why old Barble should have kept such a large mansion and grounds for his own use, when he might have cleared so much money by selling them to promoters of hotel companies, who had made many a bid for what was regarded as the finest site in W——. However, old Barble had always said: "My nephew Peter shall sell the house if he pleases; as for me, I like to feel that I am living in the finest house of our city. In one way and another, this house has been the making of me; and, please the pigs, it'll be the making of Peter."

It seems that the pigs were pleased that Peter should be made; for one day of woe old Barble died, and his nephew became heir to a tidy sum of money, along with the house at W—— aforementioned. Mr. Peter Mickins was a briefless barrister of about forty, who was very ambitious of getting on in the world. He had tried his hands and feet at climbing a number of those ladders which are supposed to lead to social eminence quicker than if you take the roundabout road of patience. He had edited a newspaper, had written some political pamphlets, and had acted as secretary to two or three of those companies which appear to spend most of their shareholders' money in advertising. He was also a constant and fluent spouter at public meetings. In fact, Mickins was not at all an uncommon sort of fellow. By perseveringly vapouring forth the platitudes of all the crazes met in fashion, he had earned quite a nice little reputation as a man of science, a philanthropist, and a politician. But all this would not have done much for him in the long run, if it had not been for that most timely and fortunate legacy which Mickins came in for of old Barble's house.

There is a story of a man who, paying a tax for his donkey, became thereby an elector; he lost his donkey and his vote too, so that he had some ground for maintaining that it was the donkey and not he who was privileged to help in returning a Member to Parliament. Even as it was with this man's donkey, so it was with Peter Mickins's house. That dwelling endowed him with importance. It gave him rank among the big-wigs of W——, and lent colour to the supposition that he was much better off than he pretended to be. As rivers flow to the sea, good luck poured upon the man who has become independent of fortune; and so now Peter Mickins found that it would not be difficult for him to get elected a town-councillor for W——, and afterwards become Member of Parliament for the borough. Indeed, the Ven. Mr. Noser, who was Archdeacon of W——, and so active a character in the borough that he had been nicknamed the Grand Elector, said to Mickins with a sort of pious wink, as he pocketed a substantial cheque which his new parishioner had handed to him in aid of some church school funds: "You leave your candidature in my

hands, Mickins. Just allow me to nurse the borough for you a couple of years, and you'll see."

Now, the Ven. Mr. Noser did not make such promises as these without meaning to keep them, for he was a discreet Archdeacon, and so Peter Mickins began to feel wondrously elated by the career of glory which was opening before him. As for Mrs. Mickins, a slim and simpering lady, corroded by the ambition of "shining in society," she could not have taken more pleasure in her new mansion if it had been situated in the Elysian fields. She was always being complimented on its size and beauty. She gave croquet-parties in its garden, and found that any number of nice people were willing to accept her invitations. Other nice people would call and sit for whole hours on her balcony when the weather was fine, admiring the view of the sea. During the first season which the Mickinses spent in W——, their abode became a house of call for all those fascinating persons who like to enjoy themselves gratuitously at the expense of their richer neighbours. Mickins and his wife never wanted for guests to help them eat their beef and empty bottles out of the cellar which old Barble had so judiciously stocked. On their side the guests did something for Peter Mickins, who was elected a member of a local club, and received invitations from several of the county gentry to come with his wife and spend a few days at their halls and park during the hunting season.

Alas! Mickins accepted the invitation to go a-hunting, and it is owing to this circumstance that he is not now sitting in Parliament. The mere fact of having consented to ride to hounds on a horse eighteen hands high marred as fine a legislative career as could have fallen to the lot of any Briton. Mickins set his horse at a ditch, and was hurled on the top of his hat into a field of hard stubble. As his head happened to be inside his hat, concussion of the brain resulted, and poor Peter was carried back to his host's house in the saddest plight possible. It was all the doctors could do to save him, and even when they had done their best Mickins looked but a sorry object, the ghost of his former self. However, as soon as he was fit to be moved, his wife took him back to their pleasant home at W——, and here Mickins was gratified with some payment for his great hospitalities under the form of kindness from many friends. The Ven. Archdeacon Noser was most unremitting in his visits. He called every day at luncheon time; and his grave, earnest voice was often heard talking politics and theology to his suffering host even up to the evening hour when dinner was served. Then, again, old Barble's house was filled daily with visitors, who helped Mrs. Mickins to comfort and amuse her poor husband, until it became evident to the doctors that the rapid progress of their patient's recovery would hurry him into a better world if they did not interfere. They accordingly ordered him to go and spend a year abroad, travelling by easy stages all over the Continent, and winding-up with a visit to Egypt. Mickins languidly agreed, and left the arrangements for the journey in his wife's hands.

Now it was no sooner known that this lady and her husband were going abroad than agents applied to them to know whether they would consent to let their house during their absence. Mrs. Mickins saw no objection to this course, which would help her to defray the expenses of her journey; and she merely stipulated that any tenants introduced to her should be perfectly respectable. One morning an agent called to say that he had received a most eligible offer from a Polish lady of rank, Countess Fulowitz, who was prepared to take the house for one year at a high rental. Mrs. Mickins consented; and started quite happy to think she had made a good bargain. As she and her husband ensconced themselves in a first-class railway carriage, the Ven. Archdeacon Noser stood on the platform, and graciously waved them an adieu with his black kid gloves. "Good-bye, my worthy friend," he cried, with a soft gravity, to Mickins: "mind you come back to us in sound health, so that we may make a good fight with you at the elections." And he added a small joke in Latin: "*Vires acquirit rundo*. A man gathers strength by going to Egypt. Ha! Ha!"

Like a giant refreshed with wine, so did Peter Mickins return to W—— after a twelve months' voyage. He had tasted the vintages of many countries; he had been up the Rhine and down the Rhone; he had put his back into the crater of Vesuvius, and had climbed, with the help of half-a-dozen negroes, to the top of the highest Pyramid. He came back game for anything.

The day after his return was a fine, balmy one in August, and W—— was full of visitors. The Esplanade was crowded, and from his drawing-room window Peter Mickins looked down upon many familiar faces which he hoped would presently light up with glee at the sight of him. It struck him, though, that his friends had become rather short-sighted, for though he persistently bobbed his head and waved his hand out of the window, nobody appeared to notice him. "I suppose they don't expect me back so soon," he soliloquised; "yet I wrote to say I was coming. Ah here's the dear old Archdeacon." And Mickins was on the point of crying, "Hi! Noser!" when his sense of what was due to a Church dignitary restrained him. He contented himself with waving his pocket-handkerchief, but the Archdeacon, though he glanced up at the window, strode on superciliously unconscious.

Peter Mickins could not make out what this meant. He had quite counted on some public demonstration in honour of his return. He had expected that the Ven. Mr. Noser and the Mayor and Aldermen would all wait upon him together and offer their congratulations on his happy restoration to health. Troubled by a presentiment which he could not explain, he sought his head-dress and sallied forth on to the Esplanade. The very first person he encountered was the Mayor of W——, one Rinds, a prosperous cheesemonger, and a pillar of the Conservative party. Rinds lifted his hand to his hat, but it was not to remove it in a courteous salute; he clipped it determinedly on the top so as to impress it more firmly.

ly on his head, and throwing back his head with a haughty roll of his eye, he passed by his quondam friend Mickins. "Now, what on earth does this mean?" exclaimed the latter. "Hallo, Rinds, don't you know me?"

Rinds did not deign to turn round. Mickins wandered on like one stupefied and met two Aldermen of W——, the one a chemist, the other a pastry-cook. Both these dignitaries saw Mickins as plainly as it was possible to see a fellow-citizen; but not a word of greeting escaped them. They frowned terribly, curled their lips, and would have passed on like Rinds, had not Mickins barred their progress by extending his arms.

"Come, what does this mean? Don't you know me, you two?" "No, sir, I don't know you," responded the chemist stiffly. "We have even forgotten your name, Mr. Mickins," chimed in the pastry-cook punctiliously, with some pomp of manner, and giving him the go-by, one to his right and the other to his left, the pair of Aldermen went on.

Peter Mickins's arms fell to his side. He could understand less than ever what was happening to him; but, fortunately, he desisted the Archdeacon walking a little further on, and he hurried after him. "Archdeacon," he cried, breathless, so soon as he was within earshot; and he expected to see Mr. Noser turn round with his face all aglow from smiles, but the countenance which Mr. Noser turned upon Peter Mickins was one black with anger. "Sir, what do you want with me?" inquired the Archdeacon, much as if he were addressing a pick-pocket. "Why, I'm Mickins," stammered the owner of this name. "I wish to goodness you'd tell me, Archdeacon, what is the meaning of this miserable reception which has been given me here. I came back expecting to find friends."

"That was singular presumption on your part, Mr. Mickins," was the Archdeacon's dry answer.

"Will you just explain those words?" retorted Mr. Mickins, whose eyes now kindled.

"I have nothing to explain," replied Mr. Noser.

"But you shall explain," bawled Peter Mickins; and he looked so furious as he clenched his fists that the Archdeacon grew a little frightened. Several people had stopped on the Parade to watch the interview between the two men. The Archdeacon, not wishing to become the centre of a mob, motioned to Mickins to come with him, and the pair walked along together till they came to a side street, when the Archdeacon branched off. "Mr. Mickins," he then said, with as much dignity as he could muster, "when people make money by such methods as you have been doing, they cannot hope for the esteem of honest men."

"I have always made my money by reputable methods," responded Mickins hotly, "and I dare you to prove the contrary." "Ah, this is too much," shouted the Archdeacon, shaking his umbrella. "If you call it reputable to keep a public casino and gambling-house for the entertainment of sharpers and jades, I pity you." And, turning majestically on his heel, he walked on. Mickins could get no further explanation from him.

He got none from anybody else, though he soon discovered, by conducting personal inquiries among people who were not his friends, that during his absence his precious tenant, the Countess Fulowitz, had converted his house into a rendezvous for all the loose characters in the district; and that, moreover, she had stated that Mr. Peter Mickins had given her full authority so to do. The very high rent which she paid seemed to corroborate this assertion, and poor Mickins found it in vain to struggle against appearances. He is noted to this day as a black sheep in W——, and he finds it impossible to let his house. Neither can he inhabit it himself. It stands empty and desolate, glanced at with little shivers of horror by all the pious persons in W——, among whom Archdeacon Noser is chief.—*Truth.*

#### METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, OCTOBER 22ND, 1880.

Observatory of Daigaku, Moto-Fujiho, Hongō, Tokio, Japan.

#### REMARKS.

Heavy line represents barometer.

Light continuous line—max. & min. thermometers.

.....represents velocity of wind.

.....percentage of humidity.

Max. velocity of wind 20.0 miles per hour on Tuesday, at 11 a.m.

The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer for the week was 30.176 inches on Friday, at 7 a.m., and the lowest, was 29.590 inches on Tuesday, at 2 p.m. The maximum temperature for the week was 73° 30' on Tuesday and the minimum was 49° on Wednesday, the highest and lowest temperature for the corresponding week of last year being 72° 5' and 50° 2' respectively. The total amount of rain during the week was 1.154 inches, against a total of 3.210 inches for the corresponding week of last year.

#### NATIVE CURRENCY QUOTATIONS.

China No. 4-5, Kongfun & Kook-fah	"	\$6.00 to \$8.00	Kerosene Oil	case	\$2.05

**EXPORTS.**

**SILK.**—We have had rather an active market for Silk during the past week and a very large number of parcels have been bought. Subsequently however, on inspections, there have also been very heavy rejections, and this reduces the actual transactions of the week to 250 Shipping bales in all.

The demand has been almost exclusively for Sinshu and other Hanks, and the better qualities of these Silks are almost unobtainable.

Prices of the higher class hanks are \$5 per picul higher.

Filatures, re-reels, and Kakidas are in better demand, and holders are anxious to sell.

Stock about 8,800 Japanese bales.

Shipments to date 5,146 bales against 5,533 bales at same period last season.

The following are to-day's quotations.

	Exchange 3/9½	Exchange 4.62
New Silks { Hanks.—No. 1 & 2	\$515 to \$520 = 17/3 to 17/6	= fca. 48.20 to fca. 48.60
" " 2	\$505 to \$500 = 16/11 to 17/1	= " 47.40 to " 47.80
" " 2½	\$480 to \$490 = 16/1 to 16/6	= " 46.00 to " 46.60
" " 3 & 4	\$450 to \$470 = 15/3 to 15/11	= " 42.40 to " 44.30
Old Silks { Filatures.—Extra	\$640 to \$650 = 21/ to 21/4	= " 59.00 to " 59.80
" " 1	\$600 to \$620 = 19/9 to 20/4	= " 55.40 to " 57.20
" " 2 & 3	\$570 to \$590 = 18/9 to 19/7	= " 52.80 to " 54.80
" Kakidas.—Medium to Best	\$550 to \$600 = 18/ to 19/9	= " 51.20 to " 55.40

**TEA.**—The market has been quieter. Settlements for the week only amounting to 3,800 piculs. Common to Good Medium grades, have again been most in demand, but Fine to Choice leaf has been dealt in to some extent. Prices are rather easier at the close and there is a fair stock on offer.

Common	{	...	\$13 to \$15	Fine	...	\$23 to \$24
Good Common	{	...	\$16 to \$18	Finest	...	\$26 to \$27
Medium	...	...	\$20 to \$21	Choice	...	\$29 to \$30
Good Medium	...	...		Choicest	...	\$35 to \$36

THE GREATEST  
WONDER OF MODERN TIMES  
HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!  
HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

In his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock." Sold by all Chemists and Medicine Vendors throughout the World May 17th, 1878.

"HIGHEST AWARD & PRIZE MEDAL PHILADELPHIA EXHIBITION, 1876."

2nd class.....	1.50 <i>yen</i> per day, or 40.00 " " month.
3rd class.....	1.00 <i>yen</i> per day, or 28.00 " " month.

All kinds of Wines and Spirits supplied in large or small quantities.

GUIDES, HORSES and KAGOS supplied at fixed rates, for FUJIYAMA and other places in the neighbourhood of HAKONE.

Experienced Cooks, Waiters, etc., engaged from this year.

**MATSUZAKA HOTEL,**  
KIGA,  
(Hakone Hot Springs.)

Yokohama, July 19, 1879.

**W. & A. GILBEY'S**  
**WINES AND SPIRITS.**

W. & A. GILBEY have special facilities for carrying on an extensive Foreign Trade, having held for many years in their Excise Bonded Stores, for the purpose of their Home Trade, a stock of not less than 12,000 Casks of Wines and Spirits, which are equally available for Export. These stores are by far the largest private Duty Free Warehouses in the World, and are under the supervision of a staff of Excise Officers specially attached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them to give the best VALUE to the public, as a twentieth part of the Foreign Wines consumed in the United Kingdom is supplied from their stock. In the year 1876 W. & A. Gilbey paid duty on 1,881,049 gallons of Wines and Spirits, and the average quantity bottled and sent out by them daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same whether the Wines or Spirits are obtained direct from their Head Establishments or from any of their Agents. The purity and genuineness of every article in this list are guaranteed in accordance with Act of Parliament, 38 and 39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the standard of Bottle Measure recently recognised by the Government, namely—

6 bottles contain one gallon; 12 half-bottles contain one gallon.

SECURITY is ensured to the purchaser, each bottle bearing W. & A. Gilbey's seal and label guaranteeing quality and measure, and the strength also in the case of Spirits.

Yokohama, 7th September, 1880.

## MISCELLANEOUS.

**BUGS, FLEAS, MOTHS, BEETLES,**

and all other insects are destroyed by

**KEATING'S INSECT POWDER,**

which is quite harmless to Domestic Animals.

In exterminating Beetles the success of this Powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application.

Ask for and be sure to obtain "KEATING'S POWDER," as Imitations are Noxious, and fail in giving satisfaction.

SOLD BY ALL CHEMISTS IN BOTTLES, 1/- &amp; 2/6 each.

**KEATING'S WORM TABLETS,**

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL** or **THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for Children.

## TESTIMONIAL

Medical Hall, Gildersome, Nov. 28th, 1876.

MR. KEATING,

Dear Sir,—I think it nothing but my duty to inform you of the immense sale I have for your Worm Tablets, which I may justly say is enormous, and in every case gives the greatest satisfaction. I have now in stock two bottles containing the Round Worms brought me during the last few days by customers, one Worm 40 yards long. I dare not be without the remedy.—Yours respectfully,

M. A. WALKER.

SOLD IN BOTTLES, BY ALL CHEMISTS AND DRUGGISTS.

Proprietor—**THOMAS KEATING, London.**

**REWARD AND CAUTION.**—Whereas fraudulent imitations of this unsurpassed remedy have been sold, I hereby request anyone knowing of the vendor of the same to communicate with me, on conviction of the offender a liberal reward will be paid.

## AGRICULTURE IN JAPAN.

WITHIN the last half century the art of agriculture has in most countries received a great impetus and been greatly improved by the application to it of the results of the exact sciences, and concurrently with the improvement a greater interest has been taken in the history of agriculture in different countries. The fact that by a proper tillage of the grey matter of a farmer's brains, his green crops, his white crops and his live stock will be improved, is now most fully acknowledged and acted upon. But this was not always so; every one will easily call to mind instances in the classical light literature of different periods, where the agriculturist, even when of a comparatively high social status, is depicted as a boor and a clown in comparison with the professional man of any rank. Ignorance and its faithful handmaid superstition have always had their stronghold and have lingered longest in the agricultural mind. In these days, however, this is rapidly changing and, under the pressure of circumstances, the pure empiricism of the farmer is becoming a thing of the past, and as a consequence in most parts of the world farming is rising to the dignity of a liberal profession. In this country the position of a farmer and his lot and uses in life differ much from that of his brother in most other lands, and either the lack of thought of, or the want of appreciation of, the different circumstances in different countries often leads the writers and talkers on agricultural matters of Japan into strange statements.

Very many cycles have been completed since the time when the great sun-goddess, the ancestress of the Emperor of Japan, whose natal day we have just celebrated, Amaterasu-no-mikoto, otherwise called Tensho Daijin, sent one of her younger brothers Haya-Susanowo-no-mikoto to the land of reeds, Toye-ashi-bara, to explain to Uke-mochi-no-kami the methods by which the soil might be

rendered eternally productive of the plants necessary to the sustenance of man. One account describes how Susanowo being irate at the poorness of the repast offered him killed Ukemochi with his sword, and from different parts of her body there sprang rice, beans, millet, a mulberry tree, silkworms and a horse and cow. According to another version of the legend Ukemochi did not meet with so sad a fate, but devoted her energies to the cultivation of these various crops, the rearing of animals, and the instruction of her countrymen in these arts, and that the munificent sun-goddess was graciously pleased to be satisfied with the results of her labour and extended her divine and imperial help and protection.

The principal deity worshipped at the Geku at Watarahi in Ise is this Ukemochi, the Isis or Ceres of Dai Nihon; she also rejoices in other names viz., Ogetsu-hime-no-kami and Toyo-uke-hime-no-kami. The Harvest Gods, whose temples at Ise are also conspicuous, would appear to have been respectively the son and the grandson of the Goddess-slayer Susanowo. Who is the representative of the Roman Sterculius in Japan we know not, but he must be a very important and intensely disagreeable personage. The affair of Susanowo and Ukemochi probably happened about the time when Isis, mourning over her lost husband, by the abundance of her tears suggested to the dwellers in the valley of the Nile their first efforts in cultivation. From the Nile valley undoubtedly sprang the art of agriculture as it was known in the more western countries, and it had probably reached a comparatively high state of perfection in Egypt, when Cain was a tiller of the land and Abel a feeder of flocks.

The earliest writings extant, if we exclude the stone inscriptions of Egypt, on agriculture are those of Hesiod, who in his "Works and Days" described the practices of the Greek cultivator in the tenth century a.c., which is many centuries after Ceres instructed Triptolemus, and about four centuries after the Eleusinian mysteries had been introduced to Athens by Erechtheus. Several other Greeks touched on farming in their writings, and the Roman literature on the subject is rather extensive. There may be mentioned as authors Cato the censor, in the second century a.c., Varro, and shortly after him the charming author of the Georgics, Pliny, Columella and Palladius. Any one studying Wilkinson's "Egypt," or reading these Latin authors for the first time, will be greatly struck with astonishment on finding that much knowledge which he thought of recent acquisition had been in the world for so long a time. In the earliest times of Japan, as in other countries, the whole adult population were both fighters and farmers; in the eighth century these two classes were divided, and later on the four social classes, for the bulk of the people, of *Shi* or military class, *No* or farmers, *Ka* or manufacturers and *Sho* or merchants were instituted. The agriculturists have always been esteemed as a higher class than the traders. That in the

Roman empire the farmer was not an altogether despised man we have, besides the well known incidents in the lives of Cincinnatus and Curius Dentatus, proof in the names of several patrician families, the Fabii, the Cicerones, the Lentuli, the Pisones and others, the meaning of whose names scarcely strikes one in reading of them.

Of the history of Japanese agriculture, the knowledge at our disposal at the present time is but slight, and it still remains for some scholar to work up the subject. Many new crops have been introduced and improvements in the treatment of many others have taken place, but still there can be but little doubt that for many centuries, until quite recently, the agriculture of Japan had been in a stagnant condition; thus affording a parallel to its condition in Europe during the middle ages, though there, indeed, it seems to have retrograded.

The Japanese hoe, the *kura*, bears a remarkable likeness to the Egyptian sarle, but is better suited to the manifold applications it undergoes and is certainly superior to the primitive implements of other lands. In some places, as in some of the Kiushiu provinces, a rude kind of plough has been used, drawn by oxen, for many years. The principal new introductions and improvements of which we have note in historical times are the following. The cultivation of tea, which though used by the imperial family in the eighth century, began to be more widely grown from the beginning of the thirteenth century, when it was introduced to Uji. The Shogun Yoshimitsu, of the Ashikaga family, gave a great stimulus to its cultivation early in the fifteenth century and introduced the ceremony of *Cha-no-yu*.

Tobacco was introduced to Nagasaki by the Portuguese in the beginning of the seventeenth century and its cultivation rapidly spread and was the subject of very numerous interdictions by the Government, none of which had much effect. It is curious that at about the same time that the English James was issuing his Counterblast against tobacco in the West, Iyeyasu in the Far East was prohibiting its growth and use.

Cotton has been twice introduced into Japan; once at the beginning of the ninth century by a native of India, but at the close of the twelfth century its cultivation seems to have entirely died out. Its second introduction was from a foreign ship, driven on the coast at the end of the sixteenth century, the captain of which presented to the Daimio a bag of cotton-seed on account of his hospitality. From this time its cultivation has spread. Silk-worm rearing, one of the gifts of Amaterasu, was greatly improved in the third century by certain Koreans, brought over by the reigning empress of Japan for the purpose. Many other plants now cultivated to a considerable extent were introduced by the Portuguese and by the Dutch from Deshima, such as the common potato, the ground-nut, orange, and many vegetables and fruits. Some others are of still more recent date of introduction, as many fruits; e.g., currants, cherries and gooseberries, and several vegetables and sugar beet and sugar sorghum. The first mention of paper-making in history is at the beginning of the seventh century, when the paper mulberry is said to have been introduced by a Korean priest. Now, very many other plants are used in the production of Japanese paper and its numerous and highly ingenious uses are known to all our readers.

Some implements, such as the winnowing machine now seen all over the country, seem to have been introduced or suggested from abroad, probably through the Dutch.

Japanese literature on purely agricultural subjects appears to be but limited. Perhaps the best works are the

"Seikei Dzusetsu," published by order of the Satsuma Government and several writers; this is very complete, but now very scarce. Sato's "So-moku Rokubukushuho," in twenty volumes, which is probably the best work easily procurable and which, if we exclude from it some curious notions of the author apparently derived through an imperfect knowledge of Dutch, gives a very fair account of Japanese agriculture. Several small treatises and *brochures* on special subjects as manures, silk and tea cultivation are in print. The great difference between Japanese agriculture and that of Europe or America, besides the cultivation of paddy, is that by the system of the former scarcely any live stock is kept; and the almost invariable remark of a new comer to the country is that Japanese agriculture cannot be improved until more live stock is kept to produce manure. If this were the only or chief use of cattle they would be very expensive machines, and it is forgotten that in this country man himself acts as the degrader of food without the intervention of cattle. Whilst Europe, and especially England, has been for centuries turning the waste products of her bones and sinews into the sea through the rivers, Japan and China have been carefully utilising them for the production of fresh generations of bones and sinews. That this utilisation of waste products is often accompanied by disagreeable and disgusting features, and too frequently by absolute injury to health is but too well known, but we believe that the recent teachings of sanitary reforms are beginning to take effect on the Japanese Government and people, and that these matters will be improved. The observant traveller in Japan now, as in the times of Kämpfer and Thunberg, notices the great perfection to which the system of irrigation of the rice fields is carried, and also the great regularity of the yearly crops. Though these crops may not be so fine or so heavy as those of high-farming Europe, yet year after year fair average crops are produced on the same land. Another characteristic feature which was the source of great disappointment to the botanist Thunberg, is the entire absence of weeds from the Japanese farm. There can be no doubt that the Japanese farmer had, many generations or even centuries ago, by a long course of patient observation and experience, reduced his system to a state which was the best for the condition of soil, climate and requisitions as to food to which he was subject. With the new era, ushered in a quarter of a century ago, came naturally with other European ideas a desire to improve and modify the system of agriculture. As the wants created for woollen clothing and a demand for more animal food caused by the altered habits of those coming into contact with and following the customs of Europeans arose, there came the necessity of increasing and improving the live stock of the country and making other alterations. Japan has therefore wisely followed the steps of other countries and provided for her rising generation, educational institutions in which are taught the sciences which have a direct bearing on the art of farming. In this field of work Japan has not started so backward in the race as in many others, for the first Agricultural College in Europe was not founded until this century, viz., at Hofwyl, in Switzerland, in 1806. The celebrated college of Grignon dates from 1826, and the English agricultural college from 1845. Japan now boasts of two colleges, founded on foreign systems and with the aid of foreigners for teaching the science and the art of agriculture as practised in Europe and America, besides numerous minor colleges or schools in different prefectures for the same object, most of which are assisted by graduates

of the above two institutions. The first founded of these colleges is at Sapporo the capital of Yezo, and it claims to be the first Agricultural College, in point of date, in the East. It is entirely on an American plan its prototype being the Amherst Agricultural College, Massachusetts, which institution lent its president for a year in order that he might organize the Sapporo College. The other institution is on English lines and is at the village of Komaba, a few miles from the capital. This latter college is under the Kuwan-no-kiyoku or Agricultural Bureau of the Home Department, as also are the recently established schools in the prefectures. This Bureau has also done much work in other directions towards permanently improving agricultural matters in Japan. Thus, perceiving that one of the weak points in native agriculture is its failure to take advantage of mechanical laws in economising labour, it has established shops for making the simpler kinds of farm implements on improved patterns, and has encouraged the use of such labour-saving implements among the farmers. It has established the farm at Shimosa for breeding sheep and supplying wool to the factory at Senji, and for improving the native breeds of cattle and horses by more careful selection and by crossing with imported stock. By its publication of the periodical *No-gi-geppo*, replete with valuable information to the farmer, and by collecting and printing agricultural statistics, it is doing much to raise the cultus and improve the knowledge of the farmer. Again by the holding of exhibitions of agricultural produce, such as the late one at Osaka for sugar and cotton and the previous one in this town for tea and silk, and by the collection and publication of statistics and information on these industries, much good has already been done. The substantial aid and advice which this Bureau gives in the reclaiming and cultivation of waste lands, as in the large works now going on in the prefecture of Fukuishima, we can now only just note. We have but space now to refer to two facts of quite recent date which may seem of comparatively slight importance, but which will, we believe, do much to alter and ameliorate some phases of Japanese farming. One of these is the introduction and continually extending use of bones and other phosphates as manures. These substances which are now so extensively and so advantageously used in other countries did not come into any use except on a small scale until this century, principally owing to their slow and almost imperceptible action when not finely powdered, and the want of proper machinery to powder them. Another important feature is the introduction of the sugar sorghum, especially the improved varieties from America. This sugar plant is likely to rapidly extend in cultivation and to furnish much of the sugar of this country at no distant date. The improvements in the manufacture of black tea and its introduction to the Australian colonies is also an encouraging feature, especially at a time when there seems a probability of Indian tea becoming a formidable rival to the Japan green teas in the United States. We have been able here to but indicate briefly some of the advantages which the modern Japanese farmer labours under as compared with his ancestors, and if he makes proper use of the recent prosperity he has enjoyed, due to light taxes, good harvests and high prices, he will now take a step forward from which he cannot afterwards be ousted.

#### CITY IMPROVEMENTS.

THE improvement and embellishment of most large cities has been necessarily a somewhat tardy operation, dependent by no means for its success merely upon

a lavish expenditure. The sweeping alterations which during the last Empire made old Paris into the pleasant ornate capital that it is, are still being gradually added to; whilst London promises to be the subject of remodelling and reform for centuries to come. The growth of commercial importance, or the advantages of position which have raised a town to the dignity of a capital, have meanwhile been creating the nucleus upon which the future city must be made, and the work of reconstruction and repair is guided and fettered by existing things.

The ancients, we are told, had a happy way of laying out their towns according to a preconsidered systematic plan such as we might employ for the plotting of our gardens or our dwellings. The site being fixed upon and the streets laid out with a due regard to the convenience of traffic and the direction of the winds, then took place the choice of positions for the convenience and use of the State, for sacred edifices, the forum and other public buildings. Such a mode of proceeding with a preconceived plan from the beginning is seldom practicable in modern times. The conglomeration of streets and buildings have generally to be taken pretty much as chance and circumstance have made them; the interests of a large community of private individuals standing in the way of anything like revolutionary reconstruction on one general plan.

The exceptional regularity, convenience and neatness in the arrangement of the town of Kioto, is owing to the original nature of its foundation as the palatial residence of the Emperors; by whom a country site was selected, divided and plotted out with regular roads and avenues, and divided by spacious grants of land for the princes and courtiers. The city of Kioto has thus always retained more or less the shape and characteristics given to it by its founders.

There is perhaps no town in Japan which has presented to a remodelling government a more straggling haphazard basis from which to form an ornate and convenient modern capital than Tokio. Originally, a feudal stronghold, with adjoining villages, it has increased by extending itself round this fortified centre with little or no system, until in recent years it has been promoted to the dignity of the capital of the Empire and planted with the most important buildings of the State. Here and there are fine modern erections in a durable European style, devoted to this or that purpose of administration or education; but with the thoroughfares leading to them narrow, tortuous, irregular and dirty. As an example of this it may be noticed that the Emperor cannot approach the railway, or any of the important points in the city, without passing from his palace through streets which can only be designated as "back slums." Apart from the interests of the populace and the impossibility of making sweeping changes without much destruction of property, there are other considerations which conflict with all ideas which are merely utilitarian. The appeal of the remains of feudal magnificence calling for preservation as historical monuments often conflict more than a little with the demand for improved thoroughfares, sanitary reform, and other utilitarian measures. Let the observer keep in his mind the *tout ensemble* aspect of a little city like Oxford, with its spires, domes and roofs composing into a picturesque group, or even of the former capital of Japan with its sweeping temple-roofs and pagodas, forming more or less an harmonious whole,—and then from some height adjoining Yedo look down upon the disordered mass it forms. Buildings of all kinds and styles seem to be scattered in confusion amid winding thoroughfares, and large waste open areas, forming perhaps the most discordant mass of any capital in the world.

A more careful investigation may however reveal the gradual development of a convenient and harmonious arrangement. It is only required that the improvements which are most obvious should be kept in mind, and the opportunities which decay or conflagration give for remodelling parts of the town should be carried out according to a well considered plan of reconstruction. The moving back of the frontage line of all destroyed buildings in narrow streets, the taking in, into one large thoroughfare, of narrow parallel lanes, divided only from the street by "nagaya" or shattered buildings; all this would slowly and surely add to the health and appearance of the city. Nor are these improvements entirely in abeyance. The main thoroughfare running north and south in an almost direct line from Shiba to Ueno is gradually assuming an important aspect, destined with proper care to change it in time into the Broadway of Tokio. Portions of this route have already been considerably widened, provided with footpaths and lighted gaslights, and lined with pseudo-European shop-buildings. We cannot say much for the buildings; for though more height and grandeur might be dangerous in this country, still a rather better idea might have been formed of what would be suitable as a high street for Tokio. Trees have also been planted which will improve the appearance greatly in years to come, and with the large park of Ueno at one end and the Shiba gardens at the other, the Japanese have the backbone of a fine capital.

Special care seems to be required in the discreet use of the large open sites and spaces left in the neighbourhood of the castle, so that the large buildings with which they are being gradually occupied may be afterwards well connected with communicating thoroughfares. From one immense site has been formed a fine parade ground; and it would seem advisable before all these open sites are otherwise disposed of, to devote some of them to the purpose of open squares and prevent as much as possible the total extinction of green spots within the metropolis.

WE must apologize to our readers for again intruding upon their remarks on a well-nigh forgotten subject, but we have in view a Spring Race Meeting, and would be glad to see a correction in several important items in the new programme. The meeting just passed was a success in many senses, the races being well apportioned to the many competitors, but there was a want of experience apparent in many points. For instance, the imposition of a penalty of 7 lbs. over scale weights in the "Britannia Cup" was manifestly an error, and one which could have been rectified when it was found that no Japan ponies had entered for the race.

Again, the closing of the entries for the Champion Races was a mistake, as the champion races are intended to bring together the best ponies of the meeting at scale weights, and to offer a reward for the actual champion. The system of imposing an extra fee for each race won has been found to work well, and the winners have never any objection to make their contributions. The club would therefore be a considerable gainer by the imposition of such fees. The most serious cause of complaint lays in the permission accorded by the Committee, at the last moment, for all comers to ride in the "Sayonara Stakes," the entries for that race having closed at the customary time; and we question very seriously whether the Committee did not exceed their powers in making the concession when they did, and so altering the actual conditions of the races. There is no doubt that had it been known at the time of the closing of the entries, that bettees and grooms would be permitted to ride in the race,

many would have taken advantage of such permission to enter their ponies.

As we have said, the meeting was a success, and it was more through the good nature of all concerned that so flagrant an error was passed unchallenged.

WE cannot join in the outcry which has been raised against the American Consul at Ningpo for prosecuting to the end the recent case of nun abduction. It is possible that Dr. Lord may be ignorant of, or know but imperfectly, the law and rules governing the procedure in a case of this description. Indeed, it is difficult for any but a trained legal and judicial mind to see well through the "quips and quiddities" of a pair of lawyers who seem to have introduced much bitterness and hard words into the case. But leaving this aside, the question is—whether a grave offence of this kind having been committed, or a suspicion existing of its occurrence, it should or should not be sifted thoroughly to the bottom? Dr. Lord seems to have been of opinion that no pains should be spared to investigate it, and in this we thoroughly agree with him.

Crimes of this nature against women have in all ages and in almost every country, however barbarous, been visited with peculiarly heavy punishments. The tendency to commit these offences is so great, more especially as against women of subject or alien race, and the feeling raised by them is frequently so hostile and dangerous, that it cannot be too vigorously repressed. In India the crimes of abduction, rape, &c., where the victims are native women, are punished with much greater severity than in England. In the neighbouring colony of Hongkong we can all remember the extent to which the traffic in women and girls was carried. That it has either wholly disappeared, or has been reduced to a minimum, is due almost wholly to Sir John Smale's fearless exposure of, and crusade against, the nefarious system by which females were abducted from the neighbouring mainland, and introduced for purposes of prostitution into Hongkong. The good effects of his example are now spreading to the China ports; and whether Dr. Lord's conduct of the case was according to rule or not, the principle on which he seems to have acted, viz: that allegations such as were made against the defendant should be rigidly investigated, is a sound one.

While on this subject, we may mention that a few weeks since, in a paragraph inserted by an inadvertence, whilst anyone knowing the difficulties of a newspaper in the East will readily understand, Sir John Smale was mentioned in terms which were not only out of keeping with the tone which we have endeavoured to maintain in this journal, but were not those which should, under any circumstances, have been employed towards a gentleman who has for so long a period occupied the high position which the learned judge has filled with dignity and honour. It is possible that we may differ with Sir John Smale, and may not at all times coincide with his views or approve of his acts, but such disagreement or disapproval have in all but this case been expressed, we trust, in courteous terms. His action in the question in coolie-traffic, though opposed to the authorities of the colony, as well as his views on female slavery, have always met with our hearty concurrence and support. We repeat, the insertion of the paragraph was an inadvertence, and we regret if any pain has been caused thereby.

THE subject of the session and granting of a charter for a portion of north Borneo to Baron Overbeck, is still under the consideration of the British Foreign Office but it is said that now Parliament is over and Lord Gran-

ville has some little leisure from the exigencies of legislation and party leadership, the matter will receive his earnest attention and some definite decision will be arrived at before long. What that decision will be is very doubtful. Sir Charles Dilke's replies to the various interpellations upon the subject in the House of Commons were on the one hand rather encouraging to the hopes of a charter being granted, but on the other hand one of the guiding principles of the Gladstone government, openly and repeatedly avowed by several of its leading members, is hostility to the extension of the empire's territory and responsibility. It would not, therefore, be surprising that the ultimate decision should be a refusal to have anything to do with the project. In that case, the probability is that Baron Overbeck will apply to Germany, and there are rumours that he has already done so, and that his overtures have been favorably received by Prince Bismarck, who has just been appointed Minister of Commerce, and who is known to be desirous of securing some standpoint in the East and in the South Seas for the development of German commerce and German colonisation. The Chancellor has given great encouragement to the formation of the German Trading Company, which has taken over the business of the great house of Godefröy & Co. in the South Seas, which recently failed, and the Samoan Islands are now more or less German territory. There could be no better or more eligible station for Prince Bismarck's purposes than the North-East of Borneo, and if England lets slip the opportunity, now offered her, there can no reason why Germany should not take advantage of it, however much we may regret that the Gladstone Government should be so blind. The Hongkong *Daily Press* makes the following remarks on this subject:—The matter is no doubt regarded as of trifling importance by the Foreign Office, but it is one nevertheless that should receive its fair share of attention. The interests of British commerce are, perhaps, in the eyes of the Gladstone administration, of little moment in comparison with the coercion of the "unspeakable Turk," but we cannot forget—and regret that it should be for one moment forgotten by British officials—that to the establishment of trading companies similar to the one promoted by Messrs. Dent and Overbeck, the present greatness and glory of the British Empire are largely due. It was a British trading company that won our Indian Empire; it was a trading company that planted English rule across the northern part of British America. It was as trading stations that numbers of our colonies were acquired, and as such they are maintained. The acquisition, by peaceful means, of a new empire in the great island of Borneo, with two of the finest harbours in the world, should not be treated with indifference. If the small island of Labuan was worth annexation, how much better worth occupation is the magnificent domain secured by the North Borneo Company? Rich in natural resources of all kinds, with the most fertile of soils, the finest facilities for water carriage, and possessing a tractable population; eager to welcome and ready to embrace European rule; there would seem to be little difficulty in the way of a satisfactory reply being given to the application for a charter by the Company. It is urged by some persons that to do so would be to extend the responsibilities of the British Government, already so onerous, and possibly involve them in some dispute with other nations claiming rights in that part of the world. Apart, however, from the fact that it is the duty of a British Government to face legitimate responsibility, and not to shirk the acceptance of new duties rendered necessary to support the credit and extend the power of the Empire, the possession of the harbour of Sandakan has been pronounced by a competent naval authority as a most desirable

tation for rendezvous by the British Squadron in the China Waters. New outlets are, moreover, required for British industry and the employment of British capital, and for the formation of new markets for the produce of Birmingham, Lancashire, and Yorkshire. We trust, therefore, that the Imperial Government will lose no more time in neglecting to consider the proposals of the North Borneo Company, but that they will grant the required charter, and enable the enterprising founders of the scheme to proceed with its development. There need be little difficulty in the matter, and no increment in the expense of the naval squadron in these waters, which could just as readily look after the new territory as after Labuan alone. The success of the settlement of Sarawak also affords another proof of the ease with which European rule can be established in Borneo and the advantages derived from it by the natives. The arguments in favour of granting the desired charter are so many and obvious that it is difficult to understand why the Foreign Office requires so much time for deliberation.

#### REUTER'S TELEGRAMS.

London, 7th Oct.—The Barracks in the West of Ireland are being prepared for the fullest complement of troops.

London, 8th Oct.—The *Daily News* in a leading article announces the deposition of the Sultan being in contemplation.

London, 11th Oct.—The Sultan is reported to be inclined to yield.

London, 12th Oct.—It is officially announced that the Porte has adopted a resolution to cede Dulcigno unconditionally.

London, 13th Oct.—There has been a great irruption of Turkish Kurds into Persian territory. 170 villages are reported to have been ravaged.

London, 15th Oct.—The press both in England and the Continent deprecate pressing the rectification of the Greek frontier.

London, 28th Oct.—The Sultan has ordered the surrender of Dulcigno in five days.

The British Government will prosecute the officers of the Irish Land League for conspiracy.

London, 1st Nov.—Two arrests have been made of Irish intimidators. They will probably be tried in London.

London, 4th Nov.—General Garfield has been elected President of the United States of America.

Several tribes having joined the Basutos, the condition of affairs at the Cape is very critical.

### The Japan Weekly Mail.

'FAIS CE QUE DOIS; ADVIENNE QUE POURRA.'

#### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL, must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOVEMBER 6th, 1880.

JAPANESE ERA 2540, MEIJI 18TH YEAR, 11TH MONTH, 6TH DAY, DO-YO-SI.

#### NOTES OF THE WEEK.

The French mails were delivered by the Messageries Maritimes Company's steamer *Volga* on the morning of the 5th inst. The same Company's steamer *Menzaleh* left with the homeward mails on the 31st ult., and the P. & O. Company's steamer *Sunda* left to-day.

The competition of the Société Suisse de Tir, which was to have taken place this afternoon, has been postponed *sine die*.

A military friend, who was present at the review held in the Hibiya parade ground in Tokio, on the Mikado's birth-day, has kindly furnished us with the following remarks:—The parade ground was a large grass square affording sufficient space for the close manoeuvres of a force of 10,000 men. On this occasion, I should think there were about 9,000 under arms, with a number of recruits, without arms and accoutrements, looking on. The uniform of all arms is blue with facings of yellow, white, green or red, according to the corps. Many of the coats were seedy looking and would, according to military parlance, belong to "last year's clothing." I observed, however, among the royal escort, which consisted of lancers, that "this year's clothing" was the nearer to the royal personage! The men were in marching order, with the addition of a white horse-hair plume of one pattern worn in the shako by the cavalry, artillery and infantry, which no doubt converted the otherwise "marching order" into "review order." The knapsack is of goatskin, and similar to that of the French and Italian armies. In addition to the great coat rolled on the top of the knapsack a red or green blanket was carried around the top and sides of the pack. The rifles were English Snider, 1868 pattern, the sword bayonet being substituted for the bayonet. Each infantry battalion appears to have a national colour of small dimensions, guarded by a party of about ten men and borne in front of the battalion, not in the centre, thus leading to the supposition that is does not form the rallying point as in the British army. The cavalry do not possess a guidon or standard and the various regiments appear to be without bands. The troops under review formed three sides of a hollow square, facing inwards. It would have looked more practical if they had been drawn up in a line of columns, on a base fronting the entrance to the ground. I always think there is a tendency in eastern armies for fanciful formations, and have often witnessed very complicated, not to say very curious formations at reviews of native troops before their princes, on what would be called by native writers "auspicious occasions." The result of the hollow square formation was that His Imperial Highness took an intolerably long time in passing along the front, and the proper intervals between regiments in marching past were lost, occasioning loss of time and some irregularity. The Japanese being the most polite people of the East, it would strike one as somewhat odd that the Mikado did not return the salutes. As he rode slowly down the ranks, he looked straight to his front, apparently uninterested in all about him, as if something of the spiritual still lurks in his composition! The inspection being completed the troops wheeled to the right and marched past in quick time (the slow time, being a thing of the past, was not indulged in), the cavalry and artillery going past at the head of their respective brigades—first at the walk, afterwards by themselves at the trot, the dressing being moderately kept, but some of the horses varying their paces by cantering where they should have been trotting; all however doing as well as might be expected. The infantry marched past at the slope, French fashion, i.e., rifle resting with the barrel downwards on the right shoulder. The men did not keep step or dress particularly well, and the intervals between companies were not strictly preserved. It is scarcely fair, however, to look with too critical an eye on the movements of an army just emerging from its infancy. The "march past" concluded the review, there being no field manoeuvres. I should think the Japanese troops approach in appearance more nearly to our Ghooorkas than to any other Asiatic troops, although the men are perhaps not so thick set, and have not the same jaunty air in marching. The Japanese seem to drag their feet after them similarly to the Bengali sepoy, which I should attribute to their wearing of the "waraji" as in the case of the sepoy, who is accustomed to a chāpāl or sandal. I noticed in a Japanese regiment on its march to Takasaki, that many of the men carried their European boots attached to each side of the knapsack and marched in the "waraji." The Japanese soldier has not of course the physique, gait, or dash of the British soldier. In the cavalry, man and horse being lighter and the horse not possessing much speed, the momentum in a charge would be much less than that of British cavalry, and the shock received from the latter would be over-

whelming. The same may be said of the infantry (Japanese), who do not possess the weight and "go" of the British. The Japanese should therefore train themselves principally in fine tactics. The men ought to shoot well as they possess superior intelligence, great tractability, and are not addicted to drink, a vice indulged in so largely by some European armies, and one which is so subversive of all order and military discipline.

One of those terrible gun accidents occurred yesterday in Yokohama, and carried off in a few brief moments a man in the prime of life. Yesterday, at noon, Mr. Thomas Seon, engineer, machinist and gunsmith, was working upon a double-barrelled shot gun sent to him for repair. Being under the impression that the gun was unloaded he placed the barrels in the forge for the purpose of loosening the breech, when suddenly, as he was busy moving them about, a terrible explosion was heard. When the smoke cleared away the poor fellow was found lying on the ground terribly mutilated. Both barrels had been loaded, it would appear, with duck or some equally heavy shot and this had passed through the left loin, and intestines, and came out on the other side. Medical aid was promptly summoned, but the unfortunate man never spoke again and died in about half an hour. Mr. Seon was a steady, industrious and skilful workman; he leaves a widow and three children to bewail his loss.

A subscription list for the bereaved wife and children has been started, and liberally subscribed to.

The premises of Messrs. Pagdon & Co., No. 31, Settlement, were broken into last Sunday night by thieves, who carried off stock of various kinds worth over four hundred dollars. The entry was effected by forcing the padlock, which was evidently done by a skilled workman. The thieves left behind them a crowbar and a round cloth European hat, which latter may prove a clue to their discovery. This is the sixth time within the last three years that these premises have been thus entered. Considering that part of last night's booty was canvas and similar weighty matters, and also the frequent occurrence of burglaries, it seems more than probable that the native police are in collusion with the perpetrators of these robberies.

The M. B. M. steamer *Genkai Maru*, with the mails from Shanghai and way ports, is not due here until Sunday evening next in order to connect with the *City of Tokio*, which vessel is advertised to leave for San Francisco on or about the 9th instant.

The next outgoing Shanghai mail will be detained until Thursday the 11th instant, at 4 p.m., in order to take forward the mail matter due here from San Francisco on the 10th, per P. M. steamer *City of Peking*.

The return match Tokio v. Yokohama came off on Wednesday and as will be seen by the score below, resulted in an easy victory for the visitors. Owing to the lateness of the season it is doubtful whether the deciding game can come off this year. Yokohama won the toss and elected to take the field, Tokio being one man short. Play commenced at eleven o'clock, the first wicket fell quickly, but afterwards runs came in quick succession, the batting being steady but the fielding loose. The ninth wicket fell at 12.40 p.m., for 86 runs. A cold tiffin in the pavilion being soon disposed of, play recommenced immediately with Wheeler and Thompson at the bat, the latter being cleverly caught at point, one wicket for three runs. The succeeding batsman made no show, six being disposed of for twelve runs. Hearne, together with Dr. Wheeler, then made a stand, the latter, who had parted company with six of his team was then bowled, seven wickets for thirty six, of which these two contributed thirty one. Stumps were kept up for some time longer but only eighteen was added to the score, the innings closing for 54 runs. In their second innings, with two exceptions, the Tokio men gave their opponents plenty of leather hunting, Strange, Playfair, and Trevithick each getting one over the fence. Time was called at a quarter to five o'clock, when Tokio had scored 81 for the loss of four wickets. We subjoin the score.

The bowling of Strange was the best we have seen on the

Yokohama Cricket Ground, as the following analysis will shew.

Last Monday night the band of the U. S. S. *Richmond* gave their farewell concert to a house of under ninety persons! In spite of the great discouragement which playing to empty benches always causes, the performance was particularly good and those who stayed away missed a great treat. Punctually at nine o'clock the Band led off with the Bridal Chorus and March from Wagner's "Lohengrin" followed by a cornet solo by Mr. Wilson. This polka was well played, the tone of the performer was good throughout the whole range of the instrument, and the tonguing of the quick repeated notes excellent. The whole band next performed a selection from Balfe's "Bohemian Girl," the fresh bright melody of the Irish composer being very grateful. Next a clarinet solo by Mr. Cole proves that gentlemen to be a worthy pupil of the excellent bandmaster, and the audience would not be satisfied without a repetition. We pass over No. 5, perhaps the only weak spot in the whole programme, to notice the vocal quartet of Hatton arranged for instruments, which was well rendered and repeated much to the satisfaction of all present. Mr. Bennett's Aria by Verdi was very finely played, the effect of the full rich-toned instrument on the orchestral background being very grand. After a splendidly played collection of gems from Rossini—Mr. Meyrelles shewed himself *facile princeps* on the clarinet in a solo by Selter, which was enthusiastically re-demanded, and the evening was brought to a satisfactory close by an *olla podrida* of National hymns.

We most heartily wish the band of the *Richmond* God speed. The playing last night was of the highest class, whether in solo performance, accompaniments, or in the full blaze of operatic display, and reflects great credit upon the skill and perseverance of the esteemed Band-master Mr. Meyrelles. We much regret that the public should have proved so ungrateful for the scores of gratis performances given here by the band, as to leave such a beggarly array of empty seats as that we saw last night. It is at best but a poor compliment to pay those who have done so much for our amusement; and we imagine it will be remembered by the Captains and Officers of other ships when asked for the loan of their bands in time to come.

"Contributor," writing to the *Hingo News*, states that "To a

person well versed in the classics and with sufficient time and knowledge of the Japanese language, no more interesting field of research can be found than in comparing the customs practised here at the present day with those in vogue in Ancient Greece and Rome ages before the Christian era.

"Even with a limited knowledge of Japanese, and still less acquaintance with classical lore, I sometimes stumble upon customs prevalent in this country which are almost identical with those of the Ancients. Take, for instance, the placing by the Ancient Greeks of an obolus (a coin worth about 3½ cents) in the coffin to pay the passage of the dead over the river Styx. The Japanese do precisely the same. The Mon'o sect place six rin in the coffin to pay *Sandzuga wa no obasan* (the old woman of the river of death) for ferrying the newly arisen soul over the Sandzugawa (river of death), the same as Charon was supposed to have been paid for his labours.

"There are many other points of similarity in the superstitions and customs of Modern Japan and Ancient Greece, which would well repay patient study and investigation, and I hope that some person competent to perform the task may be found to undertake it."

Native journalists appear to be having rather stirring times just at present; we notice in the *Hochi Shinbun* that Mr. Okabe, editor of the *Osaka Nippo*, has been sentenced to thirty days imprisonment and a fine of seventy yen for having made remarks which were considered libellous on the actions of the Cabinet.

Last Sunday was the anniversary of the birth of His Majesty the King of Portugal, and in consequence of there being a Portuguese man of war in harbour, the other men-of-war dressed ship and fired the customary salute.

We republish the following items from the *Hingo News*:— Shortly after the departure of the 8 a.m. train from San-no-miya Station on the 17th instant, a poorly clad man was seen suspiciously examining the piece of ground which surrounds the well at the back of the eastern refreshment room. Suddenly he was seen to jump into the well head foremost. The people in the refreshment room heard the splash and instantly raised the cry—"Shito ido hamaru." The railway porters and others in the neighbourhood were immediately on the spot; but nothing could be done to rescue the man, as he never rose to the surface. Drags, ladders and ropes were brought, but they were of no use—the drags being of very ancient date. One man very pluckily descended the ladder and tried to dive to the bottom of the well, but the water was far too deep for a person to reach the bottom by diving from the surface. Here we venture to remark that this man, in our opinion, ought to receive some acknowledgment from the Kencho, if only to encourage others in such praiseworthy deeds. After some three-quarters of an hour the body was fished out of the well, and we need scarcely add life was extinct. The Japanese, however, persisted in trying several means to resuscitate the body, but without effect. It is generally understood that the man committed suicide from poverty and want.

Another case of suicide occurred on Tuesday evening last, (26th) shortly after 5 o'clock, when a woman about 30 years of age, formerly living in the Nagasa-dori, threw herself into the bay and was drowned. Her body was hooked up at the Hatoba and taken to the Western Custom House, where, after being recognised by some of her relations, it was sewn up in a straw bag and removed. Poverty again, and not jealousy, is supposed to be the cause of the suicidal act.

The following will serve as a warning to Europeans in Japan, who may wish to engage an English-speaking Japanese servant. The man mentioned is almost sure to apply to Europeans for employment, although probably under a different name:—

A Japanese named Morioka, of medium size, fair looking, about 25 years of age and who speaks English unusually well, was lately in the employ of Dr. Browne. The doctor occasionally missed small things from his room and had suspicions of the man, who probably noticed this, as one evening, while the doctor was at dinner, he opened a desk, took out what he found handy, \$16 in silver and yen 2½ in *satsum*, and disappeared.

The man is married, and has lived in San Francisco, being in possession of a San Francisco passport, describing his person.

When the *Takamugi Maru* was last in port a thief got into the cabin of the third engineer, during the latter's absence on shore, broke open a drawer, and extracted thence a pocket book containing between 50 and 60 yen-satsu, three \$10 Ypko-hama, Hongkong and Shanghai Bank notes, and 4 silver yen. The robbery was discovered by the third engineer when he returned to his cabin, at about 12 o'clock. Matches and candles were left by the thief, and a number of letters and books were found partially burnt, which appeared to show that an attempt had been made to set fire to the cabin after the perpetration of the robbery. Fortunately the chief steward and the second engineer were able to extinguish the fire.

A fine specimen of horological art, says the *Times*, has been lately added to the Germanic Museum at Nurnberg. It has been erected at the expense of the Princes of the Royal House, and is intended as a memorial of the Wittelsbach Jubilee, celebrated a few days ago. The clock is placed at an elevation of 14.2 metres, or a little over 46½ ft. It is surrounded with ornamental work in mediæval style and several gilt figures, most of which move by mechanical arrangement. The idea intended to be expressed is that the Bavarian people at all times reverence its king, who governs under the protection of God. Above is the sitting figure of the Saviour, and below that of Louis II., also seated. Around the Saviour are arranged eight angels, some of whom strike the clock bells, others blow trumpets, others hold a curtain behind the king, before whom two citizens bow down reverentially. An inscription records the object and authors of the work. The old arms of the Palatinate are set below. The whole work is in the style of the 14th century.

An American medical journal mentions that during the last hour of Dr. Tanner's fast, some of his blood was withdrawn and examined in the microscope by Dr. Van der Weyde. It proved to be quite different from healthy blood. The corpuscles which are usually smooth and round flat discs, with a central depression, were found to be ragged, irregular, and shrunk (on an average) from 1-3,600th to 1-5,000th part of an inch in diameter. There was scarcely a smooth corpuscle among them. The white corpuscles, however, were smooth, and nearly of normal size; and their proportion to the red was apparently increased to about one in 100 (the normal being one in 400). The rough appearance of the red corpuscles was due to projecting points, thought to represent a fungoid growth going on at the expense of the corpuscle (those most densely covered being the smallest and most irregular in shape.) Such growths have been observed on the corpuscles of patients suffering from various malarious diseases. Twenty-four hours after Dr. Tanner had broken his fast it was observed that many smooth and fresh corpuscles had been evolved. At the second day about half of the blood had become normal, while on the third day nearly all the corpuscles were of the normal kind.

A writer in the *United Service Magazine*, discussing Mr. Fleuss's device for breathing under water, says: "The apparatus having been fastened over the nose and mouth of the diver, when he wishes to breathe the air out of his lungs, he does so in the ordinary way, and it goes down the tubes into the bottom of the front filter. It then filters through the caustic-charge sponge in front, and passing along an outlet at the top, is conducted over the diver's shoulder into the other case, through which it filters in the same way, and then ascending into the helmet, mixes with the oxygen that has to be let in from its store chamber, and is ready to be breathed again into the diver's lungs."

Mr. Fleuss states that if he could only eat under water he could remain there for a whole day. As it is, he walked for a quarter of a mile under the sea at Ryde, and when at Brighton he went down during stormy weather into five fathoms of water, and so if so much can be accomplished, we think that before long Mr. Day's long-lost invention will be re-discovered, and then the days of the ironclads will be numbered, as boats which could move about under water would easily be made serviceable in torpedo warfare, a warfare, even now, which threatens the existence of the huge, unwieldy metal monsters

that cost so much money, and have done so little to keep up their character, either for strength or utility.

It appears to us that if caustic soda in solution were plentifully supplied, as well as fresh oxygen, into an air-tight chamber, people might breathe as freely there as in the open air; and should this prove to be the case, a submarine ship could be speedily constructed having engines to propel it in any direction, the motive power of which might be compressed air. A vessel of that description could either be a torpedo boat or a ram, or be both; and as the armor does not go below the waterline, a vulnerable part in the strongest ship could always be reached. They might certainly have submarine ships to act as sentinels over the ironclads, when, of course, there would be battles under water; or strong electric lights might be sunk fathoms deep, so that a vessel that moved under water could not approach without being seen; still, taking all these things into consideration, we cannot help fancying that Mr. Fleuss's invention has sounded the knell of the ironclads.

An American paper writes touchingly as follows upon the troubles which beset those who tread the thorny paths of literature:—"If an editor omits anything he is lazy. If he speaks of things as they are people get angry. If he glosses over or smooths down the rough points he is bribed. If he calls things by their proper names he is unfit for the position of an editor. If he does not furnish readers with jokes he is a mullet. If he does he is a rattle-head, lacking stability. If he condemns the wrong he is a good fellow, but lacks discretion. If he lets wrongs and injuries go unmentioned he is a coward. If he exposes a public man he does it to gratify spite, is the tool of a clique, or belongs to the "outs." If he indulges in personalities he is a blackguard. If he does not his paper is dull and insipid."

One of the oldest ladies in Europe died recently in Gleiwitz, a small town in Prussian Silesia, having retained her memory and the use of all her senses, except that of sight, up to the day of her decease. Judith Singer was born on the 11th of June, 1768, and, although she did not marry until she had completed her twenty-sixth year, was the mother of two children when the present Emperor of Germany came into the world, nearly eighty-three and a half years ago. Of the fifteen sons and daughters she bore to her husband, the verger of the Jewish synagogue at Gleiwitz, but three survive. Mrs. Singer buried her eldest daughter, a venerable dame of eighty-four, last year. On her own 112th birthday, being the fiftieth anniversary of the Emperor's wedding day, she addressed a letter of congratulation to his Majesty, and received an autographic acknowledgment of her communication, enclosing a bank note for one hundred marks, which she forthwith bestowed upon a local charitable institution. Among the remembrances of Mrs. Singer's unmarried girlhood were events which have long since been relegated to the pages of history. Eighteen years of her life were passed under the reign of Frederick the Great, and she had just attained her majority when the great French Revolution broke out. She professed to recollect with perfect clearness the rejoicings celebrated in her native town upon the occasion of the first Partition of Poland, which took place three years before the Declaration of American Independence.

EDWIN WHEELER, M.D.,  
Surgeon-in-Charge.

## ECCLESIASTIC AND MISSIONARY NOTES.

**JAPAN MISSION OF THE REFORMED CHURCH IN AMERICA.**—This church was called to take part in the work of Missions in this country in a way so remarkable that it would be ingratitude to God not to make mention of the same. On the conclusion of Hon. Townsend Harris' treaty with the Japanese Government in 1858, letters from prominent Clergymen and Missionaries resident in the East, and members of other churches, came to leading members of the Reformed Church in America, urging the appointment of Missionaries from this church to Japan. This call met a prompt response on the part of two laymen and an individual Church in New York City, who volunteered to bear the expense of such an undertaking. The Rev. S. R. Brown and Rev. G. F. Verbeck, with a Missionary Physician, were appointed the first representatives of this Church to Japan. Dr. Brown had spent several years previously as a Missionary teacher in the Robert Morrison School at Hongkong, and at the time of his appointment was engaged in pastoral and educational work at Owasco Outlet, New York. These missionaries with their families set sail from New York City May 13th, 1859, and arrived in their future field of labor in November of the same year. Dr. Verbeck located at Nagasaki, and Dr. Brown at Kanagawa, where Dr. Hepburn, first representative of the American Presbyterian Mission, had arrived a few weeks before him. Rev. J. H. Ballagh joined Dr. Brown at Kanagawa in Nov., 1861. The efforts of the missionaries for several years, owing to the surveillance exercised by the Government, were mostly confined to the acquisition of the language. Dr. Brown for assistance to beginners in the language, published his book of sentences in Colloquial Japanese in 1863, and subsequently, his *Mastery System* of the language. Private instruction of pupils in English was early commenced, and with much benefit to the pupils who became interpreters in official positions, or teachers in the Government institutions. Drs. Brown and Verbeck, with the consent of the Board of Missions, for several years engaged in educational work under the Japanese Government. These labors were carried on at Nagasaki, Niigata, Yokohama, and Tokio. At the latter place Dr. Verbeck was for many years the virtual director of the Kai-Sei-Jio or Dai Gak-Ko, the Imperial University. His labors in the cause of education were rewarded by the bestowment of the Imperial Order of Merit.

In later years, Drs. Brown and Verbeck resumed their connection with the Mission and engaged in Bible Translation or direct missionary work. Dr. Brown's labors with those of Drs. Hepburn and Greene, the Committee on the translation of the New Testament into Japanese, were happily brought to a completion by the publication of the entire New Testament, in Japanese, early in the present year. Dr. Brown's last work on the translation Committee was the preparation of the first draft of the translation of the Book of Revelation, when he was compelled from failing health to return to America, where amid the friends of his youth, and apparently without a pang, he entered into rest at the ripe age of 70.

The early establishment and maintenance of public worship in English at Yokohama, resulting in the establishment of two flourishing Churches composed of foreign residents, owes much to the services of Dr. Brown. Besides conducting the service at H. B. M.'s Legation at Yokohama, he was well-known to take a deep interest in the establishment of the English Church at this place, an interest evincing itself in practical services rendered at the time of the erection of the present Church edifice. Later, the maintenance of the Services of the Foreign Union Church of Yokohama, until a recent period, with the provision of a place of worship for its accommodation and that of the Native Union Church, were largely due to Dr. Brown and other members of the Mission.

The first native converts baptized by members of this mission were at Kanagawa in October, 1864, and at Nagasaki in May, 1866. These Baptisms were administered in private, no one except members of the converts' own families being present. The first baptisms publicly administered were in May, 1868, at Yokohama. The first organization of the native Church of Christ was at Yokohama, on March 10th, 1872. It consisted of eleven persons, two of whom had been baptized previously, one by a member of the American Presbyterian Mission, and the other by a member of the English Church Mission at Nagasaki, and nine persons baptized that day. The number of organized Churches under care of the mission with date of their organization is as follows:

Yokohama, 1872; Uyeda, Shinshiu, 1876; Nagasaki, 1876; Tokio, Kojimachi, 1877; Wadamura, Musashi 1878; Tokio, Shitaya, 1878. Two of these churches are self supporting, and all except one contribute part of their support, and with one exception all have native pastors. There are 314 Adult members in the Churches, 178 scholars in Sunday Schools and 29 candidates for baptism.

The Churches of this Mission are united with those under the care of the American Presbyterian, and the Scotch United Presbyterian Missions in Japan, into a *Middle Assembly* or *Chu Kwei*, of "the United Church of Christ in Japan." This

body holds its sessions semi-annually, and reported 21 Churches, with 1405 members, under its care at its last meeting. Members of this Mission are engaged also with representatives of the above two Missions in a Union School of Theology at Tankiji, Tokio, where a Seminary building, with library and reading room attached, has been erected at the conjoint expense of these Missions. A Council of these Missions, consisting of all the Missionaries, is held annually, at which common measures concerning their united work are agreed upon.

The Evangelistic work of this Mission is carried on at Kanagawa, Hakone, Mishima, Numadzu, Yoshiwara, Koyama, and the region around Fujiyama. At Nagoya in Owari; at Okazaki in Mikawa; at Kagoshima in Satsuma; at Kogoro, in Shinshiu; and in the city and vicinity of Tokio. In the latter city preaching is maintained in one of the prisons as opportunity offers. The educational work of the Mission, aside of the theological instruction engaged in by Dr. Verbeck and Rev. Mr. Amerman at Tokio, is chiefly confined to the Ferris Seminary, or school for Japanese ladies at Yokohama. This school commenced by Miss M. E. Kidder, now Mrs. E. R. Miles, in 1870, and at present, under the care of Miss E. C. Witbeck, and Miss H. L. Winn, has long been favourably known by parents in official circles, whose daughters have received a good Japanese and English education based on Christian principles. Its present numbers of pupils is 26.

The members of the Mission at present, and the date of their joining the Mission are as follows:—

Tokio .....	(Rev. G. F. Verbeck L.L.D. and wife .....	Nov. 1859
	(Rev. J. L. Amerman " " .....	July 1876
	(Rev. J. H. Ballagh " " .....	Nov. 1861
Yokohama ...	(Rev. E. R. Miller " " .....	July 1875
	(Miss E. C. Witbeck .....	Nov. 1874
	(Miss H. L. Winn .....	May 1878
Nagasaki ...	(Rev. Henry Stout and wife .....	March 1869
	(Rev. E. S. Booth " " .....	Oct. 1879

THE ANNUAL MEETING of the Tokyo Missionary Conference was held on Tuesday, Nov. 2nd, Rev. G. F. Verbeck, D.D., was chosen President for the ensuing year, and Rev. C. Bishop, Secretary. Rev. H. Waddell addressed the Conference on "The Psychology of the Chinese and Japanese," and will continue his address at the next meeting, Dec. 7th.

THE AMERICAN TRACT SOCIETY has appointed two Committees to supervise its work in Japan. For the north: J. C. Hepburn, M.D., Rev. Drs. Brown, Verbeck and Williams, and for the south: Rev. Messrs. Davis, Morris, Winn and He-bima. The former Committee, excepting Rev. Dr. Williams, who is unable to accept his appointment, organized on Saturday Oct. 30, electing Rev. Dr. Brown, President and Rev. Dr. Verbeck, Secretary and Treasurer. The Committee also appointed Rev. Jas. L. Amerman its corresponding secretary.

Hitherto the American Tract Society has granted funds to several missions for suitable publications, but now that its work is organized by the appointment of these Committees, we may expect to find it more prominent among our various Christian Agencies. And as the use of tracts in Christian work in this country has largely increased during the past two years, there will be abundant room both for the work of this Society and that of the London Religious Tract Society already organized.

**JAPAN METHODIST EPISCOPAL MISSION.**—The Japan Mission of the Methodist Episcopal Church, U. S. A. was commenced in 1873. The missionaries appointed to commence the Mission were the Rev. Messrs. R. S. Maclay, J. C. Davison, Julius Soper, M. C. Harris and I. H. Correll. Rev. Mr. Maclay, with his family, arrived in Yokohama, June 11th, 1873; Rev. Messrs. Davison, and Soper, accompanied by their families, arrived August 8th, 1873; Rev. Mr. Harris and Mrs. Harris arrived December 14th, 1873; Rev. Mr. Correll and Mrs. Correll, under appointment to the Methodist Mission in Foochow, China, arrived in Yokohama, June 30th, 1873, and being unable to proceed on their passage, in consequence of the serious illness of Mrs. Correll, they were detached July 22nd, 1873, from the Foochow Mission and appointed to the Japan Mission. It is an interesting and perhaps a noteworthy circumstance that all the above-mentioned missionaries and missionary ladies who were attached to the Mission at its initiation have, with only one exception (Mrs. Maclay who died in Yokohama, July 28th, 1879) continued to the present time in connection with it. Since the commencement of the Mission its corps of laborers has been increased by the appointment of the missionaries whose names we now proceed to give, viz: the Rev. W. C. Davison who, accompanied by Mrs. Davison, arrived in Yokohama, Nov. 8th, 1877; the Rev. Messrs. Charles Bishop and Milton S. Vail, who reached Yokohama, Sept. 13th, 1879; the Rev. Messrs. G. F. Draper, and C. S. Long who, accompanied by their families, reached Yokohama, March 19th, 1880; and Miss Jennie S. Vail, who arrived May 25th, 1880. The Rev. John Iug, a missionary of our church returning to the United States from the mission in Kiukiang, China, in September, 1874, was detained, with his family, in Yokohama for a few weeks, during which time he accepted an engagement as teacher in the school at Hiroaki, in the Awomori Ken. He remained in Hiroaki till March, 1878; and for a period of somewhat over a year,

toward the close of his engagement with the school, he was a member of the Japan Mission of our church. The woman's Foreign Missionary Society of the Methodist Episcopal Church has established a Mission in Japan, the first missionary having arrived in Yokohama, October 28th, 1874, but as a sketch of the Society's work in Japan will be prepared by another hand, the names of the Missionaries are not given here.

The stations in Japan where the Methodist Episcopal Mission has resident foreign missionaries are Yokohama, Tokio, Nagasaki, and Hakodati. In Yokohama it has four foreign missionaries and one foreign lady teacher; in Tokio it has three foreign missionaries; in Nagasaki it has two, and in Hakodati one. In addition to these four central stations, our Mission, either alone or in conjunction with other Protestant Missions, has a goodly number of stations in the interior of the country under the direct charge of native pastors or evangelists, to which the foreign missionary makes visits as circumstances may require. The stations it occupies in conjunction with other Protestant Missions are Nagoya city, occupied in conjunction with the Union Church of Christ in Japan; Sapporo, the capital of Yesso, occupied in conjunction with the Church (of England) Mission; and Kagoshima, the capital of the Satsuma country, occupied in conjunction with the American Reformed Mission and the Church (of England) Mission. The more important of the stations, where our mission is the only Protestant evangelistic agent, are Matsumai, in Yesso; Hirotsaki, Awamori, Kuroishi and Yamagata, in North Hondu; Hachioji, Joze, Matsumoto, Matsushiro, Atsumi, Iida and Nishiwo in central Hondu; together with Hakata, Kujiki and other places in Kiushiu.

The educational department of the Mission comprises a Theological School, a system of day-schools of a somewhat advanced grade connected with all the central, and some of the other stations, together with Sunday schools, which are conducted at nearly all our stations. The Theological School is in Yokohama. The school-buildings are eligibly situated on the Bluff, and comprise residence for the President of the school, four lecture-rooms, and dormitories for the students. The corps of instructors includes five foreign and two Japanese teachers. Thirty-two students are now in attendance, of whom eight are theological. The students (with the exception of six who are supported in part or wholly by the Mission) pay all their expenses, including tuition-fees and other school charges. The school is not self-supporting; at the same time every effort is put forth to develop manliness and self-reliance in the character of the students, and financial aid is afforded only in those cases where there is every reason to believe it will tend to promote the best interests of all concerned. Day-schools, in which the foreign missionaries give personal attention to the work of instruction, are conducted in Tokio, Yokohama, Nagasaki, Hakodati, and Kagoshima, while at some of the other stations there are schools under the supervision of the native pastors. There are over five hundred children in these schools, nearly all of whom attend also the Sunday schools of the Mission. The publication department of the Mission, the funds for which are supplied by the Tract Society of the Methodist Episcopal Church, aims to do something towards providing a Christian literature for the Christian church of Japan. During the past year four thousand copies of tracts, making a total of 181,400 pages, have been published. The church in the United States, represented in Japan by our Mission, being a contributor to the funds of the American Bible Society procures from that Society, in accordance with its rules, all the copies of the Sacred Scriptures required by its Missions for the prosecution of evangelical efforts in foreign countries: hence in the publication department of our Mission in Japan, we do not trench upon the work which appropriately falls to, and is so efficiently performed by, the American Bible Society.

The property of the Mission consists of five church-edifices, seven parsonages, and five school-buildings, the total estimated value of which is \$29,500.00. Of this property, three parsonages, two school-buildings and one church-edifice are in Yokohama; two parsonages and one church-edifice are in Tokio; one church-edifice and one parsonage are in Nagasaki; one church-edifice, one parsonage and one school-building are in Hakodati; and one church-edifice, a portion of which is used for school purposes, is in Kagoshima.

The entire working force of the Mission as at present constituted includes ten foreign missionaries and one foreign lady teacher, one ordained native preacher, fifteen unordained native preachers, and twenty helpers. There are now about five hundred members, one hundred and sixty candidates for baptism and sixty-two baptized children connected with the churches under the care of the Mission. During the past year the native church has contributed the sum of \$263.30 toward the support of evangelistic work in Japan. In accordance with our plan of church government, the places in Japan occupied by our Mission have been arranged in twenty circuits, each circuit being placed under the care of a native preacher. These twenty circuits are grouped in six districts, each district being for the present in charge of one member of the Mission, who supervises its interests and is responsible for its adminis-

tration. Meetings, attended by the official members of the churches, are held quarterly for the transaction of all business connected with the circuit or circuits represented in the meetings; and once a year a general meeting of all the foreign missionaries, native preachers and helpers, of all grades, is held for the discussion and adjudication of all matters affecting the churches and work under the care of the Mission.

A reference to the dates given in the opening paragraph of this paper will show that it is only a little over seven years since the Japan Methodist Episcopal Mission was commenced. During this comparatively brief period, the members of the Mission have acquired a knowledge of the Japanese language sufficient to enable them to use it with at least a moderate degree of accuracy and fluency; they have procured all the property and other material appliances necessary for the efficient prosecution of their work; have translated and published some of the text-books used in training inquirers after Christian truth, and in the course of study for schools under their care; and have given a large portion of their time to efforts connected with the public preaching of the truth, the instruction of candidates for baptism, and the organization and training of Christian churches. Bearing in mind the difficulties to be overcome in the initiation of every important enterprise, and especially the obstacles confronting those who seek to change the religious faith and practices of a great nation, it must be evident we think to any thoughtful observer that the exhibit of work performed and results already tabulated, which is presented in this paper, indicates at once an ample return for the outlay involved, and a substantial basis for hopefulness and courage in the energetic prosecution of the work of Christian Missions in Japan. It is not claimed that, as compared with the work of other Protestant Missions in Japan, there is anything exceptionally favorable in the exhibit just presented: it affords us sincere pleasure to state that, in proportion to the resources and appliances used, the success of every other Protestant Mission in Japan is, at least, equal to that indicated by the exhibit of the Mission to which we have referred in this brief sketch.

OKAYAMA PROVINCE has its first Christian Church. The Council convened at Okayama, on October 12th, and did its work of organization and ordination of Mr. P. M. Kanamori, in two days. The first membership numbers thirty-two, five of whom came by letter from other churches. A new building has been rented in the centre of the city, where a Bible bookstore and Reading room will be opened, besides service preaching and a Sabbath School. A new work has just commenced in the large Pottery where Okayama-ware is made. The proprietor believes that the observance of the Sabbath will be a good business investment, and he has requested religious services for the benefit of the operatives.

IT WAS OUR duty to attend, on the 23rd of October, the impressive Christian burial services of a young graduate of Sapporo Agricultural College, who died in a Tokio Government Hospital, a little more than three months after the close of his College-life. We note this fact because the promising young man thus cut down at the beginning of his career formed one of ten in the first graduating class of thirteen, who are earnest converts to Christianity, and whose desire for the true progress of their country attests the genuineness of their Christian faith.

## PARIS LETTER.

PARIS, September 11th, 1880.

A section of the republican press insists upon public meetings being held to protest against the participation of France in the united naval demonstration against Turkish obstinacy and fatalism. The holders of these views stated several weeks ago, that the country must keep aloof from the Oriental Pandora's Box, where even Hope does not appear to be at the bottom. Beyond doubt, at that epoch ministers allowed it to be understood that they would bow to the expressed wish. Judge then of the surprise, when the public learned that three French war-ships were ordered to join the European navies, which in their way, will recall the French monarch, who marched his army up a hill, and then—marched it down again. It is as great a deception, as the speech of M. de Freycinet on the "Decrees," promised to be applied to all non-legal religious confraternities, as well as the Jesuits, and then—deferred to the Greek Kalends.

All this will be made clear when the Chambers meet, and their convocation is instantly demanded. However, legislators cannot be asked to leave the superintendence of their vineyards, the organization of factories for winter work, or to return from Alpine climbing and lowland shooting. If the Minister has erred, his day of reckoning will not be the less certain, nor

his punishment the less summary, if he merit it. But it is incomprehensible, that Frenchmen claim ever for their country a prominent place in the Council Board of Europe, while at the same time repudiating its obligations. It was hitherto considered something like a crime on the part of England to stand aloof from European questions; now France adopts the same selfish diplomacy.

It is on M. Gambetta's shoulders—happily they are broad,—that falls the whole accusation of driving France into the Turkish difficulty. He alone of all the mighty men of Israel remains in Paris, while at this important juncture, when the destinies of the Republic may become jeopardized, M. Grevy is accused of potting at rabbits on his private estate, and the prime minister of drinking mineral waters at their spring to keep his liver orthodox. It is M. Gambetta that reigns—at once anonymous and irresponsible.

There is another functionary who is down for removal at an early date—M. Andreux, the Prefect de Police, who is accused of doing as he pleases, because counting on the high protection of M. Gambetta. M. Andreux was in his day a journalist: it was the press wrote him up, and it is the press that is now writing him down. He is accused of having only smiling eyes for the opposition papers. He is now at some cure station, while Paris is becoming pestiferous, from the stenches of her unflushable sewers. It was said that the world envied France her Judicial Bench—this was before the Coup d'Etat, and some added, the capital system of sewerage. Cities in process of undertaking a new plan of drainage, would do well to pause till they have the report of the Committee of Inquiry into the failure of the sewers of Paris to work during an unusually dry summer—the period when their efficacy is most required. Too much street mud and refuse is allowed to pass into the drains: the scavengers make such serve as carts. But then the filth when it accumulates is brought up by means of buckets through the man holes. This rubbish has accumulated beyond all expectations, and hence why Paris resembles a certain city on the Rhine, with its "two and seventy stenches, all well-defined, and several stinks." The night soil too is not farmed in every case, as many believe; but the house communicates with the street drain. It is at Clichy that the discharge of the *maxima cloaca* occurs; this season the inhabitants in that quarter have nothing to complain of—as Paris consumes all its own odors, as it does its own smoke. The river too is said to be better stocked with fish, as no impurities can enter the Seine—for the moment.

Menesclou has just been executed, and the post-mortem examination just held on his body, that is to say, his head, demonstrates that he was a lunatic; not only was the brain unusually below the standard of the average of Parisian brains, but it was adhering to the sides of the skull—a diagnosis indicative of insanity. Then again his mother and uncles are more than touched. His crime did not show him to be in his senses; he enticed a little girl aged four, into his bed room, violated and strangled her, cut up the body into fifty fragments, and was occupied burning them in a stove when discovered by the mother, who found the two hands of her child in the ruffian's pocket. His execution is the quickest on record. At four o'clock the guillotine arrived, and by five was erected, after which the executioner and his assistants partook of refreshments. In the meantime the prisoner, who was in a leaden sleep, was roused up, at five; was dressed, confessed, and supplied with wine, in fifteen minutes; in two more he was tied, three minutes were occupied in the procession, and three more to strap him against the plank, run the board out into the half moon where his neck lay, and on the opposite side was an assistant holding down the head, till the knife and its back of 112 lbs. of lead did its work. The ceremony of the last toilette has been mercifully abolished; that is performed after the prisoner leaves the Court condemned to death as a "sanitary" regulation of the prison, and consists in clipping the hair off the back of the head and removing the shirt collar, so that the knife can do its duty. The ordinary crowd can see nothing of the execution, and only a privileged few are permitted to the inner circle. The Republic is the rendezvous for ex-presidents, as for ex-kings; one of the former, dating from Bolivia, was present with his wife; the executioner ordered her into the

back-ground, which she said was ungallant, but after the ceremony she trotted back to see the blood, and the knife being run up. She and her John Anderson assisted at the post mortem examination, and declared the electrical wriggings of the corpse, &c., constituted a beautiful experiment. The real experiment failed—as the body having arrived late, was cold. It consisted in pouring the blood of newly killed dogs into the bloodless head, with the view of testing the working of the transfusion theory, and deciding at the same time, if the head, as some allege, is conscious of its widowhood.

The Republic has commenced devouring a first kingdom—Tutiti; let old Europe be on its guard. The French would be more enthusiastic over their new acquisition if they exactly knew where it was: by-and-bye a journal will be specially brought out to enlighten them, just as the Marquis de Bays has done for his New Broton—only in the latter case it is impossible to conclude, whether it is the Marquis or his Crusoe island, that the end is to advertize.

The Bonapartists appear to have made an important political discovery; they accept now the Republic as a fact, and only demand, that in the election of all future Presidents, such ought to take place by a popular, direct vote—a plebiscite in fact, instead of as at present, by the united two Chambers. This dodge it is expected would allow Pion Pion to become a candidate, to follow in the wake of Napoleon III—president, perjury, coup d'Etat, Sedan. The Count de Chambord, bleak as his prospects are, is superior to this: he waits for heaven to restore him, and in the interim invites all his followers to banquet royally on Michaelmas day—that Saint being the patron of Henri V.

On the re-meeting of parliament, the question of the repeal of the Concordat will be placed on the order of the day for discussion: this is the preliminary battle for the separation of Church from State. A few journals have special writers for this subject, whose articles are printed separately and distributed broadcast. The total annual amount voted for the clergy is 51 million francs: the Archbishop of Paris has fr. 45,000—far below that other poor descendant of the Apostles—the Archbishop of Canterbury. There are 16 archbishops with an income of fr. 15,000 each, a salary that many government clerks would despise; there are 69 bishops with an income of fr. 10,000 each; the extras are very modest. A vicar-general's salary is fr. 4,500, and the other deans in proportion: the assistant clergy have but fr. 1,000 or £40, like Goldsmith's Vicar, and so are passing rich. It is intended to apply the church endowments to the erection of schools, and also to tax all monasteries and convents like secular properties—a step that will bring in 60 or 70 millions to the local taxation of the country.

Signs of the coming season are evident; the tropical heats are over, and all we want is a week's steady rain to wash away the summer's dust out of all nooks and crannies and drown the flies. Has it been remarked this year, as in France, the small number of blue bottle flies? The butcher's shops have nothing to complain of; on the other hand, the fruiterer's are in hysterics over the invasion of a new species of fly, very black, long, slender, and as obstinate as a mule.

The game season has set in, but the supply in the markets is poor and dear. Germany and England are the two countries that stock the Paris Market in this commodity; quails are very plentiful: partridge is a *rara avis*, but already hotels provide you with all that is necessary and without augmentation of price: the same with last year's vintage; it was one-fourth short, yet the citizens had neither to go on short commons, nor to pay one sous higher in price. *Vive la Seine!*

The grandson of the Countess d'Argout, Daniel Stern, has been married. His grandmother was one of the most celebrated beauties, and most remarkable wits of her day; she had a passion for Lizst which was proverbial, and she is the Arabella, in George Sand's "Letters of a Traveller." Towards the end of her life the Countess had an admirer, the brother of a senator, who assured her, her "friendship was for him, a glory!" On her death, he came daily to talk of the departed to her waiting maid, and both indulged in tears, which resulted in matrimony, as he could find none so ready to speak about the virtues of the

Countess. The couple were among the most prominent guests at the wedding in question.

Paris may be without President, or Ministers, but never does she lack some royal princes, who, true to their mission, run to and fro. The Grand Duchess Vladimir is within our walls, and is to be met with everywhere, shopping. The winter Palace will hardly contain all her purchases, and her commands will keep many firms busy for some time.

Marshal McMahon has been heard of: he has opened the sporting season on his magnificent estate, at Montargis. At six o'clock in the morning, he, his household, and his guests, assembled in front of the castle, when slices of bread and jam were served, along with wine, to drink to the health of St. Hubert. After that, the bugles sounded "Good Morning," and then to work.

"We were five, at the reading of Monsieur X's five act drama, and we concluded, that an act ought to be suppressed—each of us indicating a different one."

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

#### COURT, POLITICAL AND OFFICIAL.

The *Nichi Nichi Shinbun* states that a rumour is current to the effect that Mr. Makimura, Governor of Kioto, is to be transferred to the Senate and will be replaced by Mr. Kagoteda, the present Governor of the prefecture of Shiga, whose office is to be filled by Mr. Secretary Toninori of the Daijo Kwan.

The *Chuga Shinbun* states that the ex-king of Loochoo, who has never yet received an audience with His Majesty the Emperor, was presented on the 3rd instant.

The *Nichi Nichi Shinbun* says that from the 5th to the 10th instant, the gardens of the Aoyama Palace will be open to the Imperial Princes, the Prime Ministers, Privy Councillors, and officials of the 1st to the 7th grade, to enable them to inspect the chrysanthemums now in bloom. To-day the 6th instant there is to be a theatrical performance in the palace itself before Their Majesties the Emperor and Empress.

The same paper states that it is intended to establish a new office in the Imperial Household Department, which will be styled the "Private Official Meeting Room."

We read in another paper that the branch office of the Agricultural Bureau, established at the Bonin Islands, was handed over to the authorities of the city of Tokio on the 30th ultimo. Mr. Takeda, a sakan of the first class in the Home Department, who was in charge of this branch office, will shortly return to Tokio. The expenditure of the office has been greatly reduced and is estimated as 2,654 yen.

We learn from the *Hochi Shinbun* that His Excellency Sano, Minister of Finance, and Mr. Ishimaru, Superintendent of the Osaka Mint, left Tokio on the 30th ultimo on an official visit of inspection to the Shimosa farm. During the absence of the Minister of Finance, His Excellency Yoshiwara will act for him.

On the subject of the expected arrival of Admiral Les-offaky in command of the Russian fleet, the *Mainichi Shinbun* says that the following report has become very current, but does not guarantee its accuracy:—"On receipt of information that the Japanese Government intended to receive the Russian Admiral with very great hospitality, His Excellency Ho Ju Chang, the Chinese Minister, reported it to his own Government. They replied that Japan was a near neighbour of China and that up to the present day a warm friendship had existed between the two countries, and that should such a disaster occur as that war should break out between China and Russia, Japan would undoubtedly remain neutral. The only reason for Japan awarding the Russian Admiral a special reception could be that he is her distinguished guest. The Minister was also instructed to direct his full attention to the movements of the Admiral and on no account to neglect to forward periodical reports on them."

The *Mainichi Shinbun* states that having recovered from his recent indisposition, His Majesty the Emperor has recommenced taking horse exercise.

From a native paper we take the report that their Excellencies Sugi and Hijikata, Assistant and Vice Assistant Ministers of the Imperial Household Department, are shortly to receive the decoration of the Order of the Rising Sun.

Mr. Under Secretary Obana, of the Home Department, left, according to a native journal, for the Bonin Islands on the 1st instant.

Mr. Wadagaki Kenzo and two other officials of the National Debt Office in the Finance Department, left for France in the M. M. Co.'s steamer *Mentaleh*, on the 31st ultimo.

We notice in another vernacular journal that His Excellency Sugi, Assistant Minister of the Imperial Household Department, left on the 1st instant on a tour of inspection into the condition of the people of the Northern provinces.

The *Hochi Shinbun* has some laudatory remarks on the conduct of Mr. Nabeshima, the ex-Governor of Tochi-gi, for having refused to accept a seat in the senate, privately offered to him by the Government on the recent occasion of his resigning his office.

On the 3rd instant, His Majesty left the palace at 8.30 a.m., and proceeded to the Hibiya parade ground, where he witnessed a Military review. H. I. H. Prince Higashi-Fushimi was in command. His Imperial Highness Prince Arisugawa, the Prime Ministers, the Privy Councillors, the Ministers of the all Government Departments, and the Foreign Representatives accompanied the Emperor. At 10.40 a.m. His Majesty returned to the palace.

The new Post Office in Hakodate is to be opened next January.

The *Mainichi Shinbun* reports that H. E. Oki, Privy Councillor, who has recently been indisposed, resumed his seat in the Cabinet on the 4th inst.

The same paper states that H. E. General Oyama, Minister of War, paid an official visit to the Agricultural School at Komaba, on the 3rd inst.

According to a native journal Mr. Fuji-i Benzo, ex-Governor of the Hiroshima prefecture, has been ordered up to Tokio, where it is said he will be appointed a Secretary of the Imperial Household Department.

The *Nichi Nichi Shinbun* informs its readers that Mr. Fuji-kawa, Secretary of the prefecture of Tochi-gi, has been appointed to succeed Mr. Nabeshima as Governor of that prefecture.

#### NAVAL AND MILITARY.

We learn from the *Nichi Nichi Shinbun* that the Tokio garrison and its barracks are shortly to be inspected.

According to the *Hochi Shinbun* a review of all the forces composing the Imperial Guard is to hold about the middle of next month.

According to the *Nichi Nichi Shinbun*, in consequence of the increase of Japanese residents at Gensan, the man-of-war formerly stationed at Fusan will in future spend one month alternately at these two ports for the protection of Japanese residents.

From the same source we learn that Mr. Kokuni, one of the military cadets studying in France, has passed his examination for the commission of a Lieutenant. He will, it is said, shortly return to Japan, when he will be appointed Instructor on the Staff of the Military College.

A number of officers are to be despatched from the Staff Office, at the commencement of next month, for the purpose of surveying the rivers and creeks throughout the whole country.

A regiment of cavalry, which composed part of the forces recently at the Narashino plains, returned to Tokio on the 3rd instant.

#### TRADE, INDUSTRIES AND FINANCE.

We take the following extracts from the *Mainichi Shinbun*:—"Mr. Kawamura Yei-no-suke, President of the Kawajiri Company of Akita, who went to Italy last June, has established a branch office of his company, at No. 31, Mitchisar Street, Turin, and commenced direct transactions with the Italian merchants on the 2nd of July. The Company has already established itself in the confidence of the mercantile community, and the average price of the cartons already contracted for ranges from 4.50 to 4.60 yen per card. The general condition of the European silk crop is considered good, and the Japanese

eggs have proved most successful, and also the silkworms that were crossed with Italian worms. The "brilliant golden eggs" of France turned out very badly. In consequence of these results the company has gained an excellent business status. The way is now thoroughly paved for direct trade which, it is hoped, will take some of the profit out of the hands of foreigners. Two subordinates of the company have also entered the silkworm-breeding school at Turin: they are studying Italian in addition to matters connected with the trade, which will all tend to the benefit of the said company."

A native paper publishes the following statistics of Exports and Imports during the month of September last, as supplied by the Custom House Bureau:—

Imports .....	Yen 3,569,998.68
Exports .....	Yen 2,197,768.32

Excess of imports .....	Yen 1,372,230.36
Custom House revenues .....	Yen 238,956.51
Export of specie and bullion .....	Yen 483,451.73
Import " " " " .....	Yen 40,437.00

Excess of exports .....	Yen 443,014.73
-------------------------	----------------

Another native journal states that the Government loan which was raised some time ago and advanced to the Shizoku to assist them in their various industrial undertakings, amounted in all to over 2,000,000 yen. It should not be long before all the waste land in the country is brought under cultivation and industries greatly encouraged in consequence.

The *Mainichi Shinbun* writes on the subject of Trade in Corea:—"Trade at Gensan is greatly improving, and a large amount of gold dust arrives daily. There is a constant enquiry for all kind of Japanese goods and supplies are inadequate to meet the demand. In consequence of this the Japanese merchants have petitioned the Consul General to request the higher authorities to increase the number of mail steamers running between the countries, and their petition has been forwarded.

We make the following extract from the *Hochi Shimizu*:—"The public is well aware that tea, silk, and silkworm's eggs are the three most important items in our list of exports, but yet we have been content, up to the present time, to sit at our ease waiting for buyers to come, so that prices rose and fell at the whim of foreigners, and we not only failed to obtain a fair price but lost considerably. However, Mr. Shimamura, of Jushiu, and an equally well-known gentleman in Ooshu, who are both connected with the cotton trade, have come to the determination to send no goods to Yokohama, but to ship direct to France and Italy. It will be indeed a matter of the greatest congratulation if our merchants have really become filled with such a spirit of enterprise."

The *Akebono Shinbun* writes as follows on the subject of the financial crisis:—"Many expedients are recommended just now as remedies for the present crisis. In the Cabinet the proposal to reduce the expenditure of all the Government Departments has met with approval. We have not received official intimation as to what sum is expected to be saved annually, but we hear that it is only about 3,000,000 yen, which is a very small amount. By the revision of the *maké* tax, however, the revenue will receive an augmentation of over 5,000,000 yen yearly; the tax on tobacco and the reduction of the expenditure connected with Government buildings, adds a sum of over 2,000,000 yen. Thus the Government will have a sum of over 10,000,000 yen at their disposal which be applied towards remedying the present unsatisfactory state of financial matters.

"If we try to discover the causes of the present condition of affairs, we find them so many as to be beyond enumeration. The two principal reasons, however, are beyond doubt the following:—First. We had maintained for many years a policy of isolation, and were consequently unacquainted with the ordinary details of trade. We had no merchants who dared to go abroad and consequently trade was completely in the hands of foreigners, who bought whatever produce we brought in at just such prices as suited themselves and, in fact, had complete control of the market. This resulted in a constant drain upon our specie. The second reason is, that owing to the enormous issue of paper money by the Government, the people have lost confidence in it.

"The remedy for the first cause given above would seem to be to encourage our merchants by every possible means to carry on trade direct with foreign countries. If they export goods let them establish themselves in those places to which the goods are sent, and sell them direct to the consumers; and let them adopt a similar method with respect to imports, and purchase them direct from the manufacturers. Thus they would recover their commercial influence and prevent the foreign merchants from making enormous profits when acting as agents only. As regards the second question, the amount of paper money now in circulation should be reduced without delay, in order to re-establish public confidence and stop depreciation."

The *Nichi Nichi Shinbun* contains the half-yearly return of all exports and imports at the open ports of Japan, from January to June, 1880:—

Imports .....	Yen 18,034,531.99
Exports .....	Yen 10,048,186.62

Excess of imports .....	Yen 7,986,345.27
Custom's revenue .....	Yen 1,203,401.88
Export of specie and bullion .....	Yen 9,030,071.56
Import " " " " .....	Yen 3,357,302.60

Excess of import .....	Yen 5,672,768.96
------------------------	------------------

The same journal also publishes a report on the exports and imports at Fusau, Corea, for the same period:—

Exports .....	Yen 466,543.48
Imports .....	" 329,745.66

Excess of export .....	yen 137,797.82
------------------------	----------------

Of the imports, the Japanese produce cost 31,891.07 yen, while the goods of foreign manufacture re-exported from Japan, are valued at 297,854.59 yen.

One of the native journals states that it has been informed that the matches manufactured at the Shin-uis-sha Match Manufactory at Honjo, Tokio, are now being exported to China, and that dealers in foreign-made matches, finding themselves unable to compete with the Japan match merchants, have closed their shops.

Another paper writes:—"In the prefecture of Akita the Kencho authorities have for some years passed rendered great assistance to those engaged in the breeding of horses and cattle. The people have also been competing against one another which has brought about a great improvement in the animals. For instance, the horses are now worth from five to ten per cent. more than they were formerly.

According to an advertisement in the *Hochi Shinbun*, a native Life Assurance Company has been opened at No. 11, Nichome Hamacho, Tokio.

The *Nichi Nichi Shinbun* says that rice fields to the extent of about 200,000 koku, in the province of Harima, in the prefecture of Hiogo, have recently been carried away by floods. The Government is about to render assistance to the sufferers.

#### MISCELLANEOUS.

The *Mainichi Shinbun* publishes the following extract of a letter from a Japanese military officer at present pursuing his studies in Paris:—"When I happen to meet with a member of the French Military Mission who was formerly in Japan he always remarks to me, 'Japan is indeed a pleasant country; since my return to France I feel as if I had left Paradise for a world of sin. You are so bountifully endowed by nature that I cannot but envy your happiness. I hear too, that there are now many people in Japan striving to obtain the establishment of representative institutions; if this excellent idea can be carried out Japan will be the most favoured and happiest of nations.'"

We see in a native paper that the *Iconai Maru*, which was recently under construction at the Yokosuka Dockyard for the Colonization Commission has been completed, and left on the 28th ultimo for a trial trip. Her engines were found to be in perfect order and she will shortly proceed to Yesso.

According to a native contemporary a new periodical has appeared under the title of the *Hokugo Zasshi*, in Tokio. Another journal called the *Hokuyetsu Shinbun*, will be published in Nagaoka, in the province of Echigo, on and after the 4th of January next.

The *Mainichi Shinbun* writes as follows:—"About the month of July or August last, a Korean came to Japan and devoted himself to the study of our literature, and to disguise his nationality he assumed the Japanese name of Asano. On the recent occasion of the visit of the Korean Ambassadors he had an interview with them, and by his careful explanation of the affairs of Japan and other different countries, he made them comprehend many matters about the outside world. Wishing to awake the Korean nation from its present obstinate sleep, he left Japan and returned to Corea in the *Tagonoura Maru*, on the 22nd of September last. He resumed his native dress and went to the Capital where he held a long interview with the reputed head of the party of progress, and explained fully the general state of affairs abroad, and entered deeply into the subject of the future of Corea. Mr. Asano is expected to return shortly to Japan."

Another paper says that an American of the name of Wagner, and a native of India, have applied to the authorities for permission to reside on the Bonin Islands.

The following passenger steamer statistics are taken from a native source:—During the past month, no less than 13,403 persons travelled by the Yokohama-Yokosuka steamboats. Another steamer, running between Tokio and Yokohama during the same month, had 450 passengers.

There is to be a great festival at the Yasukuni Shrine at Kudan, Tokio, for the next three days.

The Shintomiza Theatre will be re-opened to-day.

#### ARRIVAL OF THE FRENCH MAIL.

London, October 3rd.—The Great Powers await the proposal of the Porte for the pacific solution of the Montenegrin question. The *Hecla*, Royal Naval Torpedo depot ship, has started with torpedo boats and 150 torpedoes to Corfu.

One thousand pounds reward is offered for the apprehension of the murderers of Lord Mountnorres at Clonbur.

Constantinople, October 3rd.—The Porte has communicated to the Ambassadors of the Great Powers a general scheme for the settlement of all pending questions between them and Turkey. Further details regarding it are awaited.

The British Squadron has sailed to the Gulf of Cattaro, and Admiral Seymour is proceeding to Cetinje.

London, October 4th.—Numerous land meetings were held yesterday in different towns in Ireland. The largest were in Cork and Kilkenny, where Mr. Parnell made violent speeches.

The troopship *Scrapis* sailed to-day for Bombay.

Genoa, October 4th.—General Garibaldi arrived here to-day, and was welcomed enthusiastically.

London, October 5th.—Sir Bartle Frere has arrived in England.

The Cabinet has discussed the scheme of the Porte, but the result of its deliberations has not transpired.

Prince Nikita has urged the Great Powers to consent to an immediate attack on Dulcigno, which he will commence if assisted, as the lateness of the season forbids delay.

The *Daily News* in a leading article to-day, announces that the Turkish scheme is neither a reasonable nor a practicable proposal. The proposition is that the Porte will undertake to surrender Dulcigno upon condition that the Naval demonstration be henceforward abandoned; and further, it promises afterwards to deal promptly with the Greek frontier and Armenian questions.

London, October 6th.—Offenbach, the celebrated musical composer, is dead.

All the London press condemn the scheme of the Porte as an insult to Europe. The proposal comprises the following offers:—That the Greek frontier shall be extended to and include south Janina and Larissa; that reforms in the administration of Asia Minor and Armenia shall be organized within three months, that reforms in European Turkey shall also be carried out, compatible with the maintenance of the integrity of Turkish rule and independence, and that endeavours will be made to persuade the Albanians to surrender Dulcigno. All these proposals are, however, conditional upon the abandonment of the naval demonstration. The allied fleet is now at Cattaro. It is in contemplation to extend the naval demonstration to the Bosphorus.

October 7th.—Obituary: General Sir Henry Dalrymple White, Colonel of the 6th Dragoons.

It is in contemplation to present General Roberts with the freedom of the city of London and a sword.

The majority of the European Press are indignant at the German Press treating the demonstration in the East as a huge joke. The French Press are now urging prompt action.

The Great Powers are desirous to maintain the European concert, and they await the proposal of England. A blockade is suggested.

The Czar's new yacht *Livadia* has sailed for the Baltic. Rangoon, September 28th.—Two Burmese prisoners out of the three who escaped from Engsein on Friday, have been recaptured by the police, together with the Government rifle and ammunition. The other prisoner is still at large.

Rangoon, October 1st.—The Bassein correspondent of the *Rangoon Gazette* writes that a severe earthquake was felt at Bassein on Thursday, about 4 o'clock in the morning. The Suntoo Pagoda fell, scattering the jewels on the Htee. The municipal bazaar and public buildings were somewhat injured. The same shock was felt at Rangoon, but was comparatively light here.

Rangoon, October 2nd.—The British ship *Melpomene*, from Liverpool to Rangoon with salt, was wrecked on a sunken reef on the 24th September, 60 miles east of the Andamans. After several attempts to stop the leak had proved unsuccessful, the vessel was abandoned and the Captain and 26 crew took to boats. They tried to make the Andamans, but owing to high sea were unsuccessful, and made for Torres Island after four days, as the supply of water was getting finished. The steamer *Kileva* picked them up, and conveyed them to Moulmein, whence they arrived here on Friday last.

Naini Tal, 22nd Sept.—In the list of killed or injured by the great landslip at Naini Tal, the following were injured:—Messrs. R. (?) Macleod, J. Walker, A. Draw, and Mrs. Grey; altogether four persons. All the rest were killed.

Lahore, 23rd Sept.—The full details of the disaster at Naini Tal have not been received here, but it appears that between one and two o'clock on Saturday afternoon the hill at the back of the Victoria Hotel gave way, destroying the hotel and other buildings, and killing forty Europeans and many natives. The landslip was caused by the heavy rains of two nights and days before. The hills rise abruptly near the houses of the residents, and are of such nature that a slip at any time is rendered liable. Quite a panic prevailed among the remaining residents, most of whom have left for the plains.

The latest news from Naini Tal is that the bodies of Mr. Drew and about twenty natives have been recovered and, as there is little hope of any more being found, a solemn service for the dead was held on Wednesday, by the Revd. B. T. Atlay, near the spot, where the unrecovered bodies are supposed to be. A sum of about Rs. 7,000 was subscribed at the meeting held at Naini Tal to raise funds for the widows and orphans of the sufferers.

Allahabad, 22nd.—The following is an account of the Naini Tal landslip. Rain which had been threatening for some time began to fall heavily and on the evening of the 16th, showers had foreshadowed what the weather-wise believed to be the final burst of the monsoon. Friday passed, Saturday dawned, but still the sky was leaden, mists hung thickly over the mountain and rain poured steadily on in uninterrupted flow. Early on Saturday forenoon, the gauge showed that the fall had aggregated 25 inches in 40 hours. The effect of this enormous mass of water pouring down on the confined area of the settlement, which is simply a basin formed by a circle of more or less precipitous hills, was apparent. Every road was cut to pieces, the steeper ones on the hill side being reduced to the condition of huge drains down which poured floods of discolored water. On Saturday forenoon rumours of the dangerous state of the Victoria Hotel were noised abroad. A landslip, slight in itself but ominous of what might follow, had occurred in the spur behind at about 10 o'clock in the morning, resulting in the collapse of the whole upper line of out-houses and a portion of the back premises. The alarm was at once given, and visitors who had been staying at the hotel lost no time in leaving it and taking shelter elsewhere. The place was soon empty, but the main building remained standing apparently uninjured. The energies of the authorities were at once directed to the removal of the debris and the extrication of the injured and dead. Although the slip had not been of any great extent it was found that some 20 or 30 natives connected with the hotel, and one European child, had been buried in the ruins. The Assistant Commissioner, Mr. Leonard Taylor, in charge of Naini Tal, was promptly on the spot with a few of the local police and a band of labourers. Finding the task more arduous than he had expected Mr. Taylor sent for assistance to the military depot and he was speedily joined by a working party under the command of Captain Balderstone. At one o'clock all seemed well, the working party were busy at their task at the bottom of the precipitous ascent which overhung the hotel, the dead were being carried off and the wounded cared for. About half past one Naini Tal was startled by a sudden and sullen roar louder than the simultaneous crash of heavy guns, followed by prolonged rumbling as of distant thunder and then came an ominous silence. Vast clouds of dust rose heavenwards through the murky atmosphere, enveloping in one dense shroud the tract of ground from the hotel onwards to the Assembly Rooms, and the whole place shook as though an earthquake had passed over it. The waters of the lake rose in a moment far above their usual limit and swept in massive waves towards the Weir; then all was still. Never was havoc more sudden, more awful, or more complete. Down came with one fell swoop the enormous landslip, hurrying the hotel and the gallant band behind, engulfing the road and gardens, orderly room and a shop, assembly rooms and library, with almost every living soul they contained.

The following is the list of persons killed and injured. Killed. Leonard Taylor, Assistant Commissioner; G. H. Noad, Personal Assistant to the Inspector General of Police; Rev. Mr. Robinson, Chaplain; Mr. Morgan, road overseer; Major Mr. Morphy 40th Regiment; Mrs. Morphy; Mr. Tüebull; Captain Good-ridd, 35th N. I. Surgeon Major T. B. Haimah; Captain Haines, R. E.; Captain A. Balderstone, 34th Regt.; Station Staff Officer Lieut. T. E. H. Sullivan, 73rd Regt. 2nd Lieut. T. B. Carmichael, 33rd Regt. Sergeants Major Rogers. Sergeant Instructor McEwan Sergeants Grover, 33rd Regt. Lance Corporal Trister 125th Regt. Regiment Privates Hilmouth, 26th, Hayes 33rd, Gillan, 33rd, Turner, H. Brown, Chisholm, Kleinwray, of the 73rd Regiments, Farrace, 13th Hussars; J. Bart, 39th Regiment, Driver Colman, R. H. A. Mr. Bell junior, merchant; Mr. Noss, assistant to Mr. Bell, Mrs. James Drew, Ditto, Mr. Knight ditto, Mr. Tucker clerk Morgan, clerk; Mr. Shiels, resident of Naini Tal, Mr. Shiels, brother of the above. Injured, Mr. E. Macleod, clerk, slightly, Mr. T. Walker

clerk, slightly; Mr. A. Drew, Mrs. Gray, Assistant to Mr. Bell.

## THE JAPANESE PRESS.

### THE FINANCIAL CRISIS.

(Translated from the *Akebono Shinbun*.)

To-day, if we wish to purchase the sum of one hundred yen in silver, we must pay over one hundred and seventy-eight yen in kinsatsu for it. What a change from former years! Everyone is saying let us remedy this, and let us restore paper to its previous value, but no one can suggest any practical method by which this is to be brought about. The public cannot help wondering why specie should have risen so much of late, but it is plain that this is due to the action of the Finance Department in stopping sales of specie from its Treasury. As we have frequently explained before, kinsatsu remained steady at a discount of between thirty and forty per cent in consequence of these sales, but as silver began to rise, and the authorities found it impossible to check it, they stopped all further sales and the price immediately jumped up. The rise, therefore, is nothing sudden, but would have been effected gradually, had it not been for the check afforded by the Government sales of specie. If, however, the movements of kinsatsu are of an elastic nature, specie would in time be restored to its former rate, but there seems to be no hope for that and it may not be long before the existing discount of seventy-eight per cent goes as far as one hundred per cent; in other words, paper money will cost only half as much as specie. At such a crisis it is no wonder that we hear remedies suggested on all sides.

With the paper currency at such a discount, how is it possible for general commodities of life not to be affected? On one side we find that rice, salt and all kinds of vegetables have gone up in price, while on the other hand we find that the public loan bonds are depreciated. For instance, a bond bearing the nominal value of one hundred yen will not fetch more than about 64.40 yen, and we cannot say how much lower they will fall. Now the price of a public loan bond, as described therein, is to be paid in kinsatsu and its current value to be settled accordingly, so that there is no reason why it should be affected by a rise in specie and a fall in kinsatsu. Yet, however, we find this actually to be the case. It seems natural enough that bonds, the price of which depends on the value of the paper currency should depreciate more than the latter, but can we assert that this depreciation is due to a loss of confidence in the Government?

We have been informed that some months ago the Presidents of the National Banks in Tokio, held a meeting to discuss the state of financial matters, at which they gave the following as their opinion:—"It is far beyond our power to prevent the depreciation of kinsatsu, but we are able to restore the price of the public loan bonds to their proper level." A petition was then forwarded to the Government couched in the following words:—"We shall ask for a loan of one million yen from the Finance Department, which will be employed in buying up loan bonds, and if this sum proves insufficient many banks will combine, and by buying up quantities of these bonds will restore them to their proper price." This proposal has met with the approval of several of the officers of the Department, but the Minister of Finance has not as yet given a reply.

At first sight the suggestion may seem reasonable, but we look upon it with suspicion. When over one million paper money is put into circulation in order to buy up public loan bonds for the same amount, the demand for these latter will send up their price. On the other hand, an increase of one million yen to the amount of the paper currency now in circulation would of necessity tend to a further depreciation. Some one may say that as there are already several millions of yen out, the addition of one more can make only a trifling alteration. We might answer him with his own argument; if the public loan bonds, which amount to several millions of yen, are reduced by one million of yen what good would so trifling a diminution effect? So that the *pros* and *cons* of this proposal balance each other, and the only persons who would benefit by the scheme would be the buyers and sellers. We cannot there-

fore compliment Mr. Sano, Minister of Finance, too highly for not having adopted the proposition.

Some one else has asserted to us that although specie has risen in a most extraordinary manner of late, yet paper-money is greatly wanted, and the circulation of money in the city becomes worse every day. Interest is getting higher and higher, and it is impossible to tell whether business may not be brought to a standstill; and that it would be better for the Government to issue several millions of yen to remedy the present crisis in financial matters. This would be indeed a most short-sighted policy, but as there might be found some people to approve it, it is necessary to show the cause of the crisis. It is, that the people in the interior are at present in a wealthy condition, while the inhabitants of the cities, being in a state of poverty, look at the matter in a one-sided manner. Space forbidding us to explain fully the reasons for this, we reserve our further remarks for another article.

#### LAW REPORT.

##### IN H. I. R. M.'S CONSULAR COURT.

Before A. PELIKAN, Esq., Consul and Judge.

Messrs. S. CARCANO and REYNAUD, Assessors.

*Saturday, the 30th day of October, 1880.*

JAN DE BOER v. S. SEREBRENIKOFF, agent for the owners of the Russian steamer *Nordenskjöld*.

This was a claim to recover the sum of \$8,992.70 salvage expenses, &c., and \$1,283 commission on the value salvaged. The defendant admitted his indebtedness to the extent of \$2,189.49 salvage, but disputed the commission claimed and left that to be settled by the Court.

Mr. Kirkwood again appeared for the plaintiff and Mr. Dallas for the defendant.

On the re-assembling of the Court, Mr. Dallas called Per Person, a Swede, 50 years of age, Lutheran, not related to any of the parties to the suit, but employed on board the *Nordenskjöld* as ship's carpenter, who was sworn, and said:—I have already five times previously worked in salvaging operations on stranded ships. Jan de Boer did not exhibit the necessary zeal and capacity in his salvaging operations. The floating of the *Nordenskjöld* did not, considering the nature of the coast, the position of the ship, and the hole in the vessel, present any particular difficulties as the vessel lay on the sandy beach. It was difficult to reach the hole in the stern. If the hole had been in the bottom it would have been more difficult to reach. I left with Mr. Jan de Boer in *Otomi*. I have been at sea since I was 28 years of age. I have repeatedly passed round the northern coast of Norway. I have seen worse weather and more cold there than I met when in the *Otomi*. In my opinion there was no necessity for turning the *Otomi* back. When she was turned back the weather was not worse than it had been before.

By the Court:—My own countrymen would have resisted the cold better than did the Japanese crew of the *Otomi*. I spoke Danish with the Captain and chief mate of the *Otomi*, who were both Danes. I have had no conversation with Jan de Boer, because we do not understand each other, nor with the Japanese crew.

The deposition having been read to the witness, he demanded, before signing it to correct the statement "that it was difficult to get to the hole in the stern, the fact being that that hole was easy to get at, and he had understood the question to refer to small leaks subsequently discovered.

The court then adjourned until Thursday, the 4th November.

*Thursday, the 4th day of November, 1880.*

On the court reopening Mr. Kirkwood called:—

Isikawa, a Japanese subject thirty seven years of age, warned, stated:—I was engaged by the plaintiff on the 4th of May last. Since that date the plaintiff has paid me up to the 30th of June. After that date I was not on board. On the 23rd of July I went on board the *Nordenskjöld*. I went to Hakodate and Nemoro with the plaintiff. Eight workmen were engaged there by the plaintiff, six of whom left him at Nemoro. They did so because they wanted an increase of wages, which plaintiff declined to give. After this

he engaged ten labourers and two carpenters. These men left because they only received 50 or 56 sen a day from Fujiyabe, the Japanese stevedore who hired them out. He received one yen per head from the plaintiff and kept the balance of it after paying the coolies about fifty sen. This was the only reason for which they left, and not on account of any ill-treatment. I know of no occasion on which the plaintiff ill-treated them. My wages were fifteen yen a month and board. At the scene of the salvage operations the plaintiff and Mr. Gland gave all the orders. I was always in the stern of the vessel and don't know what the captain did. The orders to lay the anchors in their positions were given by the plaintiff when I was with him in a small boat.

A discussion here took place as to whether the witness, who seemed to be particularly obtuse, could be expected to understand whether the plaintiff was actually in charge, or whether he was simply interpreting for the captain. In reply to a question, however, as to whether even in the absence of the captain the plaintiff gave orders, the witness gave a reply in the affirmative.

Mr. Kirkwood:—If the witness always received orders through the plaintiff he would not conclude that the captain was in charge. But if he heard the plaintiff giving orders, when he had not spoken to the captain, he would certainly understand that the operations were under the control of the plaintiff.

Cross-examined by Mr. Dallas:—I could not understand what the captain and the plaintiff said when they conversed together. Of the eight coolies engaged by Fujiyabe, only six left in consequence of not being paid. After that happened the captain engaged ten others through the medium of Fujiyabe. They were willing to stop.

By the Court:—The plaintiff paid his coolies by the month. He had paid those who went with him to Hakodate. He advanced them 10 yen each. The six who left him had been with him twenty days. I don't know if Fujiyabe had paid them up or not. When these men went away from him, the plaintiff lodged a complaint against them at the Nemoro police station for breach of contract. The police inspector ordered them on board, but they refused to go. I went to Hannasaki in the schooner with the plaintiff and Mr. Gland. I was in charge of the machinery on board.

A discussion here took place as to what Mr. Dallas intended to prove. He said it was that Jan de Boer arrived at Hannasaki without adequate means; that he was unable to obtain assistance from the Japanese authorities, and that had it not been for the good services of Captain Serebrenikoff, he could not have got on at all.

Mr. Kirkwood denied this.

A letter was put in from plaintiff to defendant asking for his assistance with the authorities, but saying that no other orders but plaintiff's would be obeyed.

Mr. Dallas said he had not received the answer he wished for. He wanted to ask if the machinery had been transported to the scene of the wreck, owing to the intermediation of Captain Serebrenikoff.

Mr. Kirkwood said he declined to answer as it was already set forth in the petition. If the defendant had assisted, it would not transfer the authority to him from the plaintiff.

Witness in reply to Mr. Dallas:—If there had not been a small steam launch obtained the plaintiff could have got two junks which were there.

The Court then adjourned until 2 p.m.

On the Court re-assembling a witness was called.

When Mr. Dallas wished it noted that the man was one who had been dismissed from the *Nordenskjöld* in consequence of a suspicion of theft (though not actually proved) and was consequently somewhat likely to be prejudiced against the owners of the vessel.

The Court decided to hear the evidence.

Kuris, warned, stated:—I was engaged by the plaintiff, he engaged me in May through Fujiyabe at Nemoro. I don't remember the date. I did not leave the plaintiff but stayed with him all the time. I have left his service now. The plaintiff paid me fourteen yen and some sundries through Fujiyabe. I began with him on the 4th or 6th May. During the time I was on the *Nordenskjöld* I never saw the plaintiff ill-treat any of the coolies, though I have heard him scold them. The plaintiff gave the orders

on the *Nordenskjöld* and no one else. I consider that he directed every operation.

Cross-examined by Mr. Dallas:—I did not understand anything that passed between the plaintiff and the captain. Fujiyabe engaged me on behalf of the plaintiff, I conclude, because the plaintiff came and counted the coolies. This was at Nemoro. I left that place on the 30th of May. Until we reached Yokosuka the plaintiff gave all the orders, but after that the captain took charge. At the scene of the operations I went every morning to the plaintiff for orders. I was sent away from the *Nordenskjöld* because I was charged with having stolen some piping, on the 5th of October.

Oanki, twenty-two years old, warned, stated:—I am a coolie. I was first employed by the plaintiff at Nemoro through Fujiyabe. I was with him over fifty days. I was engaged with six other men and during the fifty days I left him once. At the same time the others left also. I was engaged for fifty sen a day, without food, which Fujiyabe supplied, but he actually gave us only half the pay which he received from the plaintiff. The plaintiff did not ill-treat me. I never saw him kick or beat the other coolies.

The usual discussion here occurred as to what the evidence tended to prove. Mr. Kirkwood explained that it was to prove that the allegation of ill-treatment of the Japanese coolies by the plaintiff was untrue.

Witness:—When I resumed work I was promised seventeen yen a month, which I received from the plaintiff. He gave all the orders when we were on board the *Nordenskjöld*. The plaintiff did not know why I quitted him on the first occasion.

Mr. Dallas asked no questions.

Mr. Kirkwood now asked permission to put in a plan of the position of the ship during the operations of getting the vessel off, to be examined by an expert.

Mr. Dallas objected, and

The Court said it could not accept a plan drawn up by the plaintiff as evidence.

Mr. Kirkwood:—But in his evidence the captain said that at one critical moment the conduct of the plaintiff jeopardised the safety of the ship, and I wish to prove this was not the case.

The Court:—But if the other side declines to have the plan admitted, why do you insist upon it?

Mr. Kirkwood:—The plaintiff would like to make a further statement in explanation.

The Court:—You do not seem to understand the working of the Court. Nothing is of any use to us unless it is proved. A mere explanation is useless.

Upon further representations the Court retired to consult on the matter, and on returning said that the explanation could not be heard, the Court had already listened to several explanations which really had no bearing on the case.

Mr. Dallas had no more witnesses, but wished to hand in certain documents viz: an inventory of the articles put on board the *Otomi* by the plaintiff; a letter from the head official at Nemuro to Mr. Jan der Boer. (When the plaintiff read it, said Mr. Dallas, he crumpled it up and dashed it on the ground, but Mr. Serebrenikoff picked it up.) Also a letter from the latter to the Japanese official in question.

Mr. Kirkwood:—At the next meeting I will put in a copy of the list of the machinery, made by Mr. Gland.

The Court:—Mr. Kirkwood, as the proofs are very voluminous, will you accept such extracts from the log book as you may require to be translated by the interpreter of the court?

Mr. Kirkwood agreed.

In reply to the Court, the plaintiff said that he wished to make a declaration to prove that the Captain was a liar.

The court said that such expressions could not be allowed.

Plaintiff:—Well, sir, he is a despicable character and has tried to do me harm. Before I made the contract, I had made my plans to see if I could get the ship off; had I been unable I should not have accepted the contract, and would certainly not have gone under the orders of Captain Johannsen. When I got to Hakodate, I found great difficulty in obtaining boats. I enquired about the locality and was told to go to Hanasaki as the nearest place. I

went first to Hanamuka, and went at once to the leading official who told me it would be more convenient to go to Hanasaki. I sent my men in the boat and went myself overland to see the position of the ship. I found her in a very bad position. I returned to Hanamuka after taking a sketch of the ship's position. I offered the captain of the sloop 150 yen more to take me up to the ship but he refused, saying that the harbour was unknown and he wouldn't do it for \$1,000. I was therefore obliged to land everything at Hanasaki and went down to Nemuro. There I asked the officials to give me a boat. They promised, but did nothing in two days; meantime, I went back to the steamer, and gave orders to put the sails into the godown. I dried them as well as I could. I took up some sheet iron to build a house, as the nearest one was two miles off and the snow was on the ground. After the two days had expired I visited Nemuro, and again asked for a boat. The Nemuro-cho was closed. I had just returned to my house when some one told me that a European had arrived who wished to see me; I went and met Mr. Serebrenikoff. He said "you must excuse me; but Captain Johannsen has spoken of you badly; but we will work hand in hand, and I will render you every assistance I can." I replied "I am very glad you are up here, Mr. Serebrenikoff, you are the owner of the vessel, and can see if I am doing right." We went to my house and an official brought in a letter which I was about to send to Hakodate to telegraph to Yokohama asking if I was the proper man or not. The defendant said he had all the papers to shew, and could obtain everything needful from the officials without this telegram and told me to set about the work. When I heard this, I gave him a letter, a copy of which has been entered. I then commenced operations. When the difficulties arose with the workmen Mr. Serebrenikoff suggested that they should work for Captain Johannsen, who was to be under my orders. I objected saying I had had no trouble, but that the men had been cheated and had not received the full pay which I had given to the middleman, who had kept back half of it himself. Every order was given by me. One day when I gave orders to bend sails Mr. Serebrenikoff and the captain were ashore washing coats and I told them to come on board and help. When I made the contract I suggested I should send a telegram to Hakodate to find out if there was any one there who knew the position of the vessel, but was recommended by a captain not to, as it was not likely. The old captain of the *Nordenskjöld*, Captain Sangster, told me that the time and season were very favourable. I knew that the ship, lying as she was on a sandy beach, was very likely to break up, and wished to get there as soon as possible. The captain's statement asserting that I transported the goods is incorrect. I gave him orders to go down to Nemuro for the steam-launch and the boat to fetch the machinery. I went next day to Hanasaki reaching there at noon, and the Captain arrived with the steam-launch, towing another boat, which I took charge of. The next day it was stormy, and I signalled to the captain to run in to Ogishi. He came down the next day, but before he did I had put half my goods into the boats. I ordered him to tow me to Ogishi. Next day I took the remaining machinery to Ogishi. I told him not to go to the wreck, whither I went myself, and laid the first anchor. Here the witness, at great length, explained the working of the operations, with the assistance of a plan, to the Court.

Continued:—After I got to Nemuro I engaged six men through a middleman; I could not make out why they would not work, but at last I found out that this man took fifty cents out of the one yen a day I paid them. It is very difficult to engage people there. I consider Mr. Gland was thoroughly competent. After all his work, he took only three days to clean his engine; he was always in the engine room. I never saw him drunk. He was always there when there was work to be done. The proof of his being a good engineer is that the engineer of the ship had made two unsuccessful attempts to get her off when she was empty, while I got her off with a big hole in her, and when she was full of sand and water, with Mr. Gland's assistance. The captain says that he worked with the suction hose reversed: I should like to ask how on earth this could be done. I engaged Mr. Gland because I did not like to take the risk with the engineer of the *Nordenskjöld*, because he had no certificates.

The court here adjourned until 10 a.m. to-morrow.

*Friday, the 5th day of November, 1880.*

On the Court reopening, Mr. Kirkwood said it was unnecessary for Mr. Jan der Boer to go on with his full explanation. There were certain extracts which he would read with the permission of the Court, asking the plaintiff to explain anything that he (counsel) did not quite understand. He would put in the list made by Mr. Gland of the various stores, machinery, &c., that he put on board the *Otomi*.

The list was put in and read by one of the Assessors.

Mr. Dallas said that it differed from the list that his client had in several items, and he could not accept it.

Mr. Kirkwood next put in the certificates of competency belonging to Mr. Gland, and a letter addressed by himself to Mr. Serebrenikoff.

Mr. Dallas said he would ask the Court to hear him in reply to some of the statements made yesterday by the plaintiff; there was one particular proof he wished to have produced, namely a letter which passed between the plaintiff and Captain Carst; he would ask the Court to order it to be produced.

Mr. Kirkwood said that he had never seen it.

The Court, at the request of Mr. Dallas, said that it could be proved by the evidence of Captain Carst.

Mr. Dallas said that if the existence of the letter was denied he would like to call Captain Carst, and it was agreed that this witness should be called later on.

Mr. Kirkwood then addressed the Court as follows:—Although the proceedings had been very lengthy, it was unavoidable, owing to the numerous witnesses; the points actually contested were few, being in fact as follows:—

1st. As regards the steam-pump, whether the full amount claimed, \$2,200, should be paid up, or if not, how much per month for the use of the pump?

2nd. As regards the engagement of the engineer Gland; whether the expenses of this were to be defrayed by the ship?

3rd. The voyage of the *Otomi*: was the ship to sustain the expenses of this or not?

4th. For what length of time could hire be claimed for the use of the diving gear and pump?

5th. As regards the bonus due to the plaintiff according to the contract.

The other minor items could be decided when the Court verifies the accounts. Now as regards the first question. In the contract the price of the pump is given, among other items, as \$2,200, and the paragraph states that in the event of all or any of these items being damaged in the operations, the *Nordenskjöld* shall pay their value as specified therein.

The Court said that a translation of the contract was necessary.

Mr. Kirkwood said that it would be extremely difficult even for an expert to make one; the mere words "at the salvage" on which his arguments greatly depended admitted of more than one translation in French.

It was decided to obtain a translation and

Mr. Kirkwood continued:—The question is what constituted the pump. Several pieces have been mentioned, but the price evidently shews it to mean the steam-pump, boiler, and centrifugal pump. Although the defendants had tried to prove that the pump was very old, that did not affect the question; it was in excellent working order. The contracting parties themselves agreed about the price, and if it is too high they have only themselves to blame for it. The court has only to decide on the subject of the damage, if the pump was damaged. By the expression "damaged" I mean that the machine when it returned was not in the same state as when it left. Mr. Whitfield, an expert, pronounced it undoubtedly damaged and added that for such an undertaking the damage was slight, and not due to any negligence. If it could return as it did, it had had clever handling. The only question for the Court to decide was, is the machine broken or not? which the evidence of Mr. Whitfield answers plainly. Next, was this breakage due to the plaintiff's negligence? The depositions of Messrs. Nielsen, Gland and Whitfield all contradict this. In such work it is easy enough, after an accident, to say what should have been done. It appears to me that the accident was the result of work, risk, and bad weather. If the steam-pump includes the three machines, if it was damaged,

and if the damage was not due to negligence, the plaintiff can decidedly claim its price.

Next as to the 2nd question—the employment of Mr. Gland. The defendants, while admitting the importance of employing a foreign engineer, claim that it should have been mentioned in the contract. My client has explained that the engineer of the *Nordenskjöld* declined to accompany him, and that as the second engineer of the vessel had no certificate he did not care to take the risk on himself without the aid of a competent engineer and consequently engaged Mr. Gland. It was stated in evidence that two engineers were indispensable as the engines were going night and day. If the employment of Mr. Gland was justifiable the ship ought to pay for it. Paragraph I. of the contract says that all expenses of the salvage are to be defrayed by the *Nordenskjöld*. Mr. Gland's competence is amply proved by his certificates, as is also his good character, and he is now employed as an engineer on board one of the Mitsu Bishi Company's steamers. If the court considers that Mr. Gland was required, and that he did his work well, they must also consider that the plaintiff can claim his wages. The only thing urged against him by the defence was that on one or two occasions he neglected to have sufficient water in the boiler. But he had full charge of the engines of the *Nordenskjöld*, he kept the engine-room log-book, and after the arrival of Captain Johannsen he was still employed on board the ship. The Court must consider the nature of the contract. It depends upon the result of the salvage. My client wanted to agree to so much a month but the Russian Consul did not approve of this arrangement, and the present contract was accordingly drawn up which left my client in the position that whatever expense he incurred he had only the ship as security. In fact, he risked all to gain nothing. He trusted to recoup Gland also from the ship.

3rd.—As to the voyage of the *Otomi*. It appears to me that the reasons given as applying to the employment of Mr. Gland, can apply equally to this question. As set out in the plaint, my client was afraid of losing time, and as the cold season was approaching, of finding workmen, especially natives, who would and could work in the cold water. Captain Sangster assured him there was no fear of being frozen in and that the cold would not be as intense as he expected, and in consequence of these representations he made the contract. It may be said that the contract was not made with the captain, but still he was an employé of the owners of the vessel, and coming as he had from the scene of the wreck every word of his carried weight. Now I do not quite understand in what capacity the Consul acted in this affair. When the contract was to be made my client, although not a Russian, took the advice of the Russian Consul, who, in charge of the interests of a Russian subject, made the contract which my client looked upon as as valid as if he had made it with the proprietors of the *Nordenskjöld*. He then said that in everything he had to do in arranging to execute the contract, he would go to the Consul for advice and assistance. We know from the plaint that the Consul did render material assistance in trying to get a man-of-war, a Mitsu Bishi steamer, and the *Courier*. These efforts being unsuccessful it was at last arranged to charter Mr. Snow's schooner the *Otomi*, and on the representations of Captain Sangster, and the request of the Consul, the plaintiff left for the scene of the shipwreck as quickly as possible. The only question here for the Court is whether the plaintiff acted reasonably or not, and whether he did not, on seeing he had a chance of reaching the ship, get the schooner and start at once.

4th.—As to the question how many month's hire is due for the use of these appliances. The contract says so much per month during the time that these instruments are necessary. I ask for loss of time of the proprietor, and for the use of the machines. The proprietor has received nothing for the time he has lost. Considering that \$50 a day is paid for a steam pump in Yokohama, \$200 per month, at the scene of salvage operations, is a ridiculous amount to offer. I assert that from the moment that the machinery was put into the plaintiff's hands, until their return to Yokohama, they were employed in the salvage operations, just as much when travelling on board the various steamers as when they were actually on the *Nordenskjöld*.

5th.—As to the bonus due to the plaintiff. We have

heard a great deal about his neglect of work, and ill-treatment of the Japanese. But the native witnesses themselves deny this, and their only complaint is that the native stove-dore did not give them half the wages handed to him by the plaintiff. As regards the extracts from Captain Johannsen's log book no one who reads these can doubt that they were all written with the deliberate intention of injuring, as much as possible, my client and Mr. Gland. [Counsel here read a long extract, written in a badly imitative style of a three-volume novel, and commented upon the singularity of the fact that a man who was busily engaged in salving operations could find time to write all this trash in an official log.]

The Court then adjourned until 10 a.m. to-morrow.

#### INQUEST.

Before by R. RICE Esq., U.S. Vice-Consul and Coroner.

C. D. HARMAN } Jurors.  
F. C. SPOONER }

An inquest was held yesterday afternoon to enquire into the circumstances connected with the death of Thomas Seon, an American citizen, from the effect of a gunshot wound on the morning of yesterday, the 5th inst.

Dr. Eldridge, sworn, stated:—I was called yesterday at about twelve o'clock to see Mr. Seon. On arriving at his house I found him dying, on the ground. All possible measures were used by myself and Dr. Buckle, who came in shortly afterwards. Mr. Seon, however, never rallied and died within three-quarters of an hour. The cause of death was a double shot wound, which was apparently inflicted by a double-barrelled gun bulkily loaded. The first charge had penetrated the left thigh, and ranging upwards had gone near the bladder. The second had entered the groin and passed out through the buttock; this severed the femoral artery, which was the immediate cause of death.

By the Court:—the barrels of the gun were shewn me by a boy in the shop. Mr. Seon was lying right by his furnace. He could not have moved on account of his injuries. Both thighs were injured. The wounds were evidently from the excessive charges of the gun. I picked some shot out of the door, which were evidently recently discharged. They appeared to me to be duck shot. The deceased rather rallied under an injection of brandy, but he only made a motion to me not to disturb him.

W. R. Bennett, sworn, stated:—About a few minutes to twelve o'clock I was passing along the side street by Mr. Seon's shop and saw a lady in great distress in the road. Before I had pulled up a gentleman beckoned to me. He was in an alley. I entered the workshop from the alley and found deceased lying on his back gasping. He seemed to be conscious but he could not speak. Mrs. Seon then came in with Mr. Johnson. I requested him to take her away and I went off to get a doctor. By the time I got back Dr. Eldridge had arrived. I did not see the gun.

James Johnson, sworn, stated:—I had occasion to call at Mr. Kildoy's place a few minutes before twelve o'clock. A lady came in and asked some one to go to the assistance of her husband who had met with an accident. Mr. Kildoy just then came into his own place and some one suggested that he should go for a doctor. I then went with the lady to Mr. Seon's workshop and asked her to remain in the store. I myself went round to the back; just as I got to the door I met Mr. Bennett. Mrs. Seon had followed me. He said "Please take the lady away," and I took her back to the house. Mr. Seon was then lying beside the forge. I afterwards saw him while the doctor was present, still alive, but unconscious. I saw the gun afterwards; it was a double-barrelled muzzle loading gun.

E. Kildoy, sworn, stated:—I have heard the evidence given. Mrs. Seon came running into my place. She was very excited and said "Seon has shot himself; run for Dr. Eldridge!" I went for and returned with him. I did not go into the blacksmith shop and have not seen deceased.

Nagashima Seikichi, warned, stated:—I am a workman and was in the employ of the deceased. About half-past eleven o'clock this morning I was working in the shop. My master was heating a gun, the stock of which had been removed. Suddenly the gun went off whilst in the fire. The gun when I saw it afterwards was lying on the stand

of the forge. I heard two reports, almost simultaneously. I saw the gun for the first time to-day. I do not know who brought it to the shop.

The Court here adjourned without giving any finding.

#### NEWS FROM GENSANSHIN, COREA.

[Hiogo News translation from the *Kobe Shimpō*.]

(Communicated by a certain officer of the *M.B.M.S.S. Tagomura-maru*.)

At 11 p.m. on the 18th September the *S.S. Tagomura-maru* left Kobe, arriving at Bukwan (Shimonoseki) at 10.50 p.m. on the next day. Leaving there at 2.40 a.m. on the 20th, she arrived at Nagasaki at 7 p.m. that day. She left Nagasaki at 3 a.m. on the 22nd, for Corea direct, and reached Fusan at 7.30 p.m. The voyage was a very pleasant one, the weather having been exceptionally fine, the Genkai-nada belying its name and being very calm; consequently there was not one person on board troubled with seasickness.

Things were very quiet at Fusan. I heard that four Corean officials had bought from an Osaka merchant a schooner of about 100 tons, which was built at Nagasaki at a cost of 6,000 yen, and it is said they are to buy four other vessels. When the Corean sailors have found out the way to handle these vessels, they will be put under the control of the Navy. Japanese have been employed as instructors for a term of fifteen days, and the above-mentioned schooner is being worked in and out of the port. Though I am not convinced that the Coreans can thoroughly master the art of navigation, I could but admire the rapidity with which they are picking up the first rudiments of the art. It is said that the Coreans intend to establish a glass manufactory near Fusan, employing a Japanese as teacher, and they are now looking out for a suitable site.

The weather was fine on the 23rd, but there was a violent gale on the 24th, which lasted till the 26th, at 2 p.m. on which day the steamer left for Gensanshin. As there was still a strong wind, the waves were high; and the passengers were all sick. This part of the voyage was very different from that to Fusan, but no lives were lost nor was the cargo damaged. On the 27th the sea became as smooth as if oil had had been poured on it. To the left of us were high mountains, thickly wooded, while to the right there was not even a rock to break the monotony of the view of the sea. At 11 p.m. the engines were slowed down, and I expected to have a sight of Gensanshin very soon. Early on the next morning I looked out and saw a port like Gensanshin.

On a nearer approach it was ascertained to be Gensanshin. In the distance a man-of-war and white walls were seen. The man-of-war was the *Amaki-kan*, and the white walls were the buildings of our settlers. At noon our steamer anchored in five fathoms, between the island of Chotoku and the *Amaki-kan*, at a distance of 15 cho from the Settlement. The settlers were very glad to see us. The port is situated in Lat. 39 N., Long. 127.32 E. The west, south and north-west sides of the port are surrounded by high mountains, the north and east sides facing the sea. The harbour is large enough, and the natives say that the sea between the island of Chotoku and the port is covered with thin ice during the cold season. Therefore I believe the sea is very calm in winter. The thermometer has stood at about 61 deg. at 8 a.m., 71 deg. at noon, and 72 deg. at 4 p.m., on an average during five days.

There was a violent east wind, accompanied with rain, on the 2nd instant, which interfered with the discharge of the steamer.

Our Settlement is over 15 cho to the north-east of the native town, and contains 100,000 tsubo, the bench being over 1,000 ken long. The Corean Government is building a sea-wall, and a wharf 30 ken long and 6 ken wide is being constructed in a north-easterly direction. At the request of the Corean Government, this latter work has been contracted for by our Government, who have given the work to a certain Bank and the Okura-gumi. The cost will be 8,000 yen, 80 natives being employed. There are about 350 settlers, one-fourth of whom are officials and police, one-fourth merchants, and the remainder artisans. The consulates, officials' residences, hospital, museum, Honganji temple, branches of the First National Bank, of

the Okura-Gumi, the M.B.M.S.S. Co., Sumitomo, Kioto Shosha, &c., are nearly finished. The merchants are emulating each other in trade, and competing with each other in the grandeur of their houses. I expect business will be flourishing. The drinking water is not very good. It is good in the shallow wells, but the supply from these is small, and the water from the deep wells is brackish, as at Yokohama.

The town of Gensanshin is about 2 ri from Tokugen-Fu, to the north-east. The region is very fertile, and vegetables grow as well as in the best fields of Japan, without manure or dressing. Beasts and birds are abundant. The natives are very fat and tall, and as they have nothing to do, they are idle. However, they are often stealing, and many robbers are prowling round our Settlement. Okura-gumi, Sumitomo and others have been visited by them, and every person is consequently very careful. On the night of the 2nd September, three thieves visited the Kioto Kaisha, where there were men on watch. One of these appearing before the brigands with a drawn sword, they quickly fled. One of them, however, stumbled and fell, and one of the watchmen gave him a stroke. On a light being brought it was discovered that the thieves were Coreans. Though search was made for the other robbers, they could not be found. The wounded robber was sent to hospital, after a report was made to the police, and on the next day he died. Since this event the robbers have very much decreased, but it is said that the settlers have not been able to obtain a sufficient number of coolies, owing to a rumour becoming current among the Coreans that the Japanese killed them without cause, and they have been afraid to work for the Japanese. However, the Coreans have lately discovered that the Japanese are not so cruel as reported, and they are now working in the Settlement.

One night a policeman returned to the station after going his rounds, when he heard a noise outside the door of his room. On peeping out he saw a tiger slowly entering the police station. The policeman was very much frightened, but, after sniffing under the table, the tiger left. I heard this from Mr. Kato, at the police station, but cannot vouch for its truth.

There are over 1,000 houses in the native town. They are very dirty, being built in the same style as those of the Yezo people. The roofs of the houses of the upper classes are tiled, and these are superior to the other houses. The Coreans do not use bed-clothes in summer and winter, but there are fireplaces under the floors, in which fires are put in the cold weather and the beds warmed. They are similar to our charcoal furnaces. In comparison to their houses, their food is not inferior. They always have *kayu* (soft boiled rice), rice cakes and potatoes, and they drink *dakushin*. Besides which they have wheat, beans, radishes, egg-plants, and other vegetables. The principal fruits are pears, peaches, kaki, &c. Mushrooms are abundant. Beef, pork, venison, fowls, and eggs are also plentiful. The chief fish are *tai*, *suzuki*, *shake* (salmon), *dojo*, *ita-woo*, &c. The *shochu* (spirit), *dakushin* and *shoyu* (soy) stink, and the taste being bad, the Japanese cannot use them. The salt is good, and the oil in general use is that of Yezo, which is superior to that of Japan. The paper oiled with this oil is similar to that varnished with guni in Europe; and the oiled paper and cloth are made into tobacco pouches, &c. The plant called *Chosen matsu* is very good eating when boiled. There are many other products, but I have not time to mention them; however, I will notice two or three. The principal products are gold-dust, tiger skins, bones and hides of oxen, silk thread, cotton, flax, ginseng, *kiri*, &c.; of these the hides and bones of oxen and flax are the most plentiful. The flax is of good quality, and some has been exported to Osaka by this steamer. If it is suitable for use in Japan, it will be the principal article of export. Trade in rice and beans is not allowed publicly, and the export is now prohibited. Consequently our settlers are buying through the hands of the Corean officials. However, I have heard we can buy it under the pretence that we want it for our own use. In connection with this, it is said our Government is continually requiring the Corean Government to permit the export of rice, and therefore the trade will shortly be allowed without restraint. Fairs are held in this town six times a month; they are like the fairs in country villages in Japan. Stalls are erected on the streets, some of which are devoted to the sale of dry goods,

some to the sale of fine wares, some caps, some tobacco pipes, some shoes, some pork, fowls, fish, &c., some boiled food, some liquors, &c. The streets are crowded with people, who sing, laugh, quarrel, &c., under the influence of drink. The Corean cash has often fluctuated in value, but one cash is worth between 24 and 27 *mon*.

There is a wide line drawn between the officials and the common people. The private people are oppressed by the officials, like slaves, and are quite obedient to the orders of the officials. Sometimes the officials inspect the treasury of the people at Tokugen-Fu, Gensanshin, and other places, and when the sum in the treasury is over 5 *kyoanmon*, the excess is appropriated by the authorities, and it is said no one ever resists this proceeding. I do not know whether this is done by the Government, or whether it is a private business of the officials. Indeed the Government is most despotic, or I should say, tyrannic.

It appears that bribery prevails. I will give an instance. When a person reports that another has committed a certain offence, the officer (similar to a policeman in Japan) arrests the accused, and when the officer wears the cap of the accused the latter understands that he is to be whipped. Then the accused takes off his clothes till he is naked to the waist, and stoops down. The officer then appears to inflict blows sufficient to cause death, but if the accused shows his fingers he whips slightly, according to the number of fingers shown, which represent the sum to be paid as a bribe. When the officer has received the bribe the accused is free, and he is not troubled to go to prison. It is frequently discovered, after the receipt of the bribe, that the person arrested was innocent, but this does not trouble the officer, who merely smiles.

It is said that the people of this place are brave and superior to those of Fusan. Consequently the Corean Government trusts them, but is cautious. When the steamer arrived three Corean officials (like those of the Customs in Japan) came on board, accompanied by an interpreter, and they enquired from what port the steamer came, the captain's name, the number of passengers, how many women, officials, merchants, &c., and what was the cargo; and then went on shore. It excited my admiration to see that the Coreans managed as well as if they were officials of a celebrated treaty port in a civilized country. I believe this has been taught them by us.

Some time ago a British man-of-war called here and stopped one day, and an Italian man-of-war also called, staying two days. When they were in harbour they made frequent communications with our Consulate. They appear to be anxious to open trade. In closing this letter I add that this steamer remained seven days at Gensanshin, leaving at 5 a.m. on the 5th instant. On that day the weather was so cold that the thermometer went down to 48 degrees.

#### CLAUDE GUEUX.\*

FROM THE FRANCH OF VICTOR HUGO.

Seven or eight years ago there lived in Paris a man whose name was Claude Gueux. He was a poor workman; and he lived with a girl, his mistress, by whom he had a child. I state these things just as they were, leaving it to my reader to deduce the moral from them as the facts develop themselves. This workman was clever, skilful, intelligent, well endowed by nature, evil-entreated by education; he did not know how to read, but he did know how to think. There came a winter when work slackened, then it stopped. No fire in the garret stove; no bread in the garret cupboard; the man, the girl, and the child were cold and hungry. The man stole. I do not know what he stole, or where he committed the theft; I only know that the result of the deed was three days' food and firing for the girl and the child, and five years' imprisonment for the man.

Claude Gueux was sent to work out his time in the Maison Centrale at Clairvaux, a former abbey turned into a prison, whose altar of other days is a pillory in ours. When we talk of progress certain folk understand and put our thoughts into action thus.

But to proceed. At Clairvaux, the man was put into a prison-cell by night and into a workshop by day. I find no fault with the workshop.

Claude Gueux, once an honest workman, henceforth a thief, was of a grave and respectable presence. He had a high forehead, deeply-lined already, although he was still young; and many gray hairs among his thick black curly locks; calm steadfast eyes, deeply set under well-marked brows; open nostrils; a firm prominent chin; and a disdainful mouth. His was a fine head; we shall see presently what society did with it. His words were sparing; his gestures were few; there was something imperious about him which compelled obedience; his demeanour conveyed an

\* This story was published in 1,834.

impression of thoughtfulness and seriousness rather than suffering. Nevertheless he had suffered a great deal.

In the prison in which Claude Gueux was confined there was a 'Director of the Workshops.' This functionary, proper to prisons, is a combination of gaoler and shopkeeper, who utters simultaneously an order to the workman and a threat to the prisoner; who puts a tool into his hands and fetters on his feet. The particular specimen of this combination employed at Clairvaux was a stern, curt-spoken, tyrannical man, of fixed ideas, which he carried out rigidly; always tenacious of his authority, but otherwise, and on occasion, very good company, a pleasant fellow, jovial even, and capable of jest: hard rather than firm. He never reasoned with anybody, not even with himself, he was a good father—doubtless a good husband—such goodness is duty and not virtue. In a word, he was not ill-natured, but bad. He was one of those men in whom there is neither vibration nor elasticity: who are composed of inert molecules: who do not respond to the fillip of any idea or the contact of any sentiment: who are capable of cold anger, of dull hate, of unemotional wrath; who take fire without becoming heated; men who seem as if they were made of wood, flaming at one end and cold at the other. The chief, the diagonal line of the character of this man was obstinacy. He was proud of being obstinate, and likened himself to Napoleon. This is an optical delusion; many people are its dupes, and will, at a certain distance, take obstinacy for strength of will, and a caudle for a star. When this man had once for all fixed what he called his will on an absurd object, he went on, with his head up, through the thickest of thickets, to his end. Obstinacy without intelligence is folly added on at the other end of stupidity, serving as its double thong, and it hits far and hard. When a public or private catastrophe has fallen upon us, if we examine the ruins which lie scattered around—ruins of whatever fabric they may be—we almost always find that it has been blindly built by an obstinate and commonplace man, who believed in and admired himself. There are in the world many of these petty headstrong fabricators of Fate, who regard themselves as agents of Providence.

Such, then, was the 'Director of the Workshops' at the Clairvaux Central Prison. Of such quality was the steel with which society struck its prisoners every day of their lives in order to get sparks out of them. The sparks elicited by steel of this temper from flints of this kind are of the kind which produce conflagrations.

On his arrival at Clairvaux, a number in the workshop was assigned to Claude Gueux, and a fixed task was set him. The Director made acquaintance with him, recognised him as a good workman, and treated him well. One day, indeed, being in particularly good-humour, and seeing Claude Gueux very downcast—for the man was always thinking of her whom he called his 'wife'—he told him, in pure joviality, and as an agreeable pastime, that the unfortunate girl had gone on the streets. Claude asked coldly what had become of the child. Nobody knew.

After a few months Claude became acclimatised to the prison atmosphere, and seemed to think no more of the past. A certain grave serenity, characteristic of him, had resumed its sway. At the end of that time also, Claude had acquired a singular ascendancy over all his companions. As if by a sort of tacit agreement—and although no one, not even himself, knew why—all these men consulted him, listened to him, admired him, and imitated him, which last is the ultimate expression of admiration. It was no small distinction to be obeyed by those essentially insubordinate natures, and rule had come to Claude, unbidden and undreamt of. Its origin was to be found in the look in the man's eyes. The eye is a window through which the thoughts that come and go in a man's head may be seen.

Place a man who has ideas among men who have none, and, at the end of a given time, by an irresistible law of attraction, all the dull empty heads will humbly and adoringly gravitate around that full and luminous head. There are men who are iron, and men who are leadstone. Claude was leadstone. In less than three months he had become soul, law, and order to the workshop. All those hands revolved on his dial. At times he must have doubted, his own very self, whether he was a king or a prisoner. By a perfectly natural reaction—one which produces its effect on every scale of being—he was as detested by the gaolers as beloved by the prisoners. This is always so. There is no popularity without disfavour: to be loved by slaves is to be hated by their masters.

Claude Gueux was a great eater. This was a peculiarity of his organisation, which was such that he needed as much food for his day's nourishment as any two ordinary men. M. de Cotadilla had an appetite of this kind, and he jested at it: but that which is a good joke to a duke and grandee of Spain, who owns five thousand sheep, is a burden to a workman and a misfortune to a prisoner. Claude Gueux, a free man in his garret, worked all day, earned his four-pound loaf, and ate it. Claude Gueux, a convict in his prison, worked all day, and for his pains received invariably one pound and a half of bread and four ounces of meat. The prison allowance is inexorable, and Claude was habitually hungry. He was hungry, and that was all about it. He said nothing of his hunger; such silence was in his nature.

One day Claude had just devoured his meagre pittance, and resumed his task, thinking to cheat his hunger by toil. The other prisoners were eating gaily. A pale, slight, feeble-looking young man placed himself beside Claude, and remained standing, with the hesitating manner of one who wished to speak, but dared not. In one hand was his untouched ration, in the other a knife. The man with his bread and meat worried Claude.

'What do you want?' said he, at length, roughly.

'I want you to do me a service,' said the young man timidly.

'What service?'

'Help me to eat this, I have too much.'

A tear glittered in Claude's proud eye. He divided the young man's ration into two equal parts, took one, and began to eat.

'Thank you,' said the young man. 'If you like, we will share every day.'

'What is your name?' asked Claude Gueux.

'Alban.'

'What are you here for?'

'I stole.'

'So did I.'

Thenceforward they did share, after that fashion, every day. Claude Gueux was thirty-six years old: but there were times when he looked fifty, so grave was his habitual mood. Alban was twenty, but he looked no more than seventeen, so much innocence still lingered in the face of this thief. A strong close friendship grew up between the two men, the affection of father and son rather than that of brother and brother. Alban was still almost a child; Claude was already almost an old man.

They worked in the same workshop, they slept in the same dormitory, they exercised in the same yard, they ate of the same loaf. Each of the friends constituted the universe for the other. They were actually happy.

The Director of the Workshops, whom the prisoners hated, was often obliged, in order to get himself obeyed by them, to have recourse to Claude Gueux, whom they loved. On more than one occasion, when a rebellion or a tumult had to be prevented, the unauthorised authority of Claude Gueux had come to the support of the official authority of the Director. Indeed, ten words from Claude Gueux were of as much avail, for the control of the prisoners, as ten gendarmes. Claude had many times rendered valuable service to the Director, who detested him cordially in consequence. He was jealous of the thief, and he cherished a secret envious, implacable hatred of Claude, the hate of a rightful towards an actual sovereign, the hate of temporal power. Such hatreds are the worst of all.

Claude loved Alban profoundly, and thought about the Director not at all.

One morning, at the hour at which the warders march the prisoners two and two from the dormitories to the workshops, a turnkey called Alban, who was at Claude's side, and told him he was to go to the Director.

'What does he want you for?' said Claude.

'I do not know,' said Alban, and he went away with the turnkey.

The morning passed: Alban did not come to the workshop. When feeding-time arrived Claude thought he should find Alban in the yard. Alban was not in the yard. The prisoners returned to the workshop, but Alban did not reappear there. Thus the day wore through. In the evening, when the prisoners were taken back to their dormitory, Claude looked about for Alban, but did not see him. He must have been suffering much at that moment, for he addressed a turnkey, a thing which ordinarily he never did.

'Is Alban ill?' said he.

'No,' replied the turnkey.

'Then why,' asked Claude, 'has he not been with us to-day?'

'O,' said the turnkey carelessly, 'because his billet has been changed.'

The witnesses who afterwards deposed to these facts remarked that the hand in which Claude held a lighted candle trembled slightly at this answer. He resumed calmly,

'Who gave that order?'

'Monsieur D.'

Monsieur D. was the Director of the Workshops.

The following day passed, like the preceding, without Alban. In the evening, when working hours were over, the Director came to the workshop, making his daily round. So soon as Claude saw him he doffed his coarse woollen cap, buttoned his gray vest, the sordid livery of Clairvaux—for it is an article of faith in prison that a respectfully buttoned vest propitiates superiors—and stood upright, cap in hand, at the top of his bench, waiting until the Director should pass along it. The Director passed.

'Sir!' said Claude.

The Director stopped, and made a half turn towards him.

'Sir, is it true that Alban has been removed to another part of the prison?'

'Yes,' answered the Director.

'Sir,' persisted Claude, 'I need Alban in order to live.'

Then he went on:

'You know that I have not enough to eat, with the prison ration only, and that Alban shared his bread with me.'

'That was his own business,' said the Director.

'Sir, is there no means of replacing Alban in the same quarter with me?'

'Impossible. The matter has been settled.'

'By whom?'

'By me.'

'Monsieur D.,' said Claude, 'this is life or death to me, and it depends upon you.'

'I never alter my decisions.'

'Sir, have I ever done anything to offend you?'

'Nothing.'

'In that case,' urged Claude, 'why do you separate me from Alban?'

'Because,' said the Director.

And with this explanation Monsieur D. dismissed the subject.

Claude bowed his head and made no reply. Poor lion, bereaved of his dog!

It must be admitted that the grief of this separation did not in any degree diminish the somewhat unhealthy voracity of the prisoner. Indeed, there was no material change perceptible in him. He did not speak of Alban to any of his fellow-prisoners. He walked alone in the yard at recreation-time and he was hungry:—nothing more. Nevertheless, those who knew him well remarked that something dark and sinister spread itself over his face more and more perceptibly day by day. But he was milder and gentler than

ever. Several of his comrades offered to share their rations with him: he smilingly refused.

Each evening since that on which the Director had given him the 'Explanation' already recorded he did a foolish sort of thing, which was quite surprising on the part of so grave and serious a man. At the moment when the Director, making his rounds, passed before Claude, the prisoner would raise his eyes, and, looking at him fixedly, utter in a tone in which there was menace as well as entreaty, these two words:

'And Alban!'

The Director, affecting not to hear them, would pass on, with a shrug of his shoulders.

The man did wrong to shrug his shoulders, for it was plain to all the spectators of those strange scenes that Claude Guenx had come within himself to some determination.

All the prison company awaited with suppressed excitement the result of this struggle between the obstinacy of the one man and the resolution of the other.

It appeared afterwards in evidence, that on one occasion Claude said to the Director,

'Listen to me, sir: restore my comrade to me. You will do well, I assure you. Observe that I say this to you.'

Again, one Sunday, when he had been sitting for hours on a stone in the yard in the same attitude, with his elbows on his knees and his forehead resting in the palms of his hands, one Faillète, a prisoner, approached him, and said, laughing,

'What the devil are you doing there, Claude?'

Claude lifted up his grave face, and answered,

'I am trying some one.'

At last, one evening—it was the 25th October, 1831—just as the Director was going round, Claude crushed under his heel the glass of a watch he had found in the corridor that morning. The Director inquired whence came the noise.

'It is nothing,' said Claude. 'It is I, Monsieur Director, restore my comrade to me.'

'Impossible,' said the master.

'It must be so, nevertheless,' said Claude, in a firm low voice. And then he added, looking the Director straight in the face: 'Reflect. This is the 25th of October. I give you until the 4th of November.'

A wailer called the attention of the Director to the fact that Claude was threatening him, and that it was a case of dark cell.

'No, no dark cell,' said the Director, with a scornful smile. 'One must be good-natured with fellows like these.'

The next day the prisoner Pernot accosted Claude, as he was walking to and fro, silent and alone, while the other convicts were disporting themselves in a little patch of sunshine at the further end of the yard.

'Hallo, Claude!' he said. 'What are you thinking about? You seem to be down in the mouth.'

'I am afraid,' said Claude, 'that, before long, some misfortune will befall this good Monsieur D.'

Nine clear days lay between the 25th of October and the 4th of November. Claude did not allow one of these days to pass without his gravely informing the Director of the increasing pain of the condition to which the disappearance of Alban was reducing him. The Director, weary of this, sent him to the dark cell, because his supplication had too much the tone of a demand. That was all Claude got by his methodical petition.

The 4th of November came. On that morning Claude awoke with a serene look upon his face, such as it had not worn since the day on which the 'decision' of Monsieur D. had separated him from his friend. He rose, and turning over the few trifles which made the sum of his possessions, and which were contained in a deal box at the foot of his bed, he took out a pair of scissors, of the kind used by dressmakers. These, with a tattered volume of *Emile*, were all that remained to him of the woman whom he had loved, of the mother of his child, of the happy poor little home of former days. Both were useless to Claude: the scissors could serve a woman's purpose only, the book that of an educated person. Claude could neither sew nor read.

Crossing the ancient cloister—so desecrated now—that it is used in winter as an exercising ground, he approached a prisoner, one Ferrari, who was gazing earnestly at the massive iron bars of a window. In his hand Claude held the little pair of scissors, and he showed them to Ferrari, saying,

'This evening I will cut those bars with these scissors.'

Ferrari, being incredulous, laughed, and Claude laughed also.

All that morning he worked with more than his ordinary zeal: never had his task been done so quickly or so well. He seemed bent on finishing, during the forenoon, the plaiting of a straw hat for which he had been paid in advance by M. Bressier, a worthy citizen of Troyes.

A little before twelve o'clock he went down, under some pretext, to the carpenters' workshop, which was on the ground-floor, just underneath that on which the strawplaiters' workshop was situated. Claude was much liked there as well as elsewhere, but he seldom entered the place, so that he was now greeted noisily.

'Hallo! here's Claude!' the prisoners exclaimed, and he was immediately surrounded. His visit was a festival occasion. He glanced rapidly round the workshop. Not one of the prisoner officials was there.

'Who has an axe to lend me?' said he.

'What are you going to do with it?' he was asked: and he answered, with perfect composure:

'To kill the Director of the Workshops this evening.'

They brought him several axes. He selected the smallest, which was very sharp, concealed it in his loose trousers, and went away. There were twenty-seven prisoners in the carpenters' workshop: he had not enjoined secrecy upon them, but they all observed it.

They did not even talk of the matter among themselves. On both sides there was merely the expectation of what was about to

happen. The matter was plain, terrible, and simple. No complication was possible. Claude could neither be advised nor denounced. An hour later he accosted a young prisoner, a boy of sixteen years old, who was yawning in the exercise yard, and advised him to learn to read. At the same moment, Faillète came up and said:

'What the devil is that you are hiding in your clothes, Claude?'

'It is an axe,' answered Claude, 'and I mean to kill Monsieur D. with it this evening. Does it show?'

The remainder of the day passed just as usual. At seven o'clock in the evening the prisoners were locked up, each gang in the workshop assigned to them, and the overseers left the workrooms, which it is, it seems, the custom, not to return to until the Director should have made his rounds.

Claude Guenx was, of course, shut up like the others in the workshop assigned to his 'trade.'

Then a scene of an extraordinary nature was enacted there: a scene which lacked neither terrible nor majestic attributes, the only one of the kind on record.

In the judicial 'instruction' which subsequently took place, it was stated that there were eighty-two thieves in that workshop, including Claude. When the overseers had withdrawn, Claude stood up on his bench, and announced to all present that he had something to say. There was an immediate silence.

Then Claude spoke, in a clear steady voice, as follows:

'You all know that Alban was my brother. With the allowance that I am given here, I have not enough to eat. Even by buying bread with the little that I earn, I have not enough. Alban shared his ration with me. I loved him at first because he fed me, and afterwards because he loved me. The Director, Monsieur D., separated us. It did him no harm that we should be together; but he is a bad man, who loves to inflict torment. I asked him to give me back Alban, but, as you know, for you have seen it, he would not. I then gave him until the 4th of November to restore Alban to me. He put me in the dark cell for having said that. While I was there, I tried him and condemned him to death.\* This is the 4th of November. In two hours he will be coming to make his rounds. I give you notice that I mean to kill him. Have you anything to say to that?'

No man spoke.

Claude resumed. It seems that he spoke with a strange eloquence, which was, indeed, natural to him. He declared that he well knew he was about to commit a deed of violence, but, as he believed, not of wrong. He took the consciences of the eighty-one thieves who heard him to witness:

'That he was in a desperate strait:

'That the necessity of doing oneself justice is a no-throughfare in which any man is liable to find himself:

'That he had maturely reflected on this matter for two months:

'That he believed he had not allowed himself to be led away by resentment; but that in case he was so led away, he entreated his hearers to make it plain to him:

'That he frankly submitted his reasons to the just men whom he was addressing:

'That he was therefore about to kill Monsieur D.: but that, if any one among them had an objection to make, he was ready to listen to it.

One voice only was raised, to urge that, before killing the Director, Claude should try, for the last time, to speak to him, and induce him to yield.

'That is just,' said Claude, 'and I will do it.'

The great clock struck eight. At nine the Director would arrive. So soon as this strange Court of Appeal had, so to speak, ratified the sentence he had pronounced, Claude resumed his accustomed serenity. He placed on a table such linen and clothes as he possessed, the scanty store of a poor prisoner, and calling to him one by one those of his companions whom he liked best after Alban, he distributed the whole among them. He kept back nothing except the little pair of scissors.

Then he embraced them all. Some of the men wept, and on those he smiled.

In the course of that last hour there were many minutes when he talked so quietly, and even gaily, that several of his comrades hoped, as they afterwards declared, he might perhaps abandon his resolution. He even amused himself by blowing out one of the few candles which lighted the workshop with the breath from his nostrils, for certain bad habits, which too often injured his natural dignity, had grown up with him. Nothing could hinder the former street-boy from smelling now and then of the Paris gutter.

Claude observed that one youthful prisoner, who looked at him with fixed eyes, was pale and trembling, no doubt at the idea of what he was about to see.

'Come, come, young man, take courage,' said Claude to him very gently: it will all be over in a moment.'

When he had distributed all his poor possessions, made all his adieux, shaken hands with all his fellow-prisoners, he checked some uneasy whisperings which were going on in the dark corners of the workshop, and directed the men to resume their work. They all obeyed him in silence.

The workshop was an oblong hall, a long parallelogram with windows on its two sides, and doors facing each other at its two extremities. The work-frames were ranged on each side near the windows, the benches touching the wall at a right angle, and the space which remained free between the two rows of work-frames formed a path which led by a straight line across the hall, from one of the two doors to the other. Along this narrow way the Director had to pass in making his inspection. He was in the habit of entering by the south, and going out by the north door, after he had inspected the workers on the right and left, and he generally did this quickly, and in silence.

\* Literally true.

Claude had re-seated himself on his bench, and resumed his work. Everybody was waiting. The moment approached. Presently a stroke of the bell was heard. Claude said, 'There goes the last quarter.'

Then he rose, walked gravely across a portion of the hall, and placed himself in a leaning attitude, with his elbow on the edge of the first work-frame on the left, close to the entrance-door. His face was perfectly calm and mild in expression.

Nine o'clock struck. The door opened, and the Director entered the workshop, in which a deathlike silence reigned. The prisoners were like so many statues. The Director was, as usual, alone.

He came in with his jovial, satisfied, inexorable face, did not see Claude, who was standing on the left of the door, his right hand hidden in the waistband of his trousers, and passed rapidly before the first frame, nodding his head, and casting a casual glance here and there, without perceiving that the eyes by which he was surrounded were fixed on a terrible idea.

All of a sudden he turned sharply round on hearing a step behind him.

It was that of Claude, who had been following him.

'What are you doing there?' said the Director. 'Why are you not in your place?'

Claude Gueux made answer respectfully, 'Because I have to speak to you, sir.'

'Of what?'

'Of Alban.'

'Again!' said the Director.

'Always!' said Claude.

'O, indeed!' said the Director, as he moved on. 'Have not you had enough of the dark cell, then?'

'Sir,' said Claude, in a voice which might have softened the devil himself, 'I implore you to put Alban back again with me; you shall see whether I will work well or not. To you, who are free, it is all one—you do not know what a friend means; but I—I have nothing but the four walls of my prison. You can come and go as you will; I have nothing but Alban. Give him back to me! Alban fed me; you know that, well. What I ask will cost you only the trouble of saying "Yes." What does it matter to you that there should be in the same workshop one man who is called Claude Gueux and another who is called Alban? For the thing is as simple as that. Monsieur D., my good Monsieur D., I really implore you, in the name of Heaven!'

Never before had Claude spoken so much at one time to a gaoler. After this effort he waited, exhausted.

The Director replied, with an impatient shrug, 'Impossible! the thing is settled. Look here, don't you speak to me about this again. I'm tired of it.'

And, being in a hurry, he quickened his pace. Claude did likewise. While speaking, they had come close to the door by which the Director was to go out of the workshop; and the eighty-one thieves were looking on and listening breathlessly.

Claude touched the Director's arm gently: 'Let me, at least, know for what I am condemned to death? Tell me why you have taken him away from me?'

'I have told you already,' said the Director; 'because—'

He turned his back on Claude and put out his hand towards the latch of the door.

At the words of the Director, Claude had drawn back one step. The eighty-one statues who were there saw his right hand, with the axe in it, emerge from his clothing. That hand was raised, and before the Director could have uttered a cry three terrific strokes of the axe, all dealt in the same cleft, had split his skull open. As he fell over on his back, a fourth stroke gashed his face; and then, as fury yielded to cannot be suddenly checked, Claude Gueux dealt him a fifth, but needless, blow. The Director was dead.

Then Claude flung down the axe and cried, 'Now for the other!' The other was himself. He was seen to take from his vest the little scissors which had belonged to his 'wife,' and, without any one present dreaming of hindering him, to plunge them into his breast. The blades were short; his chest was deep; he struck at least twenty blows, crying, 'Ah, damned heart, shall I never find you?' and at last he fell, bathed in his blood and senseless, upon the dead man's body.

Which of these two was the victim of the other?

When Claude came to himself, he was in a bed. His wounds had been carefully bandaged, and the utmost care was lavished upon him. By his bedside were good Sisters of Charity, and a 'Judge of Instruction,' ready to take notes. This gentleman said to him, with lively interest, 'How do you find yourself?'

He had lost a great deal of blood, but the scissors, which a touching superstition had led him to use, had not done their work. He was in no danger from their shallow stabs. The only wounds that were mortal for him were those he had dealt to Monsieur D.

The interrogatory began. He was asked if it was he who had killed the Director of the Workshops at Clairvaux; and he replied, 'Yes.' He was asked, 'Why?' He answered, 'Because.'

Then there came a moment when his wounds grew angry and inflamed, and he was attacked with a terrible fever, which all but killed him. Nevertheless he lived through that also.

November, December, and January passed away in tending of the sick man, and in the preliminaries of justice. Physicians and judges were busy about Claude. The former were healing his wounds; the latter were erecting his scaffold.

It was on the 16th of March, 1832, that, being then perfectly cured, he was brought before the Court of Assize at Troyes. As much of a crowd as the town could muster was there.

Claude made a good appearance before the Court. He had had himself carefully shaved, he was bareheaded, and he wore the dismal dress of the prisoners of Clairvaux—a particoloured garb of two kinds of gray.

The State Prosecutor (Procureur du Roi) had collected all the bayonets of the district in the court-house, 'in order,' he explained

to the audience, 'to keep down the scoundrels who were to figure as witnesses in this affair.'

When the proceedings were opened, a singular difficulty prevented itself. Not one of the witnesses of the events of the 4th of November would give evidence against Claude. The President of the Tribunal threatened them with his discretionary powers, but all in vain. Claude then commanded them to make their depositions. Every tongue was loosed, and they told what they had seen.

Claude listened to them with profound attention, and when one of the number, either from forgetfulness or affection for Claude, omitted facts which told against the accused, Claude restated them.

Witness after witness deposed to the series of circumstances which we have related, and the whole story was unfolded before the court.

At one moment during the trial the women who were present wept. The convict Alban was called; it was his turn to give testimony. He entered, sobbing, and staggering on his feet. The gendarmes could not restrain him from falling into Claude's arms. Claude held him up, and said with a smile to the State Prosecutor, 'This is a scoundrel who shares his bread with those who hunger!'

Then he kissed Alban's hand.

When the list of witnesses was exhausted, the State Prosecutor rose and began his speech as follows: 'Gentlemen of the jury, society would be shaken to its foundations if the just retribution of the laws did not reach great criminals, such as this one, who, &c.'

After this memorable discourse, Claude's advocate spoke. The pleadings for and against were, each in its turn, such evolutions as are commonly made in that sort of circus performance which is called a criminal trial.

Claude held that all had not been said. He rose in his turn, and spoke after such a fashion that an intelligent person who was present at the trial left the court struck with astonishment.

For, it appeared, there was in this poor workman an orator, rather than an assassin. Standing upright, he spoke with a piercing and well-managed voice, a clear, resolute, and honest eye, with a gesture which was always the same, but full of authority. He related the facts as they were, simply, without addition or diminution, accepted everything, looked article 236 of the Code in the face, and laid down his head beneath it. There were passages in his discourse of true and lofty eloquence, which caused a movement in the crowd, and the listeners repeated to one another in a whisper what he had just said, so that there was a general murmur when Claude, regarding the spectators with a proud look, paused to take breath.

At some moments, this man, who did not know how to read, was gentle, polished, choice of phrase like a lettered person; and again, at others, modest, measured, attentive, treading step by step the irritating path of the discussion, and full of goodwill towards his judges.

Once only he gave way to a burst of anger. The State Prosecutor had set forth in his discourse that Claude Gueux had assassinated the Director of the Workshops without any overt act, or any violence on the part of the Director, consequently 'without provocation.'

'What!' cried Claude, 'I was not provoked! Ah, yes, truly, that is all right. I understand you. A drunken man gives me a blow with his fist; I kill him; I have been provoked; you spare my life, you send me to the galleys. But a man who is not drunk, a man in full possession of his senses, squeezes my heart in his hand for four years, humiliates me for four years; pricks me every day, every hour, every minute with a pin-point in some unexpected place for four years. A woman belonged to me, and I stole for her: he tortures me with that woman. I had a child, and I stole for it: he tortures me with that child. I had not sufficient bread: a friend gave me his; he takes from me my friend and my bread. I ask for my friend and my bread again, he puts me in the dark cell. I tell him that I suffer; he tells me that I weary him. What, then, would you have me to do? I kill him. Very well, I am a monster; I have killed this man, I have had no provocation, you cut my head off. Do it!'

The President then proceeded to an impartial and enlightened summing-up of the case. It resulted in this: an evil life, monstrous indeed; for Claude Gueux had begun by living in concubinage with a prostitute; afterwards he had committed theft, and subsequently murder. All this was true.

When the jury were about to retire to their room to consider their verdict, the President asked the accused whether he had anything to say respecting the form in which the questions should be put.

'Not much,' answered Claude; 'but yet something. I am a thief and an assassin; I have stolen and killed. But why have I stolen, why have I killed? Put those two questions by the side of the others, gentlemen of the jury.'

After a quarter of an hour's deliberation, the jury found Claude Gueux guilty, and he was condemned to death.

His sentence was read to Claude; and he contented himself with saying, 'That is well. But why did this man steal? why did this man kill? These two questions they have not answered.'

Being brought back to his prison, he ate his supper gaily, and said, 'Thirty-six years' time served!'

He did not wish to make the customary appeal to the Court of Cassation; but being entreated to do so by one of the Sisters who had tended him, and who implored him with tears, he yielded, that he might gratify her. It seems that he had resisted up to the last instant: for the legal delay of three days was within a few minutes of expiring when he made his mark in signature of his appeal in the register at the prison-lodge. The sister of charity in her gratitude gave the condemned man five francs. He took the money and thanked her.

While his appeal was pending, the prisoners at Troyes offered to secure his escape. The whole of their number were ready to devote

themselves to the task. Claude refused. They contrived to throw into his cell, through the grating, a nail, a piece of wire, and the handle of a pail. Any of these three tools would have served, in the hands of so clever a workman as Claude, to file through his irons. He gave up the nail, the wire, and the pail-handle to the Turnkey.

On the 8th June, 1832, seven months and four days after the deed, expiation arrived. *pois vint*. On that day, at seven o'clock in the morning, the Clerk of the Tribunal entered Claude's cell, and announced to him that he had only an hour to live.

He appeal had been rejected.

'Very well,' said Claude calmly. 'I have slept soundly this night, not knowing that I should sleep still more soundly the next.'

The priest arrived, and then the executioner. Claude was humble with the priest, gentle with the other. He refused neither his soul nor his body.

He preserved perfect liberty of spirit. While his hair was being cut, some one in a corner of the cell mentioned that Trojes was just then threatened with cholera.

'As for me,' said Claude, with a smile, 'I am not afraid of cholera.'

He listened to the priest with the utmost attention, making his confession with humility, and regretting that he had never been instructed in religion.

At his request the scissors with which he wounded himself were restored to him. One blade was wanting. It had been broken off in his breast. He begged the goaler to have these scissors conveyed to Alben from him, and he desired the ration of bread which he should have eaten on that day to be added to the legacy.

He begged the assistant of the executioner, when binding his arms, to place in the right hand the five-franc piece which the Sister of Charity had given him—his sole last possession.

At a quarter to eight o'clock he came out of the prison with all the customary lugubrious escort of the condemned. He walked with a firm tread; his face was pale, and his eyes were fixed upon the crucifix in the hands of the priest.

It was market-day, and there was a crowd to see him pass by to his death, and to note his demennour. He mounted the scaffold gravely; his eyes never wandered from the gibbet of Christ. He wished to embrace both the priest and the executioner, thanking the one and pardoning the other. One report stated that the executioner gently repulsed him. When the assistant was in the act of strapping him down on the plank of the hideous machine, Claude made a sign to the priest to take the five-franc piece out of his right hand, and said to him:

'For the poor!'

Eight o'clock was being rung out from the belfry, and the deep tinner of the bell overpowered his voice. The priest answered that he could not hear him. Claude waited for the interval between the strokes of the bell, and repeated,

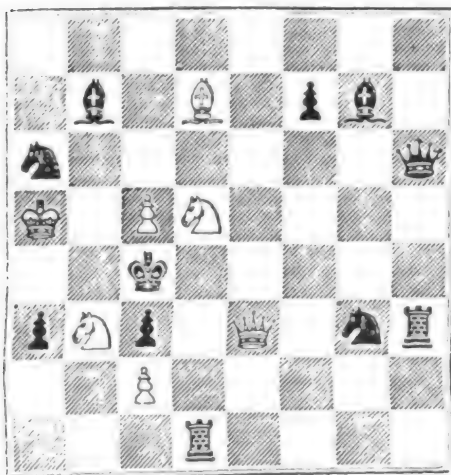

'For the poor!'

Before the eighth stroke sounded his head had fallen.

### METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, OCTOBER 29TH 1880.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokio, Japan.

### REMARKS.

Heavy line represents barometer.

Light continuous line—max. & min. thermometers.

..... represents velocity of wind.

..... percentage of humidity.

Max. velocity of wind 30 miles per hour on Sunday 3 a.m.

The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer for the week was 30.105 inches on Friday, at 7 a.m., and the lowest was 29.677 inches on Saturday, at 10 p.m. The highest temperature of the week was 70.9° on Friday, and the lowest was 42.4° on Monday. The maximum and minimum for the corresponding week of last year being 66° and 41° respectively. No rain fell during the week and the same was true for the corresponding week of last year.

### SHIPPING INTELLIGENCE.

#### INWARDS.

- Oct. 30, German barque *Lasker*, Kamena, 701, from Whampoa, coolies for Honolulu, put in for stores, &c., to Captain.
- Oct. 31, British steamer *Sunda*, Reeves, 1,704, from Hongkong via Nagasaki, Mails and General, to P. & O. Co.
- Oct. 31, German schooner *Helena*, Ewalt, 60, from the Kurile Islands, Otter and Seal pelts, to Captain.
- Nov. 3, Russian schooner *Oruga*, Isaacsen, 46, from Kurile Islands, Otter and Seal-skins, to H. Cook.
- Nov. 3, Japanese steamer *Tsuruga Maru*, Steadman, 661, from Kobe, Mails and General, to M. B. Co.
- Nov. 3, American schooner *Alexander*, Carson, 52, from Kurile Islands, Skins, to J. E. Collyer.
- Nov. 3, Japanese steamer *Wakamura Maru*, Christensen, 1,343, from Kobe, Mails and General, to M. B. Co.
- Nov. 4, Russian steamer *Courier*, Cooper, 496, from Kobe, General, to Walsh, Hall & Co.
- Nov. 5, French steamer *Volga*, Guirand, 1,502, from Hongkong, Mails and General, to M. M. Co.
- Nov. 4, Japanese steamer *Hiogo Maru*, Moore, 896, from Hakodate, Mails and General, to M. B. Co.
- Nov. 4, Japanese steamer *Kinshin Maru*, Davidson, 690, from Kobe, Mails and General, to M. B. Co.

Nov. 5, American barque *F. P. Litchfield*, Spalding, 1,063, from Newcastle, N.S.W., Coals, to Walsh, Hall & Co.  
 Nov. 6, American steamer *City of Tokio*, Maury, 5,079, from Hongkong, Mails and General, to P. M. Co.  
 Nov. 6, British steamer *Anchises*, Jackson, 1,314, from London via Hongkong, General, to Butterfield and Swire.

## PASSENGERS.

Per British steamer *Sunda* from Hongkong:—Messrs. Gracinto, Cheyner and J. H. Malmann in cabin and 3 Chinese.  
 Per Japanese steamer *Tsuruga Maru* from Kobe:—Messrs. J. Wood and T. Bingham, and 40 Japanese in steerage.  
 Per French steamer *Volga* from Hongkong:—Mr. and Mrs. Rampal, Sister Dania, Mr. Couil and four Japanese in cabin.  
 Per American steamer *City of Tokio* from Hongkong:—Mr. Chas. Katz and servant, Mr. J. McGregor and servant, and Mr. F. da Roza. For San Francisco:—Miss K. Wilson, Dr. J. F. Elmore and Mr. W. S. Hutchison in cabin; 6 Europeans and 166 Chinese in steerage.  
 Per British steamer *Anchises* from London via Hongkong:—Mr. and Mrs. Bunting, and Mr. Jacobs.

## OUTWARDS.

Oct. 31, French steamer *Menzelsh*, Homery, 1,273, for Hongkong, Mails and General, despatched by M. M. Co.  
 Nov. 2, British barque *Star Queen*, Brookes, 263, for Nagasaki, General, despatched by J. E. Collyer.  
 Nov. 2, Japanese steamer *Sunioyo Maru*, Frahm, 853, for Hakodate, Mails and General, despatched by M. B. Co.  
 Nov. 3, Japanese steamer *Takasago Maru*, Young, 1,230, for Shanghai and ports, Mails and General, despatched by M. B. Co.  
 Nov. 5, Japanese steamer *Wakanoura Maru*, Christensen, 1,343 for Kobe, Mails and General, despatched by M. B. Co.  
 Nov. 5, German barque *Black Diamond*, Baade, 460, for Nagasaki, Ballast, despatched by P. Bohm.  
 Nov. 6, British steamer *Sunda*, Reeves, 1,704, for Hongkong, Mails and General, despatched by P. & O. Co.

## PASSENGERS.

Per French steamer *Menzelsh* for Hongkong:—Mr. and Mrs. Iceland, Miss Anna Nègre, Miss Augustine Nègre, Mrs. Amory, Barou Benoist Mechniu and servant, Count de Mailly Chalons, Messrs. R. Conrad, John Pitman, Nasailieff, 2 Chinese, and four Japanese in cabin.  
 Per Japanese steamer *Takasago Maru* for Shanghai & way ports:—Mrs. Harlow, Mrs. Beauman, Mr. and Mrs. Barry, Messrs. F. A. Levittiff, J. Creagh, Rodgers, McCutchen, S. B. Ladd, and 12 Japanese in cabin.  
 Per British steamer *Sunda* for Hongkong:—Messrs. J. Denny, G. Worsfold, T. Bingham, I. Wood, W. B. Walter, and C. Van Bose in cabin; 2 Chinese and 1 Indian in steerage.

## CARGOES.

Per French steamer *Menzelsh* for Hongkong:—  
 Silk, for France ... .. 300 bales.  
 " " London ... .. 391 "  
 Total ... .. 691 bales.  
 Silkworm eggs ... .. 40 cases.  
 Per Japanese steamer *Takasago Maru* for Shanghai, and ports:—  
 Treasure ... .. \$8,200.00  
 Per British steamer *Sunda* for Hongkong:—  
 Silk for London ... .. 147 bales.

## REPORTS.

The British steamer *Anchises* reports having experienced bad weather for three days in the Formosa Channel.

## COMMERCIAL INTELLIGENCE.

**IMPORTS.**—Business still continues very dull. Native merchants still hold aloof and make but few purchases. *Yarn.*—Some enquiry for 16/24, more especially to arrive; other counts neglected. *Shirtings*, moderate demand for 9lbs, other weights dull. *Woolens* quiet and prices lower.

**COTTON YARNS.**

**EXPORTS.**

**SILK.**—During the past week our Silk market has been rather quiet, the news from home having been very discouraging. In all only about 300 shipping bales have been sold and even some of these may yet be rejected. Prices for Filatures of full sizes are rather lower and re-reels have declined about \$10 per picul. Hanks, however, cannot yet be bought at any marked reduction, so far we can only say that the tendency is downward.

Stock in Yokohama 10,500 Japanese bales.

Shipments to date 5,961 bales against 6,481 bales last season.

The following are to-day's quotations.

		Exchange 3/9½	Exchange 4.60
New Silks	Hanks.—No. 1 & 2	\$515 to \$520 = 17.5 to 17.6	= fcs. 48.20 to fcs. 48.60

## MISCELLANEOUS.

## W. & A. GILBEY'S WINES AND SPIRITS.

**W.** & **A. GILBEY** have special facilities for carrying on an extensive Foreign Trade, having held for many years in their Excise Bonded Stores, for the purpose of their Home Trade, a stock of not less than 12,000 Casks of Wines and Spirits, which are equally available for Export. These stores are by far the largest private Duty Free Warehouses in the World, and are under the supervision of a staff of Excise Officers specially attached to these Warehouses.

THE EXTENT of **W. & A. Gilbey's** purchases enables them to give the best VALUE to the public, as a twentieth part of the Foreign Wines consumed in the United Kingdom is supplied from their stock. In the year 1876 **W. & A. Gilbey** paid duty on 1,881,049 gallons of Wines and Spirits, and the average quantity bottled and sent out by them daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by **W. & A. Gilbey**, and is the same whether the Wines or Spirits are obtained direct from their Head Establishments or from any of their Agents. The purity and genuineness of every article in this list are guaranteed in accordance with Act of Parliament, 38 and 39 Vict., Cap. 63.

**W. & A. Gilbey** have always adhered to the standard of Bottle Measure recently recognised by the Government, namely—

6 bottles contain one gallon; 12 half-bottles contain one gallon.

SECURITY is ensured to the purchaser, each bottle bearing **W. & A. Gilbey's** seal and label guaranteeing quality and measure, and the strength also in the case of Spirits.

EDWARD FISCHER & Co.  
Agents for Japan.

## MATSUZAKA HOTEL, KIGA, (HAKONE HOT SPRINGS.)

Tokio, 26th June, 1880.

## MISCELLANEOUS.

## THE GREATEST

## WONDER OF MODERN TIMES HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER.

In his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mathomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

## SIMPLE, SAFE AND CERTAIN! HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of pear, and the demand became so great that I was obliged to lock up the small remaining stock." Sold by all Chemists and Medicine Vendors throughout the World May 17th, 1878.

**ESTABLISHED 1799.**

July 26, 1879.

**THE BEST REMEDY FOR INDIGESTION.**

TRADE

MARK.

**CAMOMILE PILLS** are confidently recommended as a simple Remedy for Indigestion, which is the cause of nearly all the diseases to which we are subject, being a medicine so uniformly grateful and beneficial, that it is with justice called the "Natural Strengthener of the Human Stomach." "Norton's Pills" act as a powerful tonic and gentle aperient; are mild in their operation, safe under any circumstances, and thousands of persons can now bear testimony to the benefits to be derived from their use, as they have been a never-failing Family Friend for upwards of 45 years. Sold in Bottles at 1s. 1½d., 2s. 9d., and 11s. each, by all Medicine Vendors throughout the World.

**CAUTION.***Be sure and ask for "NORTON'S PILLS," and do not be persuaded to purchase an imitation.*

November 11th, 1878.

## MISCELLANEOUS.

**BUGS, FLEAS, MOTHS, BEETLES,**

and all other insects are destroyed by

**KEATING'S INSECT POWDER,**

which is quite harmless to Domestic Animals.

In exterminating Beetles the success of this Powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application.

Ask for and be sure to obtain "KEATING'S POWDER," as Imitations are Noxious, and fail in giving satisfaction.

SOLD BY ALL CHEMISTS IN BOTTLES, 1/- & 2/6 each.

**KEATING'S WORM TABLETS,**

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL** or **THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for Children.

## TESTIMONIAL.

Medical Hall, Gildersome, Nov. 28th, 1876.

MR. KEATING,

Dear Sir,—I think it nothing but my duty to inform you of the immense sale I have for your Worm Tablets, which I may justly say is enormous, and in every case gives the greatest satisfaction. I have now in stock two bottles containing the Round Worms brought me during the last few days by customers, one Worm 40 yards long. I dare not be without the remedy.—Yours respectfully,

M. A. WALKER.

SOLD IN BOTTLES, BY ALL CHEMISTS AND DRUGGISTS.

Proprietor—**THOMAS KEATING, London.**

**REWARD AND CAUTION.**—Whereas fraudulent imitations of this unsurpassed remedy have been sold, I hereby request anyone knowing of the vendor of the same to communicate with me, on conviction of the offender a liberal reward will be paid.

" " " " 3 " " 3 "

## LOCAL BILLS DISCOUNTED.

Credits granted on approved Securities, and every description of Banking and Exchange business transacted.

Drafts granted on the Chief Commercial places in Europe, India, Australia, America, China and Japan, and Circular Notes issued for the use of Travellers.

JOHN WALTER, Manager.

Yokohama, 25th August, 1880.

**The "Japan Mail,"**

A Daily, Weekly, and Fortnightly Journal,

ESTABLISHED, 1865.

## TERMS OF SUBSCRIPTION.

WEEKLY EDITION. The "Japan Weekly Mail," a Weekly Review of Japanese Commerce, Politics, Literature and Art.—Per annum, \$24; Six months, \$13; Three months, \$7.

FORTNIGHTLY Edition, being a Summary of the foregoing, is published for transmission by the American Mail Steamers via San Francisco. Per annum, \$12; Six months, \$7; Three months, \$4.

THE JAPAN DAILY MAIL is published every morning (Sundays excepted) and contains the Arrivals and Departures of all Shipping, Passenger lists, Cargoes, Vessels on the Berth and in Harbour &c. &c. Also the latest Telegrams, Japanese news, Reports of Trials in the Courts of Law, Meetings of public bodies, and all matters of interest to the Community. Special attention is called to this Journal as a medium for circulating local advertisements. It has a large and constantly increasing circulation, its low price bringing it within the means of all classes of the community. It therefore affords exceptional advertising advantages, and secures to all announcements the utmost publicity, the object aimed at by advertisers.

## SUBSCRIPTION PER MONTH—ONE DOLLAR.

## AGENTS OF THE PAPER.

## AGRICULTURE IN JAPAN.

### II.

IN an article on this subject published last week we glanced slightly at the historical side of the subject and gave a passing notice of a few improvements made in late years in the art of agriculture as practised in Japan. To this latter part of the subject, and to certain improvements *in posse*, we will now return and consider at greater length.

The total area of the Japanese empire, excluding the Kuriles, Riu Kiu and some other smaller islands would appear to be, in round numbers, but little short of 100,000,000 acres. The exact area is unknown and different estimates vary considerably, but including all the islands the above cannot be far from the truth. Of this about eleven million acres only would seem to be cultivated, of course excluding woods; viz., about six millions as paddy land and the remainder by dry culture. This cultivated land, with the produce of the seas and rivers and with a small amount of food products from the woods and rough grass land, supports a population of upwards of thirty-three millions. This fact in itself is sufficient to show that the state of agriculture has arrived at a point of considerable perfection, and this has been the case for several hundred years, for there is reason to believe that the population of Japan has not varied greatly for a long period. That the Japanese public has a deep and vital interest in improvement in this art, if the nation is to continue to advance in the steps of civilisation as it is known in the West, needs no argument to prove, and that the government feels this interest is also evident by the attention and money it devotes to the object. But if the

public feels the interest which it *has*, it fails to express it in any very appreciable form to the outsider. In the native press, which must be taken as the expounder of public opinion, on at all events non-political subjects, we find more attention paid to the private affairs of ministers and other officials than to subjects of far higher importance and interest.

The soil of Japan apparently is largely derived from igneous rocks rich in silica, such as trachytes, granites &c., and is not chemically of a high standard of excellence. The soils in the valleys and plains are largely alluvial and some of them formed by aerial deposition; most of this is of fair quality and is in very excellent physical condition. For some definite information on the composition of certain rocks and soils of Japan we are indebted to a paper recently published by the Asiatic Society of Japan, —and noticed in another part of this issue,—which also has furnished us with information and hints on other points connected with the subject in hand. The temperate climate of this country and its abundant supply of rain has been of the greatest assistance to its cultivators, the summer heat and moistures favouring an abundant and luxuriant vegetation. Still the different parts of the empire are favoured with very different meteorological conditions even when they are situated in the same longitude, witness the difference in temperature and amount of moisture on the east and west coasts of the main island, caused for the main part by the influence of Kuro-siwo. These different climatic conditions have necessarily caused variations in the methods of culture employed, though their effect seems to have been hardly as great as might have been expected. The traveller from India to Japan is greatly struck with the enormous difference in the practises in the two countries. In India, at least in Southern India where the ryotwari system of tenure largely prevails, a spoliation system of cultivation is the bane of the country, and valuable manures are destroyed and wasted on all sides. In Japan, on the other hand, nearly every available manurial matter is turned to good account. Here the farmer is free from all feudal and ecclesiastical impediments and the state imposts in the way of land and local taxes are comparatively light and therefore the farmer applies himself with diligence to the culture of the soil. The land-tax, formerly collected in kind but now in money, is two and a half per cent. on the nominal value of the land as assessed by Government officers. The value of rice land, which itself varies much according to the facilities with which it can be irrigated, is placed at a far higher figure than the dry land and woods which were, until recently, free from tax. Both irrigated and dry lands are divided into four main divisions and these again into sub-divisions according to the amount of produce they are supposed to be capable of producing on an average. According to the category in which the land is placed, the amount of land-tax is assessed being

reckoned at from three to six-tenths of the produce. The average value of paddy land is taken at about 120 yen per acre and of *katake* about 80 yen per acre. The whole question of the land tax and of the holding of land is, however, very complicated, and though the government is the nominal owner of the land the real holders are quick to resent any interference with their customary rights. Of late years the tax collected in money has borne very lightly on the farmer, owing to the increased price of the produce.

With the use and application of manures the Japanese farmer has been long acquainted; he has many centuries ago found out by experience, what in other nations has been but lately appreciated, that unless the soil has returned to it the ingredients which are taken from it by crops and are not supplied by the air it will quickly become unprofitable to cultivate it. It is probable that he never followed to any degree a system approaching the deplorable spoliation system which has been the custom in so many of the States of North America and which has resulted in vast tracts being thrown out of cultivation for many years and in the decreased fertility of others for many decades to come, or if so he has long ago left it off. Nearly all animal manures have been utilised to their full extent for ages, except, as we before mentioned, bones, which are now eagerly sought after. It is of course against the filthy and degrading system of ordure carriage that other countries have striven by their expensive sewage system, but there can be no doubt that the utilisation of these matters is the only rational plan and that the European sewage system will have to be modified in some way and rendered less wasteful in the coming years. Of vegetable manures also all kinds are made use of and generally to good effect. In the use of mineral manures our farmer is not so strong; though acquainted with the use of lime it is but little used, but this is partly owing to the cost of burning it and still more to the cost of transport; to these latter points we must refer again later on. There are many deposits of shells to be met with in different parts of the country which might be utilised for supplying agricultural lime, always remembering that this must be used with caution, for if in excessive quantity, it "enriches the father and beggars the son." Gypsum is a mineral occurring here which might be used with advantage, especially on the leguminous plants. Common salt is a substance which might in all probability be used with the greatest advantage as manure on many Japanese soils, but its high price at present prohibits its use. With a few improvements in the process of production and with the utilization of the salts of the mother liquors of the evaporation, it might surely be produced at a much lower price. In the northern isles, where large quantities of salt are required for curing fish, might not the plan of concentration of sea water by freezing be advantageously adopted? the winters are said to be cold enough and long enough. Potash felspar, another mineral occurring in quantity in some places, might be applied with good effect to many soils which are poor in potash.

Facts full of instruction to the thoughtful observer are that the Japanese farmer never breaks up a piece of land for cultivation unless he has or can procure a stock of manure, and that if he allows a plot of land to go out of cultivation for any length of time it may be diverted from him.

One direction in which Japanese agriculture will in certain districts undergo a revolution is in the rearing of

larger quantities and better qualities of live stock. There are many reasons why this must occur, and indications of its commencement. Thus horses will come more into use in agriculture proper and besides this with the increase in domestic and foreign trade, and consequent improvement in the roads and conveyances of the country, continually more and more horses will be used. A demand for wool exists which can be supplied by the country itself, and lastly, the nation is becoming more and more a flesh-eating nation and larger supplies of beef are demanded. For this production of a larger amount of live stock an improvement in the pasture of the country is required, and new fodder crops must be introduced and properly cultivated. The improvement of pasture is a point requiring great attention and considerable time and capital, but does not present insuperable difficulties; although good and nutritious grasses are difficult to get, well rooted clover, lucerne and other high class fodder plants are readily grown and produce excellent crops. There are also several oil residues and waste products from manufactures which may be used in the feeding of stock and which now seem to be only used as manure, such as rape cake, cotton cake and rice cleanings. In the breeding of stock and in the careful selection of the animals for propagation everything remains to be done by the agriculturalist of Japan. The good which was done by the introduction of a strain of better blood into the Nambu horses a century ago and the half-bred horses and cattle of the present day should be sufficient encouragement for much greater efforts in this way, and throughout the country for the improvement of the native stock by selection of sires and dams. The improvements in live stock in the west date from the latter half of the eighteenth century, when the first and most successful efforts to improve the breed of sheep were made by Robert Bakewell, in Leicestershire; he commenced his experiments about 1755, and so careful and painstaking was he in the selection and rearing of his stock, that the improvement in the breed was marvellous. Some idea of the value attached to the rams of his flock may be gained from the fact that in 1789 he received twelve hundred guineas for the hiring of three which had been born at one birth. Bakewell also greatly improved the long-horned cattle which were then the prevailing breed in the midland countries; this breed has now been entirely superseded by the Durham or short-horn breed, and this is entirely owing to the application of Bakewell's own principles by the brothers Colling to the breeding of this race. These principles of selection have been carried down to the present time by Messrs. Booth and Botes and their followers, with the magnificent results and high prices known to all. Bakewell's influence spread also to the north of England and beyond the Tweed through the agency of his pupils the Messrs. Cully and Mr. Dawson; the latter, a large and enterprising farmer of Roxburghshire who hired himself as a ploughman to the Leicestershire farmer, and on his return home—his master would fain have retained so good a labourer longer—introduced the improvements he had practically learnt to his own farm and neighbourhood. The improvement of the English horse is of somewhat earlier date, its foundation being laid at about the time of the Restoration, but it was not until much later that any considerable progress was made. In the more careful selection of seeds of cereals and other crops the farmer here has also much to learn and he must find out that it is little use introducing fine and high class well-bred seeds into poor land in low condition, as it is worse than useless to introduce high class pure bred stock where they receive inferior food and are badly tended.

High class stock, whether animal or vegetable, must have high class food and attention. The farmer should also be strongly impressed with the advantage of exchanging the seed between different districts and not keeping the same seed to the same farm or village continually. In the application of mechanical laws to improving agricultural implements and machinery this nation is much behind-hand, and with the small holdings of each farmer but little can be expected to occur in this direction unless the farmers in a district can be induced to band together for the purchase and use of some of the simpler and most effective of the labour saving machines for agricultural processes such as for threshing, winnowing &c. The opposition with which all such machinery has been met and the slowness with which it has been introduced in other lands renders it certain that it will not be quickly adopted here, and besides only the simpler forms are adapted for use in this country. Such a co-operation among the farmers of a district would be much to their interests not only for purposes connected with the use of implements but for the production of certain of their wares on a factory system, such for instance as sugar, cotton or tobacco, which might be prepared far better and more economically on such a plan than when each man or family attends to its own little lot. Not the least advantage of such a factory system would be the introduction of business habits into the members of the community and the teaching them habits of book-keeping and of economy, without which permanent benefit can scarcely be looked for. Giving a little attention now to crops grown, and especially those which are of importance as furnishing materials for export or which will tend to diminish imports, it is evident that silk is and will probably long continue the principal export and as such attention should be given to its production and preparation; at this time we cannot enter on this subject. The two next crops in present importance in the export markets are tea and tobacco, both of which are in their nature very exhausting crops and require the application of large quantities of manure; should their cultivation be largely extended the question of the importation of manures, such as guano and bones, will have to be seriously considered. Excluding from consideration for the present the main food supplies, viz., rice, the cereals and leguminous crops, although the former might in favourable seasons furnish a considerable export could the cost of transport from the interior be reduced, cotton and sugar are the next important crops. Both cotton and sugar are now largely imported, thus of the 70,000,000 lbs. of cotton required by Japan, 40,000,000 lbs. are imported, and of the 90,000,000 lbs. of sugar used in this country less than one-third is produced here. Both of these crops, when cultivated as a Japanese farmer could and would cultivate them, are not exhausting in their nature and should therefore receive every encouragement. Cotton, besides producing the fibre so largely needed, furnishes in its seed a valuable oil and the residue after expressing the oil forms a cake useful for cattle feeding, or if it cannot be so utilised its use as manure returns to the soil all the important ingredients removed by the cotton plant. The trial of new seed to improve the staple of Japanese cotton might be made with prospects of success, especially of Egyptian, or the better kinds of Indian cotton; the former spreads considerably over the ground but produces large bolls and a long and silky fibre which has the advantage of being easily separated from the seed. As the best cotton is produced in Kawachi and Harima, near the districts where most cattle are now reared, this is an additional inducement

to utilise the cotton cake for feeding purposes. For the production of sugar the sorghum seems the most suitable plant in the northern portions of the country, and possesses the additional advantages of being an excellent fodder plant and also of producing seeds which furnish a flour that can be made into capital cakes, or the seeds can be used directly for cattle or horse food. We have notes on other minor crops but have not space now to notice them, and must conclude this sketch with a reminder of the great benefits that would be derived by the farmers were they to form themselves into Societies, having for their object the improvement and furtherance of their art. If such Societies were to collect, publish, and distribute information relating to agriculture and hold meetings, discussions and, where possible, occasional shows, a spirit of emulation and love of literature and experiment would be aroused in the farmer and a most important educational work set on foot. Taking Great Britain and Ireland for an example, we find that the first agricultural society was formed in Scotland in 1723, under the title of the "Society of Improvers in the knowledge of agriculture in Scotland." One of its most active members was the earl of Stair, who is said also to have been the first cultivator of turnips in Scotland. This Society very soon numbered three hundred members, but it was before its time and lived but twenty years. In a volume of its "Select Transactions," published at its death, is the first mention of a threshing machine. This was invented and patented by Mr. Michael Menzies and worked by water power; the Society strongly recommended it as enabling one man to do the work of six. In 1737, the Royal Dublin Society was founded, having for one of its objects the encouragement of agriculture; it still holds an annual cattle show and grants an order of Associate in Agriculture. In 1777 the Bath and West of England Society for the encouragement of Agriculture, Arts &c. came into existence, and has ever since continued to do most excellent work. Seven years later the Highland and Agricultural Society of Scotland was instituted, and it has been the means of the accomplishment of many valuable results notwithstanding the bad feature it has of allowing politics to enter largely into its proceedings.

The Royal Agricultural Society of England was not founded until 1836, but it now numbers on its rolls nearly eight thousand of the leading agriculturists of Great Britain, banded together under the motto "Practice with Science," and the good it has done in advancing agriculture by means of the emulation fostered at its shows and by diffusing information by its journals and in other ways is incalculable. Five years after the foundation of this society the Royal Agricultural Improvement Society of Ireland was started and the next year a body of tenant farmers of the Lothians started an "Agricultural Chemistry Association" for the purpose of conducting field experiments. After a few years this became merged in the Highland Society. In 1843 the Central Farmers' Club, with its head-quarters in London, started into life and the idea quickly spread so that now each country and each important agricultural borough and district has its Farmer's Club or Chamber of Agriculture. The importance of similar institutions in this country is patent to all and the good effect they would produce on the internal trade, and thence on the foreign trade, needs no exposition.

## BONDS VERSUS SATSU.

THE notification substituting interest-bearing bonds for a certain amount of satsu is important as it shows that the Government is anxious to deal with the depreciation of the paper currency. This measure, however, can hardly be attended with such success that any appreciable rise in the value of satsu will be the result. In truth, however, the terms are very tempting. A hundred yen can now be purchased for about sixty-four dollars, and the Government promise to redeem these yen in silver before the expiration of fifteen years, with interest at the rate of six per cent; that is to say, sixty-four dollars laid out now will become a hundred and ninety dollars in fifteen years—or nearly treble itself. The object of prohibiting the sale of such bonds to foreigners is not very apparent and is a very short sighted policy. The same restriction was applied to the domestic loan a few years ago. The explanation that the Government contemplate the possibility of repudiation seems to us very unsatisfactory. We do not think the Japanese finances will ever get into such a state that repudiation will be resorted to. If the bonds were made payable to bearer, and if foreigners were allowed to hold them, the measure would be much more certain of success. Certainly it would inspire more confidence; and holding these bonds can in no sense be compared to holding property in land or mines. Jealousy of foreign interference has gone too far in this instance;—so far, indeed, as to threaten to defeat the policy of the notification.

The order for the sale of manufactories under the various departments is also no doubt intended to improve the position of affairs, but it is very doubtful whether it will really attain this object. It may be more difficult than it seems to get purchasers for such undertakings as the Senji cloth mill, the various establishments under the Kaitakushi, the Shimosa farm, &c. The success in all these cases has not been such as to encourage private individuals taking them over, and they will all have to be put upon a sound commercial basis, and so worked, before they can yield a good return as an investment.

On the whole, then, we do not anticipate any very great improvement as the result of these steps. The Government, we feel constrained to say, are hardly dealing with this serious question in as broad a spirit as we should like to see. Insufficient and inoperative measures may even aggravate the evil which they propose to remove.

AMONG the iron-works of Japan, those newly erected at Kamaishi stand first in importance. The port of Kamaishi, in the prefecture of Miyagi, is one of the best in Japan. It is perfectly land-locked and the harbour is deep enough to allow ships of large burden to anchor almost within a stone's throw of the shore. A pier is being projected from the terminus of the railway that connects the mines and the coast and runs through the works. The works themselves are of a most extensive kind. There are smelting furnaces capable of turning out some 50 tons a day. There are puddling furnaces and rolling mills, a steam hammer, &c., and in fact all the machinery requisite for producing iron for native use or for exportation. The mines are at a distance of thirteen miles from the furnaces, with which they are connected by a railway, constructed under the direction of an American engineer, in a manner that leaves nothing to be desired. The road is a narrow gauge—2 ft. 9 in.—but very well laid and solid. The iron ore is excellent and equal to that from which Lowmoor iron is manufactured. If it

be found to be unlimited in quantity, and the Government push on the works with vigor, there must be a great future for these mines and the iron industry of Japan. In prospect of the rapid extension of railways in the country, and the development of the coal mines, the Kamaishi works rise in importance. Even if the ore should run out at the Kamaishi mines there is ironstone in other parts of the north, and the situation of the smelting works at Kamaishi may still be availed of for reduction of the ore, being so conveniently situated at that port. The only apparent difficulty is the supply of fuel for working. At present the supply of charcoal is obtained at a place in the neighbourhood, to which a branch railway has been laid. But it is expected that coal will be brought to the mines from Yezo and other ports as soon as the works are in full swing. The Poronai coal mines, and the Iwanai mines of Yezo, may be found to work well in this way as soon as easy transit to the coast is effected. There seem to be as yet few men practically acquainted with blasting and puddling to work the furnaces—which, especially in the case of blast furnaces, require great care and attention as well as experience. But no doubt the authorities will be made aware of the probable losses which will accrue if the works are proceeded with, inefficiently supplied with experienced workmen.

COMPARING the financial position of Japan and of India—an independent and a dependent Oriental country—the *Pall Mall Gazette* writes as follows:—"The summary of the finances of Japan, recently quoted by the *Times* from the *Allgemeine Zeitung*, suggests some interesting reflections:—the population of Japan, as is well known, almost exactly equals the population of the United Kingdom; but a far more just comparison may be instituted with India, as illustrating the distinction between the finances of an independent and a dependent Oriental country. The total revenue of Japan is about 11 millions sterling, being at the rate of 6s. 8d. per head of population. The total gross revenue of British India may be put at 60 millions, or about 6s. 4d. per head. But in Japan the land tax alone yields more than 8 millions, or 75 per cent. of the total; whereas in India the land tax furnishes only 34 per cent. The incidence of taxation proper averages 1s. 2d. per head in Japan, as compared with 1s. 6d. per head in India. An examination of the expenditure is still more instructive. Japan has no exhausting drain for 'home charges,' nor any 'loss by exchange.' Her army costs her only £1,440,000, as compared with nearly 17 millions in India. In Japan, interest on debt is by far the largest item, amounting to more than 4 millions, contrasting unfavourably with about 5 millions in India. But it must be recollected that in Japan there is a heavy annual sinking fund, operating like our own terminable annuities; and that by far the larger portion of the debt (about 95 per cent.) is held in the country. If we may trust the figures given in the *Almanach de Gotha*, the Japanese debt has decreased by about 12 millions sterling during the past three years; whereas we know only too well that the Indian debt has increased by about an equal amount within the same period."

THAT the Chinese claim to the suzerainty of Nepal has not at all times been an empty phrase is shown from a recent article in the *Times* on the Goorkhas, the warlike and hardy race from which some of the best of our native Indian troops are taken. They come from Nepal, and are supposed to have sprung from the alliance of pure-blooded Hindoos with the women of various Mongol tribes. They first settled some centuries ago at the town from which they take their name, some distance west of Khatmandu. In the

14th century the ruler of Afghanistan endeavoured to add Nepal to his dominions, but was utterly discomfited by a Chinese force. Dissensions among the Nepal princes paved the way for the supremacy of the Goorkhas, and in 1750 all Nepal was under their dominion. Their policy then became one of almost Chinese exclusiveness; but in 1791, tempted it is supposed by the wealth of the *Lamasseries*, they invaded Thibet. A Chinese Army set forward to meet them, and pursued them to the capital itself, where they were forced to sign an ignominious treaty, acknowledging themselves vassals of the Emperor of China. Thus prevented from 'exploiting' north of the Himalayas, they turned their attention to the sub-Himalayan region, where their intrigues excited the wrath of the English Government; and in 1816 they were compelled by treaty to renounce all their recent conquests. On this occasion again, the Chinese sent an army to assist their vassals, but it arrived too late on the scene to take any part in the war which the British were waging under Sir David Ochterlony. Under the rule of Sir Jung Bahadur the Goorkhas gave much assistance during the mutiny, and since that time, wherever there has been fighting on the Indian frontiers these hardy troops have rendered us the most valuable service. "Their record of service under our flag is the narrative of untarnished fidelity and unsurpassed valour." Doubtless the Chinese base their recent claim for tribute from Nepal on the conditions of the Treaty of 1791 above-mentioned.

THE following remarks on the "Iron Money of Japan" are taken from the *Numismatic Chronicle*, the organ of the Numismatic Society of London. The writer, Mr. James White, of South Kensington, when in Japan in the summer of 1878, made a collection of Japanese coins, some of which were iron. Mr. Brämsen's new work promises to exhaust the subject as far as Japan is concerned; but meantime, Mr. White's brief essay may be found of interest.

"As requested by our President at the last meeting, I now draw attention to the iron money of the Japanese, specimens of which will be given to the Society, as illustrative of this notice.

"We all know that iron, in bars, was used by the Lacedæmonians and Byzantines as money, probably on account of its abundance in Laconia and on the shores of the Euxine. The inconvenience of iron as a monetary medium in Sparta is obvious, when the value of £20 sterling would require for its conveyance a cart with two oxen to draw it.

"Aristotle mentions iron as a material for money, and adds that the people of Clazomenæ—a city in Ionia—had iron money, and according to Suidas iron money was used in the earliest age of Rome.

"Dufresnoy says iron was so used in Britain, and it would appear from Caesar's Commentaries that the aboriginal currency was circumscribed to rude rods of iron and brass. Caesar's words are, "Utuntur aut ere aut taleis ferreis ad certum pondus examinatis." (De Bello Gallico, book v., chap. xiii.)

"It may be worth mentioning that some 1800 years after the invasion of Julius Caesar, iron was still used as currency in our land, according to Adam Smith. In his "Wealth of Nations," the fourth chapter, "Of the Origin and Use of Money," he tells us, "There is a village in Scotland where it is not uncommon, I am told, for a workman to carry nails, as money, to the baker's shop and to the alehouse."

"Owing to the rapid oxidization of iron, or mayhap to its ready convertibility into swords and ploughshares, there is, I believe, no survival or specimen extant of the Iron Money of the Ancients.

"It seems to me not unlikely that iron, when used as currency by the Greeks and Romans, was not coined, but simply rings, rods, or bars of a specified weight like those circulated—as Mungo Park tells us—by the Mandingoes, each bar passing as the equivalent of two shillings. If so, to the Japanese would be accorded the credit of having first, mayhap exclusively, utilised iron as a current coin, specimens of which I now submit and present to the Society.

"These iron coins were issued (as I was told when in Japan last year) by a Shogun of the Tokugawa family, vulgarly called a Tycoon, and often incorrectly ranked in Europe as the Secular Emperor of Japan.

"The reverse of these coins, like those of the Chinese—from which they are copied—is blank. The obverse bears the impressed Chinese characters, 'Ching Yung Tung Pau,' which means the current money of Yung the Prosperous.

"A Japanese bronze coin bears a similar inscription. Its form and characters were adopted by the Japanese. It is said to have had its origin in China at the beginning of the Chan dynasty, about 1120 years before the Christian era.

It should be mentioned that the Chinese language is the learned (or classical) language of Japan, Corea, Mongolia Thibet, and adjacent countries—hence used for the superscription of coins in the East as Latin is in the West.

"'Tung tseu' (copper money) with 'Tung Pau' (current money), impressed with the name of the emperor reigning when it is issued, is still officially the only current coin of the Chinese—the Land Tax and other Imperial or Provincial taxes being eligible in that coin.

"This money is said to consist of 8 parts of copper and 4 parts of lead; although zinc and sometimes iron is substituted for lead. Each of these Chinese units of value should be the 384th part of a 'Kin' (Catty)—*id est*, one and one-third of an English pound weight.

"The present low value of these iron coins will be recognised when I add that the twenty pieces now exhibited are equal in value to that of the one bronze coin annexed to them—its newly minted equivalent. It is said to be the smallest modern coin issued. The value of both is one 'Rin'—a mil, or thousandth part of the 'Yen,' or silver dollar of Japan.

"Small as is now the value of these iron coins—each about one hundredth part of a farthing—still, at times, a gherkin, a few pea-nuts, and other articles were, I was told, obtainable in exchange for one piece of this iron money. From my own observation I should infer that these coins are now used, almost exclusively, for the giving of alms and making offerings to the gods.

"In the vicinity of Osaka I found in the gardens of some Buddhist temples a particular tree, generally an exotic, thickly covered at its foot with oxidized masses of these iron coins, the offerings of pious pilgrims and occasional visitors."

IT is pretty generally known that in the 15th, 16th and 17th centuries, Japanese pirates were the scourge of the China seas, sometimes even extending their depredations as far as the coasts of India. The Jesuits, in their *Mémoires Concernant les Chinois*, inform us that during the sixteenth century the inhabitants of every port in China were kept in constant fear of descents by these pirates, and that at one time nearly the whole province of Fokien was in their possession. It is not so well known, however, that one of the greatest of English navigators, and one of a class which has been called England's forgotten worthies, met his death at their hands. This was Sir John Davis, the arctic traveller. There are two accounts of the occurrence; one, by Mr. Froude, in his "Short Studies on Great Subjects," in which he says:—"In taking out Sir Edward

Mitchellthorne to India, in 1604, he (Sir John Davis) fell in with a crew of Japanese, whose ship had been burnt, drifting at sea, without provisions, in a leaky junk. He supposed them to be pirates, but he did not choose to leave them to so wretched a death, and took them on board, and in a few hours, watching their opportunity, they murdered him." But from a recent publication of the Hakluyt Society, it seems that Sir John Davis's ship was lying in the harbour of Singapore, side by side with a large Japanese junk. The crew of the latter, attracted at first by curiosity and afterwards by cupidity, visited the English ship in large numbers, and ultimately made an attack on the crew. They were beaten off, but in the fight the great English Captain lost his life.

An account of the doings of these freebooters in the Indian and Chinese seas would be full of interest.

#### REVIEW.\*

THIS instalment of the transactions of the Asiatic Society of Japan is certainly one of the most valuable that has yet been issued by the Society. Every paper in the number contains sterling and valuable work in its own particular line. After a description of the three languages embraced in the single word "Japanese," Mr. Chamberlain, in his "Japanese rendering of some Psalms" adopts the classical language, "which in the case of the poetical books should, if possible, be in a versified form in order the better to suit the native taste." This version, which is a paraphrase, is accompanied by a strictly literal version, "which would receive its explanation from the paraphrase and conversely, determining the precise sense of the latter." He accordingly furnishes translations of twelve Psalms, as specimens of our sacred books on this principle. To ordinary minds this seems the best method of conveying to the native mind the substance, more especially of the Hebrew poetical scriptures. These are full of references and words, which would be absolutely incomprehensible in a literal translation. Doubtless, however, this subject has received the careful attention of those missionary gentlemen who are responsible for the translation of our Bible into Japanese.

Mr. Satow's contribution on the "*Sepulchral Mounds in Kandzuke*" will be a welcome addition to the valuable materials which are gradually being accumulated on Japanese archaeology. The objects which have been obtained from these mounds, comprising articles in bronze and porcelain, are both numerous and varied. The markings on the porcelain have in many instances a striking resemblance to those on the fragments of porcelain exhumed from some of the shell heaps. In some cases, there is also a resemblance in general shape. This would seem to indicate a possibility of the shell-heaps and these mounds being formed at periods not very remote from each other. From the state of preservation of the articles of bronze and iron which have been found in the mounds, it seems certain that their age cannot be very great. Local tradition, it would appear, identifies one of these mounds as the burial-place of Mimoro-wake. This would assign their date of construction to about the 1st century—a conclusion which is not at all at variance with the supposition that the iron articles are not of a very great age. If the shell-heaps, then, were formed anywhere near the same time, we shall certainly be compelled to abandon the theory of Professor Morse, who, if we wish to see these formations, would ask us to look back through the vista of by-gone ages to some period which he calls pre-Aino. Although we congratulate Mr. Satow on the text of his valuable paper, we can hardly do the same so far as his illustrations are concerned. Many of them lack perspective as much as many of the drawings of the country to which the articles belong.

Mr. Conder's paper on costume appears to be the commencement of a series upon the dress of all classes of the Japanese. When this is completed it will be a useful reference for those who wish to decipher the meanings of the different styles of attire that are depicted in the various

Japanese works of art. It appears from the nature of the robe may be learnt the rank and in many cases the individuality of personages represented. In the matter of distinctiveness of attire the Japanese seem to have been most punctilious and these scrupulous distinctions have been followed even by the lower classes, who were governed by no fixed laws of ceremonial. Differences in dress to denote age seem to us however to be by no means peculiar to the Japanese as we find similar customs among most nations, those forms of costume and toilet which are adopted by the younger members of society being considered "*outré*" when employed by those who are older, and vice versa.

According to the writer there are two points of view from which such a subject may be regarded, namely the historical and the artistic. From an historical standpoint it seems that there is still a great deal to be done in tracing back the origin and derivation of certain forms of dress; and in comparing them with the more ancient shapes such as are to be observed in some very old paintings. China, as in many other things, was no doubt the source from which Japan drew for imitation; but on the matter of costume such a derivation must have taken place long before the forms which have been in use in China ever since the first acquaintance of Europeans with her people. The present costume of the Chinese is, as is well known, entirely distinct from the former styles of this country. Are we on the other hand to give the credit of perfect originality to Japan in so important a matter of Art as that of dress?

Much has been said against the adoption of European costume by the Japanese as one unsuited to their climate and habits. We think that it is a matter of custom and manner of life rather than climate, our western dress being one which is elastic enough to adapt itself to all climates. As a change takes place in the dwellings and daily life of the people, it is only reasonable that the style of dress should change; but such changes will no doubt become popular only gradually, as the bulk of the people alter their tastes and habits.

To the painter and romancer who wish to take Japanese life and history as their theme a thorough acquaintance with matters set forth in Mr. Conder's paper, which he promises shortly to complete, will be invaluable; and it is only to be regretted that such a subject cannot be more fully illustrated. In such a paper each form described requires to be illustrated with a plate in order to render it truly useful. We suppose that such a meagreness of illustration is owing to the parsimony of the society, which we suppose is rendered necessary by the smallness of the funds at their command. But the subscription of membership we think might be well increased without any risk of losing any of those really interested in the proceedings of the Asiatic Society.

*Contributions to the Agricultural Chemistry of Japan*; by Edward Kinch, F.C.S., F.J.C.—The author of this paper seems to have laid under contribution nearly all the writers on the subject of the agriculture of Japan from the times of the earlier missionaries to the present time. Quotations from Kämpfer, Charlevoix, and Thunberg, are given in the quaint language of their age. Siebold's "*Nippon*" and most of the later works are also quoted from, the volume of Charles Fortune being, however, conspicuous by its absence. The earlier writers do not appear to have had a very exalted opinion of the quality of the Japanese soil, their observations being made chiefly in the neighbourhood of Nagasaki; but most of the recent authors noticing Yokohama, Tokio, or their neighbourhoods have loudly extolled its fertility. General Capron, for instance, states that the soil of the main island is one of the richest in the world and that the soil in one of the valleys of Yezo is rich beyond comparison, and so on. We believe that the General considerably modified his views on the fertility of the soil before he left the country, but, if so, it is a pity that he did not put his later views and his reasons for them on permanent record. The author of this paper points out that the word "fertile" is often used in a relative and ambiguous sense and that the word "fruitful" might often be substituted with advantage. The verdure of the country is believed to be more largely due to its climate than to its soil, which is largely derived from acidic rocks. These acidic rocks are generally poorer in phosphoric acid than the corresponding basic rocks, and evidence is brought forward to show that this is the case in the rocks of other countries, though there is no direct proof of a deficiency of phosphoric acid in Japanese

\* Transactions of the Asiatic Society of Japan, Vol VIII., Part III. October, 1880.

rocks. Analyses, most of which were made by Dr. Korschelt, are given of several Japanese rocks, and analyses of nine Japanese soils, which seems to us, speaking from an amateur's point of view, to contain but little of the essential ingredients, lime and potash, as well as of phosphoric acid. All these soils contain magnetic oxide of iron, a point of some interest, for we remember that some years ago a small storm was brewed in the tea-pot, owing to certain teas being said to contain iron filings used as an adulterant, a most improbable substance to be so used: it is possible that the supposed filings were crystals of magnetic oxide derived from adhering soil. The author arrives at the conclusion that the soils of Japan are generally not very fertile but are rendered fruitful by the methods of cultivation employed. The Japanese farmer does not look upon the soil as a bank to be continually drawn against, but as a vehicle in which the plant may take root and be fed with manures. Analyses of twenty different manures of animal, vegetable, and mineral origin, are given and the value of some of the organic refuse for cattle food pointed out and shown in the analyses. Then follow fourteen analyses of the principal vegetable foods of the country and twelve of different sea-weeds, with interesting remarks thereon. It is suggested that the ordinary food of the native may be somewhat deficient in mineral constituents and especially lime, which is also deficient in most of the waters; to this the smallness of the bones and their slowness in healing when injured may be due. Several analyses of alcoholic liquors, waters and miscellaneous products follow, making in all eighty three original analyses. The use of salicylic acid in preserving *saké* from acetification during hot weather is shown, this being one of the many uses to which this valuable antiseptic may be put. The influence of the nature of the water used in winding and reeling silk is mentioned; and some notes are given on the various establishments for rearing salmon in this country, the natural spawning river on the west coast in Echigo being very curious. The discussion which followed the reading of this paper, as given in the society's transactions, seems to have consisted of the remarks of one individual, who, while nobly condescending to thank the author for his work, carps at the meaning given in the paper to the word "fertile" and quotes from Webster's Dictionary in support of his view. If the gentleman had looked a little more carefully into his dictionary he might have learnt that his remarks on this subject were hardly to the point. The discussor also seems to have been unaware that the results he alludes to of experiments carried on at Rothamstead, and which were given at the meeting of the British Association of 1879, by Dr. Gilbert, to an audience of scientific and amateur chemists, have been known for many years to agriculturists and have been acted on practically for some time by advanced farmers in many lands. Doubtless the author of the paper is better posted in these matters than the Professor who thought that "too little importance" was given to them. Possibly he thought that his eulogium of the fertility of the plain at Ochiai in Shinshin, given in Part I. of this same Volume, was attacked and required defence. Mr. Isono, a graduate of the Tokio university, contributes some analyses of Shoyu in different states, which are printed at the end of this paper. Mr. Kinch's contribution is evidently the result of much labour, and as a starting point in this field is of great value. It will be of much assistance to those whom the author calls the "missionaries of science" in this land. We trust that work in agricultural science will be carried on and made public not only by Mr. Kinch but by the staff of the lately established Geological and Agricultural Survey Department, for its use to the nation will be very great. We noticed a rather large proportion of misprints in this paper, some of the most important of which are on page 375, Yedo for Yezo; page 376, assist for await the farmer's plow; page 378, Siberian for Silurian; page 388 Chlumeau should probably be Chlumeau; on the same page in the foot notes *Bielermann's* is spelt three different ways; page 395 fisher's should evidently be barber's shops; and many others of minor importance will be noticed.

So much writing on a weasel as is contained in Dr. Brauns' paper "On the Systematic position of the *Itachi*," might appear at first sight as superfluous as the discussions of the middle ages whether a million angels could dance on the point of a needle. If, however, we look into the sub-

ject, we see that it is by no means so useless as a casual reader might think. This weasel is not only remarkable, as Dr. Brauns says, for its nature and its geographical distribution, but also as shewing us the slight differences on which naturalists have made new species. Dr. Brauns shews that it is similar to the European *noerz*, and unites these two animals into one species. He thus adds a link to the chain which joins the animals of Japan with those of Europe. By a careful examination of other animals may we not possibly further diminish the peculiarities which are supposed to characterise the fauna of Japan? As Eurasian species in this country, we find the fox, otter &c. A complete list of such animals would be found interesting. Dr. Brauns speaks of the grizzly bear being found in Japan as well as in America, and also states that the polar bear is found in northern Japan. We are not prepared to deny the correctness of these statements, but we should like to know on what authority they are made. We would also ask Dr. Brauns whether he draws any distinction between the bears of Yezo and those of Iturup, and if so, which of the two does he call the grizzly.

The whole number, we may add, is very creditably printed, and "turned out," which will seem no easy task when we recollect the large number of illustrations, and the quantity of Chinese and Japanese characters scattered throughout the book.

#### CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions or for the deductions they may choose to draw therefrom.]

#### TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR,—In a recent brief communication I expressed my doubt as to the correctness of Mr. Griffin's statement (Mikado's Empire, page 161) that the offer of eternal life would be painful to the "normal Japanese," the announcement of "only a fatal fact;" and I also solicited from your readers any proofs which they might possess of the truth of the statement in question.

Several weeks have passed away and no such proofs have appeared; hence, as the question is certainly worthy of the attention of thoughtful men, it is fair to presume that the proofs solicited do not exist.

There is a kindred question touched upon by the same author on the same page, which I would like to see taken up and treated by a competent hand, viz.; Is the *Nirvana* of the Japanese Buddhists a state of Conscious happiness?

I do not profess to be learned on the subject, but I venture the opinion that our author is again wrong when he says that "to be absorbed in the bosom of holy Buddha" is "really the popular form of Shaka's doctrine;" if he means absorption with loss of consciousness, as the whole tenor of the passage and especially the words "to whom thought is misery" imply.

So far as the belief of the great body of the laity of all the sects, and the belief and teaching of the priests of the popular and powerful Monto Sect are concerned, I feel pretty safe in saying that to Japanese Buddhists, *Nirvana* is neither a state of annihilation, as Professor Max Müller says that of the ancient Buddhists was; nor a state of unconscious absorption in Buddha, as our author implies. It is a state of great and conscious happiness. I make these statements not dogmatically, but largely to draw out from those in position to give it, some clearer information as to the belief of Japanese Buddhists, priests and laity.

M. L. G.

Yokohama, November 1st, 1880.

#### REUTER'S TELEGRAMS.

London, October 27th.—The Sultan has ordered the surrender of Dulcigno within five days.

London, Nov. 8th.—Latest advices from the Cape state that General Clarke stormed Molethau's stronghold with an overwhelming force and recaptured Lethoridi's village.

London, 11th November.—Meetings are being held throughout Ireland to protest against the Government prosecution of members of the Irish Land League.

The Basutos threaten Clarke's rear and more reinforcements are being sent to him.

Reinforcements are being sent to Ireland, and the Government have ordered the prosecution of Parnell, Dillon, Kelly, Biggar, Sexton, the two Sullivans, the two O'Connors, officers of the League conspiracy.

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOVEMBER 13th, 1880.

JAPANESE ERA 2540, MEIJI 13TH YEAR, 11TH MONTH, 18TH DAY,  
DO-YA-UI.

### NOTES OF THE WEEK.

The English mail arrived here by the Mitsui Bishi Company's steamer *Sumida Maru* on the morning of the 8th instant, and the American mails by the Pacific Mail Company's steamship *City of Peking* on the 10th instant. The same Company's steamer *City of Tokio*, left for San Francisco on the 9th instant, and the Messageries Maritimes steamer *Tanais* leaves to-morrow morning, with the homeward mail.

The O. & O. steamer *Gaelic* left San Francisco for this port on the 4th instant.

We are informed that the Rev. J. Murray Mitchell, L.L.D., and Hon. Sec. of the Free Church Mission of Scotland, for many years Dr. Duff's Successor as President of the Free Church College, Calcutta, is expected to preach at the Union Church, No. 167, Yokohama, to-morrow, at 11 a.m.

We notice that a commencement has been made with the repairs of the fence of the cemetery adjoining the Bluff road, portions of which have for some time been in a most disgraceful condition, to the imminent danger of passers by. The cemetery committee have doubtless had great difficulties to contend with in the matter of funds, but the exposure of the entire burial ground, containing revered friends and relatives, is a matter which concerns the entire community.

In other settlements in the East the duty of keeping in order the fences of our burial grounds devolves upon the municipalities, but here we are entirely at the mercy of the Governor of this ken, whose neglect of the interests of foreign residents is proverbial, and little can be expected where the ordinary repairs to the roads are left undone until the very last moment, and where, for every trivial requirement, such as lighting the settlement, watering the roads, etc., special subscription lists are circulated amongst the foreign residents. We must urge our fellow citizens to subscribe liberally to the cemetery fund in memory of those once dear to them, and thus enable the committee to effect in a complete manner a much desired and necessary work.

There was a prolonged shock of earthquake at about 6.40 p.m. on Friday, but the motion was only slight.

When the British barque *Eme*, on her arrival on the 22nd instant, reported having spoken the *Cilurnum* dismasted, and trying to make Yokohama, some surprise and in fact indignation, was expressed that an English man-of-war should lie here idle, and make no effort to go to her assistance. To this succeeded great anxiety, as vessel after vessel arrived without having seen anything of the ill-fated ship; so that a general feeling of relief was experienced when she anchored down the bay on Saturday morning last, sadly knocked about, but yet safe. By the courtesy of Captain Beadle we are enabled to give our readers the following account of her terrible experiences of the typhoon, compiled from the official log-book.

The *Cilurnum*, a fine iron ship of 1,884 tons register, left Hongkong for San Francisco on the 3rd of September, with a full cargo and fair weather. Until the 24th she ex-

perienced light, and moderate breezes. After this the wind increased in force and sail was shortened as considered necessary. At 5 p.m. on the 25th, very violent squalls were experienced, and a sudden gust carried away the foresail, the ship labouring heavily. About an hour after this, the fore topmast staysail blew right away from the boltropes; the gale increased in force, and the vessel shipped seas every minute. The next day the gale moderated, and all hands were occupied in repairing the damage done. Fine weather now ensued until the 30th September, when the wind once more freshened, again necessitating shortening canvas, one sail after another being reefed, and taken in. On the 1st ultimo, the barometer began to fall steadily and registered 29.20, furious squalls blowing and the vessel shipping a great deal of water. The gale increased every hour, and the rain fell in heavy driving showers, which rendered it quite impossible to see a yard in front of one. The main topsail blew clean out of the ropes. The sheet of the fore topsail carried away, and the sail consequently blew to ribbons in an instant. The mizen stay carried away next, splitting the storm staysail. The barometer was now as low as 28.90 and the ship lay under bare poles, her starboard side being completely under water, while the fury of the gale increased every moment. All hands were engaged in lashing, as well as they were able, everything movable to the decks with double fastenings. At about half-past seven on the morning of the 2nd ultimo, the steering gear carried away, smashing the whole of the machinery. The rudder was dashed backwards and forwards against the ship with violence; meantime heavy seas broke over the ship, carrying away spare spars, &c., at every brace. By noon it was evident that the vessel was in the zone of a typhoon. She heeled over more and more, boats, spars, yards, bridge, compass, hencoops and in fact everything moveable being washed overboard. A spare topmast broke adrift and did a great amount of damage to the poop. The barometer now showed 28.20. Every effort was made to secure the topmast but without avail. Shortly afterwards the main hatch burst open and a perfect flood of water poured down into the 'tween decks. All hands attempted to secure the hatch with sails &c., but the sea had complete charge and it was impossible to do anything. The barometrical reading was now 28.08 and continued to fall while the wind and sea rose proportionately. Nothing remained but to relieve the vessel by sacrificing some part of her masts, and accordingly the fore and mizen topmasts were cut away which relieved her greatly, and she righted considerably, thereby freeing herself of some of the water which was flooding the decks. About this time the efforts to secure the main hatch proved successful. Attention was next directed to the wreckage which, with every lurch of the ship, cannoned against the starboard side, seriously endangering her safety, and it was at last cleared away.

At 5.30 p.m. the main-topmast yard carried away, the port yard-arm falling on the deck and breaking a large hole. A hurried inspection of the saloon showed that everything on the starboard side was completely ruined, while the port side had fared little better. The barometer now began to rise. The pumps were hard at work, although the hurricane continued to increase in force. It was discovered that the steward, named Murray, was missing, and it was not until 7.30 a.m. on the 3rd October, that the poor fellow was found, drowned in the saloon, which will give some indication of the perilous state in which the *Cilurnum* was. Murray was buried the same day. Later on, W. Lawson, an A. B., received serious injuries in his right arm while securing the rudder chains, which had got adrift. On the morning of the same day the port yard-arm of the foreyard fell overboard; a splinter struck an A. B. named W. Harding on the head, killing him instantaneously. It was impossible to continue working the pumps owing to heavy seas making a complete breach over the ship every moment. At 10.30 p.m. the main-mast went over the port side, breaking off about eight feet above the deck, and smashing the bulwarks down to the water way; all hands were at once set to work to cut away the wreckage, to ensure the safety of the ship. The barometer, which had actually registered 28.00, now rose steadily, and the fury of the gale at last moderated. The seaman Harding was buried on the morning of the 4th October, after which an inspection show-

ed that the once fine vessel was then really little better than a total wreck. Every effort was used to clear away wreckage and make things as shipshape as possible: the pumps were put in order and kept going with the donkey engine, although the vessel continued to roll so heavily that great difficulty was experienced in keeping the fires alight; the bilge water that came up was full of sugar and almost as thick as molasses. Wednesday, the 6th October, was spent in refitting the steering gear and general repairs, and on the following day shears were rigged, but it was not until the 12th instant that the sea was sufficiently calm to allow of jury masts being rigged. Meanwhile the barque *Eme* spoke the *Cilurnum* on the 8th instant, took from her the wounded man Lawson, gave her one boat, as she had none left, and promised to report her on arrival at Yokohama.

This finishes the *Cilurnum's* actual experience of the typhoon. After the *Eme* left her, the dismasted vessel was driven away south, but managed eventually to reach this port. The ship as she now lies in harbour, presents a pitiable spectacle, with masts, jibboom, bulwarks, boats, and in fact, all that she could lose, gone. We are glad to be able to state, to the honour of our mercantile marine, that the crew, both officers and men, all worked pluckily and boldly, while death in its most hideous aspect stared them in the face: and it is owing to their determination and bravery under such adverse circumstances, that the vessel eventually succeeded in reaching Yokohama.

The Captain of the *Cilurnum* has asked us to afford him sufficient space in our columns to express his thanks to the barque *Eme* for her kindness in help and offers of assistance when she spoke him, and we are only too happy to accede to his request.

Crimes of violence appear to be on the increase about Yokohama and as we have often remarked before, the police seem powerless in these matters. We learn that on Thursday evening last an armed gang stopped some three or four jinrikishas at the top of the well known S hill, just this side of Totsuka, and robbed the occupants of their valuables and clothing. As this was happening one of the Odawara omnibuses came up seeing that there was something wrong the driver whipped up his cattle and tried to escape, but a fallen fir tree, lying across the road, effectually prevented him getting away. The robbers plundered the passengers and actually wounded some of them with knives or swords, maliciously. After this they made good their escape, and their victims reported the affair at the nearest police station.

At about 2 a.m. on Thursday morning, three men armed with naked swords burglariously entered a silk and general drapery store, kept by a Japanese named Tokushimaya, in Nichome, Honmura. The ruffians tied up the unfortunate proprietor and his employés, and proceeded to help themselves to what they could. Having collected nearly eight hundred yen, and all the small portable articles they could lay their hands upon, they left the premises, taking the house lantern with them in order to deceive the police, who, be it remarked, seem to have had no inkling that there was anything wrong although the operations lasted two hours. It is only a short time ago that a robbery by six men was committed in Honmura at the house of a Tokio man named Tokuyemon Odaikan. We think that something ought to be done to improve the present condition of the native police.

The cricket match which was arranged to take place at Tokio to-day between the Tokio Cricket Club and a team from H. M. S. *Comus* has been postponed on account of the inclemency of the weather.

The Yokohama Football association held its Annual General Meeting at the Grand Hotel, last Wednesday evening, at half past five. The attendance was very limited. Mr. Hamilton was voted to the chair, and the report of the past season read by the Acting Honorary Secretary.

The Chairman said that it was a matter of much gratification to learn from the report that the club was in a flourishing condition. The report was adopted, and then the following officers were elected to form the Committee for the ensuing season:—Messrs. Dare, Maxwell, and Wood. A discussion

took place on the proposal by Mr. Wood to modify the rule which allows handling the ball as, last season, some of the matches were nothing but a series of dropkicks throughout the game. After the rejection of an amendment proposed by Mr. Dare, that running or drop-kicking should be only allowed in cases of a fair catch, the original proposal that drop-kicks should be allowable from a clean catch, or the first bound of the ball, no handling or knocking on being permissible was carried.

The proceedings then terminated with a vote of thanks to the retiring Committee.

The *Hongkong Daily Press*, commenting on the subject of the American Embassy to Peking, says:—We are inclined to believe, with the Peking correspondent of the *Shanghai Mercury*, that the American Ambassadors to China will experience more difficulty than they anticipate in negotiating a revision of the treaties between the two countries. The mere fact that the Chinese Government have received Mr. Angell favourably and induced that gentleman to think his negotiations will progress satisfactorily is no proof that his course will be smooth and plain in the future. The Chinese will receive his propositions courteously and give him to understand that no difficulty lies in the way of their acceptance, but they will then in their turn present their little contra account, which the United States Minister may find some difficulty in meeting. The United States Government wish to restrict the emigration of Chinese to America; the Chinese Government will be certain to express a desire to curtail the privileges of American citizens in China. The Americans have never exercised any very strong influence at Peking, for they have never like the English, French, and Russians, made a display of force in these waters, nor, like the Germans, have they acquired the fame of being a great military nation. As it is might—represented by soldiers, big guns, and ironclads—that China most respects, and as the United States possess neither, the American Minister is likely to find his negotiations drag tediously along to a perhaps unprofitable conclusion. At all events he has hardly entered the wood, and it is premature to express anything but misgiving until he is fairly in sight of its termination. Mr. Angell has yet to learn through what long and devious paths he has to travel before arriving at an understanding with Chinese officials.

The following were the current rates of freight for vessels on the berth at home on the departure of the last mail, Sept. 24th:—Per Conference steamers.—To Hongkong, £1 10s. weight, and £2 measurement; to Shanghai £1 10s. weight, and £2 measurement; to Hankow or Nagasaki, £2 0s. weight, and £2 10s. measurement; and to Yokohama, £1 15s. weight, and £2 5s. measurement. Per China and Japan Shippers' Association:—To China, £1 15s. weight or measurement; to Yokohama, £2 weight or measurement; to Hiogo, £2 weight or measurement. Per sailing vessels.—To Hongkong, £1 7s. 6d. weight, £1 5s. measurement; to Shanghai, £1 10s. weight, £1 measurement; and to Yokohama, £1 12s. 6d. weight and £1 5s. measurement. The current quotations for coal were as follows:—From Wear or Tyne, per keel.—To Hongkong, £25; to Shanghai £31; to Yokohama, £26.

Writing on the Russo-Chinese question the *Hongkong Daily Press* says that "the latest rumour in connection with the Russo-Chinese imbroglio is certainly not the least astounding. The *Shanghai Courier* is informed that the Russian Government have demanded the confirmation of the Treaty of Livadia, and obligingly intimated that, if the Peking Government are unable to pay the whole of the indemnity for the expenses incurred by Russia in war preparations, the island of Formosa could be accepted in part liquidation thereof. Now it would be very interesting to know on what authority this statement is made. The first portion of it is not new, as it has several times been stated that the Russian Government fully intend to insist upon the provisions of the Treaty of Livadia being adhered to in effect, whatever verbal alterations may be conceded; but the proposition that China should cede Formosa is quite novel, and we venture to think it is a highly improbable one. The Russian Government are not lacking in assurance, and they

would not hesitate to ask for what they wanted if they saw any probability of securing the prize. But they have been checked so frequently that they are not so likely to advance preposterous claims now. It is not to be expected that China, after spending vast sums of money and sacrificing any number of troops, besides running the risk of war with Russia, merely to regain a comparatively valueless strip of territory in Central Asia, would yield up a large and fertile island on her own coasts to her deadliest foe. Nor is it likely that the other Treaty Powers would look calmly on such a transaction. Russia is already sufficiently dangerous in the Pacific, and her acquisition of Southern Saghalien was not at all palatable to any the great European States. The cession of Formosa to Russia would not be tolerated. Another strip of Manchuria might be given to her by the Chinese Government, and little notice would be taken of the circumstance; and the annexation of Corea by Russia would hardly provoke active intervention; but the acquisition of Formosa by this greedy Power would undoubtedly excite energetic remonstrance. The report, however, is so incredible as to scarcely merit discussion. The Chinese Government would, we feel sure, show fight rather than part with so important a dependency as Formosa."

On the 2nd instant, according to the same paper, information having been received by Captain Walker, of the Revenue cruiser *Chien Jui*, the Senior Revenue Officer at Macao, that a number of boats engaged in opium-smuggling had taken shelter in some of the creeks near the neighbouring islands, that officer sent a steam launch manned by a crew of two Europeans and five Chinese to intercept them. When off the island of Mong Chow, about five miles from Macao, the launch suddenly found herself surrounded by five armed boats mustering together about hundred men. No time whatever was lost by either party in paying compliments, but hostilities were at once commenced, both sides firing into each other with considerable effect. The smugglers, in addition to fire-arms, made use of stink-pots and bags of powder, and the engagement, while it lasted, was hot and bloody, the smugglers in the end being compelled to run before the fire of the launch, which was beginning to tell upon them most seriously. They soon found convenient cover behind numerous rocks where the launch was unable to follow them. No capture was made, but the casualties seem to have been heavy for the short time during which the fight lasted. On the launch one Chinese was killed, and both the Europeans and one Chinaman were wounded. The wounded Chinaman and one of the Europeans are now in hospital at Macao, the former suffering from a gunshot wound in the head, and the latter from a similar wound in the arm. The other European, Harry James Fauch, who was in charge, brought the launch on to Hongkong, where he arrived yesterday afternoon, and is now in the Government Civil Hospital here, having been severely, though not dangerously, wounded by a bag of gunpowder which exploded on his right shoulder and scorched him from head to foot. Fauch formerly served in the English Navy, in which service he passed fifteen years, and is considered one of the most useful men in the Revenue Service. On the side of the smugglers it is stated that fifteen dead were counted, but is believed that a greater number was killed, to say nothing of many more wounded.—*Idem.*

The *Hingo News* of the 6th instant contains the following translation from the *Shokio Shinpo*, referring to the state of business in the city of Osaka:—Owing to the rise in the price of specie the circulation of money has stopped, causing trade to be dull. Since the issue of last number the committees of various merchants have met and ascertained as follows:—

The merchants are refraining from purchasing imported goods, and those who have made contracts with foreigners and whose goods have arrived are requesting the foreigners to hold those goods. Though they are desirous of receiving those goods, submitting to the loss caused by the high price of dollars, they have no buyers from the provinces, and they appear to be sorry that there are no buyers for the goods they have for sale. Cotton yarn has many uses, and does not directly suffer from the high price of dollars, and therefore it is saleable, if in small lots. It is thought that kerosine is an article of daily

necessity, but if its price reaches 4 yen there will be no market for it. Its price is now yen 3.80, and there are few buyers. The constant fluctuations in the value of dollars causes the merchants great confusion. The products of the interior (for native use) at one time reached a very high price, owing to the large purchases made by people, who thought it better to hold goods than sell on the value of which they could not depend, but now, although they would like to buy more goods, they are unable to do so for want of funds, and there is a large stock and prices show a tendency to decline. Cotton has already fallen, a drop of about 40 sen having taken place a few days ago. It is because the commission merchants who act as agents between the wholesale merchants and the merchants of the provinces cannot obtain loans enough to hold the goods they have for sale from the wholesale merchants to the merchants in the provinces, who are the buyers, though they offer a high rate of interest, and they are hurrying sales, at small commissions. The (native) goods which have an upward tendency are oil and sugar. These appear to have been excited by the imported sugar and kerosine oil. Japanese metals are also rising in price. Even speculators cannot buy foreign goods, because there is not only no considerable profit, but the value of dollars fluctuates; and therefore the common merchants are sitting folding their hands, and are regretting that though they would like to buy native goods they cannot do so for want of money.

Lately there has been little rice imported, and when stocks became short specie advanced and the retail merchants wished to buy rice, but owing to the latest reports, which state that rice has everywhere lost its upward tendency, they are now refraining from purchasing, while the speculators are still buying. However, it is said that the price of rice in the adjacent provinces has not fallen. There is little new rice on the market; and we shall doubtless see some change in the market in a short time.

## SONGS OF SADNESS.

(From the Japanese.)

### III.

The cold winds beat  
With hurrying feet  
On a lonely grave,  
While they sob and rave  
As they would check my roaming,—  
Who lieth so deep  
Where mosses creep?  
Who lieth so low  
Where chill winds blow?  
Only the Owllet makes reply  
From the ancient pine-boughs grim and high,  
Tuwhit, tuwhoo, tuwhit, tuwhoo!  
Like a ghost in the Autumn gloaming.

### IV.

A reddening reach of sunset sheen  
Struggles athwart the rugged way  
O'er which a passing stranger hastes,  
As lonely as the dying day,—  
Why speed so fast?  
Why speed so far?  
Keen blows the blast  
In wintry war,—  
Swift falls the snow,  
Swift falls the night  
To quench the glow  
Of sunset light.  
Where is thy home, O hapless one,  
Unhoused amid the maze of snow,  
Who bids thy feet, relentlessly,  
To weary wand'rings to and fro?  
I had not sent thee thro' the wild,  
In storm and night, wert thou my child!

Tokio, 10th November, 1880.

## ECCLESIASTIC AND MISSIONARY NOTES.

ON SUNDAY, the 17th instant, the Rev. Mr. Denning C.M.S. of Hakodate, assisted by Rev. Philip Fyson of Niigata, baptised six Japanese converts to Christianity in Sapporo. Four of them were adults of middle age and two were youths of a promising character. At the same time several candidates gave in their names for baptism next year. A Christian native church has also been established, chiefly through the energy of some students of the Agricultural College who wish to extend their faith among their benighted countrymen.

WRITING on the subject of Bible revision the St. Louis Central Baptist says:—The phraseology of the revised New Testament will not differ materially from the one now in use; only obsolete words and phrases, and those whose meaning has greatly altered will be changed. It may be there is a sort of superstitious reverence in the minds of some for King James' version. It may strike them as strange that the Bible should be changed in any particular. Such should remember that the version of King James is only a translation of the Bible, and that a translation is the work of uninspired men. The revised Testament is the same—a translation of God's Word. On that ground simply it is of equal authority with the old version, and in addition to this it has the advantage of all the light 250 years of scholarship can throw upon Biblical criticism. It should be received, then, not because it is new, or because it is to supplant another, but because it is the work of the best scholarship of the age. Every reasonable Christian will avail himself of all the light he can get in the study of God's truth.

THE agents of the China Inland Mission have, says the Academy, lately been especially active in their journeys in the little known parts of the Chinese empire. The two ladies, Miss Wilson and Miss Fausset, who ventured alone on a long journey to the north-west, have arrived in safety at Hanchung-fu, in Shensi—a feat which would have been quite impossible a few years ago. Mr. F. W. Buller had arrived at Ichang, on the Upper Yangtze, after a long journey through the Hunan province to Kwei-yang-fu, the capital of Kweichow, and after that to Chungking, in Sz-chuen. Mr. T. W. Pigott sends home a long report of a journey which he had made in Manchuria. In one place he mentions having met four Koreans, who were bringing to Mr. MacIntyre, at Newchwang, a further supply of Korean books, which were well bound in parchment, and on better paper than the Chinese use. These books established Mr. MacIntyre in what was little more than his theory before, viz., that the Koreans have a perfect system of signs, which, attached to the Chinese characters, render any Chinese book readable and intelligible to an educated Korean. A Korean convert named T'sway, it may be incidentally mentioned, is now engaged in translating the New Testament and "The Pilgrim's Progress" into his native language.

THE REV. DR. TAYLOR preached a farewell sermon both in the morning and evening of October 31st, at the Municipal Hall, Kobe. At the morning service the congregation was exceptionally numerous, for this small community, and the large room of the Hall was filled almost to overflowing. The Rev. Divine, who we were sorry to see suffered greatly from hoarseness, arising from a cold—took for his text the 11th chapter of the gospel of St. John, 25th and 26th verses—"Jesus said unto her, I am the Resurrection and Life: he that believeth in me, though he were dead yet shall he live. And whosoever liveth and believeth in me shall never die. Believest thou this?" The Rev. gentleman remarked that these words were uttered by our Saviour in answer to Martha, who had said "I know that we shall rise again in the resurrection at the last day." Space will not allow us fully to give the whole of the discourse, but we will now attempt briefly to recapitulate a few of the most prominent remarks. The worthy Dr. dealt very ably with his text, and touchingly remarked that, already in the morning had he read the same words over the grave of a departed brother. After drawing an affecting picture of the deep sorrow experienced by the bereaved, when memory recalled the form of some departed loved one, he continued:—"According to all recently ascertained facts, each atom in our bodies undergoes a change every three years, and not one particle which forms us now remains exactly the same as it was three years ago. Therefore, if it be possible for the Creator to effect this marvellous mutation imperceptible to ourselves—why need we wonder in what shape or form we shall appear before the judgment seat. When the last trumpet shall sound"—the worthy divine continued—"we shall arise to appear before that great tribunal in the full consciousness of the manner in which our lives have been spent." Shortly after this part of the discourse, a lady in the congregation, overcome by faintness, had to be carried out, thereby causing what promised to be a lengthy, although highly interesting sermon, to be abruptly brought to a close. At the evening service, the congregation was not so large, probably owing to the sun in the afternoon being excessively hot. The text was from the 1st Epistle to the Corinthians, 15th chapter, 51st and 56th verses. "O death, where is thy sting? O grave, where is thy victory? The sting of

death is sin; and the strength of sin is the law." Here he began by saying that death was a word that struck terror into the hearts of all. But why should we be frightened of death? To him it appeared that the soul was tied down to this world by the body; as soon as the latter released its hold, the soul soared up far beyond the stars, into a world of eternity, into a more fitting sphere. Why should we be afraid to die? Sin was the cause. If there were no sin in this world, we should long to leave it, and then we could say of the dead "They are not dead, but only gone on before." "O grave, where is thy victory?" shows us there must be another world, otherwise there would be no fear to conquer. To the true believer the grave has no victory. It was shorn of its victory when our Saviour gave up his life in our cause." He then pointed out how strange it is that seeing, whereas the last six commandments dealt with offences against ourselves, and our neighbours, the first four had only reference to our duty towards God, yet how severe we were against crimes mentioned in the last six and how leniently we treated those who broke the first four. How full of love is He who gave us life, from Whom we derive every blessing that we enjoy. Yet He only asks us for one day out of the seven to be set apart exclusively for His worship. How many there are,—he continued,—in this community who never think of entering a church on the Sabbath day, but rather make the day one of pleasure-seeking and feasting! He then paid a glowing tribute to the Rev. Mr. Foss, who is shortly expected back here, and concluded his remarks by saying he was about to leave us with deep regret. He had tried to do his duty to the best of his ability. He had not sponged out the slate containing his shortcomings, but had kept it steadily before him. He was about to part from us for ever and—here he appeared to be deeply moved—if we met again, if not in this world, he hoped—stretching his hand towards heaven—it would be above. The singing of the Doxology and a prayer closed the service.

On Sunday next, we hear Dr. Taylor purposes preaching a farewell sermon at Osaka, and after which he will take his departure by the following mail. Since he came amongst us he has, by his kind, hearty and genial manner, secured for himself the respect and esteem of our little community. Earnest and unflinching in the pulpit, he has drawn numbers always to hear him, whereas before, the pews were singularly empty. Outside of the church, we hear of many little acts of Christian kindness and benevolence, which will be gratefully remembered by many of our fellow residents. At the bedside of the sick, himself and his estimable wife have been careful watchers, speaking words of comfort and hope to the dying and alleviating the pain and suffering of the sick. God speed them and grant them a safe return to their native land, is our sincere wish.—Hingo News

## SHANGHAI LETTER.

SHANGHAI, November 2nd, 1880.

The Shanghai Autumn Race Meeting opened on Friday, the 29th ultimo, so that we had Sunday coming between as a break, and were most fortunate in having fine weather for all days. On Saturday a strong northerly wind somewhat interfered with the comfort of spectators and the speed of ponies, but on the other days nothing could be complained of, and we consider ourselves exceptionally lucky to have escaped wet weather. We had, indeed, enjoyed fine weather for so long before the races that the course was very dry, and consequently a flying one, which is not usually the case, and the time done at the Autumn meetings never, as a rule, comes up to that of the Spring meetings. On this occasion, however, exceptionally good time was made, and the mile for the Criterion was run in the fastest time on record, viz: 2 min., 5 seconds. This meeting was one of the surprises, and on the first day scarcely a race was run that was not an upset. The stewards are to be commended for the punctuality which characterized the proceedings, so that the programme each day was concluded long before dusk set in. A great improvement was also instituted by the Committee, by which your Race Club might profit. At the conclusion of each race a black board was hoisted to the top of a pole close to the Judge's box, giving the official time, so that when glancing at the winning numbers, the correct time in which the race was run was clearly visible.

The Maloo plate, for half a mile, was the first race, and for which Mr. Risk's *Strathpeffer* was the favourite; but that famous old race pony *Black Satin*, had not been sufficiently considered, and carried off what was considered a certainty for *Strathpeffer* by a head, the two having raced hard together, neck and neck, down the straight, finishing in the capital time

of 66½ secs. This makes the 35th victory for the Black; truly a wonderful record for a China pony, especially considering that most of his success has been on this course, running in important races against crack opponents. The Criterion Stakes brought eight cracks, Mr. Risk's *Strathairn* being decidedly first favourite, and Mr. John Peel's *Jolly Friar* second. However, the race really lay between *Strathairn* and Mr. Bill's *First Violin*, though the favourite could never put himself on even terms with his opponent, and was several lengths behind at the finish. The time done, 2 min. 5 sec., has never been equalled on this course.

Then came the exciting race of the Day, the Maiden Stakes, for three-quarters of a mile, for which there were only the small number of twenty seven entries! This may be accounted for on account of the reduced number of Griffins that came to Shanghai this Autumn, and in some measure by the fact that Mr. Minor's *Earl Osey*, late *Folle Farine*, was so excellent a mover and apparently had this race so entirely for himself, that many owners were deterred from entering their purchases, especially as they imagined that *Earl Osey* was to turn out a second *Ten-Kwang*. And yet this wonderful pony turned out to be a wretched car. Go he certainly can, and that in excellent style, but in a race go he will not, and was nowhere in the Maidens. Mr. Bill's *First Clarinet* had succeeded *Earl Osey* as favourite, and Mr. Eccle's *Zif* and Mr. John Peel's *Merry Sunshine* were fancied. The first-named favourite did not disappoint his backers, as he won the race in fine style in the best time yet made, 1 min. 32 sec., Mr. Fungus' *Prestige* being second and Mr. Low's *Baruto* third. The race for the Club Cup, two miles, was a hollow affair. It was looked upon as a match between Mr. Paul's *Bravo Chiel* and Mr. Risk's *Earl Harold*, and as it was in that these ponies were far ahead of the other three starters, but the Scotchman walked away from the Earl as he liked, and cantered in easily any number of lengths ahead, in 4 min. 28½ sec. The Jockey Cup, for one mile, was the next race, and as all the riders were inexperienced, there was a great amount of uncertainty about the result. However, the favourite, *Ellerslie*, won, with Mr. Vitch up, *Prince Charming*, with Mr. Townsend up being second, and *Plumigan* with Mr. Craven a good third. Time 2 min. 13 sec. The Strath Plate, for one mile and a half, brought out the largest field of the day, eleven ponies, being the second Griffin's race. *First Clarinet* was made the favourite, owing to his previous performance for three-quarters of a mile, with *Louis d'Or* second favourite. This was a capital race, and *Louis d'Or* looked like winning it, but the "Wild" jock brought *Zip* up in fine style and won by a length. The favourite was not in it. Time 3 min., 18 sec. The last race of the day was for the Racing Stakes for one mile and a quarter, for which Mr. Paul's *Tajmahal* and Mr. Risk's *Strathairn* were fancied. This was a splendid race. Mr. Bill's *Second Violin* led into the straight, but was collared by *Tajmahal* and *Strathairn*, and a most exciting struggle ensued, it being difficult to say which of the two last named ponies had the advantage, first one being ahead and then the other, *Strathairn* just winning by a neck, in the splendid time of 2 min., 42 sec. The rider of *Tajmahal* complained that he was shut in by *Strathairn*, and claimed a foul, though he confessed that neither himself nor his pony was touched. After investigation the Stewards disallowed the claim, and so Mr. Risk, who had run second in three out of four races he had started for, scored his first win this meeting.

The first race on the second day was for the Northern Cup, half a mile, which brought out eight starters out of fourteen entrants. This race was credited to the "Strath" colours, but though *Strathairn* made a very game effort he was just passed on the post by a head by *Second Violin*, and only secured himself second place from *Jolly Friar* by a neck. This was a splendid race, but owing to the strong wind then blowing the time did not equal the half mile of the previous day, as it was only done in 60 sec. After that came the great race of the meeting, the Shanghai St. Leger for one mile and three-quarters, a Sweepstakes open to Griffins of last spring and this autumn, with three prizes of 75, 15 and 10 per cent. respectively, of the total amount of the stakes. For months past public opinion has fluctuated considerably as to the favourites for this race, and

after the first day's performances, it settled down to *Strathairn* and *First Violin*. It was with no small astonishment, therefore, that after about three-quarters of the distance had been covered with varying results, the almost despised pony *Prejudice*, belonging to Mr. Fungus, and carrying 10st. 12lbs., walked away from all the others without an apparent effort, and won hands down by any distance, the favourite *Strathairn*, carrying the top weight of 11st. 3lbs., being second, and only just beating *First Violin*. The time was the best ever done, 3 min. 5½ sec. The next race, the Autumn Cup for three-quarters of a mile, gave the old favourite *Black Satin* an opportunity of again trying conclusions with *Strathairn*, as, although the "Wild" stable sent two ponies, and that fraud *Earl Osey* appeared together with *Gem*, the race was looked upon, as it turned out to be, a match between the two first named, and so close a match was it, that coming down the straight no one could say which pony was doing the best, for these two, far in advance of the others, contested every foot nose by nose, the almost invincible veteran securing the win by a head only in 1 min., 32 sec. In the Shanghai Stakes, once round, there were sixty-four ponies in the book as the entry was a forced one, but only ten appeared at the post. Among these were *Bravo Chiel*, *Strathairn*, *Wild Boer*, *Tajmahal*, *First Clarinet*, *Second Violin*, etc., and yet the plucky little *Prejudice*, notwithstanding he had won the St. Leger just before, upset all calculations by running clean by the favourites in the straight and winning by half a length, *Bravo Chiel* second, *Strathairn* third, and *Tajmahal* fourth. This was a very unexpected but popular win, and confirmed the proof that the St. Leger had established, that *Prejudice* was a wonderfully good pony that the knowing ones had somehow overlooked. Indeed, so little was this pony fancied, that at the Club Concordia lottery he went to the drawer, failing a purchaser, and he, lucky man, won \$1,050 thereby. For the Lilama Mian Stakes, one mile, *Strathairn* was again the favourite, but Mr. Bell, on *First Violin*, repeated his victory over the "Strath" crack of the previous day, and disposed of that stable's second pony by a head after a good race, never, however, permitting *Strathairn* to collar him, despite most strenuous efforts on the part of his jockey. Time, 2 min., 8 sec. The Mongol Cup, for one mile and a half, was a third Griffin's race, and brought out a field of ten starters, and was, indeed, almost a repetition, of the Strath Plate on the previous day for the same distance, both in the ponies running and the result, for *Zip* again won easily in 3 min., 23 sec., with *First Clarinet* second and *Louis d'Or* third. In the Walter Cup, one mile, there were only five starters, of whom *Jolly Friar* was favourite, and won, despite a splendid rush by *Wild Surf*, by a length in 2 min. 10 sec., this scoring the first win at this meeting for the Blue and Silver. The Hack Stakes, once round, was the concluding race of the second day, and for this Mr. Jedar's *Red Hart* was the favourite, and would have won but for the superior jockeyship of the rider of *Wild Fate*, who snatched the victory from the favourite just on the post by one of those rushes for which the jock is so celebrated. Time 2 min., 43½ sec.

The weather was raw on Sunday, the day of rest that intervened, and rain was expected for the third day, but the weather cleared up in a marvellous way, and Monday was the finest day of the meeting. Proceedings opened with the Grand Stand Stakes for one mile and a half. Owing to his previous performances *Prejudice* was made a hot favourite for this number two St. Leger, and fully justified expectations by running clean away from his ponies and winning easily in 3 min., 19 sec., with *Louis d'Or* second and *Johnny Morgan* third. *Strathairn* again ran, but was out of it, as was also *Wild Echo*. Then followed the Flyaway Plate for seven furlongs, when the ill luck of the "Strath" stable was reversed, and their crack pony *Strathairn* easily beat *Jolly Friar* and *Wild Surf*, who ran a dead heat for second place, *Earl Osey* and *Flick* also ran, but were easily disposed of. Time 1 min. 50 sec. The Metropolitan Plate for one mile and a quarter was rightly enough looked upon as a certainty for *Bravo Chiel*. He had *Second Violin*, *Rapp* and *Wild Boer* against him, and ran with them until his rider chose to call upon him, when he went ahead at the call and won easily in 2 min. 46½ sec., by several lengths. In the Sycee Stakes, two miles, there were only six starters,

*Tajmahal* being the favourite. The favourite had it his own way until challenged in the straight by *Strathaird*; the latter came up very well but failed to pass the favourite, who won by a good neck in 4 min. 28 secs., the others being nowhere. The race for the Chan-Shang-Kiuk Cup, one mile, was another complete upset. For this *Zif* and *First Clarinett* were favourites, the former being most fancied. Mr. Ring's *East Wind* had the advantage of being ridden by the "Strath" jockey, and soon after the half mile took the lead and kept it, notwithstanding being pressed hard by his opponents, and finished a splendid race half a length in advance of *First Clarinett*, with *Zif* a length behind for third place. This result was totally unexpected. Time 2 min. 9½ secs. For the Consolation Cup, once round, ten ponies started, the two "Wilds" being most thought of. *Louis D'Or* looked very like winning when coming down the straight, but was passed with the usual rush by *Wild Surf*, closely waited on by *Dunn Brown*, the winner being half a length ahead. Time 2 min. 40 secs. Then came the great race of the day, the Champion Sweepstakes for one mile and a quarter, which brought out nine of the cracks. *Prejudice* was the decided favourite, though he had splendid opponents to contend against in *Black Satin* and *Strathavon*, to say nothing of *Tajmahal*, *Jolly Friar*, *First Violin*, *First Clarinett* and *Zif*, the first four named of these being winners of nine Champion races at different times. *Prejudice* did all that was expected of him, and after a magnificent struggle with *Black Satin* and *Strathavon* down the straight, responded to his rider's call and passed the post three quarters of a length ahead of the Black, who just beat *Strathavon* for second place. Time, 2 min. 41 secs.

The Steeplechase finished the legitimate racing, and, as was expected, was a victory for Mr. Peel's *Black Cloud* again. He and Mr. Fearon's *Spalpeen*, being the only two ponies in the race. *Black Cloud* was ridden by the "Strath" jock, and the two ponies went round together taking every jump without a fault, the winner drawing away just before the last jump and winning with plenty to spare. The others blundered about, and showed, too plainly.

"The graceless action of a heavy hand."

The usual races of the off-day took place to-day, the weather being again everything that could be wished. The first race was for half-a-mile, which *Strathaird* won, with *Ptarmigan* second. Next *Strathpeffer* brought the colours to the front again in a mile and a quarter race, beating easily *Louis d'Or* and four others in 2 min. 44 secs. The first Mafoos' race was not very interesting, as only four ponies ran, and they took 2 min. 40 sec. to do once round, *Wild Boer* winning. Then came a two mile race which was a gift for *Ricochet*, and next a match for a mile, which *Ptarmigan* just won in 2 min. 12½ secs., beating *Gem* and *Ellerslie*. *Ellerslie* won the Jockey Cup on the first day when *Ptarmigan* was only third, and yet on this occasion, he beat *Ellerslie* easily, though he had run for half-a-mile just before. This was probably owing to the change of riders. The Champion Mafoos' race was a capital one, ending with a dead heat between *Wild Surf* and *First Violin*, with *Zif* third *Jolly Friar* fourth. Time 2 min. 34 secs. This was the only dead heat of the meeting. The Oldster's Sweepstakes finished the events of the day, for which only two ponies contended, which made the race a virtual walk over for *Flick*. So ended the Autumn Meeting of 1880, which was a perfect success in every way. The uncertainty of racing was shown by the bad luck of the "Strath" and "Wild" stables, and by the fact that Mr. Miner's ponies were never placed in a race of any description, though he was supposed to possess two exceptionally good griffins in *Earl Osney* and *Earl Hereford*. Mr. Fungus' *Prejudice* has turned out to be the pony of the meeting, and Mr. Paul has been very fortunate. It is doubtful if any China pony will ever be able to show such a racing record as *Black Satin*.

#### PARIS LETTER.

Paris, 25th September, 1880.

The Opposition journals ridicule the new Cabinet, and the Radical Press jeers. Neither represent the vast majority of the nation. The very mediocrity of the Cabinet, supposing

it merited the epithet, constitutes its advantage. All the Ministry has to do is to obey the injunctions of Parliament and maintain the observance of the law. Thus, the present Cabinet is calculated to belie prophecies. It is Gambettist in the sense that it fulfils the aforesaid conditions, and the country demands nothing more, and will tolerate nothing less.

A humorous paper publishes a skit, representing a mouse-trap in which all the ministers are caught by the neck, while Gambetta is seated on his haunches close by, perfectly content. It has become the fashion, easily explained, to hold Gambetta accountable for every ministerial dislocation. Before now English Ministers have been accused of filling the butchers' shops with large blue flies. Gambetta, as well as France, condemned the do-nothingism of Waddington, and when the latter was pushed aside by the sheer force of public opinion, he was accused of producing the crisis. When de Freycinet, without consulting any person, takes upon himself to alter the policy of Parliament and the Ministry, and to humble his country by bartering for the observance of the laws, the country with Gambetta protests, and the latter is charged with breaking up the Cabinet. Happily, true France thinks otherwise. Nothing could give the reactionists greater pleasure, and their allies, the radicals—for extremes here meet—than to destroy the influence of Gambetta, the sheet-anchor of the Republic—the first to upset the Constitution, and the second to be freed from their brake or curb. The political programme of France is as plain as road to parish church: no responsibility in European complications, and respect and obedience the most absolute by all toward the law. Thus she will have peace within her walls and plenty within her palaces.

Alexandre Dumas, faithful to his hobby, or his mania—writing dramas, pamphlets and bulky volumes, on the miseries of spouses, mistresses and paramours—has brought out another work, "The Woman who Kills, and the Woman who Votes," which, it is said, he wrote in a fortnight. It is needless to observe, it is composed with all the talent of the distinguished writer, who has the one drawback, to be impracticable when he is not paradoxical. The work in question is divided into two parts: the first comprises the women who have lately figured in celebrated trials for shooting or throwing vitriol, and whom juries acquitted, as they invariably do, because they were simply women, weaker vessels: but neither judge nor jury would accord extenuating circumstances to a he crinner who employed similar mutilations against a woman. The new is the second part of the brochure; it claims for woman the political rights of men and at once, lest America be first in the field, and reap all these humanitarian honors. Dumas wants a French Parliament of female Deputies, but does not exact for the sex either a diplomatic or military career. For oppressed women, the right to vote is the Marshal's baton, and no doubt there are ladies ten times more worthy of that privilege than many men who enjoy it. If Frenchmen be tolerant for the crimes of women, they are not so with respect to her claims for political equality. They agree with Pope, it is to their caprices they owe their charms. Women do not perform all the duties of men, nor share all their servitudes. It is the very inferiority of woman that constitutes her strength. The day that society would rank her as a man, she will be treated as a man; if second in politics, she is first in humanity. In the destiny of peoples, her rôle is well traced. She embodies all that is tender, ideal, and humane in life. As the girl, she is the ideal of youth; as the wife, the ideal of mature age; as the mother, the ideal of all. The first accents of the infant are for her; the last thoughts of old age are the same. Are not these superiorities worth a vote? The principal adversary of Dumas is, not cruel man, but sensible woman herself, who prefers family joys to the discussions of a tribune. She chooses the empire of her caprices and the acknowledged weakness of her sex rather than municipal honors. She will remain, then, in the future, what she has been in the past—the point of repose in the life of man; the ideal in his tormented existence; giving him hope with courage, and bearing children for whom the husband works, in order that they will return the solicitude when the parents arrive at old age.

There is one satisfactory circumstance about the returned Communists—no one pays the slightest serious attention to

their utterings and blusterings, whether from Rochefort in his journal, or sending a delegate to insult the memory of Thiers on the inauguration of the statue at St. Germain, down to Felix Pyat, who has started *La Commune*. This sheet commences, as it boasts, by paying a tribute to truthfulness; it will put the "real date of each number on the title page," instead of a day in advance. By the by, it is strange that some respectable journals persist in this foolish plan of ante-dating the sheet. Pyat seems to notice the Ministerial changes, but he harps on the Municipal Council. Then follows necrological studies on the heroes of the Commune—choice being exercised on the most abominable—Raoul Rigault, the Public Prosecutor of the Commune. It appears the latter was caught at a corner of a street, and crying *Vive la Commune!* had his brains blown out by a revolver; the body lay exposed for a day on a heap of order, and was in time carted away. *La Revolution Sociale* claims to be the official organ of anarchy, that no one appears to be disposed to contest. It relies on force to remedy whatever may be rotten in the state of Denmark. It has a very high opinion of regicide, and gives a description of how every man can manufacture his own dynamite. And there are people who say liberty of the Press does not exist in France.

It seems that the Republican editors are not in the odor of sanctity with young Royalists; a society, or band of the latter, belonging to excellent families, has been organized on a joint stock principle to teach democratic writers good manners by breaking their heads, and knocking in, or out, their eyes, in case they touch on matters relating to private life. Scholl, whom Comte Dion punished so severely about the features, might justly claim to be the first condemned of this vendetta; only one thing is overlooked; Parisian editors are very ugly people in a set quarrel; they belong to that class of wicked animals which, when struck, defend themselves.

Madame Thiers has been conceded extra space in Père La Chaise cemetery, to erect a mausoleum for the remains of her husband, who is alongside his mother-in-law. This has raised the question of transporting his remains to the Pantheon, and so converting that monument to its original use—the home for national celebrities—*la patrie reconnaissante*. It is not unlikely that if ever the Communists obtained the chance of ruling Paris again, even for twenty-four hours, they would treat the remains as the Royalists did those of Voltaire and Rousseau, throw them into a sewer, then gather them into a sack and bury them in a rubbish drift, in quicklime, outside the city.

The oysters are good this year, and dear—the latter is the consequence of the bivalve having to pass through several hands, notably the oyster-woman's, quite an unnecessary institution, who occupies a sentry-like position at the entrance door of the restaurants, with sleeves, apron and cap as white as the interior of the shells she lays open. I notice that a dozen was the orthodox number, hitherto, of oysters to whet the appetite; now eighteen has become fashionable. It will end like the rustic, who ate a bushel to get up an appetite, and remarked he was less hungry than when he had commenced.

The Northern Railway Company is, beyond doubt, the foremost in adopting every improvement. It is now studying a plan to dispense with the locomotive's whistling when in the terminus. An electric signal board is expected to suppress the noise. In time, we may have Bell's ray-of-light telephone, that moderates the most piercing screeches.

During the late Cabinet crisis, M. Grévy was to be pitied; he is a passionate sportsman, and had arranged for three day's capital sport with old chums on his estate. Twice a day he received telegrams from his keeper, privately begging him to come to the Jura, as the game was becoming wild and the poachers industrious.

Emile Zola has been pronounced a humbug, and perhaps rightly so; he has transferred his allegiance from the Republicans to the Royalists, and in an opposition paper made a very coarse attack on M. Ranc's works. M. Ranc, who is editor of the *Republique Française*, merely replied by publishing Zola's fulsome review on the same volumes a few years ago, before Ranc scarified his "naturalism."

The militia have been called out for their 28 days' drill; a

conscript complains, "every one talks of the 28 days, but nothing about the awful nights."

A husband claims to have a model, economic wife; she purchases her toothbrushes second-hand.

### THE AMATEUR ATHLETIC ASSOCIATION.

The Athletic sports of Saturday last were only a modified success as the weather was very unfavourable. All the morning it had looked threatening and just about noon rain began to fall. There was at first an idea of postponing the meeting, and a telegram was actually sent, countermanding the Imperial Marine Band, which was to have attended. As later on the rain stopped for a short time, and most of the competitors came on the ground, it was decided to hold the sports. About halfway through the afternoon the rain was falling steadily and considerably affected the times and heights recorded. The following are the results:—

#### 1.—100 YARDS FLAT RACE.

F. V. Samuels scratch	...	...	...	...	1
Jasper Mayne, 27th Regiment, 2 yards	...	...	...	...	2
H. J. Snow 6 yards	...	...	...	...	3

This was a very good race. Fifteen yards from the home all the competitors were together, but then Samuels came to the front and won by about two feet. Time, 11½ secs.

#### 2.—THROWING AT WICKET.

This was won by Snow, who out of ten competitors was the only one who hit the wickets at all.

#### 3.—120 YARDS FLAT RACE.

F. V. Samuels scratch	...	...	...	...	1
H. J. Snow 9 yards	...	...	...	...	†
Jasper Mayne 27th Regt. 5 yards	...	...	...	...	†
S. Cope 7 yards	...	...	...	...	0
J. Gedge 6 yards	...	...	...	...	0

This was another good race. Samuels collared his men ten yards from home and a fine struggle ensued, Samuels winning by a little over two feet. Snow and Mayne ran a dead heat for second place, Cope and Gedge being close behind. Time, 13½ secs.

For the long jump there were no entries and it was consequently omitted.

#### 5.—440 YARDS FLAT RACE.

J. W. Whitmore 5 yards	...	...	...	...	1
H. J. Snow 15 yards	...	...	...	...	2
S. Cope 15 yards	...	...	...	...	3
A. C. Harbord 10 yards	...	...	...	...	0

This was also a well contested race. Snow kept ahead, with Cope close at his heels, for two-thirds of the way, when Whitmore passed both of them and won by about two yards. Cope spurred just too late and had to be contented with the third place. Time, 64½ secs.

#### 6.—POLE JUMP.

G. C. Charlesworth scratch	...	...	...	...	1
S. Cope, 9 inches	...	...	...	...	2

The rain was falling heavily and it was next to impossible to hold the smooth bamboo pole. Both competitors got some nasty tumbles in consequence. The event should have been postponed. The height jumped was 7ft. 1in.

#### 7.—THE LADIES PURSE.

F. V. Samuels, scratch	...	...	...	...	1
J. W. Whitmore, 10 yards	...	...	...	...	0
S. Cope, 20 yards	...	...	...	...	0

This was virtually a walk over for the winner, who at the conclusion of the race was presented with the purse by Miss Walker, who congratulated him on his success which she wished, she said, would attend him in like matter in other pursuits. Mr. Samuels made an appropriate reply and presented Miss Walker with a handsome bouquet. The time was 1 min., 34½ secs.

#### 8.—800 YARDS FLAT RACE.

This was a race for non-commissioned officers and men of the men-of-war in port. There were three prize of \$5.00, \$3.00, and \$1.00.

Sullivan	...	...	...	...	...	1
London	...	...	...	...	...	2
Whollys	...	...	...	...	...	3

About a dozen started and made a good race of it. Time 2 min. 48½ secs.

#### 9.—HIGH JUMP.

W. Sutter 6 inches	...	...	...	...	...	1
A. H. Dare scratch...	...	...	...	...	...	2

Dare failed at 5 feet 1½ inches, while Sutter cleared the bar at 4ft. 7 inches, making him with handicap the winner.

#### 10.—100 YARDS FLAT RACE.

This was a race for boys under twelve years of age and brought out a large field. There were two heats and a final run off.

O'Hara	...	...	...	...	...	1
C. Gibbs	...	...	...	...	...	2
Smith	...	...	...	...	...	3

#### 11.—880 YARDS FLAT RACE.

F. V. Samuels scratch	...	...	...	...	...	1
S. Cope, 25 yards	...	...	...	...	...	2
C. E. Churchill 30 yards	...	...	...	...	...	0
J. W. Whitmore, 15 yards	...	...	...	...	...	0

This was another gift to Samuels, who won as he liked. The course was very heavy and the time bad in consequence. Time, 2 min. 41½ sec.

#### 12.—120 YARDS RACE. For Honorary members of the Association, Married Men and Visitors.

##### ENTRIES.

G. J. L. Hodges	...	...	...	...	...	scratch.
E. Wheeler	...	...	...	...	...	10 yards.
F. E. White	...	...	...	...	...	"
W. H. Smith	...	...	...	...	...	"
F. A. Cope	...	...	...	...	...	"
F. D. Walker	...	...	...	...	...	"
H. O. Hara	...	...	...	...	...	"
C. H. Coldden	...	...	...	...	...	"

Won in very fine style by Doctor Wheeler.

#### 13.—HURDLE RACE: 120 YARDS OVER 10 FLIGHTS.

A. H. Dare minus 5 yards	...	...	...	...	...	1
Jasper Mayne, 27th Rgt, scratch	...	...	...	...	...	2
G. C. Charlesworth, 6 yards	...	...	...	...	...	3

Charlesworth and Mayne were together almost up to the last hurdle when Dare collared them and just won: Time 2.0 secs.

The other events were postponed on account of the weather, with the exception of the Tug of War. In this, the *Richmond* beat the *Suotara* and the *Comus* defeated a shore team. Then came the struggle between the victors, the *Comus* and the *Richmond*. The tug was most exciting, every man pulling his utmost, being urged thereto by shouts from his own countrymen looking on. The *Richmond* at first got the better but only for a time, when the *Comus* men set to work in a way that would accept no denial, and dragged their opponents fairly over. The proceedings terminated with the distribution of prizes.

### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as make them readable and intelligible.]

#### COURT, POLITICAL AND OFFICIAL.

The *Nichi Nichi Shinbun* says that His Majesty the Emperor was present on Tuesday at the disbanding of a number of time-expired men of the Imperial Guard, which ceremony took place in the Fukiage Park.

We read in a native paper that the new buildings of the *Bussan-kioku* (Office of the Colonization Commission at which the produce from the Hokkaido is sold,) erected near the Yeitai-bashi, Tokio, have been completed and that the opening ceremonies, which will last three days, will be held on the 1st, 2nd and 3rd of next month. Private visitors will be admitted.

According to the *Hochi Shinbun*, the postal regulations are to be revised next year, and for this purpose several meetings to discuss the proposed alterations have been held at the Post Office. It is intended to establish post-offices on the seven islands on the coast of Izu, and on the island of Hachijo.

A vernacular paper informs its readers that Mr. Kobayashi, the present Consul at Korsacoff, will return to Yokohama in the *Kioriu Maru*, a steamer belonging to the Colonization Commission.

The *Hochi Shinbun* of Tuesday morning publishes a translation of a short editorial which appeared in the *Japan Herald*, of the 5th instant, on the subject of the possibility of the treaty revision taking place in London instead of in Tokio, with the advantages which the presence of Sir Harry Parkes and the Chevalier de Stoeitwegen would offer &c., &c., and comments upon it as follows:—"For our own part, we know nothing about Sir Harry Parkes' return, but as to the statements that the treaty will be revised in London, instead of in Tokio &c., and that the Dutch Minister will attend, and that the Japanese Government will, perhaps, have cause to be sorry for not having taken measures more calculated to propitiate these Ministers &c., &c., was there ever anything more ridiculous? They resemble the grumbings of an old woman, or the senseless nonsense that we sometimes hear folks mutter in their sleep. The present British Representative, Mr. Kennedy, is a gentleman of good repute, well acquainted with the state of Japan, and as it is unnecessary for Sir Harry Parkes to come back, he probably will not do so. This is the opinion of our leading politicians, and they add also, that the British Minister's return to Japan would not in any way benefit the country he represents."

The *Mainichi Shinbun* states that His Excellency Hanabusa, Minister for Corea, accompanied by his suite, will leave for his post about the 20th instant.

The *Nichi Nichi Shinbun* says that the new French Minister is expected in Tokio within a week, and that then the present French *Chargé d'Affaires* will return to France.

The same paper informs us that His Majesty left the palace at 9 a.m. on the 9th instant, and proceeded to the Fukiage park, where he witnessed the races, conducted by the officers belonging to the Imperial Guard. The running commenced at 10 a.m. and ended at 5 p.m., during which hours there were fifty races (?). Among the riders were His Imperial Highness Prince Arisugawa Sawa and Their Excellencies Admiral Kawamura, and General Yamada, all of whom won races.

The *Mainichi Shinbun* writes as follows:—"We do not vouch for the truth of the report, but we learn that on the 10th instant, the two Prime Ministers and nine of the Privy Councillors held a meeting at which a warm discussion and mutual recriminations took place. The sitting closed at about 5.40 p.m., but H. E. Inouye, and General Yamada remained behind for more than two hours, after which they called upon His Imperial Highness Prince Arisugawa, with whom they had a secret conference, and then returned to their respective homes at about 10 p.m. The Prince, though not yet quite recovered from his indisposition, resumed his place in the Cabinet on the following day in consequence of this interview."

A native paper states that Mr. Nagayama, Governor of the Niigata prefecture, is to be transferred to the Senate.

The same paper reports that His Ex Sano, Minister of Finance, returned from the Shimosa farm the day before yesterday.

#### NAVAL AND MILITARY.

His Excellency Privy Counsellor Admiral Kawamura paid an official visit to the U. S. S. *Richmond*, on the morning of the 5th instant, and Port Admiral Hayashi inspected the *Kongo Kan* at Yokosuka on the same day.

The Military cadets who were reviewed at the Narashino plains, have proceeded to Yashiu on the 9th instant, to practice marching manoeuvres.

His Excellency General Oyama, Minister of War, is about to visit Iwahana in the province of Joshu, to inspect the new buildings for the Arsenal; His Excellency's visit is also connected with various economies announced in a Government Notification, dated the 5th instant.

Another paper states that an official from the Foreign Department had a conference with some members of the War Department, on the 8th inst., on the subject of the construction of new forts for the protection of Nagasaki harbour.

The *Hosho Kan*, which left Yokohama to survey the

coast of the central provinces, arrived at Kobe on the 8th inst., having completed the object of her voyage.

A native paper writes:—"Admiral Lessoofsky, in command of the Russian fleet, left Vladivostok on the 7th instant, and is coming to Yokohama via Nagasaki. The Russian fleet will therefore be here about the 15th instant."

The *Mainichi Shinbun* says that as the arrival of Admiral Lessoofsky is daily expected, three secretaries and twelve other officers of the Naval Department have been appointed as a committee for his reception.

One of the torpedo boats in course of construction at the Yokosuka dockyard has been completed, and is to be launched about the 22nd instant. Three others are now under course of construction.

A native paper states that four Russian men-of-war arrived in Nagasaki on the 26th ultimo, one of which, carrying a thousand marines, left for China on the 28th ultimo.

We learn from a vernacular journal that the *Teibo Kan No. 2*, which lately left here to survey the coast of Boshu, returned on the 10th instant, having completed the object of her voyage.

#### TRADE, INDUSTRIES AND FINANCE.

We take the following paragraph from the *Mainichi Shinbun*:—"As regards the state of trade in Corea, the rice business is very prosperous, and consequently the number of brokers has been greatly augmented. They have actually taken to going beyond the limits of the Japanese settlement, early in the morning, and insist on making purchases, whether the people desire it or not. A number of police have consequently been detailed to watch their actions. As their conduct greatly interferes with the business of the larger merchants, the chamber of Commerce has taken the matter up and intends to issue some regulations for the better control of brokers."

We notice in the *Choya Shinbun* a paragraph to the effect that public loan bonds, exchangeable for kinsatsu, will be sent from the National Debt Office, through the Post Office, to all various cities and prefectures.

A native paper writes as follows:—"Tea occupies the principal place in the exports of Kobe, and the principal native export merchants, Messrs. Okashima Denbei of that port, and Komai Yabei of the prefecture of Shiga, resolved recently to raise a subscription of 50,000 yen, to be applied to establishing a company for exporting direct. They trusted by this to raise the price of tea, which has been lowered by foreigners and still continues to fall. The scheme met with the approbation of many of the leading merchants and gentlemen, who have now joined the company. The full amount of capital has been subscribed, so it will not be long before we shall see the advantages which arise from the proposed scheme."

We learn from the *Choya Shinbun* that the Osaka Mint recently forwarded 40,000 yen in gold, 50,000 yen in silver and 20,000 yen in copper to the Finance Department. The sum of 2,000 yen in copper was sent to the prefecture of Okinawa (Loochoo) on the 4th instant.

The *City of Tokio*, which left here on Tuesday, took, according to a native contemporary, 30,700 pounds of silk, 17,000 cases of tea, large quantities of matches, lacquer-ware, and deer skins.

Another native paper writes:—"The public is very well aware that among our exports, silk and tea rank first, followed by the lacquer and other wares. In imports, shirtings and cotton yarns occupy the most important position, followed by sugar, and woollen fabrics. Both the Government and the people are devoting their attention to the export of tea and silk; but as regards the prevention of the continuous import of shirtings and cotton yarns, there are only a few spinning mills, situated in Kagoshima, Sakai, Hiogo, and Tokio. Mr. Enomoto Shigetomi therefore has raised a sum of 200,000 yen for the purpose of establishing a Spinning Company in Tokio. The rules of the company having been drawn up, and the promoter and other members of the company will hold a meeting at the Matsugen Restaurant to-day, the 13th instant, to consult about beginning business."

The *Mainichi Shinbun* says that the Shukosha Society, in the town of Himeji in the Banashin province, Hiogo prefecture, has raised a capital of several hundreds of yen for the purpose of establishing a match manufactory. The members of the society

propose to apply the profits derived from the above establishment to the expenditure required for sending in applications to the Government, demanding the establishment of a National Assembly. Mr. Tsutsui, the director of the society, has gone to Kobe to purchase the machinery.

The Japanese mercantile houses in Gensan are about to be connected with each other by the telephone to enable merchants to carry on trade without meeting each other. The necessary instruments have been ordered at the office of the Telegraph Department.

#### MISCELLANEOUS.

The *Mainichi Shinbun* writes as follows:—"The Korean Government seems to have of late discovered the advantage and convenience of steamers and sailing ships, because the officers of the Ship-building Office visited Fusan in the month of September last, and purchased a sailing ship, the *Hoten Maru* No. III., from an Osaka merchant at the cost of 2,200 kwan-mon in Korean money. According to what we have heard, the Korean Government contemplates purchasing more ships."

A telegram from Nagasaki, dated the 5th instant, to a native journal, announced that a fire broke out at the Takashima coal mines at about 9 p.m. on the 4th and has not yet been extinguished.

The *Nichi Nichi Shinbun* asserts that during the past month, twenty-six foreign and one hundred and four Japanese ships entered Yokohama harbour.

Another native journal states that business at the Yokosuka Dockyard increases daily, and that consequently another dock is to be built. The estimates have already been drawn up.

The *Mainichi Shinbun* contains the following paragraph on the subject of the fire in the Takashima Coal Mine:—"We published recently a telegram to the effect that a fire had broken out spontaneously in the Takashima Coal Mine, but we now learn that the actual case was as follows. Another riot has occurred among the miners, who broke down the machinery of the mine, and set the various buildings on fire. The matter assumed such serious proportions that the police in charge of the mining district were in danger; they consequently sent an alarm to the Kencho authorities, who hastened to the scene of the disturbance. The rioters, however, had arranged to guard the sea-shore, and when the police attempted to effect a landing, they were attacked by the mob with stones, and repulsed. Being unable to get near the beach, the police were obliged to threaten to use their firearms. This proved effectual; the rioters dispersed and the police were able to land and succeeded eventually in pacifying the men. We are not yet in possession of further information."

A native paper announces the establishment of a new journal entitled the *Tokio Yoron Shinshi* (*Tokio Public Opinion*). The offices of the paper are at No. 5, Minami Jimbo-cho, Tokio, and the first number appeared on Saturday last, the 6th instant.

A vernacular paper informs its readers that in order to improve the facilities for transport, a new harbour is to be constructed at Kohama, in the province of Kadzusa. The position has been surveyed and marked out, and work will shortly be commenced.

The same paper says that the towns of Sendai and Gamo, in the prefecture of Miyagi, are to be connected by a tramway, which will be under the charge of Mr. Yuri Kimmama, ex-Governor of Tokio, and ex-member of the Senate.

According to a native paper, Mr. Inouye Keijiro, editor of the *Kyiji Hiron*, has been condemned to two years' imprisonment and a fine of five hundred yen for having committed a breach of the 4th article of the law of libel, by the publication of two articles headed "It is not good policy for the Government to raise a foreign loan of 100,000,000 yen," and "Is the Japanese Government really unkind to its people?"

The same paper states that Mr. Hara, ex-editor of the *Hochi Shinbun*, has been fined thirty yen in accordance with the 5th article of the law of libel, for having written libellously on the acts of the officials connected with the exhibition held in the prefecture of Akita.

The following statistical report is taken from the *Hochi Shinbun*:—"The population of Japan amounted to 34,338,404 people in 1876, of whom 17,419,785 are males, and 16,918,619

females. There are of the house-holders, 9 Princes, and 2 Princesses of the Imperial Blood; 466 Nobles, and 3 Countesses in their own right; of the gentry classes 399,713 are males, and 3,783 females; of the religious classes there are 19,448 priests, and 1,077 nuns; and the ordinary people number 6,542,334 males, and 289,987 females.

The *Nichi Nichi Shinbun* writes as follows:—"Our countrymen residing at Fusan and Gensan in Corea, have taken to copying the way in which foreigners used to behave years ago when the port of Yokohama was first opened, and now act very rudely towards the Coreans. Consequently, Minister Hanabusa intends, when he has got settled at his post, to make some regulations for the Japanese settlement. The officers connected with the Consulates are, we understand, to proceed every day at 7 p.m. to the ward offices, where they will lecture on the new criminal code, and the code for the administration of justice, before Japanese residents."

#### TELEGRAPHIC NEWS.

London, 8th October.—The Board of Trade returns of imports for the past month amount to £36,250,000, showing an increase of £6,500,000 compared with last year. The returns of export for the same period amount to £20,000,000, showing an increase of £2,625,000 compared with last year.

Bank Shares:—Oriental Bank, £20; Chartered Bank, £23; Chartered Mercantile Bank, £23; Hongkong & Shanghai Bank, £38.

London, 9th October.—The Government have proclaimed the counties of Galway and Mayo as being in a disturbed condition.

Constantinople, 9th October.—The Sultan has declared that he will abdicate rather than yield to the demands made by the Great Powers.

London, 10th October.—Nothing definite is known in reference to the decision of the Great Powers on England's proposals to occupy and lay an embargo on the commerce of the chief ports in the Aegean Sea. It is believed that Russia and Italy have promised co-operation. A semi-official statement has been made at Berlin to the effect that Germany will only join in coercive measures if the Great Powers are unanimous. Admiral Seymour has summoned a Conference of Admirals. It is reported that the detached squadron has been ordered to the Levant. The British troopship *Assistance* is taking out munitions and Gatling guns. Constantinople, 10th October: The conference of Admirals summoned by Admiral Seymour has been countermanded. London, 11th October: The *Daily News* in a leading article this morning announces

that the Cabinet Council summoned for to-day, is postponed, owing to information received that the Sultan is inclined to yield to the English proposal for the entrance of the combined squadron into the gulf of Smyrna for the purpose of laying an embargo hesitate to accept, and though a Cabinet Council of the French Ministry has discussed the proposal, no decision as at has been arrived at. Large numbers of volunteers are arriving in Greece. The Albanian residents in Montenegrin territory have been expelled and their property confiscated.

London, 12th October.—Mr. Evelyn Baring starts from Brindisi on November 29th to take up his appointment in succession to Sir John Strachey.

Allahabad, 12th October.—The *Rangoon Gazette* wired yesterday from Thyetmyo that a thousand Burmese had fairly arrived, and it is therefore believed that Government soldiers or employes have assembled on the frontier on the river's left bank with the avowed intention of attacking Ruatong Allanrinwo. The garrison is on the alert. Captain Campbell and a company of the 41st Trichinopoly Light Infantry have been detached for protecting Zuatong and arrived yesterday. The are under canvas. An attack is expected to-morrow.

Bombay, 52th September.—The Jamadar of Ayub's Armstrong Battery, a prisoner, says there are no Europeans in Ayub's camp. He states that at the beginning of the war, two Russian officers arrived at Herat and offered money and other assistance if the Afghans made a descent on Kandahar. The Amir died just after, so the offer was not accepted. It is said that at Maiwand the Heratis fired on the Kabulis. A special Gazette says the defeat of General Burrows was a foregone conclusion as the British line of battle was on a bare slope facing the enemy, destitute of cover, while the enemy was protected by a broad deep nullah sweeping round the front and flanks of our line. General Burrows might have fought in the enclosed orchards and gardens and held the position against any odds. It is said that the Military Officers accused the Politicals of withholding information, and that Colonel St. John; while assuring General Primrose of complete confidence in the Wali's troops, wrote to the Government of India expressing distrust. High politicals are also accused of purchasing certain London and Indian newspapers by supplying news.

The *Pioneer's* Correspondent writes from Kandahar 19th September:—"In a few days the remaining regiments of Sir Frederick Roberts' Cabul-Division will have left Kandahar, and once more the responsibility of maintaining peace in the province will be entrusted to Bombay. The bitter experience of the past will still sink deep into the minds of those left in authority here, although there will be no Ayub Khan with 36 guns and a large army to act as a bugbear. The temper of the people has been so thoroughly shown, however, that their sympathy with any successful leader against the British is established beyond doubt, and no self-complacent belief that "all is over" should blind military leaders to dangers that may yet beset them. It does not seem likely that the mistake of undermanning Kandahar will be made so long as we have to hold it, for General Phayre's Division is 8,000 strong and even if General Burrows' Brigade be recalled there will still be some 1,000 or 11,000 troops in garrison.

Kandahar is now in charge of a European Governor, in the person of Major M. Protheroe.

The responsibility for the wording of the sensational telegram announcing that General Burrows' brigade had been "annihilated" has been acknowledged by Major F. Adam, Assistant Quarter-master-General of the Kandahar force, in a letter written to a Bombay contemporary.

Sir Frederick Roberts arrived at Quetta on the 21st instant. There he will remain until the arrival of Mr. A. C. Lyall, with whom he will have to confer before his departure for India. General Roberts has quite recovered from the effects of his recent indisposition, yet his intention to go home as soon he can remains unchanged.

Bombay, 4th October.—General Primrose, Burrows and Nuttall, accompany their troops to India. General Phayre has to-day taken over the Kandahar Field Force. Disturbing rumours are circulating in the bazaar here to the effect that Mahomed Jan and Ayub have formed an alliance, and the latter will again advance supported by a movement from Gaznee. There is no doubt that the attitude of the popu-

lation is expectant and hostile. We are prepared for all emergencies.

The special correspondent of the *Times of India* telegraphs from Kandahar on the 29th September, that Ayub had halted in the neighbourhood of Farrah, about half way between Kandahar and Herat. The reason of his halting is said to be that Abdula Khan, son of Afsul, has arrived from Meshad and is established at Herat, where he is said to be prepared to resist any attempt on Ayub's part to re-enter the city. The latest news from Herat was, however, of the 20th August.

A special telegram from Kandahar, to the *Bombay Gazette*, states that it is reported there that Herat had been pledged to Persia by Ayub Khan for the assistance given him, and that Ayub has now applied to the Shah for more aid.

News from Kandahar announces that all Yakub's relations and supporters have assembled at Carrak, of which Hashim Khan has been appointed Governor, and have proclaimed their intention of continuing the war against Abdal Rahman and the British.

The special correspondent of the *Bombay Gazette* telegraphs from Quetta that Herat is held by the son of Mir Afsul Khan, late Governor of Kandahar, in the pay of the Shah of Persia, and that it is supposed he will refuse to deliver it up to Ayub.

Simla, 5th October.—Mr. Lyall has proceeded towards Quetta. He was expected back yesterday, but telegraphed that he was feeling better, and was going on.

Kandahar, 5th October.—General Primrose and staff return to India to-morrow, General Phayre taking over the command of the force here. A Brigade is to be sent to Girishik in a few days.

Calcutta, 6th October.—The withdrawal of the Cabul force from Kandahar was to have been completed on the 28th September, General Macpherson's Brigade being the last to leave. General Ross and the 15th Hussars are to accompany this Brigade, which will arrive at Quetta about the 10th proximo. General Baker has reached Segi, and was to be at Quetta on the 28th.

The two divisions remaining about Kandahar, under Generals Phayre and Primrose, number respectively 8,000 and 5,000 men. Two Brigades of General Phayre's division are at present in Kandahar, the third being at Khana Girdab, and the Cavalry at Kokaran. The 3rd Hyderabad Cavalry have been ordered to retire to Bombay. General Daubeny's Brigade has returned from Maiwand.

Orders were issued from army head quarters, on Saturday, providing for the grant of furlough to thirty-three per cent of the native army. As a general rule, the limit is fixed at ten per cent. each year. It has also been ordered that all restrictions hitherto imposed on the grant of leave to officers on private affairs are now to be regarded as cancelled.

Allahabad, 6th October.—General Ross with the divisional staff marches to Segi to-morrow, whence he will join General Roberts at Quetta. General Macpherson who with his brigade goes by way of Gulistan Karez by ordinary marches.

London, October 12th.—The *Times* understands that there is no immediate intention of sending more troops to Ireland.

Dublin, October 12th.—The military authorities in the West of Ireland are making extreme preparations, in view of apprehended disturbances. Houses are being hired at Tuam and Headford, in Galway and in Mayo, for immediate occupation by the military. Detachments of troops will also leave the Curragh of Kildare for Castle Bar and Westport, in Mayo.

London, October 12th.—Colonel Gordon (Gordon Pasha), while passing up the Red Sea, wrote under date of September 29th to the Secretary of the British Anti-Slavery Society as follows: "I hear of an Egyptian official leaving Massowah to annex the Damkli Coast and occupy Guardafui Promontory. This will involve Egypt in a yearly expenditure of £5000 and completely blockade Abyssinia from the sea. The Egyptian Commission established at Assiut for the suppression of the slave trade is a perfect farce."

London, October 12th.—A despatch, dated Valparaiso, the 10th, says that Chili and Peru have accepted the offer of mediation by the United States.

London, October 12th.—At Buenos Ayres, the National Congress proclaimed General Roca President of the

Argentine Confederation. Perfect tranquillity prevailed.

London, October 12th.—It is reported that gold to the amount of £600,000 was taken from the Bank of France yesterday, chiefly for America and Germany.

London, October 12th.—The *Pall Mall Gazette* says it is informed that news has been officially received this afternoon that the Sultan has consented to the amicable cessation of Dulcigno.

A despatch from Pera says the Sultan last night signed an Irade in which he orders the surrender of Dulcigno. A convention will be concluded with Montenegro, assuring the rights of Mussulman inhabitants in that district. The Irade has been communicated to the Ambassadors. It is expected that the Powers will relinquish the idea of exercising pressure with regard to the settlement of other pending questions.

London, October, 12.—At Newmarket, in the Czarowitch stakes, "Robert the Devil" was first, "Capitola" second.

Buenos Ayres, October 13th.—There were great rejoicings here on the installation of General Roca as President of the Confederation. Romero assumes office as Governor of this Province. The officers of the National Government, which administered the affairs of the province since the triumph of the Nationalists, have been withdrawn. The new Argentine Cabinet is composed as follows: Señor Viso, Minister of the Interior; Irigoyen, Minister of Foreign Affairs; Contines, Minister of Finance; Victorica, Minister of War; Pinzarno, Minister of Education. A thousand persons escorted ex President Avellaneda home at the expiration of his term of office.

Constantinople, October 13th.—The Shah of Persia telegraphs the Sultan, demanding that a Turkish army corps be sent to the frontier to assist Persia in quelling the Kurds' outbreak.

London, October 13th.—It is stated that the notorious Mme. Rachel, the so-called "Female Beautifier," has died in prison. She was convicted of fraud in August, 1878, and condemned to penal servitude.

London, October 13th.—A private telegram from Sydney states that great political excitement prevails in Queensland. The mail contract has been suspended. The Ministry is denounced and the Opposition is strongly supported.

Dublin, October 12th.—A plasterer named Hefferman, of Clonbur, and a man named Spencer, steward of a neighboring nobleman, have been arrested in connection with the murder of Lord Montmorris.

The Irish Constabulary have sent forward a requisition for 67,000 additional rounds of buckshot.

Teheran, October 12th.—The Kurds have fallen back as far as Sorjourlikh, sending their booty over the frontier into Kurdistan. They are reported to have totally or partially destroyed 17 Persian villages. The tribes of Azerboyau are preparing to march against them.

London, October 12th.—A despatch from Paris says it is reported that certain members of the Cabinet side with Ferry, and others with Constans. The latter is understood to demand perfect freedom of action in regard to the disposition of the religious Orders, while Ferry is anxious to moderate the ridicule beginning to be incurred by the campaign against the Orders.

London, October 13th.—Regarding the rumors of dissensions in the French Cabinet, the Paris correspondent of the *Times* says:—Ferry, President of the Council, thinks it a paltry thing to direct by his efforts the dispersion of 13,000 unrecognized monks and nuns, when there are 112,000 who cannot be disturbed, being already recognized. The Minister of the Interior, Constans, however, regards the dispersion of these 13,000 as an achievement which may dispense with the necessity of any other programme. In view of this conflict of opinion, Ferry has begged President Grévy to hasten his return to Paris, when it is expected the great battle between the two parties—one representing the dictates of Gambetta, the other leaning on President Grévy—will be decided.

Paris, October 13th.—A Cabinet council to-day, at which all the Ministers were present, unanimously approved the proposal of Constans, Minister of the Interior, for the enforcement of the decrees against the unauthorized religious communities.

London, October 13th.—Only 3,000 Montenegrins are now encamped at Sutomar. The Montenegrins have al-

ready begun to discuss the harbor administration of Dulcigno.

A correspondent says that as soon as official notification of the cession of Dulcigno is received, the French ships will be recalled immediately.

A Montenegrin General will go to Dulcigno to-day to take command.

London, October 13th.—In the Newmarket races, the Select Stakes for three-year-olds was won by "Toastmaster," "Valentine" second. The Middle Park Plate for two-year-olds was won by "St. Louis," "Townmoor" second.

The Bedford stakes, for two-year-olds, was won by "Foxhall," "Myra" second, "Ismael" third.

St. Petersburg, October 13th.—The Emperor of Russia is indisposed.

St. Petersburg, October 13th.—The *Novosti* publishes a telegram from the municipality of Novtcherkust, which states that merchants there have, in view of the insufficient supply of cereals for consumption by the population, petitioned the Minister of the interior to prohibit the export of grain from the Sea of Azof. General Loris Melikoff, Chief Executive of the Government, visited the St. Petersburg Corn Exchange, for the purpose of inquiring the price of the stock and the amount of the export of grain. It is stated that he contemplates stopping the exportation of cereals to foreign countries. Large quantities of American maize and Chilean wheat are being sold here, and flour is being imported by way of Stettin.

London, October 13th.—It is roughly estimated that the Bank of France, within the last three or four days, has parted with about two million pounds of gold. This supply may be found available for export to the United States on English or German account. Of the gold that went into the Bank of England yesterday, the sum of 203 pounds was French coin, ultimately destined for the United States.

St. Petersburg, October 13th.—The reports relative to the impending prohibition of the export of cereals or the imposition of an export duty are officially declared unfounded.

Valparaiso, October 14th.—Representatives of the three belligerents, Bolivia, Chili and Peru, will meet on board the U. S. man-of-war at Arica. It is understood that one of the stipulations will be that hostilities may be continued pending the negotiations. Peru, it is reported, will refuse any cession of territory. The United States Ministers left Valparaiso to-day, to be present at the meeting.

Paris, October 14th.—It is understood that the Prefects desire the instant and universal enforcement of the religious decrees, in order to avoid agitation at the triennial municipal elections in November and January. This is likely to make a larger scale of proceedings against unauthorized religious orders.

The managers of two newspapers have been imprisoned for libel on the President.

London, October 14th.—"Microphone" won the Newmarket Handicap, "Cradle," second; "Gil Blas," third. The Newmarket Oaks was won by "Muriel," "Cipoloto," second; Lorrillard's "Nereid," third. The Champion Stakes was won by "Robert the Devil," "Bend Or," second; "Reveller," third.

The Ashley Sweepstakes for two-year-olds was won by "Savoyeur," "Foxhall," second; "Samuel," third.

Constantinople, October 14th.—The Ambassadors notify the Sultan that the naval demonstration has been abandoned, its object having been attained.

Cape Town, October 14th.—Busutos have sacked and burned the Government office and barracks at Masern. Colonel Bayley, with 500 men, is besieged at Masern. Carrington, with a small force, is besieged at Mafetene. Reinforcements are on the way.

Dublin, October 14th.—In view of the abortive proceedings against Davitt, Daly, and Keller, the Government has abandoned the idea of proceeding by summons of arrest and has determined to move on the 2nd of November, in the Queen's Bench Division, for a conditional order for criminal information against the leaders of the Land League. It is reported in well-informed circles that the Government does not intend to proceed against such men as Parnell, Finnegan, and O'Connor, but against members of local branches, who participated in preventing the bidding in of farms from which tenants had been ejected.

New York, October 14th.—A *Herald* Paris special says Hartman, Nihilist, telegraphs to the *Internationalist* to-day a full description of the mine which was to have blown up the Imperial train at Alexandria. He explains that the plot failed because an hour before the passage of the train a carriage came along the line and cut the wire connecting the dynamite with the battery. Hartman asserts that there are 13,000,000 of organized Radicals in Russia.

Paris, October 15th.—Gambetta has arrived in the city. President Grévy has decided that the municipal elections will be held the 8th of January.

Madrid, October 15th.—The Government has granted Calixto Garcia, the Insurgent leader of Cuba, liberty on parole in Spain. Garcia, in an interview with the Minister of Foreign Affairs, confessed that he believed the pacification of Cuba to be complete. Seventeen thousand men return from Cuba this Autumn.

Berlin, October 15th.—It is reported that in the next session of the Reichstag a motion will be introduced for a reduction of the duty on grain by about six pence.

The report on the Swiss grain trade states that the presence of large imports of American grain and flour, received by way of Rotterdam and Antwerp, had a very reassuring effect.

Cape Town, October 15th.—Mafetene, where Carrington and his force are besieged, was quite safe up to the 13th instant. A relieving force will leave Weppener on the 17th.

New York, October 15th.—The *Herald's* St. Petersburg special says: Though many rumors respecting the Czar's marriage have been spread abroad, we can touch for the following: On the 9th, the marriage of the Princess Dolgorouki was solemnized in the chapel of the Imperial Palace. The Czar's family disapproving, the Czarowitz went to Hapsal, on the Esthonian coast. Grand Dukes Constantine and Delmar went abroad, in order that they might not witness the ceremony. The marriage was very private. Grand Duke Nicholas and the Minister of War were present. The newly-married pair are with the bride's family in Livadia. The Czar has purchased for his consort the palace of the Grand Duchess Catharina, paying 2,000,000 roubles as the price of it.

Cologne, October 15th.—The city is crowded to welcome the Emperor and Empress of Germany. Many distinguished persons are present. The King of Saxony and Princes of various countries welcomed them as they arrived, and there was great enthusiasm and display.

Constantinople, October 15th.—There is not the slightest sign as yet made of ceding Dulcigno. It is believed now the Sultan only made the promise to gain time.

Toulouse, October 15th.—The Police ejected thirteen Jesuits who had re-entered the college here as professors. The college was formerly a Jesuit institution.

New York, October 16th.—The *World's* special says Princess Louise returned to London to-day and will shortly sail for Canada to join her husband, the Marquis of Lorne. She has been on the Continent seeking treatment for the nervousness resulting from the shock she received by being thrown from her sleigh at Ottawa last winter. Her announced intention of returning does away with the reports that the Marquis would shortly return from the Dominion. It is, however, rumored that if the Marquis of Lorne remains for another term in Canada as Governor-General, the Duke of Argyll will pay a visit to the Dominion, not of pleasure merely. The Duke intends to investigate and report upon the accuracy or inaccuracy of reports which have been afloat as to a desire on the part of the Canadians for annexation to the United States, and which have been supported by Mr. Goldwin Smith in pamphlets and magazine articles.

Paris, October 16th.—The religious decrees were enforced against the Carmelites throughout France, in many cases forcibly.

Madrid, October 16th.—The Spanish Minister of Justice has informed the Papal Nuncio that the Government has determined to expel from Spanish territory all priests introducing politics into their sermons.

New York, October 16th.—The *Sun* prints several communications to its editors from Workingmen and others. The following is a sample: "Sir: What prompts me to write this letter to you, is the faith I have in your attention to a Democratic workman. On Wednesday night I was

standing near the *Herald* bulletin, where a large crowd was assembled, looking at the returns. The crowd consisted mostly of workmen. Around were a number of men whom anyone would take to be Democrats. Imagine my surprise, when I heard these men say, in reference to the defeat in Indiana, that the Democracy would lose this State also; that this was not a question whether Hancock or Garfield should be the next President, but that it was whether they were to suffer their trade to go to foreign markets. I took six different positions in that crowd, only to hear like expressions, satisfying me that the tariff question was making a large number of converts. Now, sir, what I would ask is that you urge the Democratic leaders to take this question up in time, and that you do it justice in your editorial columns. It is true, you had an article in the other day, but that was no explanation. It read more like an apology. Excuse me if I am candid. I am giving the facts as I took them. I believe that four fifths of the workmen of this city want a change to the Democrats, but if they can be made to believe that the change would threaten their livelihood, they would prefer leaving matters as they now are. But if you can show them in a plain manner that what Mr. Smith says is true, and do it in time, you will bring them back. You owe this to them. They all read your paper.

GEO. O'CONNELL."

The *Sun* says: The answer to all this is that of late years the platforms of the parties, adopted by National Conventions, have come to have very little real significance. Could anything be stronger than the civil service reform platform of that Republican Convention of 1876? The Democratic party has had a majority of the House of Representatives for six years, and in both houses since 1877, and yet they have done nothing whatever toward a tariff for revenue only. Indeed, they have not even attempted revisions and reforms that are plainly necessary to cure gross abuses. Are we, then, justified in saying that the idea of a radical change in our plan of customs taxation is so visionary as to make it needless for any one, really Democratic at heart, to allow himself to be so influenced by any feeling of alarm on the subject as to vote against Hancock?

Chicago, October 16th.—There has been a terrific wind all day, doing much minor damage. The South Side Rolling Mill stack-house blew down, and four men were buried in the ruins, one fatally injured. The others were slightly hurt.

Chicago, October 17th.—The storm continued throughout the day with somewhat less force. It was far less disastrous on the lake than might have been expected, because warning sufficient had been given to allow most of the craft to seek harbor. The only accident of a serious nature reported is the loss of the schooner *Brawells*, Captain Thierkauff, with iron ore from Escanaba to Chicago, having a crew of eight persons, which foundered off this port last night, and as none of the crew have been reported, it is presumed that all were lost. Its masts and spars were sighted this morning, but there was no trace of any of its crew.

The damage by the wind will in the aggregate be very heavy in this vicinity. The force of the wind seemed most marked about the space included within a radius of 100 miles from Chicago, but the blow itself extended much farther, Omaha being about the western limit, Michigan the eastern, Central Illinois the southern, and Wisconsin the northern. The telegraph wires remain in precarious condition, and many of them are entirely useless at present.

Milwaukee, October 17th.—The wind-storm here, yesterday and last night, was decidedly the severest ever known in this section. The barometer was never so low. The wind was from the south, blowing between sixty and seventy miles. Despatches from Lacrosse say the storm, all along the line of the Southern Minnesota Railway, was the severest known in years. Passenger and freight-trains along the line are blockaded in snow-drifts ten to twelve feet deep, and teams with provisions have been despatched to their relief from several points. The train which left Lacrosse on Friday has not been heard from since leaving Fulda that night. All the cuts west of Fairmount are filled with snow packed hard. Reports of cattle, horses, etc., having perished are constantly received. No loss of human life is yet reported. It was the worst storm ever known

in Southern Minnesota and Western Dakota, and is still raging.

Council Bluffs, Michigan, October 18th.—Friday's and Saturday's storm was unusual for this season. Snow fell all Friday night and melted as it fell. It has turned cold since, with a raw north-western gale, and the roads are frozen solid and very rough. On the Maple Valley branch of the North-western snow drifts have blockaded the trains. Snow is five to seven feet deep all along the Sioux City Railroad from that point to Sioux City. Snow fell continuously on Friday night and Saturday, melting almost as fast as it fell. Saturday night a sheet of ice and snow was reported three to four inches thick. Trains from St. Paul and Yankton, due Saturday, have not yet arrived here.

Sturgeon Bay, Wis., October 18th.—A terrible wind-storm prevailed on Lake Michigan on Friday night and still continues. An immense amount of damage was done to shipping. Upward of twenty vessels are ashore on the west shore of the peninsula. Seven crafts are reported on the beach at North Bay. Sailors all agree that this is the worst storm ever experienced on Lake Michigan.

Chicago, October 18th.—To-day's reports of lake disasters from Sunday's furious gale are very meagre and really give nothing more than was known last night. Up to 11 o'clock the information in addition to that already known was confined to experiences of arriving craft. There is no question but that the damage and losses of both life and property have been great, but it is hardly possible that the full extent can be learned for days.

A good many vessels came in since daybreak, and all tell of the storm as the hardest known for years. Most of the lumbermen now reaching port were anchored under the west shore, and aside from parting with some of their deck load and a few upper sails, are all right. Boats of all transportation lines are known to be safe. Nothing is available in the telegraphic line north of St. Joseph, as the wires are all down. They are also down between Detroit and Traverse City. The companies are busy at work and will open communication as soon as possible. One hundred miles of wire are down just north of St. Paul, but the line is being rapidly put up.

Chicago, October 18th.—The train that left Dubuque on Friday morning over the Illinois Central for the West is still stuck in a snow drift west of Howell, and the wind fills in the snow faster than it can be shovelled out. The company does not expect to get the road open to Sioux City before Tuesday.

The steamer *Depere* has not yet been heard from. She left Grand Haven for Milwaukee on Saturday morning, just before the storm. The Captain of the barge *S. A. Irish* reports that he parted company with the missing steamer *Alpena*, after sailing with her three hours, ten miles off Kenosha. She was then heading shoreward. Nothing has been heard of her since.

Grand Haven, October 18th.—The *Alpena* left here at 9 p.m. Friday. Only the names of a few passengers are known. A. S. Benham and wife, Mrs. B. F. Curtis, Heber V. Squies, Sr., A. Crossman, of Grand Haven; Mrs. Newton Bradley and two daughters, Santa Fé, N. M., Ispeth C. Kurterer, G. Hattenger, of Grand Rapids, are all the names obtainable at present.

The crew and passengers of the *Alpena* are variously stated at forty to seventy. The Captain, Napier, was a trusty and skillful officer. The officials of the Goodrich line, to which she belonged, refuse to give any particulars about her or her passenger list. She was not the staunchest vessel on the line.

St. Paul, October 18th.—The storm was not very severe here, but the wires are down in all directions around the city. Nothing is known of the Northern Pacific country yet, except a report that the storm is more severe and the snow heavier than it was all last winter.

Toronto, October 18th.—Despatches from North and Northwestern Ontario reports a severe snowstorm in progress. About a foot of snow has already fallen.

Detroit, October 18th.—There are no reports of disasters yet. Vessels are generally in port. The gale is still blowing.

Two Rivers, Wis., October 18th.—The following is a list of the casualties known of here from the Lake: A Mackinaw boat with fish was swamped, and two fishermen were drowned. The boat was recovered. The deck of the schooner *Dunkham* was lost, and she is ashore. The schooner

*Hungarian* is ashore, a total wreck. The *City of Woodstock* is ashore. The schooner *Ferry Hannah* sunk. The barge *Brunette*, with 48,000 bushels of corn, is ashore in 3½ feet of water. The schooner *Conway* is high on the beach. The schooner *Lotta May*, wheat-laden, is high and dry. The *Lawrence* and *Ebenezer*, both stone-laden, are benched, and are total wrecks. The *Gazelle* is damaged. The *Reciprocity* and *Contest* are ashore. The Captain of the *Brunette* was lifted bodily by the wind and dashed through the cabin, and one of his legs was broken. Several piers were destroyed, and other damage done along the shore. The minor injuries to craft were numerous.

St. Paul, Minn., October 18th.—The snow is mainly confined to the southern part of the State, along the southern Minnesota road and the Sioux City road east of St. James. On these lines the cuts are full of snow, and there are drifts several feet deep on the track, and no trains have moved since Friday night. On the Hastings and Dakota line, travel is prevented by snow. East of Stewart, on the northern lines, there is less snow, the detention to the moving of trains arising mainly from the disabling of telegraph lines by the wind. Some snow, however, lies on the St. Paul, Minneapolis and Manitoba line, in the wooded country west of Red River.

Pongkeepsie, October 18th.—No Western passengers have passed here since morning. Reports from along the New York Central show that the passengers blocked west of Rochester by snow and ice will reach New York sometime to-morrow morning.

Chicago, October 18th.—The *Inter-Ocean's* Muskegon special says: Not a vestige is left of the schooner *Grenada*, which went to pieces off shore here. There are only two survivors, William Bressell, the mate, and Angus Tiuklater, the Captain's brother. The latter reports that the vessel left Chicago with a smart breeze on Friday evening, but the steering apparatus soon became worthless and the schooner was at the mercy of the waves. The storm hourly increasing in violence. On Saturday, at noon, the steward and a sailor died of exposure, and he himself prayed for death. On Sunday, at noon, land was sighted, and they began to make a raft. One sailor was caught between parts of the rocking vessel and nearly crushed, but was wrapped in canvas and put on the raft. The waves washed him overboard. The Captain lost his hold by the breaking of the raft, and was drowned when near shore. Tiuklater held on for a while and then swam ashore. All the rest of the crew (numbers not stated) were drowned before their eyes.

New York, October 17th.—Twenty-nine missionaries from Salt Lake city arrived last night. They sail for Europe on Tuesday. Their efforts will be confined to Great Britain and Scandinavia. They will return in two years.

London, October 18th.—Lady Mountmorris returned to her residence, but was so persecuted that she had to leave again.

Vienna, October 18th.—The *Press* says: We learn on the best authority that the Princess Dolgorouki, who married the Czar, is a younger niece of the Governor-General of Moscow, and not a sister of Count Albertinski. Negotiations respecting the future position of the Princess, and their children are still pending. It is proposed that the latter be recognized as Princes of blood and take rank after the Grand Dukes. Should the Czarowitch consent to this arrangement, the Czar will appoint him co-regent and transfer to him the reins of the government, the Czar retaining imperial privileges and retiring permanently to Livadia.

London, October 18th.—The Viceroy of India telegraphs that Kurma Valley was evacuated on Saturday by the British troops.

London, October 18th.—Five steamers have been ordered to be built on the Clyde for a new French company to trade with the United States.

London, October 18th.—A St. Petersburg despatch says that Russia has ordered the commander of the Pacific squadron to survey the entire coast of Korea as soon as possible.

Buenos Ayres, October 18th.—A terrible snow-storm occurred in this province on the 18th of September, and it is estimated that 700,000 cattle, 500,000 sheep, and 250,000 horses perished.

London, October 18th.—At a large meeting of Irishmen at Bradford, a resolution was passed denouncing the accounts

of the state of Ireland by the English press as calumniators. Resolutions were also adopted in favor of a peasant proprietary and home rule.

## THE JAPANESE PRESS.

### THE PROPOSED ECONOMY IN GOVERNMENT EXPENDITURE.

(Translated from the *Hukka Shimpō*.)

ON the 5th instant the Prime Minister issued a notification ordering the practice of economy generally, in the annual expenditure. His Excellency has found that economy is absolutely necessary in order to increase the sum available for the withdrawal of the paper currency, and to improve the state of internal affairs. He has consequently fixed the local taxes at one-third of the Imperial taxes instead of one-fifth as they were formerly and has ordered that all expenses for construction and maintenance of roads, rivers, harbours, and embankments are to be paid, from the 14th fiscal year, out of the local taxes instead of, as hitherto, from the Imperial finances. It is manifest that by adopting this scheme the Government can affect an annual saving, to be applied to the withdrawal of the surplus paper now in circulation. The proposed change may have arisen from the idea that as the farmers are, at present, the wealthy portion of the population, and that the trifling increase in taxation would not be felt by them. If, however, after these reforms are begun, the people do not see any actual economy result from them, it is more than probable that they may complain that the Government have simply seized a plausible pretext to impose heavier taxes upon them.

On the same day, however, on which the notification we refer to was issued, another similar document appeared, emanating from the Council of State, and addressed to the Home, Finance, Public Works, Naval, War, and Educational Departments, enjoining economy. It is evident from these notifications that the Government is really desirous of practising economy and reducing expenses; this is especially borne out by the clause directing that all factories belonging to the three first-mentioned Departments, and the Colonization Commission, are to be sold gradually to private firms. By this step the Government on one hand reduces its expenditure, and on the other increases its revenue by transferring, to the local taxes, expenses formerly defrayed by the Imperial Revenue. Again, the recently revised tax on saké is expected to bring in about four million yen annually, and the saving effected by the transfers above mentioned should bring in an equal amount. The Finance Minister stated in his estimate that he expected to have annually about two million yen in reserve for the redemption of paper money, so that we may roughly estimate the excess of which the Government will be able to avail themselves at about ten million yen per year.

It is, however, a question of some importance as to what purpose the Government will dedicate this saving, for we do not consider it probable that the whole amount will be devoted to the redemption of kinsatsu. No doubt some further use for this surplus will be found; and it will indeed be most praiseworthy conduct on the part of the Government if instead of raising a foreign loan, or adopting similar clumsy expedients, they persevere in the present plan. If they do so, the financial crisis will soon become a thing of the past.

We have already seen how the Government itself took up various enterprises on the ground that the people generally were not sufficiently advanced to do so, and how when these enterprises had improved so much that they might have been entrusted to the people, the Government still continued to conduct them. The intention of the Government was doubtless praiseworthy, but the same cannot be said of the result. It is too late for the Government to abandon its factories, but we trust that men of position in the various localities will form companies to purchase them, and conduct them themselves. Many of these factories which do not at present bring in anything to the Government might be made paying concerns in the hands of private companies if strict attention to economy and industry were practised. At any rate, the movement would tend to the encouragement of industrious ways, and this,

combined with the economy about to be practised by the Government, should place our native country in a position of wealth. We trust that, as we said before, men of position throughout the land will work as much as possible towards the attainment of this end.

## LAW REPORTS.

## IN H. I. R. M.'S CONSULAR COURT.

Before A. PELIKAN, E-q., Consul and Judge.

Messrs. S. CARCANO and REYNAUD, Assessors.

Saturday, November 6th, 1880,

JAN DE BOER v. S. SEREBRENIKOFF, agent for the owners of the Russian steamer *Nordenskjöld*.

This was a claim to recover the sum of \$8,992.70 salvage expenses, &c., and \$1,283 commission on the value salvaged. The defendant admitted his indebtedness to the extent of \$2,189.49 salvage, but disputed the commission claimed and left that to be settled by the Court.

Mr. Kirkwood again appeared for the plaintiff and Mr. Dallas for the defendant.

On the opening of the Court, the President said that in consequence of the request of Mr. Kirkwood that the vessel might not be allowed to leave, he had made the owners give a guarantee for \$12,000, before she started.

Mr. Kirkwood expressed himself satisfied with this arrangement and resumed his address as follows:—

"As to the amount of bonus which was due to the plaintiff the Court would see, by paragraph 3 of the contract, that if the operations lasted more than four months after the arrival of the plaintiff at the scene of the stranding, he was to receive 5 per cent on the value of the ship, plus \$500 per month. Accordingly if the *Nordenskjöld* had not arrived here before September, he could have claimed over \$5,000: if this was so, he certainly had a right to claim more when he actually brought her back by June, as his one object was to accelerate the operations as much as possible. As regards this subject of the bonus, I read extracts yesterday from the log-book; these, however, careful reading will prove to have been written with the sole intention of injuring the plaintiff; Captain Johannsen, who wrote them, did his best when at Yokohama to get the plaintiff to throw up the contract and said that he had the power to annul it himself. The defendant was by no means ignorant of the ill-will that existed between Captain Johannsen and the plaintiff. It is claimed that the defendant engaged the majority of the workmen employed but why was this? simply because the plaintiff's letters and documents were not of sufficient authority in the eyes of the native officials. Just at this time the defendant arrived, furnished with the necessary powers and it was far simpler to use them than to have to go down to Yokohama again. The extracts submitted to the Court all go to prove that the plaintiff had direction of the operations. The letter, which the plaintiff crumpled and threw away also testifies to this; I would remark too, that no man of delicate, gentlemanly feelings would have availed himself, as did the defendant, of a document lost by another. Both the defendant and Captain Johannsen did their best to induce my client to cancel the contract. They maligned him to the Japanese Government, they surrounded him with difficulties, and made him consequently incur great expenses. As to the question as to who gave the orders on board; it is asserted that Captain Johannsen did so, but yet, strangely enough, the officers of the *Nordenskjöld* say nothing in the petition to that effect, while Mr. Gland and the native witness all declare that it was the plaintiff and no one else. Captain Johannsen's statement that he himself gave the orders is I feel confident, untrue. He never had change on board until she was about to return to Yokohama, and only then at the express desire of the plaintiff. I would point out to the Court that all the witnesses against the plaintiff are the *employés* of the owners of the vessel, while those on his behalf were Mr. Gland, now in the Mitsui Bishi Company's service, who is consequently not interested in the case, and the Japanese workmen, whose contracts have expired, and who also have no interest in the matter.

The Court must be well aware what is usually paid for such operations as the one under discussion. French, English, Italian and most probably Russian laws allow not less than a

third or more than a half of the value of the vessel salvaged. The steamer is valued at \$25,000, of which sum a third is \$8,000 and a half \$12,500; the plaintiff claims \$10,000 as a fair remuneration. The exact sum is \$10,275.70, with legal interest and costs. The items composing this total are as follows:—

For repairs to the steam pump .....	\$2,200.00
(or 6 months hire at \$200 per month if the court does not find that the pump was damaged .....	\$1,200.00)
Six months hire of diving dress .....	1,200.00
One anchor and chain lost (this price was agreed on in the contract) .....	250.00
Captain Carst's, Messrs. Whitfield and Dawson's, and Mr. Cook's bills for various necessary implements, respectively \$1,198, \$53.22 and \$23..	1,274.23
Mr. Gland's salary .....	920.00

To which is to be added the cost of the voyage of the *Otome*, and the workmen's wages, and a bonus of 8 per cent on the value of the steamer.

Mr. Dallas, for the defence, said:—"Before going into details I think I ought to reply to the general observation made by the plaintiff's counsel on the subject of maritime usages in the matter of salvage. We are not dealing now with a vessel that was completely abandoned: the *Nordenskjöld* was on a sand-bank and in good condition. Moreover, there was a regular contract and I think we have no right to pass its limits. The plaintiff claims for six months' hire of his apparatus, but it seems to me clearly stated in the contract that the hire was to begin only upon the arrival of the plaintiff at the scene of the stranding. My client is perfectly willing to pay for the hire of the apparatus from the day when he considers they were actually in his service, and for the pumps for the whole time that they were employed; and we are willing to admit that by the term *steampump*, the complete apparatus is implied. As to the damage done to it, this was only to be expected. Mr. Gland, and Mr. Whitfield, who gave his evidence as an expert, both agree in saying that for the amount of work done the injuries are very trifling, and that they have taken perhaps five per cent off the value of the pump. I must therefore protest against our being called to pay \$2,200 damages. As regards the engagement of Mr. Gland, we are fully prepared to admit his competency. The contract promises the plaintiff the assistance of an engineer, but nowhere authorizes him to go and engage one on his own account. He was in fact offered the services of the second engineer of the vessel. The contract shews that the operations were entrusted to the plaintiff on the belief that he was competent to execute them. If however, he felt obliged to get an engineer to assist him, he certainly ought to pay him himself. But everything goes to prove that the plaintiff mismanaged the whole affair. The voyage of the *Otome* was perfectly useless and was just so much money thrown away, as vessels ply between Yokohama and Hakodate every fortnight, and it was evident that owing to the intense cold there was no prospect of reaching Nemuro this season in the *Otome*. The plaintiff is certainly responsible for this expense, in spite of what has been said about his conversations with Captain Sangster and the Russian Consul."

The Court here adjourned until 3 p.m.

On the re-opening of the Court Mr. Dallas continued:—"There is nothing in the contract to prove that the *Nordenskjöld* ought to pay for the various implements purchased by the plaintiff; they are still in his possession, and we must therefore decline to pay for more than the hire of them. We consent to pay two months' hire of the steampump and diving apparatus, the necessary expenses of the voyage, and the value of some articles lost. My client himself incurred an outlay of \$1,690, which he asks may be deducted from the \$5,000 claimed by Mr. Kirkwood who has not either taken into consideration the question of time; for we cannot consent to pay for more than two months' hire of the machinery. We consider also that the plaintiff is not entitled to so much per cent on the value of the ship, as according to the contract, he had to advance the necessary expenses, but was unable to do so.

The witnesses have proved that illwill existed between the two parties. At first they were friendly but later on they had difficulties. It is a matter of no importance why the coolies left the plaintiff; the important fact remains that they did so, and he was obliged to seek the assistance

of the defendant; as on a later occasion, when he could get nothing from the Japanese authorities. As to the entries in Captain Johannsen's log, they simply go to prove that he is a well educated and clever man, who amused himself by inserting, among the official observations, some lighter descriptions. Captains are not scarce in Europe, and the reason why the owners fixed upon Captain Johannsen was that they knew him to be a man of great experience in Arctic Navigation, and consequently thoroughly capable of taking charge of the *Nordenskjöld*. The European witnesses all prove that the plaintiff acted simply as an interpreter, and I assert that without the help of my client, he could never have saved the ship. From the time my client and Captain Johannsen went to work all went well. The plaintiff could do nothing with the Japanese authorities. In a word he did not carry out his contract, and we consequently deny his right to claim any bonus. We leave it to the Court to decide what sum is due to him but most resolutely refuse to accede to his demand for interest, because, long before last August, the plaintiff was offered by the defendant a sum far greater than he is likely to be granted by the Court, but he refused to accept it. We ask that the plaintiff may be ordered to pay our costs."

The Court reserved judgment.

### CHIPS, THE CARPENTER.

Chips," whom I knew for months by no other name, was ship's carpenter of the whaler *Gazelle* of New Bedford. He was 26 years old, six feet high, and as strong as a tree. He was the favorite of the ship—and no wonder. He was tender and gentle, perhaps because he was strong; he was peaceful because he was powerful. And the soft word which turned away wrath, with a gentle hand to soothe a sufferer, are often needed in the whale fisheries.

Most of the foremost hands of the *Gazelle* were rough Portuguese lads, from the Western Islands, on their first voyage. They were treated with coarse contempt by the few American seamen and by the officers.

The only "white man"—as the Yankee sailor loves to call himself—who was kind and patient with the rude boys was Chips; and he was never tired of showing them or teaching them something of what he knew. He was one of those unselfish fellows who did not believe in keeping knowledge to themselves. He had never been to sea before, but during the first two years of the voyage he had attended to so many things beside his own easy work, that he was considered as one of the best and coolest whalersmen aboard.

Although exempt from standing watch, he had insisted on doing the duty from the first day out. At night, if the weather was good, he would sit on the main hatch in the centre of a ring of the Portuguese lads, and with wonderful patience teach them to make splices and knots and to speak English. He never tired of doing this or any other kindly thing for them. In the day time if there was work for him at his trade he still had them around him, explaining everything as he sawed or planed, as if he wished to make them as good carpenters as he was himself.

On Sunday, when every one brought his letters and pictures on deck, Chips showed the only signs of sadness we ever saw. He was the only one on board—except myself—who had neither pictures nor letters, neither face nor word to remind him of home.

When the ship touched at some port with a post office and every one ran for letters, Chips remained aboard—he knew there was none for him. In one of the boys' albums he found a picture of an old white-haired woman—the lad's mother—and every Sunday afternoon he asked for that album, and always gave it back when he had turned and looked at that picture.

The ship had been two years out when I first saw Chips. Through strange and unhappy circumstances I was afloat on the Indian ocean, in a small boat, when this New Bedford whaler hove in sight, and ran toward me. The first man to spring out in the mizzen chains, to help me aboard, was strong-handed Chips, with tears of sympathy in his eyes. On deck the Captain met me with open hand and heart, and for eight months I sailed with the whalersmen, and took part in the good and ill that befell them.

Chips and I were friends from the instant our hands struck. Shaking hands is one of the best tests of character. Some people shake your hands so politely that you feel they would care mightily little about shirking your acquaintance; some men slip their hands into yours and make you feel as if you were squeezing a fish; some people's hands are so thick, and fat, and cold that you might as well grasp the fingers of a leather dummy. Most people, and nice people, shake hands as a preliminary to conversation; but now and then one's hand strikes into a sympathetic palm, the fingers take full hold, the thumbs interlock and close—and when that friendly grasp is over, there is not a word to be said—it spoke all friendly greeting in its own good language. Such a kindly and grim grip did Chips give me the first time we met.

When I boarded the whaler I was in a bad way for clothes; all that belonged to me in the world were the few branded rags that I had worn in the boat. Sailors are used to such things; and they know the remedy. Every one came forward with his little offering. One brought a hat, another a jacket, another a pair of sea-boots, a

jack-knife, a cake of tobacco, and so on, until I had a bunk full of marine necessities.

Chips had least to give of all, for he had shipped without a regular outfit. But when he saw all that had been given, smiling at the rough boys as each one handed his offering, he drew me off to his own cubby-hole, and hauled round his own chest. Out on his bed came the contents: and in a minute there was a fair division of all it contained—flannels, shirts, stockings and everything to a handkerchief.

"These are yours, and these are mine," said Chips; "and I'll make you a chest to-morrow."

That's the sort of a man he was in everything. No wonder that the boys loved him and that the one word spoken in the best tones of the ship was the name of the kind-hearted, manly Chips.

He was as brave as he was kind. When whales were chased, Chips went down in a boat, and there was no cooler head among them when the fragile shell was to be laid broadside to a monster nearly as long as the ship. Once when the boat was stove in by a sweeper of the awful flukes in the death-flurry, one of the boys was crushed by the blow and driven senseless under the water. When Chips came to the surface he counted the heads and missed one, and down in the bloody brine he went among the sharks and fished up the sinking body. He was a mighty swimmer, and with only an oar to cling to, he held the senseless man out of water until rescued.

But, to the story. The *Gazelle* had been cruising for three months a few hundred miles off the coast of Western Australia—the great penal colony of England—and during that time had not fallen in with a single sperm whale.

One raw afternoon, with a harsh breeze and a rising sea, at last we heard the long sing-song cry from the masthead. "He blows! ther—re—blo-o-w!" Four times, at regular intervals of about forty seconds, the cry was repeated; and then we knew it was a sperm whale.

It was about 5 o'clock in the evening when the first cry was heard, and the sun went down at 6.30, with scarcely five minutes of twilight. As a rule, on board of American whalers, when whales are seen late in the evening, the boats are not sent down unless circumstances, such as weather, moonlight and so on, are very favorable. In most cases the course of the whales and the speed of their travel are carefully noted. When "on a course," a school of sperm whales will move at the rate of about six miles an hour; when "feeding," they keep on the same "ground" not moving more than a few miles a day. When seen late in the evening, the ship is steered during the night according to the observations, and often finds the school in sight in the morning, when the boats are at once sent down.

This course was not followed on the evening in question. It was not a school we saw, but a "lone whale," and one of extraordinary size. The night promised to be a rough one, and the whale's motions were strangely irregular, as if he had lost himself in an unknown sea.

There is something solemn and mysterious in the sight of "lone whales" and marvelous superstitious are current among whalersmen respecting them. Through spending year after year on the great waters, whalers become more impressionable to supernatural things than other seamen, and long observation of the shoals or schools of the vast creatures they pursue tends to fill them with amazement and awe when they meet with a solitary leviathan who has abandoned all fellowship with his kind, who lives by his own law—lonely, mighty and terrible.

Soon after the cry from aloft, we saw the whale from the deck, only a short distance from the ship, and we might have seen him long before had not his white, bushlike spout been lost in the angry whiteness that was fast spreading over the sea.

For a moment all eyes were fastened on the long body, like a great black tube, over which the waves washed. Every face was wonderstricken at the immense size of the whale.

Capt. Clifford had been examining him through a glass, which he handed in turn to each of his officers.

"What do you say, Mr. Hussey?" he inquired of the first mate, who glanced at the sun and answered:

"Go down, sir; we can do it."

"Mr. Joseph?" and the Captain turned to the second mate, an old Portuguese of extraordinary size, and perhaps the most famous whalerman alive.

"Go down, sir, if we want to get the fellow; we'll never see him again."

The other two officers were younger men, and of the same mind. There was no time lost in farther consultation.

"Swing the boats!" shouted the "old man."

The lines and irons had already been thrown in by the crews. A "heave, oh!" and a straining sound, and in one minute the four boats struck the water, and the men were settled on the thwarts with the long oars out.

The sun was low and large and red, and the whole western sea and sky were magnificent in crimson and gold and black. The picture was one of the finest I ever saw. The rising sea was jet black, except where it was bloody; a broad road of crimson shimmered from the ship to the sun; the long body of the whale, even blacker than the sea, was plainly seen in the ruddy glare; and life was added to the immense scene by the four white specks—the whaleboats—closing to a point as they drew near the motionless monster.

It was not until the boats had left the ship that we realized how threatening was the weather. Every moment the seas came wilder and heavier against the vessel. Only now and again, as they were lifted on a sea, could we catch sight of the brave little boats. The breeze grew stronger at every moment, and before the first boat neared the whale, was whistling through the rigging in the wild way that tells of a coming gale. The Captain regretted the lowering of the boats, and soon signalled them to return. But the men

were excited, and refused to see the signal. Filled to the gunwale, the seas, lashing over them every moment, on they went where only a thing so nearly perfect as a whaleboat could keep afloat. As the first boat swung round to run down to leeward of the whale, the red sun stood fairly on the black field of ocean.

Talk about the bravery of soldiers in battle, or of men ashore in any enterprise you please: what is it to the bravery of such a deed as this? A thousand miles from land, six men in a little twenty-eight-foot shell coolly going down in a stormy sea to do battle with the mightiest created animal! It is the extreme of human coolness and courage, because it is the extreme of danger. The soldier faces one peril—the bullet. The whaler, in such a case as this, has three mighty enemies to fight—the sea, the gale and the whale.

We saw the harpoon of each boat stand up as they came within heaving distance and send in his two irons. All the boats were fast before the monster seemed to feel the first blow. Then came the fight, the cruel and unnatural fight between vast power and keen skill. The black water was churned white as the flukes struck out in rage and agony. The sun disappeared and the gale screamed wilder in the rigging. We could no longer see the boats from the ship. The few men on board clewed up the light sail and took a reef in the topsails, and by this time the night was dark as pitch, and the gale had whipped and howled itself into a hurricane.

It was fearful to think of the four small boats out in such sea as was then running. We on the ship had to cling to the rail of the rigging: the terrible strength of the waves swept the heavy vessel about like a cork.

I saw the Captain's face a moment as he passed the binnacle lamps, and it was absolutely deformed with grief and terror—not for himself, brave old soldier, but for his boys in the boats.

"Who's at the wheel?" he shouted. "Send a steady man to the wheel."

"Ay, ay, sir!" answered in the dark a deep, quiet voice; "I've got the wheel."

That was Chips, and I walked aft to be near him. Just then a long hail came through the darkness, and we saw the flash of a boat's lantern on the lee quarter. In a minute more a line was flung aboard, and we soon had one crew safe on deck. It was the mate's boat.

"Where were the others?" was the first question.

"Fast to the whale," was the answer, "and there are no lanterns on the boats."

One of the men from the boat relieved Chips at the wheel; and he went forward to rig lanterns at the fore and main tops. When this was done we stood together on the forecabin, looking and listening for the boats. Suddenly he turned to me and said:

"We're going to lose some one to-night. While I was at the wheel it seemed to me as if something whispered in my ear that we're going to lose one man to-night."

I said he was growing as superstitious as old Kanaka Joe, and he answered:

"I can't help it. It seemed that I heard that whisper, and so plain was it that I nearly dropped the wheel in terror."

Another shout from the sea cut off further talk, and we soon had two more boats at the davits. The absent one was Mr. Joseph's and we knew that through thick and thin he would hold on to the whale. It was hours before we found him, and when we did he refused to cut his line from the carcass. The Captain cried to him that we could not hold the whale in such a sea, but the whaleman cried back:

"He's a hundred-an-fifty barreller, and if you don't take the line aboard, we'll stick to him in the boat."

Soon after, as the gale was moderating, the line was taken in, passing through a strong iron brace, screwed on to the starboard rail just forward of the gangway amidships, from which it was taken back and made fast to the windlass bits at the foot of the mainmast.

But it was a new line of stout Manila hemp, and its strength was put to a fearful test. A hundred fathoms astern of the ship it held the monstrous carcass: and as the vessel rolled heavily to the sea the strain on the line was terrific. Standing forward of it I laid my hand on the line as the strain came, and I felt it stretch and contract like a rope of India rubber.

Mr. Joseph's boat had come alongside, and the Captain, standing on the starboard rail, was shouting to him through a trumpet. The line from the whale passing from astern to the brace forward, and back to the bits amidships, made an acute angle, inside of which the Captain was standing. I noticed also, in the dark a tall man who seemed to be leaning against the line. "I hope he is forward of it," I said to myself as I went on with what I was about.

I had not taken six steps from the spot when something strange occurred. The ship steadied as if the wind had ceased. There was no sound greater than the storm; but, instead there seem to fall suddenly a stillness. I ran amidships and grasped for the line in the dark. It was gone! A rush to the rail and all was clear. The strain had torn out the brace. The mighty pull of the whale astern had jerked the line straight, like the cord of a gigantic bow, and the Captain, who had been standing on the rail, was struck by the flying rope and thrown senseless into the sea.

All this had been seen by the men in the boat before any one on board had realized the affair. In less than a minute the cry of "Saved!" reached us from Mr. Joseph, and, in a shorter time than can be imagined by a landsman, the boat was hanging at the davits, and the injured commander was being cared for in his cabin.

Rum and bar! rubbing are the potent remedies on a whaler, and by dint of these the Captain opened his eyes in a quarter of an hour. He had been stunned, but not seriously injured.

He was amazed at first at seeing the mate and myself standing over him with the rum bottle. But without a word he realized the situation.

"How is the weather?" he asked.

"The wind has gone down," said Mr. Joseph. "We're under

foresail jib and reefed topsails, and running right away from the whale."

"Gone!" said the old man.

"Gone?" answered Mr. Joseph. "Stanchion dragged, and the line parted, and \$8,400 went without an owner."

"Tell Chips to see to the broken rail," said the Captain, closing his eyes drowsily.

"Ay, ay, sir!" said the old second mate, as he stumped on deck. I heard him stop at the after-hatch, where the boat-keepers and the carpenter lived, and call "Chips!" two or three times. At last there was an answer in another voice—not Chips: then a sound of hurried feet on deck, a shout down the forecabin, and a shout back in answer. There was no Chips there.

Two minutes after a heavy foot came aft to the cabin stairs, and Mr. Joseph, with a white face, entered.

I knew what he had to tell. I knew now—just as if I had seen it all—who the tall man was whom I had lately seen leaning against the line.

The Captain looked at the second mate.

"Chips is gone, sir," said the old sailor, with a tremor in his rough voice; "Chips was knocked over by the line, and we've gone four knots since it parted. I've put her about, and we're running down again."

There was a dead silence. We all knew that the search was hopeless though. No man could swim in such a sea, and we had a thought though no one spoke it, that the brave Chips had been killed by the line before he touched the water.

All night we beat about the place where we thought it had occurred. The wind and sea fell, and moon came out in great beauty to help our sad search. Every man on board stayed on deck till the sun rose, and then we looked far and vainly over the heedless swell of the sea.

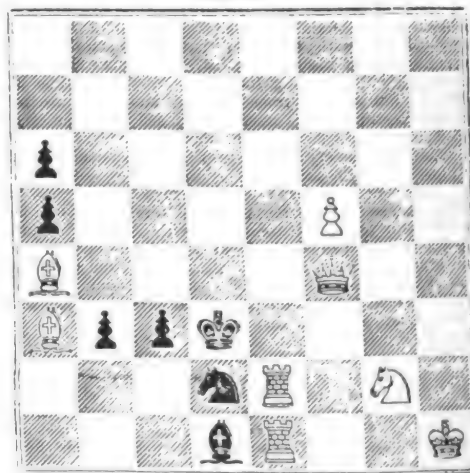

Chips was dead. The rough Portuguese lads found it hard to believe that the kind heart and strong hand of their friend had gone forever. We all knew that the best man in the ship was taken away.

Two years afterwards, when I found myself in Boston, I took from my sacred things a letter, which I had found in Chips's chest. It was addressed to a woman, with the name and number of a house in Cambridge street. I found the place—a small frame-house, with lots of Chips's handiwork around it. His mother met me at the door, a white-haired woman. She seemed to have been waiting and watching for somebody. A few words told the hopeless story. The letter was for her, and she read it over—the letter of her only boy, asking forgiveness for his one great and only disobedience—and as she read, the white head bent lower and lower, till it met the thin hands; and I turned and left the little room I had darkened, with all its poor ornaments, useless now, and, as I walked toward Boston, I could not help thinking that God's ways are often woefully far from being our ways.—John Boyle O'Reilly.

## METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, NOVEMBER 5TH 1880.  
Observatory of Daigaku, Moto-Fujicho, Hongō, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.  
Light continuous line—max. & min. thermometers.  
.....represents velocity of wind.  
.....percentage of humidity.  
Max. velocity of wind 24.8 miles per hour on Monday 1 p.m.  
The barometer is reduced to the freezing point and to the level of the sea.  
The highest reading of the barometer for the week was 30.287 inches on Thursday, at 10 p.m., and the lowest was 29.683 inches on Monday, at 2 p.m. The highest temperature for the week was 68° on Friday, and the lowest was 35°, which was the minimum on three successive days, Tuesday, Wednesday, and Thursday. There is some doubt concerning these observations of minimum temperature which cannot at this moment be cleared up. The maximum and minimum for the corresponding week of last year were 61°3 and 35°5 respectively. The total amount of rain for the week was .685 inches against a total of 1.228 inches for the corresponding week of last year.

## SHIPPING INTELLIGENCE.

## INWARDS.

Nov. 7, Japanese steamer *Genkai Maru*, Conner, 1,917, from Shanghai and ports, Mails and General, to M. B. Co.  
Nov. 8, Japanese steamer *Sumida Maru*, Hubenet, 896, from Hongkong via Kobe, Mails and General, to M. B. Co.  
Nov. 8, British ship *Cilurnum*, Beadle, 1850, from Hongkong, General for San Francisco, to E. Fischer & Co.  
Nov. 9, Russian steamer *A. E. Nordenskjöld*, Johannsen, 179, put back on account of bad weather.  
Nov. 9, Portuguese Gunboat, *Mandori*, Captain Viana, 420, 3-guns, put back on account of bad weather.  
Nov. 10, American steamer *City of Peking*, Berry, 5,079, from San Francisco, Mails and General, to P. M. Co.  
Nov. 11, Japanese steamer *Hiroshima Maru*, Haswell, 1,900, from Shanghai and way ports, Mails and General, to M. B. Co.  
Nov. 11, British steamer *Malacca*, Seaton, 1,709, from Hongkong via Nagasaki, Mails and General, to P. & O. Co.  
Nov. 12, Japanese steamer *Wakamatsu Maru*, Christensen, 1,843, from Kobe, Mails and General, to M. B. Co.

## PASSENGERS.

Per Japanese steamer *Genkai Maru*, from Shanghai and ports:—Mrs. Nelson, Miss Rose Nelson, Miss Emily Nelson, Miss Ruth Nelson, Mrs. Taylor, Miss Van Buren, Surgeon J. Dudley, R. N., Mr. and Mrs. Diligeux and child, Lieut. G. de Charon, Messrs. Baffey, Sale, C. Purnet, G. A. K. Honey, T. Walsh, D. Reynolds and 12 Japanese in cabin; 2 Europeans, 225 Japanese and 4 Chinese.

## NOTICE.

ON the 1st of October, Dr. G. MARTIN will open a LABORATORY and PHARMACEUTICAL ESTABLISHMENT at No. 12, Tsukiji, Tokio.

In the Laboratory every description of analysis required will be made with the utmost exactitude. In the Dispensary, prescriptions in the English, French, German and Japanese languages will be compounded with care and accuracy. As only the PUREST and FRESHEST drugs will be employed, patients can rest assured that they will obtain the utmost possible benefit from the medicines supplied to them.

Tokio, 24th September, 1880.

## COMMERCIAL INTELLIGENCE.

**IMPORTS.**—The market continues nominally unchanged, but there is very little business passing. The currency has improved a little; but the native dealers wait for a still further improvement before committing themselves to purchases. Prices may be quoted the same as last week, but to effect sales to any extent a reduction must be accepted.

**COTTON YARNS:—**

Nos. 16 to 24, Common to Medium	per picul	\$28.00 to 31.00
" " Good to Best	"	\$31.50 to 32.75
Bombay, No. 20 do.	"	\$29.00 to 30.50
Nos. 28 to 32, Common to Medium	"	\$34.50 to 35.50
" " Good to Best	"	\$36.00 to 36.50
" 38 to 42	"	\$40.00 to 41.50

Cloths, all wool plain or fancy	48 in. to 52 in.	0.80 to 1.50
Pilots	54 " to 56 " "	0.32½ to 0.47½
Presidents	54 " to 56 " "	0.60 to 0.65
Union	54 " to 56 " "	0.32½ to 0.60
Blankets, green, 6 to 8 lbs.	per lb.	0.39 to 0.42

**SUGAR.**—Sales 2,000 bags, at \$4.25 to \$4.30. Stock 60,000.

**SAIGON RICE.**—One thousand piculs have been placed at \$1.77. Stock 39,000 piculs.

**KEROSENE.**—Some 15,000 cases have found buyers at quotation. Stock 405,000 cases.

Sugar:—Takao in bag	per picul	\$4.30
Taiwanfoo in bag	"	\$4.25
Ching-pak and Ke-pak	"	\$7.50 to \$8.25
China No. 4-5, Kongfun & Kook-fah	"	\$6.00 to \$8.00

Japan Rice	per picul	\$2.78 to 3.30
Japan Wheat	"	\$2.00
Saigon Rice [cargo]	"	\$1.77½
Kerosene Oil	case	\$2.05

**EXPORTS.**

**SILK.**—Since our last report the news from Europe has continued to be very discouraging and the result has been a weak market here and a further decline of about \$10 to \$15 per picul. At this reduction a fair business has been done, about 300 bales changing hand.

Stocks about 7,300 shipping bales.

Shipments to date 5,030 against 6,481 in 1879.

The following are to-day's quotations.

		Exchange 3/9½	Exchange 4.80
New Silks	Hanks.—No. 1 & 2	\$490 to \$500 = 15/3 to 16/6	= fcs. 46.50 to fcs. 47.80
	" " 2	\$480 to \$490 = 16/1 to 16/6	= " 46.00 to " 46.60
	" " 3 & 4	\$430 to \$450 = 14/6 to 15/2	= " 40.50 to " 42.40
	Filatures.—Extra	\$640 to \$650 = 21/ to 21/4	= " 59.00 to " 59.80
Old Silks	" " 1	\$600 to \$620 = 19/9 to 20/4	= " 55.40 to " 57.20
	" " 2	\$570 to \$590 = 18/9 to 19/7	= " 52.80 to " 54.50
	Kakoda.—Good Medium to Best	\$550 to \$600 = 18/ to 19/9	= " 51.20 to " 55.40

**TEA.**—There is a moderate business doing and prices remain steady. Settlements for the week amount to about 3,100 piculs consisting principally of Common to Fine grades. Stocks are 7,500 piculs, chiefly Common leaf.

Common	{	... ..	\$13 to \$15	Fine	... ..	\$23 to \$24
Good Common	{	... ..	\$16 to \$18	Finest	... ..	\$26 to \$27

MATSUZAKA HOTEL,  
KIGA,  
(Hakone Hot Springs.)

Yokohama, July 19, 1879.

## W. & A. GILBEY'S WINES AND SPIRITS.

**W. & A. GILBEY** have special facilities for carrying on an extensive Foreign Trade, having held for many years in their Excise Bonded Stores, for the purpose of their Home Trade, a stock of not less than 12,000 Casks of Wines and Spirits, which are equally available for Export. These stores are by far the largest private Duty Free Warehouses in the World, and are under the supervision of a staff of Excise Officers specially attached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them to give the best VALUE to the public, as a twentieth part of the Foreign Wines consumed in the United Kingdom is supplied from their stock. In the year 1876 W. & A. Gilbey paid duty on 1,881,049 gallons of Wines and Spirits, and the average quantity bottled and sent out by them daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same whether the Wines or Spirits are obtained direct from their Head Establishments or from any of their Agents. The purity and genuineness of every article in this list are guaranteed in accordance with Act of Parliament, 38 and 39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the standard of Bottle Measure recently recognised by the Government, namely—

6 bottles contain one gallon; 12 half-bottles contain one gallon.

SECURITY is ensured to the purchaser, each bottle bearing W. & A. Gilbey's seal and label guaranteeing quality and measure, and the strength also in the case of Spirits.

EDWARD FISCHER & Co.,  
Agents for Japan.

Alex. Campbell,  
GENERAL COMMISSION AGENT,  
No. 33, TSUKIJI, TOKIO.  
Tokio, 26th June, 1880.

## THE GREATEST WONDER OF MODERN TIMES HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the druggist Makomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an unobtainable effect upon the patient, which satisfies him of their value."

## SIMPLE, SAFE AND CERTAIN! HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to look up the small remaining stock." Sold by all Chemists and Medicine Vendors throughout the World May 17th, 1878.

"HIGHEST AWARD & PRIZE MEDAL PHILADELPHIA  
EXHIBITION, 1876."

## OAKLEY'S WELLINGTON KNIFE POLISH

PREPARED EXPRESSLY FOR THE PATENT KNIFE-CLEANING MACHINES, INDIA RUBBER and BUFF LEATHER KNIFE BOARDS. KNIVES CONSTANTLY CLEANED WITH IT HAVE A BRILLIANT POLISH EQUAL TO NEW CUTLERY. PACKETS 3D. EACH; AND TINS, 6D., 1/-, 2/6 AND 4/- EACH.

## OAKLEY'S INDIA RUBBER KNIFE BOARDS

PREVENT FRICTION IN CLEANING AND INJURY TO THE KNIFE. OAKLEY'S WELLINGTON KNIFE POLISH SHOULD BE USED WITH HIS BOARDS.

## OAKLEY'S SILVERSMITHS SOAP

[NON-MERCURIAL],  
FOR CLEANING AND POLISHING SILVER, ELECTROPLATE, PLATE GLASS, &c. TABLETS 5D. EACH.

## OAKLEY'S WELLINGTON BLACK LEAD

IN SOLID BLOCKS—1LB., 2LB. & 4LB. EACH, & 1LB. BOXES.

## JAPANESE PIRATES IN CHINA.

LAST week we referred in a brief note to the depredations of Japanese pirates in the China and Indian seas between the twelfth and sixteenth centuries, and mentioned the *Mémoires Concernant les Chinois*, published by the Jesuit fathers in Paris, about the close of the last century, as giving certain interesting particulars respecting the extent of these depredations and the fear inspired by them. Since that time we have had an opportunity of referring to the volumes of the *Mémoires*, and as they are by no means common in Japan, we propose now giving a *résumé* of all the references in the fifteen volumes of the work on this subject. The greater portion of these are to be found in the fourteenth volume, which contains the translation in all the countries "at present tributary to China," compiled by order of the Emperor Kang-hi in 1696, from numerous works which he had caused to be collected. Amongst these countries "at present tributary to China" is the kingdom of Cepen or Japan.

The first arrival of Japanese in China is placed at the year 57 A.D., and from that period up to recent years Embassies between the two countries were very frequent. Constant squabbles arose between the Japanese missions and the Chinese on points of etiquette, the latter claiming to be addressed as suzerains. On one occasion the ruler of Japan had the audacity to write to the Emperor of China, and superscribe his epistle "The son of Heaven at the place where the sun rises, to the Son of Heaven at the place where the sun sets." "These expressions," the chronicle says, "revolted every one; the Emperor himself was indignant; for the Emperors of China look on themselves, to the exclusion of all the other princes of the earth, as the only legitimate Sons of Heaven. In consequence, His Majesty ordered the

tribunal of Foreign Affairs to return the letter, and prohibited it from ever showing him a similar one in future." For more than a thousand years after this, similar differences were constantly arising—the Chinese, judging from this account, were willing to receive their versatile neighbours, provided the latter would adhere to strict etiquette; while the Japanese seemed to have delighted in playing the most extraordinary pranks on the grave and stately Chinese. On one occasion, in the seventh century, the Emperor of China, annoyed that his Envoy was not received with due honours, ordered that Japan should be blotted out of the list of tributary kingdoms, and prohibited all communication with the Japanese, but soon afterwards, "the king of Japan wishing to enter into the rights of a tributary of China" sent ambassadors and made up the difficulty. Not long afterwards the Japanese wishing to avoid doing business with a certain embassy—possibly disliking to answer embarrassing questions—took it into their heads to call all the members impostors and put them in prison accordingly; and on another occasion a local official in Tsushima, kept a whole mission in gaol for several months. Truly Japan cannot have been regarded with favourable eyes by the Chinese diplomatists of those days. But the following picture is probably unrivalled in the diplomacy of the world. In the year 1522, Japan being in a state of anarchy, two governors of provinces sent embassies headed by priests with tribute to China. Both arrived about the same time at Ningpo. According to the ancient ceremonial, the first arrival should have precedence of the others; but on this occasion, the second envoy, by means of a heavy bribe to a court eunuch, obtained the promise of first reception. The first envoy complained bitterly of this, but was not listened to. He resolved accordingly to take the law into his own hands, and to seize by force what he failed to get by appeals to justice. For this purpose, he armed his whole suite, and ordered them to cut down any one disputing precedence with them. The eunuch counselled resistance to his protégé, and promised him the assistance of Chinese soldiers. Soon afterwards the rival embassies met, and a battle royal ensued. The principal officers of the town came up with armed men to quell the disturbance, and seize the delinquents. The two bands of Japanese then joined together, and attacked the Chinese, killing a large number, among whom were the Governor-general and Viceroy. They spread themselves over the town, pillaging and murdering, as in a town taken by assault. For a time Ningpo was in their possession, and finally, when the Chinese reinforcements arrived, they escaped to their ships. Among those captured by the Chinese were the rival envoys. The Emperor ordered the death of the priest who had given the bribe, and sent back all the others to their own country. But we must now come to the voyages of the pirates, which form the subject of this article.

In 1369, when China was governed by the first Emperor of the Ming dynasty, we find it recorded that the Japanese infested the coast of China, making descents in Shantung, and extending their ravages as far as Hoain-gan, a large town in the province of Kiangnan. They destroyed many of the towns near the sea, and at the period of the favourable winds retired with immense booty. They returned the following year in much greater numbers, and repeated their previous outrages. Several complaints and embassies to the ruler of Japan failed to stop this, for in 1372, we find the Japanese over-running large districts in Che-kiang, Fokhien, and Shantung. Finding negotiations useless, the Emperor had ships built to guard the coasts of the two former provinces and also despatched troops there. This succeeded at first, but the pirates then attacked Shantung, which was not so well defended. Fifty-nine fortress were then erected along the coasts, and an army composed of one man in every four of the sea-board population was forced to act as coast-guard. This measure seems to have been of use for a time, although it did not wholly prevent the Japanese descents. In 1419 an expedition composed of twenty armed vessels and ten thousand men suffered a severe defeat at their hands. More than half their number were cut to pieces; but it looked as if nothing could daunt these insular barbarians. "In order that ambassadors from Japan should not be troubled by examinations at the Customs, the Emperor of China had given a hundred passports granting them full entrance into and exit from China for their personal effects." Armed with these passports the Japanese crossed to China whenever they pleased, filled the maritime provinces with all sorts of prohibited goods, and brought with them strange soldiers, spies, and arms for Chinese when they wished to excite to revolt. The Emperor was forced to drive them out of the country; and after the pillage and massacre of Ningpo above described, the order was extended to all Japanese residing in the Empire. The merchants who were thus expelled suffered much loss, and on returning to their own land inflamed the minds of their countrymen with hatred towards the Chinese, and moreover excited their cupidity with hopes of great booty. In describing the attacks that followed, the native chronicle waxes pathetic. "Soon people spoke of nothing but of the descent of the Japanese on the domains of the Empire, of Chinese vessels taken, of towns pillaged and sacked, of ravaged provinces. The whole eastern part of Che-kiang was reduced to a pitiable state by the Japanese troops, who had made themselves sovereigns of the sea." Charges of treachery and incapacity were made by the Chinese generals against each other. Three of the most capable were recalled, and the chronicle goes on "the Japanese, having now to fight only against men without experience or talent for war, overran in a short time almost the whole of Fokhien, and part of Che-kiang. The sad news which the Emperor was constantly receiving determined him to send a censor of the Empire to examine in detail into the affairs of the maritime provinces, and to give him a faithful and exact account, in order that he might take efficacious measures for establishing order. \* \* \* But things were in such a bad state that the officers, arrived at their posts, and seeing the destruction of ten important towns in Che-kiang, were so intimidated that they did not dare to defend themselves, or to take up their offices." They hastened back to the capital, and advised the Emperor to regard the Japanese, not as ordinary pirates, but as regular and banded enemies of the Empire, and to make war on them ac-

cordingly. It is worth while noticing that this was towards the end of the sixteenth century, when our own Raleighs, Drakes, Grenvilles, Frobishers, and other warriors in the Spanish Main were carrying on the same bitter and unceasing warfare against the Spaniards, that the Japanese were fighting against the Chinese on the other side of the world. It was found necessary at last to send large Imperial armies to drive out these tormentors, and "in one way or other, China was gradually delivered from a scourge from which she had suffered for so many years."

We have now arrived at the time of Taiko Hidetoshi, and the scene of conflict between the Japanese and Chinese becomes shifted to Corea, and here we may leave it. The provinces chiefly concerned in these raids were Satsuma, Hizo, Chôshin, Chikusen and Buzen. From the above hasty resumé of a Chinese narrative it will be observed that for about six hundred years, the Japanese were to the coast of China what the Norsemen were to early Europe, and the English seamen to the Spaniards in America in the sixteenth century—with this one important difference, however, that the Japanese got no permanent foothold on the mainland.

#### THE EASTERN QUESTION.

EUROPE is again much exercised on the Eastern question and the "deadlock" as it is called, at Duleigno, is creating some alarm. The naval demonstration remains as profound a mystery as ever. The motives of the Powers are entirely hidden from view, for it would be most preposterous for the fleets of united Europe to be assembled in the Adriatic to withdraw a small slice of territory from a semi-barbarous to a wholly barbarous state, or to subject one set of savages to another still more savage. We learn that a large proportion of the Albanians are Mahomedans, which may in part account for the dead set against them got up by the English Government, which is nothing if not Christian. But why the English government could not have "let sleeping dogs lie" in the Balkan peninsula is what we cannot understand, and what none of the home journals, whether ministerial or otherwise, have attempted to explain. If the continental newspapers are to be believed, the Continental Powers themselves are getting sick of the naval demonstration against Turkey, but they cannot now draw back without grave humiliation. To save their consistency they must now proceed from words to blows, and thus perhaps raise the signal for a war on a grand scale, but this seems a sorry motive to shed innocent blood for. Under any circumstances Turkey will have to be destroyed and her soil divided up among the civilized and more powerful nations of Europe. It seems that the Russian policy is about to be put in force not only with the sanction but by the active coöperation of the European powers, and England is likely to act with and not in antagonism to her.

Russia, however, does not expect to gain all her ends without fighting and she is accordingly preparing for war in Europe by economizing her resources in Asia. The expedition against the Tekke Turcomans is postponed, and as the British are withdrawing from Afghanistan, not improbably by virtue of a private understanding with Russia, there is no immediate hurry for the Russian advance on Merv, which can be taken up at any time when Russia has leisure. The attitude of Russia towards China too has rather suddenly changed. A few weeks ago the *venu*

of the negotiations was shifted to Peking, where the Russian plenipotentiary would be ostentatiously backed by a naval demonstration, and where terms could be dictated to China with every prospect of success. This programme has been changed. M. Butzoff has gone back to St. Petersburg, the Marquis Ts'ing has been detained in Russia, the Czar has dropped the more severe tone of a few weeks ago, and professes himself once more willing to resume negotiations at the Russian capital. There are evident signs of Russia's desire to avoid any difficulty on her Siberian frontier, a prudent resolve which has obviously been dictated to her by the critical aspect of European affairs. Whatever happens, Russia must not be unprepared to cut in and have her slice of Turkey, if Turkey is to be cut up. The fruit which Russia has been watching and waiting for so many years seems to be ripening rapidly, more rapidly indeed than could have been expected even a year ago, and Russia must be ready to pluck it. A European war is a horrible thing to contemplate. But it may come sooner or later, for no concert of Europe in our opinion can amicably settle the questions which the break-up of Turkey will open, but as Lord Derby said, he would prefer the war later. The longer a devastating war is put off, the better. There is always a chance of avoiding it altogether.

THE cessation by the *Sanji* of their escorts is significant of a much better state of things in the country than one might have expected. It will be remembered that after the assassination of Mr. Okubo—probably the greatest minister Japan has produced since the restoration,—in the spring of 1878, the ministers were, by order of the Emperor, provided with cavalry escorts of about six men each. Probably these had the effect of preventing further attacks about the same time, by some among the idle and mischievous class of *samurai* youth, from which the Home Minister's murderers were drawn. The statesmen who are chiefly concerned, and who comprehend better than any others the meaning of the step which they are taking, have now decided to dispense with these troublesome marks of dignity. It has been well known for some time past that the younger members of the Cabinet objected to the guards, and employed them as little as possible. Indeed many substituted a few police for the more imposing escort of cavalry. Probably the ministers have reflected that the heated feeling generated in the country by the Satsuma rebellion, to which Mr. Okubo fell a victim, has now long passed away, and that no cause for similar excitement has arisen. In any case, it is worth noticing that the responsible ministers of Japan have shown in this practicable manner, their belief that the old feelings of their countrymen have so far changed that they can exercise their high functions without the fear of personal danger or insult. It is a pledge of the absence of strong or excited political feeling in the country.

IN an otherwise very able, and, so far as we can judge, very accurate work—Mr. James Routledge's "Popular Progress in England"—we find the subjoined passage:—

"The great rulers and lawgivers of antiquity sought light, often by personal and laborious travel in many lands, and always by a fair consideration of the views and experience of other men. What ancient legislators did in a way that accorded with their time, the French did in a way that accorded with theirs, and the Mikado of Japan has within a very recent period done in a way that accords with his perceptions of statesmanship in a country which begins to attract the attention of Europe as with a magnet. He has, it is said,

sent out, or is sending out, men to search for a new and true faith which shall serve for a basis of public morals. It is the aim of a royal philosopher, and the most that can be said against it is that philosophers never yet have been very successful in the enunciation and perpetuation of any living religious faith. One vital truth is probably as much as any people can grasp at a time. The policy of the Mikado is simply a curious experiment; not to Japan, for the destiny of the nation may depend on it, but to the nations that are lookers on."

The writer is quite right. It would be a very curious experiment, if the Mikado had ever sent men over the face of the earth to select a religion for him. It is not difficult to imagine the astonishment of His Majesty over the dirt-eaters of Oregon, or the Mumbo Jumbo of the African negro, or the Brownists, Antinomians, Pelagians *et hoc genus omne*. Not the least surprising part of the matter is to find an able and popular English writer gravely discussing such trash.

"IT'S an ill wind that blows nobody good" is a well known axiom, which was verified lately in a somewhat peculiar manner in the Philippine Islands. In a late number of the *Strait Times*, we read a remarkable account of the successful recovery of cargo which had been under twelve fathoms of water for over four years, and was again brought within man's reach by the late terrible earthquake at Manila. Four years ago, the first-class iron vessel *Rhoades*, of 1,600 tons register, was scuttled in Manila bay, she having caught fire when on the point of sailing with a full and valuable cargo of hemp, pearl shell, gum copal, bar copper, &c. During the recent earthquake she was thrown up by a tidal wave, from where she lay in 12 fathoms water to close in shore in 2 or 3 fathoms, and was then purchased by an enterprising diving and salvage company, just started in Singapore, for the trifling sum of \$70, and it now appears that her cargo has not suffered from her long submersion and is valued at about £60,000 by manifest.

#### REUTERS'S TELEGRAMS.

LONDON, 15th November, 1880.

FRANCE.—The Ministry resigned, but the Chamber of Deputies having passed a vote of confidence, the resignation was withdrawn.

LONDON, 18th November, 1880.

The rebellion at the Cape is becoming more serious, and owing to the hazardous state of affairs, the burghers have been called out.

##### DEATH.

At Hongkong, on 2nd November, aged 35, M. HONDA, Japanese Agent of the Nisau Bishi Mail Steamship Company, Hongkong.

The home mails arrived here on the 14th instant by the Messageries Maritimes steamer *Tanis*, and the P. & O. Com-

pany's steamer *Malacca* left at one o'clock this morning, with home despatches; beyond this there are no mails to report.

The S. S. *Devonshire*, 1,512 tons, Capt. A. McGachen, from London, &c., arrived in port on Thursday night last. The *China Mail* writes that "this vessel is one of the 'Oriental' line, owned by Messrs. G. Marshall & Co. of Philpot Lane, London, but chartered by Messrs. Bushley & Co., who, we understand, propose putting eight steamships upon the line between London, Hongkong, Shanghai, Yokohama and Hiogo. The two steamships *Castilla* and *Galley of Lorne*, which have been out on this trip before, are two of the same line." Messrs. Mourilyan, Heimann & Co. are the consignees at this port.

The following particulars of the most unfortunate accident to the *Braemar Castle* came to hand by the French mail:—

"The *Braemar Castle* arrived at Penang on the 16th October with high pressure piston broken, and was lying at double anchor in the harbour during repairs. At about 4.45 a.m. on the 28th, at dawn, with a good moonlight, the S. S. *Breconshire* from London, coming in to take up a berth, managed to come stem on to the *Braemar Castle*, cutting her down to nine feet below the water line on the starboard-side at the fore-rigging. Anchors were at once slipped, and the *Breconshire* attempted to tow her ashore, but the mail steamer had come in and anchored between them and the shore, and so prevented this without dropping astern, and before shallow water could be reached the *Braemar Castle* sank head-foremost in about nine fathoms of water, and the masts and about two feet of the funnel only are visible. She sank at 5.55 a.m. The *Breconshire* is uninjured. The wreck has been surveyed, but the Surveyors have not yet given their decision. All lives were saved."

Another letter adds that "when the collision took place, the *Braemar Castle's* lights were quite in order. . . . As to raising the vessel nothing can of course be said at present or until further investigation into her position &c., has been made, but it is said that the undertaking would be a very difficult one owing to the current at the spot where she lies being very strong. Messrs. Guthrie & Co., who are the agents at Singapore are securing from H. M. S. *Curacao*, the services of divers to go to Penang to report on this point."

The *Penang Gazette* contains the following account of the sinking of the steamer:—

"As the steamship *Breconshire* was steaming in to take up a berth at a little before 5 a.m. this morning, she ran into the steamship *Braemar Castle*, then lying at anchor in the harbour. The latter vessel had a large rent made in her side abaft the forechains, and her Captain, finding his vessel sinking, called upon the *Breconshire* to tow him into shallow water and slipped his anchors. The *Breconshire* promptly took the *Braemar Castle* in tow, but owing to the P. and O. steamer *Indus*, which had anchored shortly before, swinging across stream, the tow ropes had to be cast adrift in order to avoid another collision, and the *Braemar Castle* slowly drifted past the *Indus* and at 5.55 a.m. settled down by the head about ten ship's lengths to the northward of the latter in nine fathoms of water, where she now lies with just about a foot of her funnel visible above water. There was no loss of life, we are glad to be able to report."—*China Mail*.

The high prizes given at our last Race Meeting has been productive of some good, as we learn that Taels 300 have been paid for the grey pony *Louis d'Or*, for a Yokohama purchaser. Surely our friend intends to win all the rich German and French cups of the future. *Louis d'Or's* record is excellent. He ran a close second to *Zip* in the *Strath Plate*, 1½ miles, in 3 min. 18 secs. He ran third to *Zip* and *First Clarinette* in the *Margot Cup*, 1½ miles, in 3 min. 25 secs: second to *Prejudice* (the crack) in the *Grand Stand Stakes*, 1½ miles, in 3 min., 19 secs. He was also second to *Strathpeffer* in the *Farmers' Cup*, 1½ miles, in 2 min. 44 secs. Verily, the old ponies had better be kept in their stables next spring, unless, indeed, our *hill* proves too much for the golden monarchist.

By the French mail, which arrived on Friday morning last, we received a communication from the agent of Signora Patti's

Concert Company now performing at Singapore. The Agent states it is the intention of the Company to visit this port at an early date, taking Batavia, Hongkong, Shanghai and Kobe *en route*. We are informed that Mlle Carlotta Patti has gained a great reputation in England, and is sister to Adelina Patti, the great Italian Opera singer. Mlle Patti is accompanied by M. de Munck, the great Belgian violoncellist; Signor Campi-Collaji, an eminent baritone, and other artists. The tour in Australia has been a most successful one, and has been looked upon as the most striking musical event in the history of the southern hemisphere.

In H. B. M.'s Court for Japan, on Friday last, a coloured man was charged with larceny. He claimed to be a Turkish subject and was consequently handed over to the Japanese authorities as a non-treaty subject, the offence having been committed on shore. The prisoner was afterwards brought up before the native authorities, but as they declined to pay any fee, the interpreter very properly refused to assist and the case was consequently dismissed.

A gentleman backed himself, on Thursday last, to ride the particularly fidgety pony *Crusader* round the road, yesterday, in a saddle *without girths*, for \$50. A start was effected at 11.10 a.m. before a number of spectators, from No. 37, Settlement. True to his old style *Crusader*, to use the graphic description of one of the spectators, skated backwards up the Camp Hill. His rider, however, was thoroughly equal to him and shortly after noon brought the pony in, having accomplished his task, in which was included the not altogether disagreeable item of drinking one glass of beer at three separate tea-houses. Quite a crowd attended at the stables of Messrs. Cobb & Co., who followed the rider as referees, and the winner was greeted with well-deserved applause.

A case of sudden death occurred in the Settlement on Saturday evening last. A raffle was being held at the saloon of Mr. Gibbs, No. 41, and Mr. J. White, of 136 Honmura Road, who was interested in the matter, had just thrown his chances, when he fell backwards, dead. The cause of this was heart disease, from which the deceased suffered for some time past.

We were glad to see a large audience at the Gaiety Theatre last Monday evening at the dramatic performance given by the Amateurs of H. M. S. *Comus*. We believe that strenuous exertions were made to sell the tickets for both parts of the house, and we hope the result will encourage our naval dramatic friends to give us another representation while they remain in port.

The entertainment opened with a scene from Buckstone's Comedy of "Luke the Labourer;" setting forth how a vision of "Cold Pudding" (combined with the warm embraces of Jenny) deterred a young countryman from a projected visit to the gaieties of the metropolis. This was ably acted by Messrs. Edwards and Roalf, and immediately put the audience *en rapport* with the stage.

The second part consisted of a variety programme,—songs, stump orations, etc., all of which seemed to delight the gods. These latter grew especially enthusiastic over such songs as "The Old Arm Chair" and "Launch the Lifeboat." These songs were both well sung and re-demanded with a wild furor by the impromptu chorus—which as usual delighted in hearing itself again. We must not omit to mention a violin duo with piano accompaniment, kindly contributed by three amateurs in lieu of the "Charge of the Light Brigade," omitted from the programme.

The evening came to a pleasant ending by a brisk little comic drama—"Good for Nothing," in which Mr. Roalf, in the title rôle, won thunders of applause. He was ably supported by the rest of the company. The audience was convulsed with laughter, and went away convinced that the crew of the *Comus* possess among their number a good deal of histrionic talent, which we shall only be too glad to see displayed once more in furtherance of the *Atalanta*, or any other fund.

Commenting on the arrival of the Parisian actress, Mlle Sarah Bernhardt, in New York, a San Francisco journal makes the following extraordinary statement respecting the sale of

Theatre tickets:—The sale of the Bernhardt tickets netted \$21,000 this morning (October 1st) in forty-five minutes. The queue of patient watchers in the lobby of Booth's Theatre was still unbroken when the light of morning appeared, the line having remained all night. Three hundred and fifty seats, representing \$21,000 in the treasury, were sold. *The Tribune* says that this is probably the largest amount of money ever received in a theatrical box office in one day. Five seats were the largest number bought by one person. The orchestra and balcony of Booth's Theatre seat 1,000 people, hence there are many good seats left. The sale of single nights will begin on Monday morning, and it is then that the greatest competition for places is expected.

Thursday's meeting of the Rifle Association came off pretty punctually. Fifteen competitors appeared, and among the leaders the shooting was creditable. The first prize of the Association Cups was won by Mr. A. Barnard, the second prize falling to Mr. A. H. Dare, who also carried off the silver medal of the National Rifle Association. The sun shone brightly, but the entire absence of wind caused the smoke to hang in the range valley, and at times rendered the target almost invisible. The winning scores were, however, exceedingly good.

We append the scores:—

ASSOCIATION CUPS.—400 and 500 yards. 5 shots each range. 1st prize, \$30. Second \$10.

A. Barnard	... ..	46 points.
A. H. Dare	... ..	37 "
Guissani	... ..	36 "
Cocking	... ..	34 "
Bland	... ..	33 "
Schinné	... ..	31 "
Talbot	... ..	30 "
Inglis	... ..	28 "
Glennie	... ..	27 "
Douglas	... ..	26 "
Stiebel	... ..	26 "
15 competed.		

SILVER MEDAL OF NATIONAL RIFLE ASSOCIATION.—200, 500 and 600 yards. 5 shots each range.

A. H. Dare	... ..	62 points.
Talbot	... ..	48 "
Inglis	... ..	46 "
Bland	... ..	44 "
Barnard	... ..	44 "
Douglas	... ..	41 "
Cocking	... ..	39 "
Schinné	... ..	39 "
Guissani	... ..	35 "
15 competed.		

The Consolation prize, 5 shots at 200 yards, value \$20, competed for on the following day, was won by Mr. Guissani.

We learn that another case of sudden death has taken place in Yokohama. On this occasion it was on Sunday morning last, near the Central Police Station on the Bluff. A gentleman was proceeding to town from his hill residence when he saw a Chinaman, apparently dead, lying in the road. Examination proving that life was not quite extinct, with assistance he had the man placed in a jinrickshaw for conveyance to the hospital. Here, however, the inevitable policeman appeared on the scene and declared, in an insulting tone and manner, that the individual should not be removed from the spot until such time as some peculiar formalities (known only, we presume, to Japanese policemen) should have been gone through. However, by the time these preliminaries had been effected, it was found that instead of a bed and medical treatment in the hospital being required, a coffin was the only article necessary, as the man had died in the interval. Should the Authorities feel anxious for confirmation of the above, we have our informant's permission to hand them his card.

The Mitsu Bishi steamer *Hiroshima Maru* arrived in harbour early on Thursday morning with the Shanghai and way port mails on board. We take the undernoted items from the *Shanghai Evening Courier*. There is nothing of importance to notice in our Nagasaki or Kobe exchanges.

To celebrate the election of General Garfield as the next President of the United States of America, the large holiday flag and pennant were to-day, (Nov. 6th) hoisted on the United States Consulate-General flagstaff, and in addition, a

white pennant underneath with the name of the successful candidate on it.

At twenty minutes past six o'clock on Wednesday morning, (Nov. 3rd) the Chinese Alphabetical gunboat *Delta* was under steam proceeding down the river on the strong ebb tide, and from some cause or other took a sheer as she passed the U. S. corvette *Alert*, and grazed the latter vessel's port bow, carrying away the port foretopmast studdingsail boom, crushing the catamaran and knocking one of the sailors, who was aloft scraping the boom, into the water. Fortunately, the man was not seriously hurt and was quickly picked up, and has since been able to return to his work.

A Daily newspaper in the French language is to be started in Shanghai next week. It will be entitled *L'Independant de Shanghai*, and in addition to the usual journalistic contents will furnish its readers with selections from works of fiction.

Yesterday afternoon about five o'clock an old China resident, Mr. F. P. Knight, put an end to his existence by shooting himself through the head with a revolver. The bullet entered the roof of his mouth and lodged in the skull, from which it was afterwards extracted by Dr. Henderson. The deceased appears to have died instantaneously and without a struggle. From the evidence given at the inquest this morning, it seems that at times he was in a morbid condition of mind. The jury returned a verdict to the effect that the deceased committed suicide whilst laboring under temporary insanity.

The United States corvette *Alert* left yesterday morning early, in response to a telegram from the Rear Admiral, ordering her to proceed at once to Hongkong. She had no other orders, but it is supposed that she would go to the *James Bailey*, of 1,531 tons, Mann, master, which vessel left Hongkong on the 13th ulto., on a voyage to Vancouver's Island, but appears to have been lost somewhere near Hoihow a few days afterwards. It is said that some of the foreigners belonging to her had been killed by the natives. A report was circulated in the settlement yesterday to the effect that the *Alert* had been ordered out to look for the *Brown Brothers*, on board which, it was said, mutiny had occurred, and that the Manila sailors had murdered the Americans on board. The *Brown Brothers* cleared at Shanghai, on 9th Oct., for Manila. We have made enquiries at the agents' offices, but they have no such information.

An official journal at Amsterdam says that the Dutch General at Acheen has had to retire somewhat, his forces being insufficient to gain a decisive victory over the Achinese. Acheen has been some years at war with the Netherlands, which claims sovereignty over all Sumatra, but which has had no little trouble in enforcing their claim. The Kingdom of this name extends from the River Sinkel to the west end of the island, and has a coast line as long as that of France. It was once a powerful State; has an area of 22,000 square miles, and a population of about 450,000. The natives of Sumatra are principally Malays, who profess, rather than practice, Mahomedanism. In appearance, manners and customs the Achinese differ widely from all the inhabitants, except the Lampongs of other parts of Sumatra. They are tall, well-formed, active, intelligent, but cunning, proud, perfidious, and very cruel. Their habits are simple, though they are opium-eaters and slaves of the drug. Caste prevails among them as well as polygamy, their wives being bought from their nearest relatives at rates regulated by youth, physical condition, and personal experience. The Achinese houses are erected on posts of iron-wood, and several families live under one roof. Acheen alone produces 8,000 tons of pepper annually, and exports cotton, raw silk, benzoin, camphor, sapan-wood, sulphur, gold, and precious stones, receiving in exchange salt, opium, manufactured goods, etc. The Achinese will give anything for opium—many of them subsist on it—even its weight in gold, if they can get it on no better terms. They are superior in every way to the other Malays of the island, and are far more formidable in war. Marco Polo visited Sumatra in the thirteenth century; Alvaro Tozeo in 1503, and Signera in 1509, the Portuguese then beginning to trade with the natives. Ninety years later the Dutch reached Sumatra under Houtman, who, on a second visit, was treacherously murdered at Acheen. Two vessels from Zealand, with

commissioners-General De Rol and Laurens Bikker, arrived there in 1601, and were kindly received by the native king, procured full cargoes, and returned with two Achinese Ambassadors. The Dutch afterwards drove the Portuguese from their factory at Pulu Tzinko, to the south of Padang, which became (1666) the seat of Dutch power on the coast. Within a few years Bencolen was surrendered to them, and the southern division of Sumatra soon followed. Various rebellions have since occurred, with the invariable result of increasing the territorial possessions of the Netherlands. An expedition was sent in 1865 to the King of Asahan, a small State on the northeast coast, to compel him to submit to Dutch authority, and since 1872, the Netherlands have been engaged in hostilities, more or less active, with the Achinese, who are steadily melting away. They have been the chief obstacle to the entire control of Sumatra, and their opposition cannot, in the nature of things, last very much longer. The Dutch will soon be absolute masters of the whole of Sumatra.

The name of Captain Kidd will be familiar to our readers, most of whom, in their boyish days, have probably personated that famous pirate. Kidd was reported to have buried enormous treasures, and the discovery of some of them forms the subject of "The Gold Beetle," one of Edgar Allan Poe's most imaginative stories. Even in these matter-of-fact days the treasures seem to be attracting attention, as we notice in an exchange that Captain Kidd's famous treasure is being sought in the Hudson, off the south end of Round Island, near Peekskill. The staunch schooner Mary D. Leach is engaged in the work for the international Submarine Company of Connecticut, and her powerful hydraulic force-pumps are said to have already cleared the mud from part of the deck of the sunken vessel. The prophet of the enterprise is D. D. Chapin, 65 years old, who searched for the ship 35 years ago and finally invented what he calls a marine compass. This discovers metals under water, it is claimed; but after locating Kidd's ship, Chapin abandoned further search and went into mining ventures. He now finds that the ship has sunk out of sight in the mud, but asserts that his compass shows her to have \$100,000 in gold coin and many times that amount in silver in her hold. Chapin claims to have once seen a book in which Captain Kidd's first mate stated that they fled up the Hudson from pursuit, but ran into an island and sunk. An old caisson found on Round Island confirms this story, in his opinion.

We read in a late number of the *New York World*, that the corner-stone of the Obelisk was laid in Central Park, on the afternoon of October 9th, by Most Worshipful Jesse B. Anthony, Grand Master of Masons in the State of New York, assisted by the Grand Lodge and some two hundred and fifty Masonic lodges, and escorted by the Grand Commandery of Knights Templars and ten commanderies of New York and Brooklyn and four visiting commanderies. The day was delightfully fine; and the result was a full representation of the best lodges in the jurisdiction. After 12 o'clock in the day the streets crossing Fifth avenue were made lively by the sound of music from the different bands which were escorting divisions of lodges and commanderies to their places on the streets east and west of the avenue from Fifteenth to Twenty-second street. Early in the morning Temple Commandery, No. 2, of Albany, and Apollo Commandery, No. 15, of Troy, arrived in the city by their respective boats and proceeded to the St. Nicholas Hotel to breakfast and prepare for a long march. Hugh de Payens Commandery, No. 1, of Jersey City, and Damascus Commandery, No. 5, of Newark, arrived in the city by the 12.30 boat from Jersey City, and proceeded direct to the places assigned them on East sixteenth street, escorted by a detachment of Palestine Commandery, No. 18. Upwards of nine thousand masons composed the line of parade. The *World* gives the following interesting account of the masonic emblems found with the obelisk:—

"In the removal of the foundations of the obelisk there was made what is considered a very important historical discovery relating to the Order of Ancient Free and Accepted Masons, and confirming its claim of ancient origin. When Lieutenant-Commander Gorringer removed the obelisk and pedestal it was

found that the latter stood on nine large blocks; six of these formed the upper and middle steps—the middle steps being cut out of the face of the block—while the other three were in the space inclosed in the six. All of these blocks are of hard limestone, with the exception of one, which is of syenite granite and is placed in the east angle of the inclosed space. The corners of the foundation, like the corners of the obelisk, were laid towards the cardinal points of the compass. The block of granite already mentioned is exactly two royal Egyptian cubits square and two Nahud or builder's cubits high; it has evidently been carefully dressed, and probably polished, while the other two blocks in the inclosed space are rough hewn and of irregular shape. After the upper tier had been removed it was found that the lower step was formed of a tier of eighteen pieces. All of these are of hard limestone except three, two of which are of syenite and one of a different kind of limestone. One of the pieces of syenite is an oblong block, having the upper half hewn to the form of a mechanic's square. Its long section is 8 feet 6 inches by 1 foot 5½ inches and its short section 4 feet 3 inches by 1 foot 7¾ inches, measuring the length in each case from the outer angle of the square. It is 2½ inches thick and would seem to have been originally a parallelogram 8 feet 6 inches long by 4 feet 3 inches broad, and the form of a Mason's square given to its upper surface by cutting out and lowering to the depth of nine inches that part of the stone included between the two inner lines of the square and the continuations of the transverse lines of its two ends. The lower part of the stone still has its original form of a parallelogram. The space cut out of its upper part was filled with the ordinary limestone of the foundations, so that on its first discovery only the upper surface in the form of the Mason's square could be seen. The thinner part of the stone has been broken, perhaps by the unequal pressure that came upon it, but the part forming the square is still perfect. The other piece of syenite is of irregular form, and differs from all the other pieces of the foundation in having the upper surface rough. Any one who examines it must be convinced that this roughness is not natural, and close examination will disclose tool marks on it, showing that pieces had been gouged out of this upper surface to make the roughness more apparent. The perfect block of syenite stood on the east end of the long arm of the square and the piece of white limestone was in the space between the perfect block and the lower part of the block out of which the square is cut alongside the long arms. The rough block of syenite stood in the west angle of of the space inclosed by the eighteen pieces forming the lower step, touching the short arm of the square and on a level with it.

"When the square was discovered it was thought to be the lid of a sarcophagus, and several gentlemen were invited to witness its removal, among them a distinguished archaeologist. Great was the disappointment when it had been raised that nothing was found under it. Every one present was struck with its peculiar form, the difference in the cement and its relative position to the perfect block. A large number of Masons of almost every nationality and creed have since examined the pieces and have had their positions explained, and every one of them fully confirms the opinion that these three pieces of syenite were intended to represent the three Masonic emblems—the perfect ashlar, the square and the rough ashlar.

"The piece of white limestone referred to as having been found sandwiched in between the perfect block and the recess of the square was broken by the workmen in their eagerness to get at the supposed sarcophagus. This accident revealed its remarkable purity and exceptional whiteness. Break it where you may, not a spot could be found in the fracture. This peculiarity, coupled with its position, convinced the experts that this also is a Masonic emblem—the lambskin apron. The arms of the square are not of the same width; this unusual circumstance is at once explained by measuring them, when we find that the long arm corresponds with an Egyptian royal cubit, and the short arm to an Egyptian Nahud cubit. The architect was either bent on perpetuating these measurements or the square was removed from its original foundation just as it is being removed now. The short arm is exactly as long as the long arm which is exactly five Egyptian royal cubits in length. Another noticeable feature of the square is a lead that is cut

at the junction of the inner edge with the lower part of the block. There are three divisions, and the middle one is much broader than the other two.

"The block that lay alongside of the long arm of the square was found to have on its upper surface a piece of iron, which was at once recognized as having the form of a Mason's towel. On examination it was found to have been laid on cement so as to make it adhere to the stone, which fact disposes of the presumption that it had been accidentally left there by one of the workmen.

The block next to the one forming the east angle of the lower step has a diamond-shaped recess in the side adjacent to the east angle. There was nothing in the hole, nor could it have been cut for the purpose of fastening the piece, as there was no corresponding aperture nor dowel on the face of the adjacent block. Indeed, this carefully cut diamond-shaped hole has no explanation, except that it was designed to represent another Masonic emblem—the Master's jewel. All of the stones forming the tier next below the lower step were rough-hewn and without marks, except three. One of these was the keystone, and stood exactly in the centre of the structure under the axis of the obelisk and the pedestal, in which position it was discovered by Mr. Zola, the Most Worshipful Grand Master of Egypt. Several figures and lines cut in relief are distinctly traceable on one of the faces of this stone. Two of the sides are cut away so as to form a right angular notch and another face has the arc of a circle inscribed on it.

"One of the figures represents a square, another a semicircle, and another the sides of a spherical triangle. The group of lines may be resolved into three figures. One is in the form of the ancient cubit measure, another is a scale and the other one three columns in perspective. This group of lines and the figures were evidently designed to represent the trestle-board; and what more fitting position for such a design could be found than the centre of the structure—the axis of the obelisk, the keystone of the foundation? Another of the stones of this tier has on one of its faces diagonal lines running parallel to each other, others forming an angle of forty-five degrees with these. On close examination it was found that each of these lines is not a simple scratch, but a carefully cut mark, having two indentations, with a raised bead between.

"Well-informed Masons, capable of appreciating their meaning, say that they are intended to represent the "Master's Mark," and this is certainly borne out by the position of this stone, which was alongside of the keystone and locked into the notch above referred to.

"The third stone of this tier having marks stood in the east angle of the tier, directly under that piece of the lower step that has the diamond-shaped aperture cut into the side. Its upper and lower surfaces and two of its sides are rough-hewn, while two of the sides have been most carefully cut. The angle formed by these two sides has a marked similarity to the capital of an Ionic column with its spirals and beads. This is believed to have been designed to represent "Wisdom"—the Master.

"Last of all was found in the debris removed from the foundation a piece of lead, which on examination was found to be a plummet. The obelisk was also surrounded by a mosaic pavement; it was approached by three steps, of which the middle one was very much narrower than the other two, and united to the upper; it stood on a single block; under this block, within the steps, were a perfect ashlar in the east, a rough ashlar in the west, a square, a trowel, and an apron between them: in the axis of the structure there was a keystone, with figures cut on one of its faces to represent a trestle-board, alongside of it a stone having the "Master's Mark," and on the same level in the "East" another, the emblem of "Wisdom," and immediately above this a diamond-shaped aperture, representing the Master's jewel."

We have repeatedly and at length called the attention of the Bureau of Woods and Forests to advantages likely to accrue from the results of Afforestation in this country. We read in a foreign exchange an interesting account of the advance of

that science in France:—"French forestry has accomplished wonders in France of late years. Wind-blown hill-tops have been covered with shrubs and trees by building weirs in the mountain gorges and gradually cultivating vegetation upwards. The Torrent du Benquet is one of the best examples of this reforestation. In 1868 it was only a bare ravine of rocks. The torrent is now quieter, and has never since devastated the valley below with periodical inundations, as was formerly the case. From 1861 to 1877, 68,000 acres were planted with trees, and 6700 trees tufted, at an expense of 1,725,000 francs. The reclamation of sand dunes is accomplished by building strong fences and planting meadow grass, sedges, broom, or espartero grass in the lee of the masses formed by the shifting sands against the fences. The blue gum tree has been planted extensively in the South of France, and the marshes at the mouth of the Var have been drained, and the fevers that used to prevail there have been ended. In poorer soil the American oak has been planted." If France can do so much in this direction what might Japan do if those interested were properly encouraged.

The following remarks on the production of Wool in America are taken from the columns of the *San Francisco Chronicle*, and may be worth perusal by our general readers—both foreign and native:—Yolo ranks among the first counties of the Sacramento valley in the production of wool. It is estimated that over 100,000 sheep are owned and pastured within its boundaries. A large percentage of these sheep have been graded up to a standard sufficiently fine to insure a heavy yield, both at the spring and fall clips, of marketable wool. Great pains are generally taken by our heaviest wool growers to put only the best quality of their product on the market. This is sold to local buyers at prices ranging from 10 to 20 cents per pound. Our local buyers unload their purchases, of course, as they can do so at a profit on their investment. The parties to whom they sell ship the wool to manufacturing establishments in the Eastern States and dispose of it at a profit to themselves. The wool is then manufactured into different kinds of goods, which are sold wholesale to the commission merchants and other dealers, who in turn again sell to the retail men, who sell the goods back to the producer for use in everyday life. It is, of course, the supposition that every firm through whose hands the raw material or the manufactured goods pass, makes more or less profit in handling the same. It will therefore be seen that the producer, when he purchases back his wool in the shape of blankets, clothing or other necessary articles, is compelled to pay an enormous advance over the original price received. In other words, he raises the commodity for nothing and pays a high price for the privilege. Now this is all wrong. We hold that if there is any profit in the production of wool or any other staple, the producer, and not the middle man, is the one who should receive the benefit of that profit. Now this can be easily done in this county if the wool growers would only take the proper view of the case and act accordingly. Let a joint stock company be formed with a capital sufficiently large to build and put into operation a woollen mill of sufficient capacity to manufacture into different kinds of fabrics all the raw material produced. Let every sheep man take stock in the same in proportion to the amount of raw material he can reasonably expect to furnish annually. Let the wool produced here be manufactured here, and thus insure to the producer all the profit which now accrues to those who handle the material up to the time it leaves the Eastern manufacturer's hands. Besides the benefits to accrue to the producer in case the above suggestions should be acted upon, the entire community would also be benefitted thereby in proportion to the magnitude of the enterprise. Should a woollen mill be put in operation here it would give steady employment to many of our boys and girls; it would serve to increase the assessment roll of the county; it would infuse life into the business of our merchants; it would give a new impetus to all transactions in real estate, and, in fact, be of great and lasting benefit to every class of people in our midst; and besides all that, would, in all probability, be the nucleus around which other manufacturing interests would cluster in the future.

## ASIATIC SOCIETY OF JAPAN.

A general meeting of the Asiatic Society was held at the Shōheikuwan, Seidō, Tōkiō, on Tuesday, November 9th, Dr Divers, President, in the chair. The election of Lady Mary Thompson as a non-resident member was announced. It was also announced that Mr. J. M. Dixon had been elected Treasurer of the Society, and that Messrs. E. G. Holtham, and H. T. Terry, had been chosen to fill the seats in the Council rendered vacant by the absence from Japan of Messrs. Bramsen and Gubbins.

The Corresponding Secretary, in the absence of the author, read a paper by Mr. B. H. Chamberlain, entitled "Notes on the Dialects spoken in Abidzu."

The author observed that the dialect of Abidzu appears allied to that spoken in Yonezawa as described by Mr. C. H. Dallas in a former volume of the Society's Transactions. Its chief peculiarities in pronunciation are the contraction of the diphthong *ai* into *é*, and sounding the syllable *hi* as *fi*, but it is wanting in that tendency to nasalization which marks other northern dialects. Grammatical peculiarities seemed to be the excessive use of archaic honorific forms like *morassharu*, to ride, and *mite isasu* to see. The pronouns in use are *ore* for the First Person among equals and *wasshi* to superiors, *omé* for the Second Person universally. The paper concluded with suggesting that missionaries and teachers resident in the interior might do great service to philology by studying local dialects, for which they have much better opportunities than passing travellers.

After a few remarks by the President, who regretted the absence of the author, and its cause, and by Mr. S. Tsuda,

Mr. Satow said.—There are four points to which the student of a particular dialect ought to direct his attention; 1st, to the collection of words and forms different from those of the standard speech; 2ndly, he should endeavour to distinguish those which are peculiar to the particular dialect from those which are found in other rural dialects; 3rdly, he should mark those which are archaic words preserved, and 4thly note those which are merely corruptions of the standard speech.

Of all the dialects, that of Satsuma probably differs most widely from the standard. Two natives of the province conversing in it would be quite incomprehensible to a person acquainted solely with the Yedo dialect. A few years ago, while hurriedly crossing the province, I obtained the following specimens.

## SATSUMA DIALECT.

Satsuma.	Yedo.
Gattsuri .....	kitchiri .....
Mambō .....	richō .....
Doshika .....	doreake .....
Koshiko .....	koredake .....
Tonaji .....	teishi .....
Okuta .....	niōbō .....
Mamō-sambō .....	gohō or shihō .....
Chinka .....	chiukai .....
Futoka .....	ōkii .....
Yawurashi .....	yawarakai .....
Hayatsuiki .....	kan-dokuri .....
Chaku .....	dobin .....
Teshico .....	kozara .....
Bontan .....	jābon .....
Modoru .....	kaeru .....
Nukui .....	atatukai .....
Nukumeru .....	atatameru .....
Agumu .....	aruku .....
Bu .....	ninsoku .....
Kashira .....	saisho .....
Makaru .....	yuku .....

Verbs of the 2nd conjugation are conjugated like verbs of the 1st except in participle, e.g. *miranu* for *miru*, *mirō* for *miru*.

The Kiōto dialect, as far as pronunciation is concerned, differs from that of Tōkiō (the Yedo dialect) very slightly. In the introduction to Dr. Hepburn's larger Japanese-English Dictionary it is stated that at Kiōto *y* has the hard sound of *y* in *gy*, *guin*, and that *se* and *ze* are pronounced *she* and *je*. I have been several times in Kiōto for several days together, in constant conversation with the inhabitants, but have failed to

detect these peculiarities. It is also usually supposed that the Kiōto people pronounce *ye* instead of *e* when that syllable occurs at the beginning of a word, but though I have listened very carefully for this *y* I have never heard it, except when pronounced rapidly after a word immediately preceding, when the passage from the final nasal *n* or a vowel naturally gives rise to the semi-vowel *y*, as is the case in the Yedo dialect also. It is this fact which has led foreigners to call the Japanese dollar *yen* instead of *en*, because they always hear it immediately after a numeral ending in a vowel. At the beginning of a sentence no *y* is heard either in the Kiōto or in the Yedo dialect.

The Kiōto dialect is certainly more correct in pronouncing certain Chinese syllables *kuan*, *kratsu*, *krui*, *gran*, *gratsu*, *grui*, etc. instead of *kan*, *katsu*, *kai*, *gan*, *gatsu*, *gui*, etc. like the inhabitants of Tōkiō. It is a curious fact that in the province of Kadzusa, on the eastern side of Yedo Bay, therefore further from the ancient capital, the correct pronunciation is preserved. Still the Kiōto people use several corrupt grammatical forms and corrupted expressions of which the Yedo dialect is not guilty, and I think it is going somewhat too far to say that the language of Kiōto is the standard. For instance they say *sen' naran*, must do, for *u senba naran*; *kōte*, *kōta*, buying, bought, for *kutte*, *katta*, which latter forms are certainly nearer to the classical *kahite*, *kahita*. They have corrupted *dono yōmu* and *dono yōmi* into *domaina*, *domaini*, and *da* is changed into *ja*. They have a great tendency to drop final *n*, as in *go nri* use for *go nri anobane*.

Another characteristic of the Kiōto dialect is the use of honorific verbs in *sharu*, as *omousharu* from *omou*, to think, *misusharu* from *miru*, to see, *wassharu* from *suru*, to do. *Irassharu* is the only such form known to the Yedo dialect.

Nukui .....	warm.
Inuru .....	to go.
Nukumeru .....	to warm.
Modoru .....	to return.
Otoru .....	to be inferior.
Neki .....	vicinity, side.
Nurui .....	weak (of tobacco.)
Yonari .....	the evening.
Na-moshi .....	I say!
Sakai .....	because.
Kuchinawa .....	snake.
Oiden' ka .....	for komu ka.
Gozaru .....	to come, to go.
Messima .....	by no means!

These are of course only a few of the expressions found in the Kiōto dialect, and absent from that of Yedo, and it is also probable that none of them are peculiar to the ancient capital.

Mention was made by Mr. Wright and Mr. Blanchet of some other dialectical peculiarities, after which Prof. Atkinson read a paper on *Kaki-no-shibu*, by T. Ishikawa, graduate of the University of Tōkiō. The author shows that on exposure of this liquid to air and light a film is formed (probably consisting of a substance resembling a gum resin) the removal of which renders the liquid inactive. He draws the following conclusions:—

1st.—The strength gained by paper and other articles coated with *kaki-no-shibu* is due to the formation in the pores of the material of the above-mentioned film.

2nd.—The formation of this film is due to the presence of small particles of gum-resin held in suspension in the liquid, which, on oxidation become solid and darker in colour, like lacquer. Hence the dark colour which paper so treated always possesses.

3rd.—The tannin present in the *kaki-no-shibu* acts as an antiseptic.

4th.—The peculiar smell of the liquid is due to the presence of butyric acid.

Mr. S. Tsuda, speaking in Japanese, which was translated by the corresponding secretary, said that at Tanamura in Oshū, a place well known for the number of poisonous snakes which infest it, the peasants take with them to the fields a supply of *kaki-no-shibu* in bamboo tubes, and apply it to the wound when they receive a snake-bite, to prevent the poison from taking effect. With regard to the conversion of the tannin of the astringent *kaki* into sugar, he mentioned that the Japanese

sometimes bent up one very astringent variety of the fruit into pulp, and add finely powdered barley which has previously been roasted. The mixture after standing for three hours becomes sweet and very agreeable to the palate, and is used in some localities as a substitute for sugar. The dried skin of the astringent *kaki* is also used instead of fish to flavour soup. The best quality of *shibu* is made from a sort of *kaki* no bigger than a grape, which is so astringent that it does not turn sweet, however long it is kept. It sweetens, however, if subjected to frost before it is plucked from the tree. The black *kaki* wood so much esteemed for the manufacture of boxes and other small articles, is chiefly but not altogether derived from the astringent or *shibu-kaki* tree. The colour of the wood is very uncertain and the only sure way to tell before the tree is felled whether its timber is black or not is to drill a hole in the trunk. Two trees growing together and apparently quite alike may turn out to be one of them white and the other black.

Mr. Ewing asked whether the black paint used for fences, etc., composed of *shibu* and lampblack had an effect in preserving the timber to which it was applied, at all comparable to the effects of foreign methods of preservation.

Mr. Atkinson replied that it had some preservative effect, but not much. He added that *kaki* juice after it has become sweet acidifies on exposure to the air, the change being apparently effected by the presence of a small organism of the shape of a lemon, which is also observed in Europe as present during grape fermentation.

The Librarian, the Rev. C. T. Blanchet, then contributed a series of plates illustrative of the great Temple of Bôrdôdâr in Java, and gave the following explanatory account:—The books and volumes of plates of illustrations lying upon the table on exhibition to-day were presented by the Minister of Colonies of the Javanese Government to the Asiatic Society of Japan, and consist of eight volumes of plates and two volumes of letter-press, one in the Dutch, the other in the French language, descriptive of the plates, which are plans and details, together with a perspective view, of the great temple of Bôrdôdâr. This temple is situated in the province of Kadoc, in the island of Java, near the Probo River, about twenty-five miles N. W. of the native capital Yogyakerta. It is the largest temple in existence in the Buddhist style of architecture. Upon an equilateral quadrangular base covering an area of nearly 250,000 square feet, arises a massive pyramid to the height of 116 feet from base to tip of crowning dome. The façades rise abruptly through five galleries until the terraces above are reached, when the grade becomes less steep and abrupt until the lofty crowning dome is reached. The galleries bear upon their outer edges long ranges of buildings, running entirely around the structure, of the most various and fantastic outlines, covered with small spires and cupolas of various shapes and forms, the principal ones covering four hundred and thirty-six niches, occupied by as many statues of Buddha as large as life, seated in his usual attitude, with legs crossed. Upon the inner walls of these buildings are long ranges of bas-reliefs, illustrating, it is believed, scenes in the life of Buddha. The four terraces which surmount the galleries bear seventy-two cupolas and are connected with the base by long flights of steps, which are broken at each gallery and which pass through the buildings under arches. A most interesting feature of the temple lies in the fact that it is hewn out of the solid rock, which was originally formed one of the groups of mountains in the midst of which the temple is situated; and in this fact it bears strong resemblance to the temples of Arabia Petraea, and will doubtless be of as great historical interest as the latter, when it is better known. The letter-press is divided into five parts or chapters, the first containing a minute description of the temple, in all its parts and decorations, with the exception of the bas-reliefs on the walls of the galleries, of which Part II treats in detail. The third chapter is upon the character and destination of this temple as compared with that of the sacred edifices upon the continent of Asia; and it also treats of the numerous statues of Buddha found in the niches of the inner walls and bell-towers.

Part IV. treats of the epoch, and circumstances surrounding the founding and decadence of the temple, in their relation to the ancient history of Java.

Part V. treats of the temple from the artistic point of view, and it also furnishes a study of the culture and customs of the epoch of the building of the temple, as compared with those of the present time in Java.

There are three hundred and ninety-three plates, divided into eight volumes, finely lithographed and printed upon folio plate paper.

Plate I. is the northern elevation, in perspective; Plate II. a map of environs, and Plate III. a ground plan of the temple; Plates IV., VI. and VII. consist of a section and architectural details: while Plate V., in four parts, shows the southern elevation, and Plate VIII. the statues of Buddha; Plates IX. and XII. Doorways of galleries; Plates XII. Architectural ornaments; Plate XIV. Plan of the distribution of the bas-reliefs as illustrated in Plates XV. to CCCXCII. and corresponding with the numbers there given them.

The frontispiece is a perspective view of the temple among the mountains, and Plate CCCXCIII. shows a statue of Gou-nung Daghi.

#### TOKIO CHRISTIAN ASSOCIATION.

Mr. Gray, C. E. B. Sc. of the Imperial College of Engineering, lectured on Thursday, the 11th instant, in the large room of the above Association, upon 'Energy.'

After remarking that the indestructibility of matter has long been regarded as the fundamental assumption in the science of chemistry, and that men are now bordering on another phase of that science, viz., the transformation of one kind of matter into another kind of matter, the lecturer went on to point out that in physics we have an assumption perhaps more important, though less *material*, than that of the indestructibility of matter, namely the indestructibility of energy. In respect of energy moreover we have got completely into the phase parallel to the second one just mentioned with regard to matter; that is to say, we have arrived at much knowledge as to the transformation of Energy. Energy is usually defined as the capability of doing work, or of producing changes. The idea of it is harder to seize than that of matter, probably because it is less familiar and incapable of appealing to our ordinary senses. What is meant by energy is evidently involved in what is meant by "work." Now we mean by "work," the action of a force in overcoming resistance through space. If for instance I lift a weight from the floor and place it on the table, I overcome the resistance of the earth's attraction through a distance equal to the height of the table, and thus I do "work." Now comes the question, 'what has become of the energy expended in lifting the weight? If energy be indestructible, the quantity expended in lifting the weight must still exist.' The answer is:—It is stored up in the raised weight. The reasonableness of this answer becomes apparent at once, if the weight be allowed to fall from the table. The power of doing work; or in this case, of doing mischief, becomes at once apparent, by the damage done to the floor. Viewed from a physical point of view then, there is a difference between the weight on the table, and the weight on the floor, this difference being expressed as an amount of energy. Again a bullet flying through the air after a rifle is fired is capable of doing work or damage. We have in fact two distinct forms of energy; energy of position and energy of motion. The former was called by Rankine 'potential energy': the latter has been called by Thomson and Tait, 'kinetic energy.' Potential energy is the power of doing work in virtue of relative position, while kinetic energy is the power of doing work in virtue of relative motion. Generally we may say that potential energy is the power possessed by a system of bodies of doing work in passing from one configuration to some other fixed configuration, while kinetic energy is the power of doing work in passing from one rate of change of configuration. Thus if the bob of a pendulum be pushed, it moves a short distance and comes to rest: then immediately begins to move in the opposite direction, its

rate of motion gradually increasing till the bob reaches its lowest position. The rate then gradually decreases until the bob comes to rest again, when it moves once more in an opposite direction, and so on. Now a certain amount of work was done in pushing aside the bob of the pendulum, and in consequence it acquired energy. This energy is at first kinetic, but gradually changes to potential, and from this to kinetic again, and so on. This process would continue for ever, were it not for the fact that the pendulum experiences resistance, which causes it to come gradually to rest. The question of course occurs, where has the energy gone to? This leads to a very interesting part of the subject, namely the transformation of energy into heat. Until comparatively recent times, heat was looked upon as matter, and was called caloric. A material mode of accounting for phenomena has always been the first to be seized upon. Light was supposed to consist of a kind of very subtle matter given off by luminous bodies, which matter impinging on the nerves of the eyes produced the sensation of light. In like manner, electricity was sometimes thought to consist of one fluid, sometimes of two fluids. With regard to the old material theory of heat, there was the difficulty of the total absence of weight in the supposed caloric. It was necessary to hold that caloric differed from all other matter, in that it was not attracted towards the earth. Rumford, at the end of the 18th century, and Davy prepared the way for the recognition of the true explanation of heat. Yet it was not until 1837, that Mohr pointed out that a mechanical equivalent of heat could be deduced from the two specific heats of air. In 1839 Séguin gave data from which the mechanical equivalent of heat might be deduced. In 1842 Mayer gave a value to the mechanical equivalent derived from the heat developed by the compression of a gas. Séguin had obtained his data from the cooling effect of dilatation on a gas. These values differed very widely from the truth, and from one another. Séguin's result was nearly double that of Mayer. It is curious also to notice that Mayer did not admit that heat is motion, but made a distinct statement that motion in order to become heat must cease to be motion; apparently considering heat to be a sort of potential energy. In 1843 Joule published a description of a simple method of finding the heat equivalent of mechanical work. This consisted in working up and down in a cylinder containing water, a piston composed of a bundle of capillary tubes. The value deduced by him differs only slightly from the result of the best experiments since made. Since that time Joule has made a most elaborate series of experiments, and comes to the conclusion that in order to heat a pound of water one degree Fahrenheit, a pound must fall through 772 feet. (Mr. Gray then went on to show by experiments that electricity can be made to perform mechanical work.) With regard to light, Joule was among the first to show that the energy of light is capable of direct measurement. Another illustration of the transformation of energy is that which takes place in chemical combination. When two substances are allowed to combine chemically, a quantity of heat is generally given off. Although we can say with almost perfect certainty that energy is indestructible, yet it is curious to observe that it is only in a few forms that it is available to any great extent for the performance of work. If now we have a store of energy in one of the forms in which it is highly available for the performance of work, and instead of using it in that form we transform it into another form in which it is not so highly available, we have (in the language of Sir W. Thomson) dissipated a portion of it. Now of all the forms of energy heat seems to be one of the least, if not the least, available of forms: and yet we are continually making use of it. The potential energy of the fuel of a steam engine is very much greater than the work which even a theoretically perfect engine can perform in ordinary circumstances. Two names must be added to those mentioned before, as connected with the development of the science of energy; the names of Newton and of Helmholtz. Newton may be said to have been the founder of the science, for he laid down in his 3rd law of motion the whole principle of the conservation of energy. Helmholtz urged that if we take Newton's Third Law, and make one or other of two assumptions, the conservation of energy may be proved mathematically. These assumptions

are (1) that matter consists of ultimate particles which attract one another with forces in the direction of the lines joining them, or (2) that perpetual motion is impossible. A question of great interest is 'What is the source of all our energy?' We are led ultimately to regard the sun as the primary source of the energy existing upon our earth. But where does the sun get its energy, and will the sun continue indefinitely to supply energy? The old popular idea of an enormous fire is evidently inadmissible. It has been calculated that the whole mass of the sun could only have supplied heat at the present rate for about 5,000 years, even were it composed of the very best combustibles known to us. There is now a very different theory to account for its energy, viz., that mass, impinging upon mass from very distant space, by using up kinetic energy generated heat.

The lecture was amply illustrated by experiments. The proceedings were closed by a vote of thanks to the lecturer, moved by the Rev. W. J. White.

### LONDON LETTER.

LONDON, September 30th, 1880.

This is the "silly" season, so called because the world is out of town and parliament is not sitting. It is the season when ethical, sanitary, and social matters generally get a hearing in the newspapers; the season of the "gigantic gooseberry," robberies of luggages, seaside extortions, and the iniquities of foreign hotel-keepers. But it is a question whether in this rushing whirling life we do not in our haste get a false perspective of things; permitting insignificant objects because they are near and noisy to assume in our eyes an altogether exaggerated importance. Many things simply by being public and getting talked about and written about in newspapers in a grand superficial kind of way are endowed with a quite artificial magnificence. Legislation—it would be rank heresy to deny it—is one of those highly momentous questions on which the best intellectual force of a nation may profitably exhaust itself. This was Mr. Goschen's way of putting the matter a year or two ago, when he explained how Mr. Gladstone had spent his majority. But looking back to the work accomplished by the British parliament this past session it would be hard to point to any one act or even to the whole group of acts as at all worthy of the labour and sorrow of 600 or 700 gentlemen through the hot August nights. Who is the better or the worse for the Hares and Rabbits Bill, or the Burials Bill or the Grain cargoes Bill? Not one individual probably. A few days of rain or sunshine effects the moral or physical well-being of the units which compose the nation in a far higher degree than all the laws in the Statute Book. The man who should invent and introduce a comfortable protection for the feet would surely be a greater man than he who merely passed a Law Act, or a Workhouse Act, or a Merchant Shipping Bill. Take the daily life of an average man or woman and how small a place in it is really occupied by religion or politics, and how entirely is it filled up with common-place details. The account of an earthquake in South America, which swallows up a city-full of people, or a cyclone in the Hoogly, which sinks a fleet of ships with their crews, are read over in the morning paper, and notwithstanding the bold headings of the printers, those calamities leave no trace on the mind of the reader an hour afterwards—at least none comparable to that produced by an ill-fitting shirt collar, the visit of a tiresome friend, or an ill-cooked steak. In our English life probably, cricketing is a more important feature than law-making, and the last new song in a Comic Opera, is of more account than all the sermons preached over England on a Sunday. If this view of the matter be at all correct the "silly" season is a real misnomer, for it is then that the suppressed aspirations of society obtain utterance. The safety of bathers, the domestic service question, the spread of small pox, the condition of sea-side lodgings, and a host of such petty interests which combine to make up the tale of conscious existence are all discussed at this season, and, strangely enough, the subjects do not get worn threadbare so soon as one would expect. There are generally some new

points brought out at each recurring period, and it would be hard to say that some practical improvements did not occasionally emerge from the hubbub. Our comforts are rapidly increasing and many of the familiar abuses of twenty years back have been scourged or shamed out of existence. Our watering places have taken hints from France and the Continent generally, but the innovations require a long time to assimilate and become our own. They have an unpleasant air of the exotic about them. In one thing it must be allowed, London has made a most important stride in the last twenty years. One can dine now in any part of the town in comfort and even luxury, for less money than an average club dinner costs. Good food and civilized attendance, have thus been brought within reach of thousands of people who were strangers to both. This we owe to the "Spirit of the Times" as embodied in Spiers and Pond, two enterprising gentlemen who came over from Australia to shew us how to do things. No statue has yet been thought of to commemorate the bodily features of these two noble men. Their memorial is in the stomachs of the people, and one of them has ordered by his will, that the inscription on his tombstone be limited to these four words, "He fed the hungry." Nor are the good deeds of these Apostles of Gastronomy confined to the metropolis. The report of them has long since spread to the provinces, and the dwellers in the most benighted parts of our island have felt the cheering effects of their operations. George Stephenson did much for England and the world, but next to him Spiers and Pond have contributed more to the happiness of the people than all the politicians since the Reform Bill. They have taught us to eat, and if they or some other Apostle would now teach us to cook, our civilization would be well-nigh perfect.

Our Irish fellow-country-men are giving us some trouble in their primitive efforts to get rid of rent. They simply murder the man to whom the rent is due, and the deed is applauded, while the perpetrator is screened by the Irish public as if he were a persecuted benefactor of his race. It is probable that some strong police measures may be necessary to restore Ireland to tranquillity, for legislation for Ireland proceeds always on a fallacious basis. I having little hope of anything save the rigour of the executive reaching to the consciences of the people.

#### PARIS LETTER.

Paris, 30th September, 1880.

The most remarkable social event is the extraordinary number of marriages that are being celebrated at this, not the usual period of the year, for we have a season for weddings just as for green peas and asparagus: they are not only the French who marry and give in marriage, but the resident and transitory foreigners: among the latter rank pre-eminently the Russians and Roumanians. It has been observed, that the Russians are the bravest people in the world, because they are not afraid of matrimony; their domestic life is happy, owing to the circumstance, that when the husband is in Russia, the wife is in Paris, and *vice versa*: it is the best of remedies for avoiding domestic misunderstandings. After the Jews, the Russians are the most public-worship-going people; the former never omit praying in the Synagogue, and their marriages seem to resemble a very large family party, or perhaps it is understood, that when one of a congregation weds, the whole congregation feels in duty bound to put in an appearance at the ceremony. There are no poor Jews in Paris, they are all either well-to-do financiers, or old clo'people. The Russians appear to live in their church, as many tradesmen do in their shops: they have so many saints to respect, so many anniversaries to honor. A few days ago I assisted at the marriage—for the first time—of an acquaintance, according to the Greek rites: the bride and bridegroom remain standing during the ceremony, before a reading desk; the bishop or pope is very brilliantly clothed: his mitre is a stupendous construction in enamel work, on which prominently glitters the cross of Constantine: he has a long beard and falling locks that suggest the patriarch, or the early Christian martyr; he is surrounded by

other clergy, who chant slowly and softly a kind of litany. The principal bridesmaid all the time holds over the bride's head an orange wreath with golden fringe: the best man doing the same for the bridegroom; happily this part of the ceremony is not long, or the arms would soon drop from fatigue, and such is ever considered unlucky for the young couple. The pope demands of each "servant of God," repeating the Christian name, "will you take, &c." A negative response is never received; he then directs the bride to "support herself on her husband," gives them his benediction, after which the newly married couple walk several times round the choir, preceded by children who strew flowers and orange bouquets in their path. They thus enter upon their new life by a road strewn with flowers. Relatives and friends embrace the pair, and repeat "*Va Zisis*," which is said to mean, "may you live a thousand years."

Ladies are very busy setting their houses in order after returning from the annual trip to the sea-side, the thermal station or the Swiss mountains; it is the favorite moment too for intimate dinner parties, September being the model gastronomic month. Nature, to judge by the markets, seems to have concentrated the majority of her good things at this period, perhaps to fortify constitutions for the winter after the enfeebling effects of a prolonged summer and a tropical temperature. What is particularly noteworthy is the aspect of very young people, whose countenances commence to wear a rueful look; the days being counted when they must return to scales and conjugation of verbs, and fixed rules and regulations. Many approaching the railway stations with little packets in their hands, the last tokens of home and friendly affection, march as if *en route* for Calvary, and feel certainly soured, seeing that life is not a prolonged holiday. I was recently invited to a "Garden Party," one of the latest social importations; there was croquet for those who desired to play, and lawn tennis, with special professors, for such as were inclined for that amusement; neither were patronized; instead, there was pigeon shooting, where ladies laid wagers that must make the fortune of some glove maker, and, in the park, hurdle races, with gentlemen riders on horses and ponies. Three asses entered the race course, and the fun was, not to feel interested as to which of the quadrupeds would arrive first or last, but to discover who were the disguised jockeys. On a little lake there were boat races, and some gentlemen indulged in aquatic, or amphibious tricks, to demonstrate that if people are drowned, it is owing to their own obstinacy not to live.

Madame Thiers and her sister continue to devote their existence to gathering laurels for the great patriot that died too soon for France; his widow edits his speeches, although a Senator's name is lent to cover the work. She is now preparing a school Latin Grammar—she is a noted linguist,—that her husband sketched when at college. She has superintended all the arrangements for the recent inauguration, at St. Germain, of the statue erected to her husband; her judgment has been here somewhat at fault, as in the issue of invitations to take a prominent part, she included certain persons not at all popular. Not many ladies were present, and the day was wet. Mme. Thiers and her sister were in deep mourning, but the Mayor's lady wore a sumptuous toilet of mauve silk. A man in the crowd, a pardoned communist, exclaimed "Thiers butchered 35,000 patriots;" did the widow cry at the insult? not a bit of it. She grew pale with rage, and followed the man with a pair of wicked eyes as the police led him away, as if she would like to tear the offender to shreds. We have ladies' shooting parties, where no gentlemen are admitted—which must be a delight for real sportsmen, who dislike the fair sex shouldering guns and whistling for dogs. The innovation will not succeed, because the ladies have really no passion for the pastime, and the chief pleasure for them, if the truth be confessed, lies in the opportunity to appear in an eccentric costume, and to present a "smashing and a martial outside," and to be photographed in a mixed group of gentlemen, dogs, guns, game-keepers, bleeding pheasants, expiring rabbits and hares, and a heap of quails. It is often remarked that ladies are not obedient: here is an historical example to the contrary. In 1700, Peter the Great prohibited all citizens from wearing the national costume, save the clergy

and peasantry; they were to patronize French or Saxon dresses. Models fully habilitated according to the latest fashions, were placed at the corners of the streets, so that there was no excuse for indulging in heresy against the new modes: the disobedient were punished, as also the tailors who made the national garments. The ladies soon perceived that their figures and beauty were set off by the foreign importations, and while men submitted to the whip, the stake and the prison, rather than change, the fair sex steadily adhered to the new law, and so effectually, that many husbands now cry aloud for sumptuary measures, to repress an hereditary taste too freely followed. The shop windows are full of rather sombre, but warm stuffs: mantles are highly laden with furs, and hats are in plush and velvet. Check pattern tissues of yellow shades, and madras of every variety, will be in favour for every day dresses; plush promises, however to be the first letter in the first line: satin and plush, copper tone, go well together; the jupon is of the large stripe pattern; the bodice is the peasant coat and lined with satin. For visit dresses, frog-colored cambric and white lace, or plain surah, or the latter, poppy colored, and embroidered with old gold. For soiree or ball toilette, old gold and garnet are in request: sleeves, Marquise and Misoncourt lace: red poppies for the bodice and hair. For dinner, dresses are in embroidered heliotrope satin of two shades; the train is square and richly embroidered: the jupe is trimmed with plaited flounces in satin, a *cordelière* crosses the train and is fixed at the left side with two tassels: the bodice is gilet fashion. Street dresses are in India cashmere, faille, surah and bottle green satin; the jupe in cashmere has a high and plaited flounce; the corsage is flat, laces in the back, and moulds the figure. The season is over for the little jackets in soft woollen materials, with fancy designs and lined with surah: they were so charming, and so handy for chilly evenings, that they are certain to do duty next season: the *douillette bonne femme*, competes for the honors during winter which it enjoyed during the summer: instead of being in mohair or cashmere, it is now made up for autumn in either plain or striped satin; later it must be well padded; some of them are made in Indian cashmere lined with satin. Hats will be very large this winter, and plush promises to reign; the beetle order of insects will be the jewellery preferred for their decoration. There seems to be no limit to the dimensions of hats, and they are turned up in every conceivable shape: they are positively weighted down with feathers, from beneath which superb insects glitter. For the round shapes, plush felt is preferred and plush silk for capotes—the latter too are large. The camail Henri III. is charming, and quite the rage: it consists of two pelorines one over the other, and both trimmed with Bruges lace: a little hood falls from the collar, on the back: it is most useful at a ball, or when seeking fresh air on a balcony, or passing from one salon to another. The *Veronese* or *Jersey* is still an elegant favorite; the chief difference perhaps consists in the former being double the price of the latter. Gold tissues are much patronized; and a material in this sense has just appeared, destined to have success this winter, whether for corsages or ornamentation: it is a silk, mixed with gold, not spangled, but striped, by means of gold threads running cross-ways: the base is in all colors, and it can be adopted to all toilettes: gold tassels continue to make a beautiful trimming and chenille fringe, mixed with gold, promises to have a decided success. Girls, like their elders, have their hood: thus the coat is in vigogne beige, lined with tobacco colored foulard; the small collar is in tobacco velvet, embroidered with gold: the sleeve is large, but tight at the wrist, with a cuff trimmed like the collar. The hood, pointed, is in vigogne, lined with foulard, the belt, flat, in vigogne, and adjusting to the figure. Their collars are as usual large, and very varied: they are trimmed with Russian lace or guipure—the effect is charming, the hats are large, and such forms suit children, especially if placed a little back, in order to show the hair.

The places of amusement give nothing new, and what is new, is not at all attractive; but then residents have not yet taken possession of winter quarters, and managers do not produce their novelties unless for sure clients for whom it is a paying honor to wait. Mlle. Krauss has made her re-entry at the National Opera, so the spectators are certain to hear one

accomplished singer, who only surpasses herself by her acting; she is always an event in herself—like Patti. The Opera Comique revives the most popular pieces of Auber and Adam, introducing a modern composer, like Delibes, for a change, and to mark time in the differences of the schools. The *Fantaisies Parisiennes* have brought out *Le Ménestrier de Meudon*, a three act operetta, where the amusing libretto turns upon a fiddler—(*ménestrier*) being mistaken for King François I., and his intended peasant wife, for Queen Elenore of Spain. The composer is young, and so may be excused a luxurious memory in respect to the successful comic operas of the last twenty years; but he has so gaily woven them together, has thrown such an agreeable dash into the score, that his want of originality is forgotten in the pleasure he confers; but there is, not the less, a drinking chorus, as sparkling as champagne itself, and a ballad full of sentiment and melody, hardly to be expected from a student of dancing music and buffoon harmony.

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as make them readable and intelligible.]

#### COURT, POLITICAL AND OFFICIAL.

The *Mainichi Shinbun* says that His Excellency Junior Prime Minister Iwakura invited a number of Nobles on the 11th instant to his private residence, with whom he held a prolonged conference.

According to a native paper Mr. Ishio, Superintendent of the Telegraph Department, will shortly visit Kioto, Osaka, Nagoya, and Kobe on a tour of official inspection.

We learn from the *Mainichi Shinbun* that one of the officials of the United States Legation in Tokio, paid a visit to H. E. Privy Councillor Okuma, on the afternoon of the 11th instant, with whom he had a long interview.

The *Nichi Nichi Shinbun* gives it as a current rumour, that in order to enforce the recent Government orders suggesting the practice of economy, a large number of officials in the various Government Departments will be dismissed. Those who have been long in the Government service, will receive pensions for life.

We notice in the *Hochi Shinbun* that H. E. Sano, Minister of Finance, has been appointed Chief Inspector, and H. E. Kuki, Vice-Assistant Minister of Education, Vice-Inspector of the Second National Exhibition, which is to be opened next Spring.

The same paper states that Mr. Inouye, Secretary of the Daijo Kwan, who recently went to China as Japanese Envoy, returned on the 11th instant without having accomplished the object of his mission.

We learn from the *Nichi Nichi Shinbun* that the Colonization Commission has, in accordance with the recent Government notifications ordering the practise of economy, appointed a committee to draw up measures for the sale of the different factories belonging to the Department.

The same paper says:—"The Governors of the different cities and prefectures are coming up to Tokio one after another, owing to their having been summoned by the Government for consultations upon improvements in local political administration, in accordance with Notification No. 48."

His Excellency Sano, Minister of Finance, attended at the Daijo Kwan, at about 11 a.m. on Saturday last, and held a conference with the members of the Privy Council.

The *Mainichi Shinbun* publishes a rumour, which it does not guarantee, that General Oyama, Minister of War, is shortly to be made a Privy Councillor.

Although the budgets of the various departments have recently been diminished, that of the Imperial Household Department alone remains unaltered. However, a local paper states that the expenditure of the Household is to be reduced, and that the finances of the department are now under examination.

We learn from a native contemporary, that the Chinese Minister entertained the Japanese Prime Ministers and Privy Councillors at a banquet, on Sunday last.

The *Hochi Shinbun* publishes the following paragraph:—

"We mentioned in a previous issue that Secretary Inouye of the Daijō Kwan, who went to China as a Japanese Envoy, recently returned without having accomplished the object of his mission. Since this, however, rumours have become current that the Chinese Government asserts that the Japanese Government has behaved very badly, and availed itself of the opportunity of the dispute between Russia and China to arrange the Loo-choo question to its own benefit, while China was so busily engaged in the above-mentioned dispute, that she had no time to attend to the matter. The Chinese Government farther says, that having concluded its difficulties with Russia, it has now time to make demands upon Japan, and as it finds all war preparations as regards Russia are now useless, it will send a powerful fleet and a picked force to Japan, to open negotiations! Mr. Inouye, so the rumour goes, suddenly returned in order to report the matter to his own Government." As usual in matters of any importance, our contemporary winds up by declining to be responsible for the truth of this rumour.

The *Mainichi Shinbun* writes as follows:—"Since the assassination of Mr. Okubo at Kioizaka, Tokio, on the 14th of May, 1878, the authorities have always taken strict precautionary measures against such mishaps, and by His Majesty's orders, the Prime Ministers and Privy Councillors have always been furnished with a cavalry escort on their way to and from the Court. Their residences also were put under a guard of police, who kept strict watch by day and night. Even when leaving their houses for private reasons, they always have an escort of three or four policemen to guard against accidents. Their Excellencies Admiral Kawamura, Generals Kuroda, Saigo, and Yamada have, however, insisted on the abolition of the ministerial escort. Some of the members of the Council opposed this proposal, but Admiral Kawamura maintained his views persistently, and consequently both the cavalry escort and the police guard were abolished on the 15th instant."

We notice in a native paper that the Foreign Representatives were invited to view the chrysanthemums, in the gardens of the Aoyama Palace, the day before yesterday.

The *Nichi Nichi Shinbun* states that fifteen students of the Tokio University addressed a petition to the authorities on the 15th instant, suggesting the abolition of the clause in the Public Meeting Regulations, which forbids Government officials to attend lecture meetings, on the following grounds:—"In order to increase produce and thus enrich the country, it is necessary to encourage industrial works and agriculture, to effect which it is absolutely necessary to adopt practical applications of physics and chemistry. Those who are best experienced in those sciences are mostly in the Government service, but are at present forbidden to attend lecture meetings political or otherwise. There is consequently almost no one at present who can give lectures on practical science, and the petitioners suggest that the Government should give its careful attention to the future prosperity of the country, and abolish the aforesaid prohibition, so that men experienced in those sciences, and now in Government service, shall be allowed to lecture freely.

Mr. Yasuda, Secretary of the Colonization Commission, has been ordered to Sapporo, and will proceed thither on the 24th instant.

The *Mainichi Shinbun* states that His Majesty the Emperor will attend some horse-races at the Fukiage park, which are shortly to be held by the General officers of the Staff Office.

His Excellency Privy Councillor Okuma paid a visit to the U. S. Legation at Tsukiji, Tokio, on Tuesday afternoon.

Their Excellencies Privy Councillors General Saigo, Admiral Kawamura, and Admiral Enomoto, Minister of the Navy, returned from Yokosuka on Wednesday morning.

Governor Chizaka, of the Ishikawa prefecture, is shortly expected in Tokio on official business.

A special meeting of the Local Assembly of the Kanagawa prefecture, will be held about the 15th of next month.

The *Nichi Nichi Shinbun* writes as follows:—"The committee of all the treaty powers for treaty revision was expected here shortly, armed with full powers for negotiation, but a tele-

gram has been received, stating that Sir Harry Parkes' arrival will be delayed for some months."

We learn from the *Hochi Shinbun* that His Excellency C. de Groote, Envoy Extraordinary and Minister Plenipotentiary for Belgium, will shortly present a decoration to His Majesty the Emperor, from His Majesty the King of Belgium.

The *Nichi Nichi Shinbun* says that the regulations for the receipt of petitions by the Government, which recently were the subject of much warm discussion in the Senate, passed the third reading without many alterations on the 8th instant. It will not be long before they are published.

It is currently rumoured, says a native journal, that there will be a great change in the Foreign and Imperial Household Departments next month, or very early next year.

Another native paper states that the Imperial Engineering College is to be closed shortly.

#### NAVAL AND MILITARY.

The torpedo boat that was recently completed in the Yokosuka Naval Dock was launched last Tuesday, as we learn from a native paper, in presence of His Excellency Admiral Enomoto, Minister of the Navy, who came down from Tokio by the 10.30 a.m. train, and then went to Yokosuka in the *Yokosuka Maru* No. II, to witness the ceremony.

A native paper says that Rear Admiral Nerei has sent in his resignation.

The *Hochi Shinbun* states that the *Riujo Kan* left Yokosuka at 9 a.m., on Monday, for Shinagawa, where she will remain this year. Commander Willan, of the *Kaigunsho*, will take command of the vessel, and the cadets will be trained under his instructions. She will leave for a long cruise next January.

A native contemporary states that Commander Euba, Secretary of the Naval Department and Superintendent of the Yokosuka dock, intends resigning his office, in order to take charge of a Sailing-ship Company. In consequence of this, he gave a farewell dinner to his fellow-officers and friends at the Fujikuro-ro Restaurant, Yokosuka, on Monday last.

Rear-Admiral Akamatsu has been appointed Vice-Administrator of the Navy, and Superintendent of the Ship-building office.

The following paragraph from a native journal may prove of interest:—"The Russian fleet now due at Yokohama is composed of twelve or fifteen men-of-war, under command of Admiral Lessofsky. There are others now lying in Nagasaki, and when the expected rupture between China and Russia occurs, both fleets will rendezvous at Nagasaki, and then sail for their destination, wherever that may be."

According to a native contemporary an increase of the Japanese navy is now under consideration.

Vice-Admiral Ito, Rear-Admirals Maki and Akamatsu, Mr. Hida, and Secretaries Furumi and Sato of the Navy Department, have been appointed on the committee for the compilation of rules for Naval Courts-Martial.

The *Sumpu Maru* has been converted into a training ship, for the use of the Naval College.

A German subject has been engaged by the Navy Department as instructor for the manufacture of gun-powder, at a monthly salary of 350 yen, payable in silver.

The War Department has purchased several tracts of land from the people in the neighborhood of the fortifications at Kwan-on-zaki, Miura-gori, in the province of Sagami.

Mr. A. Wingsell, an *employé* of the Navy Department, was to have been discharged from the service on the expiration of his contract, but as he rendered great service when the *Fuso Kan* was being built, his contract has been prolonged for one year more, and he has been re-appointed one of the officers on board the ship.

#### INDUSTRIES, TRADE AND FINANCE.

We learn from a native source that up to the 10th instant, over 429,916 cartons had arrived in Yokohama this year from various districts, of which number 18,104 cards have been exported abroad.

The *Akebono Shinbun* publishes an extract from another native paper, which states that the sardine fishery this year has been more productive than for the last fifty or sixty seasons. The

total value of the fish taken in the different provinces cannot amount to less than two million yen. One cast of a net, 3,500 ken long, brings in enough to fill twenty fishing boats with these fish, which would fetch over a thousand yen.

"The glass manufactory in Shinagawa," says the same paper, "has hitherto been worked at a loss, but it is now in a prosperous condition. Seventy-five men are employed, who are divided into two gangs, each of which works twelve hours daily. Private visitors are admitted every forenoon."

The *Osaka Shimpō* writes as follows:—"Mr. Kataoka Ken-ichi, who visited Tokio last Spring as the representative of the well known political society of Aikoku-sha, with a petition to the Government for the establishment of a National Assembly, proposes, as we are informed, to establish a company under the name of the Kainan Kiodo Kwaisha (the Southern United Company) for the purpose of encouraging the export of produce of the Island of Shikoku. The company intends to receive orders for the construction and repair of roads, &c. The rules of the company are now being drawn up."

From the *Chōya Shinbun* we learn that the sum of 20,000 yen, in five yen gold pieces, was recently sent from the Osaka Mint to the Expenditure office of the Finance Department. From the latter office, silver ten-sen pieces amounting to 30,000 yen, and twenty-sen pieces, amounting to 40,000 yen, have been sent to the said mint in order to be re-coined into one-yen silver pieces.

The *Mainichi Shinbun* says that from the commencement of the carton trade, until Wednesday last, the total number of cards that arrived in Yokohama amounted to 451,930. During the same period 20,177 cards were exported.

On the subject of the carton trade the *Nichi Nichi Shinbun* writes as follows:—"The carton trade in Yokohama has been at a standstill for a long while, but on the 17th instant, Mr. Fukushima sold 2,500 cards to a foreigner now residing in the premises of the old Horaisa Bank, for \$1.90 per card; and 6,300 cards, manufactured by the Yushisha society in the province of Boshu, to another gentleman, now occupying the premises No. 96, at 2.00 per card. In Italy also, buyers offer \$2.20 or 2.30 per card for those of the best quality from Iwashiro, but Japanese owners demand over \$2.60 for them."

The *Mainichi Shinbun* states that His Excellency Junior Prime Minister Iwakura, paid a visit to the Shinagawa Glass Manufactory, the day before yesterday.

The same paper writes as follows:—"A telegram was received in Yokohama lately, stating that the sugar crop in Formosa is very bad this year, and will be 400,000 bags less than the usual outturn. We cannot guarantee the exact number of bags as above mentioned, but it is certain that the sugar crop is very poor."

The *Hochi Shinbun* writes as follows:—"Mr. Maida Masakata, Japanese Consul-General to France, will leave for his post about the month of February next, and in order to encourage the export trade, he recently visited the provinces of Joshiu and Yashiu, where he had interviews with the silk and carton manufacturers. He explained the advantages of trade to them, and told them that it is unavoidably necessary, for the good of the country, to encourage the export trade. They were highly pleased with his kind advice, and promised to work hereafter as much as possible towards this end."

#### MISCELLANEOUS.

The *Nichi Nichi Shinbun* says that the proposed line of railway connecting Tokio and Takasaki has been thoroughly surveyed, but the construction has been postponed in accordance with the recent order issued by the Daijo Kwan, forbidding the undertaking of new enterprises for the present.

According to the same paper, the number of deaths in Tokio during the month of July last, amounted to 1,526 people, of whom 772 were males, and 754 females.

From the same source we take the following statistics of the number of ships wrecked in the surrounding seas of Yesso, from January until July last, as follows:—Five sailing ships, of European style, and forty-two Japanese junks of over 100 koku burden; the number of persons drowned were 46. Over

1,732 koku of grain, and general cargo amounting to about 9,312 packages, were lost.

The *Fukuoka Nichi Nichi Shinbun*, which was suspended recently, has been permitted to re-appear.

Mr. Kawasaki Saburo, editor of the *Akebono Shinbun*, has been sentenced to one year's imprisonment for having published in his paper No. 304, an article written by Mr. Sugiyama Tojiro, entitled "On popular rights," which was considered by the authorities as being intentionally inflammatory. Mr. Kawamura Kageyoshi, editor of the *Kanayoshi Shinbun*, has been fined fifteen yen for a violation of the law of libel.

The pier in the Nobiru Harbour has, according to the *Hochi Shinbun*, been completed, and the opening ceremonies took place on the 12th instant.

The *Mainichi Shinbun* says that the depth, circumference, and the outlet of all the lakes in Japan, are to be surveyed by competent authorities. The survey of the Hakone lake has already commenced, while that of Lake Biwa will be commenced in January next.

Mr. Goto Shojiro, the proprietor of the Takashima coal mines, left, according to a native paper, for Nagasaki by the *Sumida Maru* on the 13th instant. It is believed that his departure is in consequence of the recent disturbances at the mines.

The *Nichi Nichi Shinbun*, which recently mentioned that the construction of the railway between Tokio and Takasaki was to be postponed, understands that the 15th National Bank is said to have taken the matter in hand.

Mr. Unno, editor of the *Yamagata Shinbun*, has been sentenced to fifty days' imprisonment and a fine of fifty yen for libelling Governor Mishima.

The *Shinano Mainichi Shinbun* was suspended on the 12th instant.

The telegraph lines in Yesso are being gradually extended, and the line connecting Sapporo with Temiya was completed recently. The lines are now being extended from Iwanai to Kayanuma and Sapporo.

We see in a vernacular paper that the new dock in Kobe, the construction of which was commenced at the beginning of the present year, is expected to be completed in course of next month, as the work has been carried on with great promptness.

Mr. Nakajima Katsuyoshi, the author of a small pamphlet entitled the "*Kokkai-no-Kumitate*" (the composition of a National Assembly) having, in his work, criticised the existing laws, has in conformity with the 5th article in the penal code of the Press Law, and the 14th article in the Newspaper Regulations, been sentenced to six months' imprisonment and a fine of 50 yen. The publisher of the said pamphlet, Mr. Hoki Tokubei, as an accomplice of the aforesaid Nakajima, has been fined 60 yen. All the pamphlets remaining on hand were confiscated the day before yesterday.

#### IMPERIAL GOVERNMENT RAILWAYS.

##### TOKIO AND YOKOHAMA SECTION.

Statement of traffic receipts for the week ending Sunday, 14th November, 1880.

## TELEGRAMS BY THE FRENCH MAIL.

London, 19th October.—Agrarian outrages are becoming frequent in Ireland. Yesterday a landlord was proceeding to Bantry, when the driver of the vehicle was shot dead.

20th October.—The Government have proclaimed the County Kerry [—?] on account of its disturbed condition and the prevalence of crime.

The Government have offered a reward for the arrest of the murderer of the driver at Bantry.

A hitch in the negotiations for the surrender of Duleigno has occurred. The Turkish plenipotentiary is demanding a *statu quo* for the east of the Lake Scutari and the retention of the Turkish flag on coasting vessels. The sincerity of the Porte is doubted.

Obituary—General John Kynaston Luard.

Constantinople, 20th October.—The Porte has proposed that the Turkish troops shall evacuate Duleigno three hours before Montenegrin troops occupy it. The demand for a *statu quo* as regards the territory east of Lake Scutari is withdrawn.

London, 21st October.—The evidence taken at several election commissions now sitting disclose prevalence of gross bribery.

A severe snow storm has thus early in the season been experienced throughout England.

Athens, 21st October.—The Greek Parliament has been opened by the King, who in his speech said that the execution of the decision of the Great Powers on the subject of extending the frontier of Greece had imposed upon that country the necessity of considerable action. It had increased its armaments and raised loans to secure that object, and the Greeks would not be disbanded until it was attained.

St. Petersburg, 21st October.—The Emperor of Russia has recovered from his illness.

## THE JAPANESE PRESS.

## THE POLITICAL HEALTH OF THE COMMUNITY.

(Translated from the *Choya Shinbun*.)

IF a running stream is checked its water soon becomes stagnant and unwholesome; closely confined air we know will soon become vitiated. To enjoy health a man must breathe the pure air and avoid impure water. Now the political administration has, we know, just as important a bearing upon the political health of the community as air and water have upon its actual well-being. If then we determine to keep the state of political affairs unchanged for a hundred years, it would have just as bad an effect on the political health of people as bad air and water would on their physical condition. As regards this latter matter, our medical science has improved greatly of late, and we have Medical Boards and Sanitary Officers, &c., &c.; but we have not yet arrived at any way for maintaining our political health in a satisfactory way, despite the altered state of our country. This is decidedly a flaw in an otherwise spotless piece of marble.

We know very well that in classical times, the ancient compared the three different forms of Government, viz: Absolute Monarchy, the Aristocracy, and the Bureaucracy with stagnant water and foul air. This could only have been because a few individuals have the full control of matters in their own hands, and in consequence were unwilling to make changes. In what are called "the good old times" astute monarchs and their ministers, after well investigating the state of affairs, arranged various political points to their own satisfaction and kept the people in good control. This was all very well with people in a semi-civilized condition, but it would never do in the present day. But our countrymen, who have had lessons from Europe and America, will never be satisfied until their political ends are accomplished, even though peace and prosperity prevail throughout the kingdom, because they do not wish to have a merely temporary advantage. Since the Restoration our political administration has been conducted in a most exemplary manner, and consequently our country has progressed in a way which has surprised the whole civilized world. This is, of course, entirely owing to the course pursued by the authorities, but, as we have said before, we much regret that

improvements seem to have stopped just now, because things that the party of progress are demanding are not granted. We have the Senate, the Supreme Court, the Assembly of Local Governors, and Local Assemblies in Cities and Prefectures; the opening of a National Assembly would only add one more item to these changes. Why cannot this be done?

It is self-evident that by such an innovation we could secure the Government of the country from falling into the hands of one or two unscrupulous men, who would take advantage of their being at the head of affairs; moreover it would tend to diminish the chances of friction between the opposing parties of the state. Take the example of England, for instance: since the establishment of a constitutional, no man has ever been able to work for his own selfish ends. The Liberal and Conservative parties are always competing one against another, but yet they have never had to resort to arms, and a general feeling of happiness, peace and prosperity reigns throughout the kingdom. The reason of this is that the majority, which forms the governing party, depends entirely upon the result of the elections, so that if the Government lose the confidence of their constituents, they are defeated by the opposition, and are consequently ousted from the Cabinet. If their successors commit similar mistakes they also must forfeit their places. This in entirely in accordance with the *vox populi*, and the matter is so well understood that the people never have need to resort to arms, and it is on account of this that the British Government far exceeds all others in the world, and that the British nation enjoys a freedom which other countries would give a great deal to be able to obtain.

We think, judging from the events of the last thirteen years, that our present Government, has undoubtedly inaugurated great political improvements, and greatly benefitted the nation by the destruction of the Shogunate. After this, they established the Senate, the Supreme Court, the Assembly of Local Governors, and the Local Assemblies in Cities and Prefectures. When we consider all that the present Government has done towards advancing all the recent laws and regulations, how can we avoid asserting that it is the duty of the Government to add one item more to the list of improvements! It is our intention to keep our eyes open to the behaviour of our Government in this matter.

## AN UNTRUSTWORTHY RUMOUR.

(Translated from the *Nichi Nichi Shinbun*.)

A FEW days ago, Mr. Inouye, Secretary of the Daijo Kwan, returned from Peking. His mission thither may have been connected with political matters, especially as war is imminent between Russia and China, while our own difficulties with the latter country on the subject of the Loochoo islands are still unsettled. In such a state of affairs all sorts of rumours get abroad, invented sometimes by unscrupulous people, so that a journalist is bound to be very careful as to what he publishes, as he may bewilder the public, and possibly bring about disastrous consequences. On reading the *Hochi Shinbun* of the 15th instant, however, we find the following paragraph:—"We mentioned in a previous issue that Secretary Inouye of the Daijo Kwan, who went to China as a Japanese Envoy, recently returned without having accomplished the object of his mission. Since this, however, rumours have become current that the Chinese Government asserts that the Japanese Government has behaved very badly, and has availed itself of the opportunity of the dispute between Russia and China to arrange the Loochoo question to its own benefit, while China was so busily engaged in the above-mentioned dispute, that she had no time to attend to the matter. The Chinese Government further says, that having concluded its difficulties with Russia, it has now time to make demands upon Japan, and as it finds all war preparations as regards Russia are now useless, it will send a powerful fleet and a picked force to Japan, to open negotiations! Mr. Inouye so the rumour goes, suddenly returned to report the matter to his own Government. Our contemporary winds up by declining to be responsible for the truth of this rumour." Now the *Hochi Shinbun* itself confesses that it does not believe the above-mentioned rumour, but

if so, it would have been far better not to have published it. By making it public, however, it seems to be inclined to credit the report, and yet at the same time to look upon it with suspicion, so that it is bewildered and will probably bewilder the public also.

The object of Mr. Inouye's mission to China is was diplomatic secret and we are consequently unable to obtain any information about it, but judging from the circumstances of the case, we think we can clearly prove that the before mentioned rumour is a pure invention.

It was not recently, but some years ago, that a dispute arose between China and Japan as regards the possession of the Loochoo Islands. In March last year our Government took the decided step of abolishing the Loochoo Han and transforming it into the Okinawa prefecture; the question as to whether these islands belonged to China or Japan, arose therefore some time before China made her demands upon Russia for the restoration of Ili. When Chong How went to St. Petersburg as Chinese Ambassador last Autumn, the dispute between Russia and China did not actually lead to a rupture, but just at this crisis relations between Japan and China became strained, which unfortunately gave the Chinese Government an opportunity to assert that the Japanese Government had availed themselves of China's embroglio with Russia to annex the Loochoo Islands, as the latter Government was too much engaged to attend to the affair. The Chinese Government, being unwilling that war should break out with Japan on this question, took advantage of the recent visit of General Grant to China to effect an amicable settlement. They complained to him that Japan had annexed a country, which belongs to China as much as to Japan, in a high-handed manner. The general, whose gentle disposition is well-known, on hearing only the Chinese side of the question naturally considered that Japan had acted too imperiously, but when, on his arrival in Japan, he was put in possession of the actual state of matters, he found that the right of Japan to the sovereignty of the islands was indisputable. He expressed himself, however, on the subject as follows:—"Should Japan, after annexing Loo-choo, lay her hand on Formosa, she would have the key of the East; and the gate between the China Sea and the Pacific Ocean would be under her absolute control, so that in the event of war, she would virtually hold the entire coast of China: a state of matters which the latter power views with the greatest disapprobation. Now although Asia is an enormous continent there are in it only two really independent countries, viz: China and Japan, so that it is not advantageous to Eastern policy that these nations should fall out on such a trifling subject as the ownership of Loochoo. I therefore recommend Japan to draw an imaginary boundary line between the islands and hand over those that are near Formosa to China." This advice, however, was rejected by the Cabinet, who said in reply that Japan now owned the Loo-choo Islands and even for the sake of preserving peace could never consent to surrendering part of them; if the Chinese Government however, desired this in order to save the honour of the country, Japan might do so if an adequate return was offered; but not otherwise.

After this China changed her views and expressed her willingness to follow General Grant's advice and negotiate the difficulty as follows:—"The main islands were to be made into an independent kingdom; those in the north-east to be joined to Japan, and those in the south-west to China. Our Government, however, rejected this proposal as unreasonable and not in accordance with the General's advice, and said, that if it was unavoidably necessary, they would cede two or three islands near Formosa, but would insist on China making some return for this concession. This proposal met with no better success, however. But the dispute between Russia and China has recently assumed more serious and definite proportions, and it is almost certain that war will ensue. At this time the action of Japan is of great weight to decide the fortune of war, and the Chinese Government, recognising this, have paid especial attention to the subject under discussion, and negotiations tending to a satisfactory arrangement are now being conducted.

The above statements have not been imparted to us from actually reliable information, but we can confidently assert that they are not far from the truth; we see, therefore, that the return of Mr. Inouye may be connected with the con-

clusion of the negotiations, which shows how little reliance should be given to such a rumour as we have discussed.

#### INQUIRY.

An Inquiry was held at British Consulate on Monday the 15th of November to ascertain the circumstances connected with the death of A. Murray, steward, and W. Harding, A.B., on board the *Cilurnum* during her passage from Hongkong to Yokohama.

An entry from the official log was read to the effect that on the night of Saturday, the 2nd October, during which the *Cilurnum* was in the full force of a typhoon, the steward, A. Murray, was missed. All search was made but it was not until the next day that his body was found under the wreckage of the saloon, he having evidently been dead some hours.

William Halverston, sailmaker, deposed:—"At about eight o'clock on the morning of Sunday the 3rd October, I and the third officer found the body of Archibald Murray in the saloon lying under the wreckage and covered with water. The body was much bruised. He had evidently been drowned.

Henry Lawrence Reid, third Officer, stated:—"At about 8 a.m. on Sunday the 3rd of October, I went down to the saloon with the sailmaker to search for the steward. We found his body among the old gear that had been washed down by the water. He was quite dead and evidently had been drowned. The entry in the log is quite correct.

#### FINDING.

I find that Archibald Murray, steward of the British ship *Cilurnum* of London, Official No. 70,680, lost his life by drowning in the saloon of the above ship, during a storm on the 2nd October, 1880, in Latitude 29 deg. 11 min. N., Longitude 132 deg. 20 min. E., and that no blame attaches to Master, officers or men.

GEO. J. L. HODGES,  
British Pro-Consul.

An extract from the captain's log was next read, stating that on the morning of the 3rd October the port yardarm of the fore yard fell overboard and a splinter struck an A.B. named W. Harding on the head, killing him almost immediately.

Henry Taylor, A. B., stated:—"I have heard the entry read from the log, which is quite correct. I was standing close by the deceased at the time, but could not see what struck him. I saw him fall. The fore yard went overboard to windward. I saw the deceased afterwards. He had two large cuts on his head. One wound was, I think, caused when he fell, but the other was a deep clean cut just such as a jagged piece of iron, or a splinter, would make.

H. B. Seaborn stated:—"I am chief officer of the *Cilurnum*. When the yard went, I went forward to see what damage was done. I saw the deceased lying in the gutter face downwards, blood pouring from his mouth. I picked him up and carried him into the fore-castle. We supposed him to be dead, but when he was laid on his back, he breathed. The blood poured from the back of his head then, and not from his mouth. The wound at the back of his head seemed to me to go right through into his mouth. I could see nothing lying about with any marks showing that it had struck him. I looked to see if there was any such thing.

#### FINDING.

I find that William Harding, A.B., of the British ship *Cilurnum*, of London, Official No. 70,680, was accidentally killed on board the said vessel on the 3rd October, 1880, by the falling of the port yardarm of the fore yard during a storm in Latitude 29 deg. 11 min. N., and Longitude 132 deg. 20 min. E., and that no blame attaches to Master, Officers or men.

GEO. J. L. HODGES,  
British Pro-Consul.

#### LAW REPORTS.

##### IN THE U. S. CONSULAR-GENERAL COURT

Before T. B. VAN BUREN, Esq., Consul-General.

Monday, November 15th, 1880.

John Malon and Harold Emsom, both seamen on board the U.S.S. *Swatara*, were charged with creating a disturbance and destroying property at No. 164, Yokohama.

Original from

UNIVERSITY OF CALIFORNIA

A. Schultz, police constable, sworn, stated:—On Saturday evening last I was called to No. 164 Settlement, where Mrs. Williams, the proprietress, gave the prisoners in charge for creating a disturbance and destroying property. I took them to the station and searched them.

Addie Williams, sworn, stated:—I keep the house No. 164. The prisoners came to my house at about 3 p.m. on Saturday last. Emson tried to quarrel with Mahon. When the latter seemed willing to do so, Emson would not, but took out two clasp knives, opened them and stuck them in the band of his pants, saying that if Mahon came near him he would cut him. There were two or three others in the place at the time, one was a Mr. Coles, and another a marine from the *Swatara*. Mahon now laid down on a bench and went to sleep. About twenty minutes afterwards the schoolmaster of the *Swatara*, Mr. Harcourt, came in. One of the boys of the ship told him he was drunk, and he replied in a joking kind of way that he could whip any one who said he was intoxicated. The boy put his face close to Harcourt who gave him a tap on it in a fooling way. Emson then jumped up and threw off his shoes and overcoat, saying he would take the boy's part. He then shoved Harcourt up against the bar and began hitting him in the face, calling out to Mahon to come and help him. Harcourt tried to defend himself, but was too intoxicated. The boy too jumped on the counter and hit Harcourt on the face. I made Harcourt go upstairs he did so, and went asleep there. Emson then called Mahon to come upstairs after him, calling Harcourt all sorts of filthy names. Emson broke open the door of the room where Harcourt was. I blew the lamp out, and as they could not find Harcourt they came downstairs to get a match. They then tried again to find him but were unsuccessful, and on coming down again, they both assaulted Mr. Coles, who had tried to get Emson away from Harcourt. Coles jumped behind the bar, when Emson seized bottles, glasses, and everything he could lay hold of to strike him. He hit Coles' face in several places. The police then came and I came the prisoners in charge. Mahon simply stood by during the scuffle between Coles and Emson. He was too drunk to do anything. All the time, I was begging them to stop, as I was a lone woman. I think the damage amounts to about \$10.

John Mahon, sworn, stated in his defence:—I had been drinking pretty freely on the day in question before I went to the house. I was drunk, as Mrs. Williams says. I have stopped fights there before, as she knows, as I am opposed to rows. I was used as a catspaw, and certainly had no intention of creating a disturbance. Mrs. Williams frequently interferes to stop disturbances and always gets the worst of it.

Harold Emson, sworn, stated:—I came ashore on Saturday last, when I fell in with Mahon with whom I had several drinks. We visited several houses and at last went to No. 164. I did not drink much as I have been sick. I was quite sober and saw all that was going on. Mahon and I had a slight growl and I took my knife from my neck and said, jokingly, that I would cut him. He knew perfectly well I did not mean it, and laid down to sleep. Some man now brought in Mr. Harcourt, our schoolmaster, who seeing a little ship's boy against whom he had a grudge, struck him in the face. I told him he ought to be ashamed of himself to strike a boy, and told him to come and do it to a man. He came and made a feint at me, when I got him up against the bar. He said "Don't hit me, I'm too drunk." I did not strike him. Mrs. Williams told him to go upstairs and he went. Afterwards I told Mahon I would go upstairs and make it square with Harcourt. I went up, looked over the partition of the room and saw him washing his face. I asked him to come down, saying it was all square and that we would have no more quarrelling. The first thing I knew was the door falling in and the lamp going out. I went downstairs. Two shipmates and Mrs. Williams went up, but I don't think Mahon did, as he was too drunk. I did not leap over the bar; it was Cole that did so and he threw a glass at Mahon and cut his face. He then ran out the back way. The police then came in and took us in charge. I am certain I was sober.

# IN H. I. R. M.'S CONSULAR COURT.

Before A. PELIKAN, Esq., Consul and Judge.

Messrs. S. CARCANO and REYNAUD, Assessors.

Saturday, November 13th, 1880.

JAN DE BOER v. S. SEREBRENKOFF, agent for the owners of the Russian steamer *Nordenskjöld*.

This was a claim to recover the sum of \$8,992.70 salvage expenses, &c., and \$1,283 commission on the value salvaged. The defendant admitted his indebtedness to the extent of \$2,189.49 salvage, but disputed the commission claimed and and left that to be settled by the Court.

Mr. Kirkwood again appeared for the plaintiff and Mr. Dallas for the defendant.

On the opening of the Court the following judgment was delivered by the President:—

(Translation.)

The Russian Consular Court, sitting in Yokohama, composed of Mr. A. Pelikan, Vice Consul, President, and Messrs. Silvio Carcano and Joannis Reynaud, Assessors:—

Judging civilly, and in the first instance, in the case of Jan de Boer, a Dutch subject, against the Russian steamer *Nordenskjöld*.

After having heard the parties, in their explanations, speeches, replies and conclusions, in public audience, and after determining upon the demands of both parties,

1:—Condemns Jan de Boer to take back, in its present condition, the steam pump, diving apparatus, and, generally, all the implements and apparatus, the property of the said Jan de Boer, which has been made use of in the salvage of the steamer *Nordenskjöld*.

2:—Rejects all claims concerning the wages, travelling expenses and others of the engineer Gland, saying that they ought to remain at the charge of Jan de Boer.

3:—Condemns the steamer *Nordenskjöld* to pay to Jan de Boer the sum of \$1,200 for the hire of the steam pump for the space of six months.

4:—Condemns the steamer *Nordenskjöld* to pay to Jan de Boer the sum of \$1,200 for the hire of the diving apparatus for the space of six months.

5:—Condemns the said steamer to pay to the said Jan de Boer the sum of \$250, the value of one anchor and one chain lost in the operations of salvage.

6:—Condemns the said steamer *Nordenskjöld* to pay to the said Jan de Boer the expenses incurred by the voyage of the schooner *Otomi*, which it decrees shall be fixed at the sum of \$1508.20.

7:—Condemns the steamer *Nordenskjöld* to pay to the said Jan de Boer the sum of \$1084.54, on account of travelling expenses, transport, lodging, and other expenses incurred in going from Yokohama to the place of shipwreck, during the stay there, and in carrying out the salvage operations.

8:—Decrees that the sum of \$1021.89—the amount at which the Court fixes the expenses and the outlay incurred by the steamer on account of the said salvage—shall be deducted from the value of the steamer *Nordenskjöld*.

9:—Condemns the vessel *Nordenskjöld* to pay as commission—as is specified in the salvage contract—the sum of 8 per cent on the value of the *Nordenskjöld*, after deduction of the salvage expenses as is stipulated in the said contract, and consequently fixes the commission at \$1498.80.

10:—Condemns the steamer *Nordenskjöld* to pay to the said Jan de Boer, interest at the rate of 6 per cent per annum on the sums accorded to Jan de Boer by the present judgment. Interest to commence from the 16th August, 1880, the date of commencing the action.

11:—Declares that the expenses of the present suit shall be borne by the two parties *pro rata*, according to the terms of the law.

A. PELIKAN, President.

SILVIO CARCANO, } Assessors.  
JON. REYNAUD, }

Yokohama, 13th Nov. 1880.

## THE PROFESSOR'S EXPERIMENT.

The red wine of Affenthal has this quality, that one half bottle makes you kind but firm, two makes you talkative and obstinate, and three, recklessly unreasonable.

If the waiter at the Prinz Carl in Heidelberg had possessed a soul above drink-money, he might have calculated accurately the effect of the six half bottles of Affenthaler which he fetched to the apartment of the Rev. Dr. Bellglory at the 6 o'clock dinner for three. That is to say, he might have deduced this story in advance by observation of the fact that of the six half bottles one was consumed by Miss Blanche Bellglory, two went to the Reverend Doctor, her father, while the remaining moiety fell to the share of young Strout, remotely of New York, and immediately of Professor Schwank's psycho-neurological section in the University.

So when in the course of the evening the doctor fell asleep in his chair, and young Strout took opportunity to put to Miss Blanche a question which he had already asked her twice, once at Sarotoga and once at New York City, she returned the answer he had heard on two former occasions, but in terms even more firm, while not less kind than before. She declared her unalterable determination to abide by her parent's wishes.

This was not exactly pleasing to young Strout. He knew better than anybody else that while approving him socially and humanly, the doctor abhorred his opinions. "No man," the Doctor had repeatedly said, "who denies the objective verity of knowledge derived from intuition or otherwise from subjective methods—no man who pushes noumena aside to his impetuous pursuit of phenomena can make a safe husband for my child."

He said the same thing again in a great many words and with much emphasis, after he awoke from his nap, Miss Blanche having discreetly withdrawn.

"But, my dear doctor," urged Strout, "this is an affair of the heart, not of metaphysics: and you leave for Nuremberg to-morrow, and it is my last chance."

"You are an excellent young man in several respects," rejoined the doctor. "Abjure your gross materialism and Blanche is your wife with all my heart. Your antecedents are unexceptionable, but you are intellectually impregnated with the most dangerous heresy of this or any other age. If I should countenance it by giving you my daughter, I could never look the Princeton Faculty in the face."

"It appears to me that this doesn't concern the Princeton Faculty in the least," persisted Strout. "It concerns Blanche and me."

Here, then, were three people, two of them young and in love with each other, divided by a question of metaphysics, the most abstract and useless question and ever wasted human effort. But that same question divided the schools of Europe for centuries and contributed largely to the list of martyrs by opinion's sake. The famous old controversy was now taken up by the six half bottles of Affenthaler, three of them stoutly holding ground against the other three.

"No argument in the world," said the doctor's two half bottles, "can shake my decision," and off he went to sleep again.

"No amount of coaxing," said Miss Blanche's half bottle, two hours later in the evening, "can make me not contrary to papa's wishes. But," continued the half bottle in a whisper, "I am sorry he is so stubborn."

"I don't believe it," retorted Strout's three half bottles. "You have no more heart than one of your father's non-individualized Ideas. You are not real flesh and blood like other women. You are simply Extension, made up of an aggregate of concepts, and assuming to be Entity, and imposing your unreal existence upon a poor devil like me. You are unreal, I say. A flaw in logic, an error of the senses, a fallacy in reasoning, a misplaced promise, and what becomes of you? Puff! Away you go into nil. If it were otherwise you would care for me. What a fool I am to love you! I might as well love a memory, a thought, a dream, a mathematical formula, a rule of syntax, or anything else that lacks objective existence."

She said nothing, but the tears came into her eyes.

"Good-bye, Blanche," he continued at the door, pulling his hat over his eyes and not observing the look of pain and bewilderment that clouded her fair face—"Heaven bless you when your father finally marries you to a Syllogism!"

## II.

Strout went whistling from the Prinz Carl Hotel to his rooms in the Plockstrasse. He reviewed his parting with Blanche. "So much the better, perhaps," he said to himself. "One dream less in life, and more room for realities." By the clock in the market place he saw it was half-past nine; for the full moon, hanging high above the Königstuhl, flooded the town and valley with light. Up on the side of the hill the gigantic ruin of the old castle stood boldly out among the trees.

He stopped whistling and gritted his teeth.

"Pshaw!" he said aloud, "one can put off his convictions like a pair of uncomfortable boots. After all, love is nothing more nor less than the disintegration and recombination of certain molecules of the brain or marrow, the exact laws governing which have not yet been ascertained." So saying he ran plump into a portly individual coming down the street.

"Hallo! Herr Strout," said the jolly voice of Professor Schwank. "Whither are you going so fast, and what kind of philosophy talk you to the moon?"

"I am walking off three half bottles of your cursed Affenthaler, which have gone to my feet Herr Professor," replied Strout: "and I am making love to the moon. It's an old affair between us."

"And your lovely American friend?" demanded the fat Professor with a chuckle.

"Departs by the morning train," replied Strout, gravely.

"Himmel-blitzen!" exclaimed the Professor. "And grief ha-

blinded you so that you plunge into the abdomens of your elders? But come with me to my room and smoke yourself into a philosophic frame of mind."

Professor Schwank's apartments faced the University buildings in the Ludwigs-platz. Established in a comfortable arm-chair, with a pipe of excellent tobacco in his mouth, Strout felt more at peace with his environment. He was in an atmosphere of healthful, practical, scientific activity that calmed his soul. Professor Schwank had gone further than the most eminent of his contemporaries in demonstrating the purely physiological basis of mind and thought. He had got nearer than any other man in Europe to the secrets of the nerve aura, the penetralia of the brain, the memory scars of ganglia. His position in philosophy was the antipodes of that occupied by the Rev. Dr. Bellglory, for example. The study reflected the occupations of the man. In one corner stood an enormous Ruhmkorff coil. Books were scattered everywhere—on shelves, on tables, on chairs, on the floor. A plaster bust of Aristotle looked across the room into the face of a plaster bust of Leibnitz. Prints of Gall, of Pappenheim of Leeuwenhoeck hung upon the walls. Varied dissections and wet preparations abounded. In a glass vessel on the table at Strout's elbow, the brain of a positivist philosopher floated in yellow alcohol; near it, also suspended in spirits, swung the medulla oblongata of a celebrated thief.

The appearance of the Professor himself, as he sat in his arm-chair opposite Strout, serenely drawing clouds of smoke from the amber mouthpiece of his long porcelain pipe, was of the sort, which by promising sympathy before-hand seduces reserve into confidential utterances. Not only his rosy face, with its fringe of yellow beard, but his whole mountainous body seemed to beam on Strout with friendly good will. He looked the refuge of a broken heart.

Drawn out in spite of himself by the Professor's kindly, attentive smile and discreet questions, Strout found satisfaction in unobscuring his troubles. The Professor, smoking in silence, listened patiently to the long story. If Strout had been less preoccupied with his own woes, he might, perhaps, have discovered that behind the friendly interest that glimmered on the glasses of the Professor's gold-bowed spectacles, a pair of small, steel grey eyes were observing him with the keen, unrelenting coldness of scientific scrutiny.

"You have seen, Herr Professor," said Strout in conclusion, "that the case is hopeless."

"My dear fellow," replied the Professor, "I see nothing of the kind."

"But it is a matter of conviction," exclaimed Strout. "One cannot renounce the truth even to gain a wife. She herself would despise me if I did."

"In this world everything is true and nothing is true," replied the Professor sententiously. "You must change your convictions."

"That is impossible."

The Professor blew a great cloud of smoke, and regarded the young man with an expression of pity and surprise. It seemed to Strout that Aristotle and Leibnitz, Leeuwenhoeck, Pappenheim and Gall were all looking down upon him with pity and surprise.

"Impossible, did you say?" remarked Professor Schwank. "On the contrary, my dear boy nothing is easier than to change one's convictions. In the present advanced condition of surgery, it is a matter of little difficulty."

Strout looked at his respected instructor in blank amazement.

"What you call your convictions," continued the savant, "are matters of medical constitution, depending on adventitious circumstances. You are a positivist, an idealist, a skeptic, a mystic, a what-not, why? Because nature, predisposition, the assimilation of bony elements have made your skull thicker in one place, thinner in another. The cranial wall presses too close upon the brain in one spot; you sneer at the opinions of your friend Dr. Bellglory. It cramps the development of the tissues in another spot; you deny faith a place in philosophy. I assure you Herr Strout, we have discovered and classified already the greater part of the physical causes determining and limiting belief, and are fast reducing the system to the certainty of science."

"Granting all that," interposed Strout, whose head was swimming under the combined influence of Affenthaler, tobacco smoke, and startling new ideas, "I fail to see how it helps my case. Unfortunately, the bone of my skull is no longer cartilage, like an infant's. You cannot mould my intellect by means of compressors and bandages."

"Ah! there you touch my professional pride," cried Schwank. "If you would only put yourself into my hands!"

"And what then?"

"Then," replied the Professor, with enthusiasm, "I should remodel your intellect to suit the emergency. How, you ask? If a blow on the head had driven a splinter of bone down upon the gray matter overlaying the cerebrum, depriving of you of memory, the power of language, or some other special faculty, as the case might be, how should I proceed? I should raise a section of the bone and remove the pressure. Just so when the physical conformation of the cranium limits your capacity to understand and credit the philosophy which your American theologian insists upon in his son-in-law. I remove the pressure, I give you a charming wife, while science gains a beautiful and valuable fact. That is what I offer you, Herr Strout."

"In other words—" began Strout.

"In other words, I should trephine you," shouted the Professor, jumping from his chair, and no longer, attempting to conceal his eagerness.

"Well, Herr Professor," said Strout slowly, after a long pause, during which he had endeavored to make out why the pictured face Gall seemed to wear a look of triumph—"Well, Herr Professor, I consent to the operation. Trephine me at once—to-night."

The Professor feebly demurred to the precipitateness of the course. "The necessary preparations," he urged. "Need not occupy five

minutes," replied Strout. "To-morrow, I shall have changed my mind."

"This suggestion was enough to impel the Professor to immediate action. "You will allow me?" asked he, "to send for my esteemed colleague in the University, the Herr Doctor Anton Diggelmann?" Strout assented.

"Do anything that you think needful to the success of the experiment."

Professor Schwank rang. "Fritz," said he, to the stupid-faced Black Forrester who answered the bell, "run across the square and ask Dr. Diggelmann to come to me immediately. Request him to bring his surgical case and sulphuric ether. If you find the Doctor, you need not return."

Acting on a sudden impulse, Strout seized a sheet of paper that lay on the Professor's table and hastily wrote a few words. "Here!" he said tossing the servant a gold piece of ten marks. "Deliver this note at the Prinz Carl in the morning—mind you, in the morning."

The note he had written was this:—

BLANCHE—When you receive this I shall have solved the problem in one way or another. I am about to be trephined under the superintendence of my friend Prof. Schwank. If the intellectual obstacle to our union is removed by the operation I shall follow you to Bavaria and Switzerland. If the operation results otherwise, think sometimes kindly of your unfortunate

Ludwiga-platz, 10.30 P.M.

G. S.

Fritz faithfully delivered the message to Dr. Diggelmann, and then hid towards the nearest wine shop. His gold piece dazed him. "A nice, liberal gentleman!" he thought, "Ten marks for carrying the letter to the Prinz Carl in the morning—ten marks, a thousand pfennigs; beer at five pfennigs the glass, 200 glasses!" The impensity of the prospect filled him with joy. How might he manifest his gratitude? He reflected and an idea struck him. "I will not wait till morning," he thought. "I will deliver the gentleman's letter to-night, at once." "He will say, 'Fritz, you are a prompt fellow. You do even better than you are told.'"

### III.

Strout was stretched upon a reclining chair, his coat and waistcoat off, Professor Schwank stood over him. In his hand was a hollow cone, rolled from a newspaper. He held the cone by the apex; the broad aperture at the base was closely pressed against Strout's face, covering all but his eyes and his forehead.

"By long, steady, regular inspirations," said the Professor, in a soothing, monotonous voice. "That is right; that is—right; there—there—there!"

With every inhalation Strout drew in the pleasant, tingling coolness of the ether fumes. At first his breathing was forced; at the end of each inspiration he experienced for an instant a sensation as if mighty waters were rushing through his brain. Gradually the period of the rushing sensation extended itself, until it began with the beginning of each breath. Then the ether seemed to seize possession of his breathing and to control the expansions and contractions of his chest independently of his own will. The ether breathed for him. He surrendered himself to the influence with a feeling of delight. The rushings became rhythmic, and the intervals shorter and shorter. His individuality seemed to be wrapped up in the rushings, and to be borne to and fro in their tremendous flux and reflux. "I shall be gone in one second more," he thought; and his consciousness sank in the whirling flood.

Professor Schwank nodded to Dr. Diggelmann. The Doctor nodded back to the Professor.

Dr. Diggelmann was a dry little old man, who weighed hardly more than 100 pounds. He wore a black wig, too large for his head. His eyes were deep set under corrugated brows, while strongly marked lines running from the corners of his nostrils to the corners of his mouth gave his face a lean, sardonic expression, in striking contrast with the jolly rotundity of Professor Schwank's visage. Dr. Diggelmann was taciturn but observant. At the Professor's nod he opened his case of surgical instruments and selected a scalpel with a keen curved blade, and also a glittering piece of steel which looked like an exaggerated auger bit with a gimlet handle. Having satisfied himself that these instruments were in good condition, he deliberately rolled up the sleeves of his coat and approached the unconscious Strout.

"About on the medium line, just behind the junction of the coronal and sagittal sutures," whispered Professor Schwank eagerly.

"Yes, I know—I know," replied Diggelmann.

He was on the point of cutting away with his scalpel some of the brown hair that encumbered operations on the top of Strout's head, when the door was quickly opened from the outside and a young lady, attended by a maid, entered without ceremony.

"I am Blanche Bellglory," the young lady announced to the astonished savants, as soon as she had recovered her breath. "I have come to—"

At this moment she perceived the motionless form of Strout upon the reclining chair; while the gleaming steel in Dr. Diggelmann's hand caught her alert eyes. She uttered a little shriek and ran towards the group.

"Oh, this is terrible!" she cried. "I am too late, and you have already killed him."

"Calm yourself, I beg you," said the polite Professor. "No circumstance is terrible to which we are indebted for a visit from so charming a young lady."

"So great an honor!" added Mr. Diggelmann, grinning diabolically and rubbing his hands.

"And Herr Strout," continued the Professor, "is, unfortunately not yet trephined. As you entered, we were about beginning the operation."

Miss Bellglory gave a sob of relief and sank into a chair.

In a few well-chosen words the Professor explained the theory of his experiment, dwelling especially upon the effect it was expected to have on the fortunes of young people. When he finished the American girl's eyes were full of tears, but the firm lines of her mouth showed she had already resolved upon her own course.

"How noble in him," she exclaimed. "to submit to be trephined for my sake! But that must not be. I can't consent to have this poor, dear head mutilated. I should never forgive myself. The trouble all originates from my decision not to marry him without papa's approval. With my present views of duty, I cannot alter that decision. But don't you think," she continued dropping her voice to a whisper, "that if you should trephine *me*, I might see my duty in a different light?"

"It is extremely probable, my dear young lady," replied the Professor, throwing a significant glance at Dr. Diggelmann, who responded with the faintest wink imaginable.

"Then" said Miss Blanche, arising and beginning to remove her bonnet, "please proceed to trephine me immediately. I insist on it."

"What is all this?" demanded the deep voice of the Rev. Dr. Bellglory, who had entered the room unnoticed, piloted by Fritz. "I came as rapidly as I could, Blanche, but not early enough, it appears, to learn the first principles of your singular actions."

"My papa, gentlemen," said Miss Bellglory.

The two Germans bowed courteously. Dr. Bellglory affably returned their salutation.

"These gentlemen, papa," Miss Blanche explained, "have kindly undertaken to reconcile the difference of opinion between poor George and ourselves by means of a surgical operation. I don't at all understand it, but George does, for you see that he has thought best to submit to the operation, which they were about to begin when I arrived. Now, I can not allow him to suffer for my obstinacy; and, therefore, dear papa, I have requested the gentlemen to trephine me instead of him."

Professor Schwank repeated for Dr. Bellglory's information the explanation which he had already made to the young lady. On learning of Strout's course in the matter, Dr. Bellglory was greatly affected.

"No, Blanche!" he said; "our young friend must not be trephined. Although I cannot conscientiously accept him as a son-in-law while our views on the verity of subjective knowledge differ so widely, I can at least emulate his generous willingness to open his intellect to conviction. It is I who will be trephined, provided these gentlemen will courteously substitute me for the patient now in their hands."

"We shall be most happy," said Professor Schwank and Dr. Diggelmann, in the same breath.

"Thanks! Thanks!" cried Dr. Bellglory with genuine emotion. But I shall not permit you to sacrifice your life-long convictions to my happiness, papa," interposed Blanche. The Doctor insisted that he was only doing his duty as a parent. The amiable dispute went on for some time, the Germans listening with indifference. Sure of a subject for their experiment at any rate, they cared little which one of the three Americans finally came under the knife. Meanwhile Strout opened his eyes, slowly raised himself on one elbow, vacantly gazed about the room for a few seconds, and then sank back, relapsing temporarily into consciousness.

Professor Schwank, who perceived that father and daughter were equally fixed in their determination, and each unlikely to yield to the other, was on the point of suggesting that the question be settled by trephining both of them, when Strout again regained his senses. He sat bolt upright, staring fixedly at the glass jar which contained the positivist's brain. Then he pressed both hands to his head, muttering a few incoherent words. Gradually as he recovered from the clutch of the ether one after another of his faculties, his eyes brightened and he appeared to recognize the faces around him. After some time he opened his lips and spoke.

"Marvellous!" he exclaimed.

Miss Bellglory ran to him and took his hand. The Doctor hurried forward, intending to renounce his own resolution to be trephined. Strout pressed Blanche's hand to his lips for an instant, gave the Doctor's hand a cordial grasp, and then seized the hand of Professor Schwank, which he wrung with all the warmth of respectful gratitude. "My dear Herr Professor," he said, "how can I ever repay you? The experiment has been a perfect success."

"But—" began the astonished Professor.

"Don't try to depreciate your own share in my good fortune," interrupted Strout. "The theory was yours, and all the triumph of the practical success belongs to you—to you and to Dr. Diggelmann's skill."

Strout, still holding Blanche's hand, now turned to her father.

"There is now no obstacle to our union, Doctor," he said. "Thanks to Professor Schwank's operation, I see the blind folly of my late attitude toward the Subjective. I recant. I am no longer a positivist. My intellect has leaped the narrow limits that hedged it in. I know now that there is more in our philosophy than can be measured with a metric rule or weighed in a Coulomb balance. Ever since I passed under the influence of the ether, I have been floating in the infinite. I have been freed from conditions of time and space. I have lost my own individuality in the immensity of the All. A dozen times I have been absorbed in Brahma; a dozen times I have emanated from Brahma, a new being, forgetful of my old self. I have stood face to face with the mystic and awful Om; my world-soul, descending to the infinite, has floated calmly on for centuries over an ocean of Affenthalet. My consciousness has leaped back as far as the thirtieth century yet to come. There is no time; there is no space; there is no individual existence; there is nothing save the all, and the Faith that guides Reason through the changeless night. For more than one million years my identity was that of the positivist in the glass jar yonder. Pardon me, Professor Schwank, but for the same period of time yours was that of the

celebrated thief in the other jar. Great heavens! How mistaken I have been up to the night when you, Herr Professor, took charge of my intellectual destiny."

He paused for want of breath, but the glow of the mystic's rapture still lighted up his handsome features. There was an awkward silence in the room for considerable time. Then it was broken by the dry, harsh voice of Diggelmann.

"You labor under a somewhat ridiculous delusion, young gentleman. You haven't been trephined yet."

Strout looked in amazement from one to another of his friends; but their faces confirmed the surgeon's statement.

"What was it then?" he gasped.

"Sulphuric ether," replied the surgeon, laconically.

"But, after all," interposed Dr. Bellglory, "it makes little difference what agent has opened your friend's mind to a perception of the truth. It is a matter for congratulation that the surgical operation becomes no longer necessary."

The two Germans exchanged glances of dismay. "We shall lose the opportunity for our experiment," the Professor whispered to Diggelmann. Then he continued aloud, addressing Strout: "I should advise you to submit to the operation, nevertheless. There can be no permanent intellectual cure without it. These effects of the ether will pass away."

"Thank you," returned Strout, who at last read correctly the cold, calculating expression that lurked behind the scientist's spectacles. "Thank you, I am very well as I am."

"But you might, for the sake of Science consent, persisted Schwank. "Yes for the sake of science," echoed Diggelmann.

"Hang Science!" replied Strout fiercely. "Don't you know that I no longer believe in Science?"

Blanche also began to understand the true motives which had led the German Professor to interfere in her love affair. She cast an approving glance at Strout and rose to depart. The three Americans moved towards the door. Prof. Schwank and Dr. Diggelmann fairly gnashed their teeth with rage. Miss Bellglory turned and made them a low courtesy.

"If you must trephine somebody for the sake of Science, gentlemen," she remarked, with her sweetest smile, "you might draw lots to see which of you shall trephine the other."—*New York Sun.*

### TREBLE ACROSTIC.

"Come ye thankful people come,  
Raise the song of Harvest Home!  
All is safely gathered in  
Ere the winter-storms begin."

1.

The emblem of vice, you will see in a trice,  
Is thrown to the breeze from up here,  
As long as the mast by the fid is held fast,  
The flag will have nothing to fear.

2.

This charming nectar Colonels do provide  
After one's meals, mostly at eventide.

3.

A sort of sentry-box, who wears it feels  
He's covered in completely to the heels.

4.

We ask your voice to declare your choice,  
So mind you carefully con it,  
And if you find 'tis not to your mind,  
Just put your veto upon it.

5.

'Tis not the plural of a bogus priest,  
I am not prudish in the very least,  
But this I say they're useful in a feast.

FUJIYAMA.

### METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, NOVEMBER 12TH 1880.  
Observatory of Daigaku, Moto-Fujicho, Hongō, Tokio, Japan.

### REMARKS.

Heavy line represents barometer.  
Light continuous line—max. & min. thermometers.  
.....represents velocity of wind.  
.....percentage of humidity.  
Max. velocity of wind 45.3 miles per hour on Monday 7 p.m.  
The barometer is reduced to the freezing point and to the level of the sea.  
The highest reading of the barometer during the week was 30.340 inches on Friday, at 7 a.m., and the lowest was 29.885 inches on Sunday, at 2 p.m. The highest temperature for the week was 65° on Monday, and the lowest was 38° on Wednesday. The maximum and minimum for the corresponding week of last year were 62° and 31° respectively. The total amount of rain for the week was 1.040 inches, while a trace only is recorded for the corresponding week of last year. It will be observed that a tolerably high wind was recorded on Monday evening, the velocity reaching more than forty-four miles per hour.

### LIGHTSHIP SIGNALS.

The following are the signals made from the lightship to denote the approach of vessels:—

Merchant steamer:—A black ball, with the national flag of the vessel below, at the yard arm.

Mail steamer:—A black diamond, with the company's flag below, at the peak.

Man-of-war:—National flag of the vessel at the peak.

Sailing vessels:—For a ship; flag B. (red); barque, flag C. (red ball on white ground); brig, flag D. (white ball on blue ground); schooner, flag E. (white ball on red ground) all commercial code, with the vessel's national flag below as soon as it can be made out.

### YOKOSUKA STEAMERS TIME TABLE.

LEAVE YOKOHAMA.

DAILY:—8.30, and 9.45 A.M.; 12.00, 1.30, and 4.15 P.M.

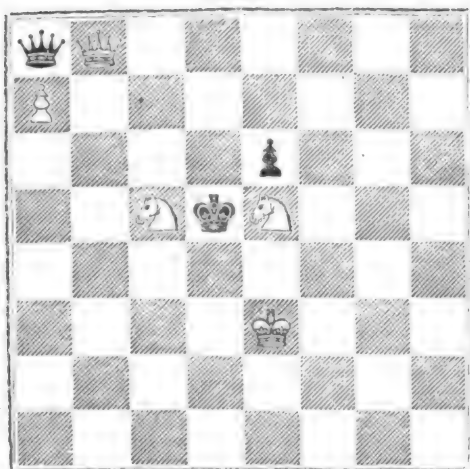

LEAVE YOKOSUKA.

DAILY:—6.45 and 9.30 A.M., and 12.00; 1.30 and 4.00 P.M.

Black.

1.—Anything.

Correct solution received from W. H. S., V. d. P., and Q.

## SHIPPING INTELLIGENCE.

## INWARDS.

- Nov. 14, Japanese steamer *Kinskin Maru*, Davidson, 690, from Kobe. Mails and General, to M. B. Co.  
 Nov. 15, Japanese steamer *Tsuruga Maru*, Steadman, 661, from Kobe. Mails and General, to M. B. Co.  
 Nov. 16, Russian schooner *North Star*, Johnson, 42, from Kurile Islands. Skins, to H. W. Hohnhotz & Co.  
 Nov. 17, Japanese steamer *Takachiho Maru*, Nye, 1,407, from Hakodate. Mails and General, to M. B. Co.  
 Nov. 18, Japanese steamer *Tokio Maru*, Swain, 1,146, from Shanghai and ports. Mails and General, to M. B. Co.  
 Nov. 19, French steamer *Menzaleh*, Homery, 1,273, from Hongkong. Mails and General, to M. M. Co.  
 Nov. 19, Japanese steamer *Niigata Maru*, Walker, 1,603, from Kobe. Mails and General, to M. B. Co.  
 Nov. 19, British steamer *Deronschire*, A. McGachen, 1,512, from Shanghai. General, to Mourilyan, Heumann & Co.  
 Nov. 20, British steamer *Hector*, Billinge, 1589, from Shanghai. General, to Butterfield and Swire.  
 Nov. 20, British steamer *Belgie*, Davison, 2,627, from Hongkong. Mails and General, to O. & O. Co.

## PASSENGERS.

Per Japanese steamer *Tokio Maru*, from Shanghai and way ports:—Mrs. Valentine and child, Rear Admiral A. Silvera da Motta, Captain de Saldanha, Messrs. G. E. Irving, D. B. Taylor, and H. N. Tileston, and 18 Japanese in the cabin; 3 Europeans and 275 Japanese in the steerage.  
 Per Japanese steamer *Niigata Maru* from Kobe:—Mr. and Mrs. Hegt, and Mr. Wilkinson in cabin; 60 Japanese in steerage.  
 Per French steamer *Menzaleh* from Hongkong:—Messrs. Alioth, Traster, Lanouy, Groth and 2 Japanese in cabin.

## OUTWARDS.

- Nov. 14, Japanese steamer *Niigata Maru*, Walker, 1,603, for Kobe. Mails and General, despatched by M. B. Co.  
 Nov. 14, French steamer *Tanis*, Reynier, 1,735, for Hongkong. Mails and General, despatched by M. M. Co.  
 Nov. 14, Japanese barque *Kinokuni Maru*, Nicolle, 960, for Nagasaki. Ballast, despatched by M. B. Co.  
 Nov. 17, Japanese steamer *Hiroshima Maru*, Haswell, 1,200, for Shanghai and ports. Mails and General, despatched by M. B. Co.  
 Nov. 17, Japanese steamer *Shinagawa Maru*, Walker, 968, for Nohin. Mails and General, despatched by M. B. Co.  
 Nov. 19, Japanese steamer *Kinskin Maru*, Davidson, 690, for Kobe. Mails and General, despatched by M. B. Co.  
 Nov. 19, British barque *Em. Green*, 775, for Kobe. despatched by Malcolm & Co.  
 Nov. 20, British steamer *Malacca*, Sexton, 1,709, for Hongkong. Mails and General, despatched by P. & O. Co.

## PASSENGERS.

Per French steamer *Tanis* for Hongkong:—Mr. and Mrs. John Robinson, Mr. and Mrs. Hennicke, Messrs. G. Grahams, E. Abbott, L. Harris, W. J. Scott, Beltrano, G. Kenna, S. T. Serebrenikoff, 1 Chinese and 4 Japanese in cabin.

Per Japanese steamer *Hiroshima Maru* for Shanghai and ports:—Mrs. Kirkwood, Messrs. Kleinmoort, Willard, Honey, Fleusch, Pidgeon, C. Illies, Playfair, Butt, Suchu, Koyn, and 11 Japanese in cabin.

Per British steamer *Malacca* for Hongkong:—Mrs. Morris, Mrs. Wynkoop, Mrs. S. A. Wynkoop, Dr. and Mrs. Wood and family, Messrs. S. F. Cotton, C. B. Cotton, Pidgeon, Flinsch, H. Darby and Legret in cabin; 6 Natives in steerage.

## CARGOES.

Per French steamer *Tanis* for Hongkong:—

Silk for London and France ... .. 940 bales.

Silkworm Eggs for London &amp; France ... .. 13 cases

Per Japanese steamer *Tokio Maru* from Shanghai and ports:—

Treasure... .. \$ 1,440.00

## REPORTS.

The Japanese steamer *Niigata Maru* reports:—Left Kobe at 6 p.m. on the 27th instant. Light variable winds to Cape Sima, then moderate to strong northerly winds to Rock Island, thence to port light variable winds. Arrived 5.30 a.m. on the 19th Nov.

China No. 4-5, Kongfun & Kook-fah... ..	"	\$6.00 to \$8.00	Kerosene Oil... ..	case	\$2.05

**EXPORTS.**

**SILK.**—During the past week our Silk market has been in a most unsatisfactory condition. For a few days, prices remained steady and a moderate number of transactions took place at about our last quotations; more recently, however, one firm entered the market and secured no less than 1,400 Japanese bales; it is very generally believed that these silks have been bought for account of Japanese and it is also reported that the Government are connected with these transactions; be that as it may, however, the market is for the present entirely demoralised.

With such a state of affairs quotations cannot well be given, we therefore do not alter ours of the 13th instant, but simply add that natives are demanding an advance of about \$20 per picul, and in many cases refuse to sell. *Bona fide* sales since the 13th instant, about 300 shipping bales.

Stocks about 7,000 shipping bales.

Shipments to date 6,630 bales against 7,545 bales in 1879.

The following are to-day's quotations.

	Exchange 3/9½	Exchange 4.80
New Silks { Hanks.—No. 1 & 2 .....	\$490 to \$500 = 16/1	to 16/6 = fcs. 46.50 to fcs. 47.80
" " 2 .....	\$480 to \$490 = 15/3	to 16/1 = " 46.00 to " 46.60
" " 3 & 4 .....	\$430 to \$450 = 14/6	to 15/2 = " 40.50 to " 42.40
Filatures.—Extra .....	\$640 to \$650 = 21/	to 21/4 = " 59.00 to " 59.80
Old Silks { " " 1 .....	\$600 to \$620 = 19/9	to 20/4 = " 55.40 to " 57.20
" " 2 .....	\$570 to \$590 = 18/9	to 19/7 = " 52.80 to " 54.50
Kakeda.—Good Medium to Best.	\$550 to \$600 = 18/	to 19/9 = " 51.20 to " 55.40

**TEA.**—There has been rather more doing during the past week, settlements amounting to 4,300 piculs, Prices have ruled firm but quotations are unaltered. Low qualities have been most in demand. Stocks are about 6,000 piculs.

Common { ... ..	\$13 to \$15	Fine ... ..	\$23 to \$24
Good Common { ... ..	"	Finest ... ..	\$26 to \$27
Medium ... ..	\$16 to \$18	Choice ... ..	\$29 to \$30

CAPTAIN DAVISON,

WILL be despatched for SAN FRANCISCO, on THURSDAY, the 25th instant, at 10 A.M.

Through Tickets and Bills of Lading issued for transportation of Passengers and Freight to UNITED STATES and EUROPE.

### Rates of Passage:

To San Francisco, Cabin .....	\$250.00
" Liverpool .....	\$415.00 to \$425.00
" London .....	\$405.00 to \$450.00
" Paris .....	\$435.00 to \$450.00
" Havre .....	\$430.00 to \$450.00
" Bremen .....	\$420.00 to \$450.00
" Hamburg .....	\$420.00 to \$435.00

According to selection of Atlantic Line of Steamers.

### RETURN PASSAGE RATES

Between San Francisco, China, and Japan.

RETURN PASSAGE ORDERS, available for One Year, will be issued at a Discount of 25 o/o from regular fare, if prepaid. Passengers not holding prepaid orders, and re-embarking for return voyage within Six Months, will be allowed a Discount of 20 o/o, and within One Year 10 o/o, from regular fares. Through First-class Passengers allowed 250 lbs. Baggage Free.

For freight or passage or any further information,

Apply at Agency O. & O. S. S. Co., No. 13.

## WOODS AND FORESTS IN JAPAN.

WE have frequently called attention in this journal to the dangers attending deforestation and to the benefits arising from afforestation, and have given illustrations of the changes brought about by these in France and other countries. The great and beneficial influence which forests exercise on the climate by regulating the humidity and temperature of the air and of the soil, and thereby preventing both droughts and floods, has been well studied and is well known. But there is another way in which forests act beneficially in a country which has not received so much general attention and which is yet well deserving of it. This is the improvement and enrichment of the soil which takes place during the growth of the forests. The kind of tree selected for planting is by no means a subordinate matter for this purpose. All trees do not grow equally well in the same soil and, moreover, they do not all improve the soil to the same extent.

Thus it has been found in certain localities in Scotland that spruce fir and beech scarcely improve the land on which they grow, but that the land of an ash forest gradually increases in value and that of an oak forest still more, whilst in a larch plantation the value of the land has increased to the greatest extent: this increase amounting to the equivalent of from two to four yen per acre in the rentable value of the land during the time of the growth of the forests, that is about thirty years. In other districts and places it is likely that the improvements would not be to the same extent for these same trees, and it is possible that they might be in a somewhat different order.

This improvement in the soil is due mainly to the alteration of the surface soil and the accumulation of a rich mould beneath the trees by the shedding of leaves and bark and the formation of forest litter under the shade of the trees. This accumulation depends in quantity and value not only on the quantity of leaves and *débris* which falls on the ground, but also very greatly on the rapidity with

which it decomposes and decays. Beech and oak leaves, and, generally, the leaves of deciduous trees, decompose far more rapidly than the needles of pines and firs, and therefore far more litter accumulates in forests of coniferous trees than in those of deciduous trees. Moreover the quantity and quality of the ash or mineral constituents of the litter and the quantity of nitrogenous matter it contains is of great importance in relation to the improvements taking place in the soil. The litter from Scotch fir and spruce has been found to contain much less mineral matter than that of ash or oak forests, but the litter of a larch forest is nearly as rich in inorganic constituents as that of an oak forest, and by its slower rate of decay it accumulates to a greater extent in the larch forests. These facts will serve to explain the observations previously made on the different amounts of increase in value of land in forests of different kinds of trees. The importance of this litter in promoting a vigorous growth of timber also can hardly be over-rated. When the litter is left undisturbed it gradually forms a forest soil rich in humus and possessing a great power of absorbing and retaining water, far exceeding in this quality the majority of arable lands. When such a soil has been formed forest trees can be cultivated with success on steep hill sides otherwise incapable of supporting growth, and in rocky places which otherwise suffer both from drought and floods. This vegetable humus assists also in other ways, by its decay it hastens the disintegration of the underlying rocks and helps in dissolving the mineral substances necessary to plant food and also during its decay it furnishes much of the carbon which the trees annually store up in the form of organic matter. The removal of this litter, therefore, is in nearly all cases, a practice to be most strongly deprecated, and as it is a custom which we have seen carried out in some of the woods of this country, with the use of the litter to fertilise adjoining arable land, we trust sounder views will be propagated on this matter.

The annual requirements of a forest and its drain upon the soil is far less than those of ordinary cultivated crops, notwithstanding the fact that the total produce of dry matter annually is largely in excess of that produced by most agricultural crops. The average produce in dry matter of a forest is about five thousand or six thousand pounds per acre, a quantity which has been remarked as being particularly constant even with different kinds of trees and in different localities. Only in the case of some root crops is this amount of solid matter reached by cultivated crops. Of this total amount almost exactly one half is returned to the soil in the form of leaves, and goes to produce litter, which litter contains nearly the whole of the ash constituents and of the nitrogen, about six sevenths of the former and three fourths of the latter. It is obvious therefore that when the litter is allowed to remain, the requirements of a forest for inorganic constituents and nitrogen are exceedingly small, and very much less than for all ordinary farm crops. In the case of the

Scotch pine, the actual requirements when the litter is undisturbed are exceedingly small, and this tree is accordingly excellently suited for cultivation on a poor silicious and rocky soil. Of course in forming a forest the young plants for the first years require more food and more attention than afterwards.

The Woods and Forests Department of the Naimusho is endeavouring, by its publications and instructions to local officers, to dispel much of the ignorance which exists in the matter of the management of trees and other points connected with forestry. It is probable that by this department observations are being made and advantage taken of the slow natural changes and rotations which occur in forests. In Europe several such changes are historical, thus the forests in which Charlemagne and his successors hunted were of oak and beech, and now only pine trees are there found. In Germany, in the Palatinate and Rhine provinces the woods in which the bold barons of yore followed the boar and other game were mainly of oak; they have now been replaced mainly by beech and fir. Similar changes have occurred in Sweden and other countries, and it is well known that in the United States when an oak or maple forest is cut down it is naturally succeeded by a growth of pine and *vice versa*.

It is to be hoped also that in forming new plantations, and especially those of mixed woods, attention will be paid to the planting of trees of economical importance for other purposes than the production merely of timber or fuel. In the northern island the sugar maple occurs and it is not unlikely that its growth might be encouraged with advantage. In this island, where so many trees of the pine tribe occur naturally, there seems to be a very small production of turpentine and resin, and this industry might surely be profitably extended.

Trees which produce other and more valuable resins and gums would undoubtedly flourish in different parts of these islands and the preparation of their products would form a useful industry and furnish materials for export. In like manner more attention might profitably be given to the cultivation of trees furnishing food products for man or beast, as certain of the very numerous species of oak indigenous to Japan—chestnuts, horse-chestnuts and the like; and without doubt the cultivation of some of the trees furnishing dye stuffs might be commenced, or where it already exists be extended. To such points in forestry the attention of the Wood and Forests Conservancy might be advantageously directed in the future, even to a greater extent than has already taken place.

#### JAPANESE PRISONS.

##### I.

THE change of feeling in civilized countries respecting the treatment of our criminal and lunatic classes is not the least remarkable of the social revolutions of the last century. Descriptions of the London prisons of a hundred or two hundred years ago, with their squalor and filth, their association of misfortune with vice, will be familiar to all readers of Smollett and Dickens. Fleet prison, the Marshalsea, the Compter, and many others were only so many centres of misery and wickedness, tainting everyone who came within their walls, and, excepting the cruelty, are only paralleled at the present day by some Chinese gaols; while the accounts given of the treatment of lunatics in the Bethlehem hospital, or "Bedlam" as it was commonly called—of the poor unfortunates chained to bars like wild beasts—make one shudder. The first man to attempt the amelioration of the condition of

prisoners was John Howard, who lived from 1726 to 1790. Having been captured by a French cruiser and taken as a prisoner of war to Brest, he witnessed the horrors of prison life, and on his return to England laid before the Government proposals for improving the treatment of criminals while in confinement. After examining the gaols of England and Wales he travelled, with the same purpose, through all the countries of the Continent; he set out, in the words of Burke, on "a voyage of discovery, a circumnavigation of charity; to collate distress, to gauge wretchedness, to take the dimensions of human misery." The seed which he had planted fell on fruitful soil, and about the commencement of the present century various schemes for the establishment of model prisons—one of them coming from the great Bentham—were elaborated. An account of the principal of these will be found in Major Griffiths' "Memorials of Millbank." But it was not for nearly half a century afterwards that the present prison system of England—as seen in Pentonville, Holloway, Dartmoor, Millbank and other places—was in full working order. It was at first assailed by many who believed that the comfort and good food found in the new gaols would lead to an increase of crime—that in fact, as to be a criminal meant good treatment, free board and lodging, and no loss but that of liberty, so people, not otherwise criminally inclined, would long for these benefits and become criminals. The most bitter and most powerful of all these assailants was Thomas Carlyle who, in one of his "Latter-day Pamphlets" declares that, after a visit to one of these prisons of "the exemplary or model kind" he felt that "so left with paper and ink, and all taxes and botherations shut out from me, I could have written such a book as no reader will here ever get of me. Never, O reader, never here in a mere house with taxes and botherations." These vaticinations, however, have proved delusive; and the general principle of good and humane treatment of our criminals has received the approval of all civilised peoples.

In no country has the principle been more thoroughly received and acted on than in Japan. It is difficult now to say what the prisons of this country were forty or fifty years ago; but, if we make allowance for the innate humanity and personal cleanliness of the people, we shall probably not be far wrong in comparing them with the present condition of Chinese or Korean prisons, as described by Monseigneur Ridel in his account of his captivity. We have had an opportunity of conversing with one of the guards who conveyed Yoshida Torajiro—the remarkable man, whose desire for western knowledge led him to attempt leaving the country with Perry's fleet—to Yedo. This gentleman is now himself a high prison official. He speaks of the prisoners being fed irregularly and improperly. Supplies from relations outside were intercepted by the prison officials, and given to favoured prisoners. One doctor attended the whole gaol, and, while charging the authorities the full price for physic of all kinds, gave the patients little or none of it. Sanitary rules were entirely disregarded, and the mortality was enormous—in the case of one epidemic of small-pox, as many as nine-tenths of the inmates of the prison being carried off. There was no general and uniform system of treatment; the officers of the prison were supreme, and could inflict any punishment short of death that they desired. No trades or occupations were taught; those prisoners who were not sentenced to hard labour lay huddled together in their cages year after year until they were released by death, or by the expiration of their sentences. Indeed, in most respects, the prisons of old Japan, according to this

gentleman's description, resembled those of old London as described by Hepworth Dixon in his "Prison World of Europe." And the change which has come over the scene is not greater in the latter case than in the former.

It will be unnecessary in this article to describe in detail each prison visited. The broad features of each were the same; whatever minor differences were noticed were due to local or temporary causes. We may mention that we examined seven prisons in all: two in Tokio, one at Kanagawa, one at Hiogo, one in Kyoto, and two in Osaka. All prisons throughout the country are under the Minister of the Interior, who transmits his instructions through the local authorities. After considerable enquiry, it seems the principle is to leave as little as possible to the discretion of the prison officials. The general rules and regulations are printed at the printing-press in the central prison at Tokio, in two bulky volumes. They were compiled at the Ministry of the Interior, and seem framed to meet every possible contingency. In addition to these there are the local regulations made by the governor of the prison, and approved by the governor of the district and the Home Department. The great object evidently is to guard from abuse the great power which must inevitably be left in the hands of the chief official of any prison.

The first prison visited was that of the Kanagawa Ken, situated about a mile from the railway station at Yokohama. It is built on an exceeding airy and apparently healthy site. Indeed in all the prisons, except one at Osaka, the sites appear to have been very carefully chosen. The prison in Kanagawa is the chief one of the district, and has four branches at the four principal towns, Hachioji, Odawara, &c. It therefore corresponds to a county gaol in England. The inmates are, with a few exceptions, those sentenced at the Kanagawa Court, which is the chief judicial authority in the district. Small offences are dealt with in the branch local courts, and the culprits punished in the branch prisons. The first thing that strikes a visitor in this, and indeed in all Japanese gaols, is the industrious manner in which all the prisoners work. Trades are taught within the prison under the supervision of artisans, chosen either from among the prisoners, or hired from outside. Among the occupations at Kanagawa we noticed spinning and weaving, tailoring, the making of straw hats, boots and shoes, paper, baskets, chairs, lacquering, carpentry, and even cloisonné-enamelling. The working hours are eight per day. The women chiefly work at weaving, and at the making of thick Japanese blankets. The mode of disposing of the products of this labour varies greatly in the different prisons, and indeed for different trades within the same prison. Occasionally the prison authorities throw their goods on the outside market in the usual way; sometimes a contractor agrees to purchase at a stipulated price a certain class of goods produced in the prison; but the most common mode seems to be to sell the labour to a tradesman outside. Thus brick-making is carried on to a large extent in the penal settlement of Tsukudashima in Tokio. A brick-maker outside agrees to pay a certain sum daily for the labour of a certain number of men engaged in making bricks within the prison; he then takes the bricks thus made and disposes of them as he deems best, while the prison authorities, on their side, agree that the men shall do a fair day's work. It is also not uncommon to hire convict labour outside the prison in gardening, digging, quarrying, brick-making &c. Youthful criminals under eighteen—and in one case twenty—years of age, work at trades only half the day, and attend school during the other half. Amongst these it is curious to find, in a

green instead of the red or criminal garment, a number of lads who have committed no legal offence whatever. These are incorrigibles, who have been placed there by their parents as unmanageable by any domestic discipline. Those parents who can afford it must pay a trifle towards their maintenance, but no payment is required from poor parents. The lads are taught trades for half the day, and then go to school during the other half. They mix freely with the criminals during the morning and afternoon, being distinguishable from them, however, by their green dress; but at night they are completely separated. That the family, not the individual, is the unit of society in the East is well-known; but it is curious to find the Japanese Government acknowledging and supporting the supremacy of the head of the family in this exceedingly practical manner. For adults there is a school on Saturday and Sunday. In other prisons the evenings are devoted to learning, the Home Department merely requiring that there shall be a certain number of hours every week given to education, and directing the prison officials to report what hours have been so set apart. The teachers are all convicts, and chiefly political offenders. The youths are taught the ordinary rudiments of a Japanese education, and in Tokio we saw about fifty lads going through the elementary rules of arithmetic, using foreign ciphers, very creditably. The principal teacher at Kanagawa is a grave and venerable looking gentleman not in prison uniform, who was 'out' in the rebellion of Yeto Shimpei. He performs no work of any kind except school-teaching, and this he does of his own freewill. With another political prisoner he shared a large airy cell, and was, we were informed, permitted to read almost any works sent to him. In other prisons, however, political prisoners, and especially those concerned in the mutiny of Takebashi, were forced to work, and were in every respect treated like ordinary criminals.

WE have to acknowledge the receipt from Messrs. Lane, Crawford & Co., of a copy of the new edition of Mr. R. H. Brunton's map of Japan and adjacent Islands. The first edition was compiled during Mr. Brunton's residence in Japan, as Engineer in Chief to H. I. J. M. Lighthouse Department, and was issued in July, 1879. The present publication has been lithographed by the well-known firm of Messrs. Witherby & Co., High Holborn, London, and although it can be purchased at more than fifty per cent. less cost than the first map, it but gains by comparison with the former. Doubtless nearly all of our fellow residents, at some time or other, have felt the want of a sure guide to the various country resorts in Japan, and more especially experienced the inconvenience arising from being unable to ascertain the accurate distance between different points. The possessor of Brunton's map may avoid all these irritating drawbacks to a country trip, and with but the aid of a small piece of paper and pencil, he will be enabled to mark out a day's, week's or month's tour with the greatest ease. It is with confidence, therefore, that we assert that a copy of the new edition will be found a positive necessity in every business establishment, household, or school situated in the land of Dai Nippon.

IT is a pretty well-known maxim of law that one country is not bound to enforce the revenue laws of another; indeed we believe on one occasion the English or American courts held that a contract to smuggle goods into France was a valid one. The question of policy, however, is a different and more important one. It is a duty which one friendly

nation owes another, that the territories of the former shall not be made a base of operations for the systematic and organised breach of the municipal law of the latter. The smuggling which was until recently so common from Hongkong into China and from Gibraltar into Spain, reflected but little credit on the authorities of either colony, and helped to embitter the Chinese and Spanish peoples and governments against Great Britain. This is a penalty which we cannot afford to pay, and accordingly we find the system all but stamped out in Hongkong; while Lord Napier of Magdala, the Governor of Gibraltar, has gone so far as to aid the Spanish authorities, with British police, in preventing smuggling into Spanish territory. The Spaniards are said to have a high official entitled "Lord of Gibraltar, at present in temporary possession of the English," and if anything was well calculated to keep alive the office and all that it implies, it is the illegal trade into Spanish ports for which the rock was made the base. It is true it is no legal duty of the British authorities to assist the Chinese in stopping contraband trade from Hongkong, but it is our clear international duty to do it, so long as we are on good and friendly terms with China. We imperil our good relations with a great power, and assist in destroying that confidence between ourselves and Chinese, without which no satisfactory or flourishing trade can exist—and all for what? For the protection of desperadoes and law-breakers, who would do to-morrow to England what they are doing to-day to China, if they got the opportunity. Lord Napier's example is a good one, and deserves to be followed in many other parts of the world besides the Mediterranean.

TWO articles in *The Times* of September 9th and September 27th, on the Mercantile Marine of Great Britain, should be read by every one interested in British commerce. The first article dwelt on the causes which are tending rapidly towards concentrating the shipbuilding and ocean-carrying trade of the world in the hands of England. The substitution of iron for wood in shipbuilding and of steam for sail power are among these causes; and the singular rapidity with which steel is now being used instead of iron tends the same way. "The use of steel is, of course, open to all the world, but those who are acquainted with the history of its recent production in large quantities, and of its application to shipbuilding on a large scale, will understand how improbable it is that foreign producers, either of steel or of ships, will come into general competition with this country." The second letter first shows what the increase in British tonnage has been absolutely, and relatively to the tonnage of the rest of the world. "Twenty years ago British shipping was inferior in tonnage and in effective carrying power to the aggregate tonnage of other countries; the reverse is now the case, British tonnage considerably exceeding that of all other countries, more especially when its efficiency as a steam marine is taken into account." This proportion, it seems, is constantly increasing. According to the Board of Trade returns for this year the tonnage of the British Empire is reckoned at 8,500,000 tons, equal in effectiveness to 16,000,000 tons, while that of the rest of the world amounts 8,200,000 tons, equal in effectiveness to about 11,000,000 tons only. "While the proportion of British shipping in 1860 was only 47 per cent. of the shipping of the world, it is now about 58 per cent., the tendency being for the proportion to change still more rapidly in our favour." On this statement from the Board of Trade report, the *Times* remarks that "a survey of the causes which have been at work to bring about this vast change, and which are operating still with more force than

ever, will tend to show that the future of British shipping will be even more wonderful than its past." But two of these letters have as yet appeared. They are said to be the work of Sir E. J. Reed, and internal evidence would support this statement. Few people in England possess a wide knowledge of this subject, combined with the literary excellence of the writer in the *Times*, and one of these few is the late Chief Constructor of the Navy.

SIR HENRY PARKES, during his last visit to Melbourne, and in his speech at Albury, gave a most interesting review of the progress made by the British colony of New South Wales. It would be difficult to produce more conclusive testimony as to the wisdom of the principles on which the public policy of the colony is founded, and to which allusion was lately made in an article published in this review. Commenting on the Premier's remarks, the *Australasian* writes:—"He had just made a brief visit to Melbourne, and had seen what is being done here to prepare a brilliant display for the representatives of the nations of the world who are invited to our Exhibition. He made a generous acknowledgement of the energy he saw put forth by Victoria, the great progress it made, and its "vast achievements made towards the building up of a nation." But he still believed our policy to be wrong, and, looking to what is being done by his own colony by the adoption of a different policy, he was more than ever convinced that it had chosen the better part, and that the wisdom of its choice was abundantly demonstrated by the results of her work.

In making a comparison of the politics of the two colonies and their practical results, we have to keep in view the hindrances which have attached to the development of New South Wales, owing to the great extent of her territory. With a population smaller than ours, she has a land area nearly four times as great. This condition necessarily involves a scattering of the people, and as a consequence the execution of a great deal of work to bring them into communication. But in this work New South Wales is making very rapid progress, and though she has now only 736 miles of railway open, while in Victoria we have 1,125 miles, she is now engaged in constructing 286 miles more, against our 74 miles. We have in the past derived great advantage from the compactness of our territory and people, but this limitation restricts our growth in the future, unless we can to some degree counteract it by wisely turning to the best account the opportunities given by our position. It cannot be said that we are doing that now. We have adopted a fiscal policy which seems expressly devised for the purpose of expelling commerce and driving shipping from our ports, and also of making production for foreign markets quite impossible. The people of New South Wales secure the ends of government at a much lighter cost of taxation than we can. The revenue of New South Wales last year was nearly as large as that of Victoria, though the population was much smaller, and Sir Henry Parkes is able to congratulate the colony on the great increase of the revenue during the present over the past year, while our Treasurer is still looking on with apprehension to a "period of greater depression" yet before us, and is preparing to issue a local loan to make good the deficiency of the year's income. To those of our readers who have lately read the melancholy statement of Victorian finance which Mr. Berry had been, with extreme reluctance, compelled to put forward, it will be instructive to mark the tone of confidence with which Sir Henry Parkes looks on to the financial future of New South Wales. He said, as we find his remarks reported by a contemporary—

"If their revenue continued to improve as it had done, and they had every reason to believe it would, the revenue at the close of this year would show a credit balance of £85,000 in excess of the amount that had been anticipated at the beginning of the year. That should be consolatory, as it diminished the chance of great taxation. They had no doubt heard from opponents that the surplus in the Treasury had dwindled down. But when the money due from the loan account was paid back, as it soon would be, the surplus account would be about £1,500,000, and that money would be expended in great public works, which had been explained to Parliament. The revenue properly expended meant the improvement of the interior of the colony. The interest on selectors' balances would bring in a revenue to the state of £450,000, and although there was a feeling against it, he thought it should be charged, as it would obviate the necessity of imposing a land tax, or some other tax equally disagreeable to the people."

With us the object has been to impose taxes the most disagreeable in their character that could be found, and to use them as weapons of class warfare. And yet, though new taxation to the amount of £600,000 a year was imposed by Mr. Berry, our revenue under his management proves to be far inadequate to our necessities, and we have to resort to borrowing to defray the year's requirements.

In another respect, the comparison which Sir Henry Parkes had been able to make helped to convince him of the soundness of the free trade policy, under which New South Wales was prospering. When walking through the Melbourne Exhibition he was struck by observing "the superiority established by the nature of the exhibits in the New South Wales court. The court representing New South Wales more exclusively represented the natural resources of the wealth of Australia than any other court in the Exhibition. There were to be seen coal, shale, iron, copper, tin, a pyramid representing the amount of silver produced in the colony, and nearly all staple commodities, which he ventured to assert would give a better general idea of the wealth of Australia than the exhibits in other courts." While this colony has been wasting its means and hampering its trade in the endeavour to foster sickly exotic industries, New South Wales has devoted its efforts to the development of the genuine resources of the colony, and has used these in payment for imports. The result is, that the imports consumed by the people of New South Wales are more per head than in Victoria, while their exports are in the aggregate actually £632,700 in excess of ours. As their population is less than ours and their exports so greatly in excess, the Premier of that colony might well ask, "Of what use or benefit was protection to the people of Victoria. New South Wales had certainly done better than Victoria with her protection, which he considered deprived civilisation of half its triumphs." Very few people whose opinion goes for much will be disposed to question the logic of Sir H. Parkes's conclusions. And it is at any rate certain that it is long since a Victorian Premier, under the régime of protection, has been able to present so exulting a statement of the progress and prosperity of his colony in regard to its finances, its commerce, and its productions.

#### CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions or for the deductions they may choose to draw therefrom.]

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

DEAR SIR.—In the various discussions which have been aroused by the extraordinary action and dicta of the judges of the Supreme Court of New South Wales in the matter of the *Evening News*, I have not seen any reference made to the follow-

ing remarks of Jeremy Bentham written about the commencement of the present century, on the influence of newspapers. They are found in a work which is probably known to but few of your readers—"The Principles of Penal Law" Part III., Chap. 19, and run as follows:—

"Experience has shown, contrary to the general expectation, that newspapers are one of the best means of directing opinion—of quieting feverish movements—of causing the lies and artificial rumours by which the enemies of the state may attempt to carry on their evil designs to vanish. In these public papers instruction may descend from the Government to the people, or ascend from the people to the Government; the greater the freedom allowed, the more correctly may a judgment be formed upon the cause of opinion—with so much the more certainty will it act."

I am, Sir,

Yours faithfully,

LEX.

#### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOVEMBER 27th, 1880.

JAPANESE ERA 2540, MEIJI 13TH YEAR, 11TH MONTH, 27TH DAY,  
DO-YO-BI.

#### NOTES OF THE WEEK.

The European mails arrived here on the 26th instant by the P. & O. steamer *Sunda*, and the Messageries Maritimes steamer *Volga*, is advertised to take the homeward mails to-morrow morning. The O. & O. steamer *Gaelic*, due from San Francisco on the 24th instant, has not yet arrived, but is hourly expected. The same Company's steamer *Belgie*, left with the mails for America on the 26th instant.

The M. M. S. S. *Tanais*, with the Marseille mails of 17th October, left Hongkong for this port on the 24th instant at 6 p.m.

The O. & O. S. S. *Oceanic* left San Francisco for this port on the 18th instant, and may be expected to arrive here about the 10th of next month.

The opening match of the Football Association is being played to-day, on the cricket ground, between a team from H. M. S. *Comus* (blue) and the shore (black and scarlet). Both teams are very strong and an excellent game is anticipated; play will commence at 3.30 p.m. The Association team will be composed of the following members:—

Messrs. Hamilton, Wood, Sntter, Hawkins, Morse, Samuels, Churchill, Towse, Frischling, Hutchison, Maxwell, Lovell, Snow, Uloth, Richmond and A. H. Dare.

Last Wednesday evening, at half-past seven o'clock, two distinct shocks of earthquake were felt. The direction, apparently, was from south-west to north-east.

The Japanese races on the Mita course came off last Saturday and Sunday, and were upon the whole a great success, as regards the racing itself, the weather and attendance. All the best Japanese-owned pure and half-bred ponies competed, the most notable feature being the victory of a grey half-bred over *Bon René*; but it was reported that the latter was not in his proper form. Amongst the winners we noticed *Yacata*, *Iwahashi*, *Miakogawa*, and other well-known names. Considering the shape of the course, the time in each race was good.

We are sorry to learn that Mr. Loxton's ill-luck, of late has pursued him up to Tokio. During a race on the Mita Course on Saturday last, his mount trod on the heels of the leading pony and fell, rolling over his jockey and breaking his collarbone. As if this was not sufficiently unfortunate the winning horse kicked the fallen man between the shoulders. We are, however, glad to be able to state that though severely hurt he is now rapidly recovering.

A private letter was placed at our disposal on the 22nd instant, which states that an epidemic of typhoid fever has broken out in Tokio, but that fortunately, however, there have not been any really serious cases up to date.

The recently announced intention of the Japanese Government to economise as much as possible, appears likely to best renounce carried out if we can trust the following announcement in a native paper of Wednesday last:—"In consequence of the recent reduction of the budgets of the various departments, all officials who are attached to different departments, but hold offices simultaneously under the Daijo Kwan, will in future belong to only one department. It is also reported that one-fifth of the *kan-nin* (the officials of the 8th to 17th grade) of the Home and Finance Departments, are to be dismissed.

We are informed, upon what we believe is good authority, that the difficulty between Japan and China on the Loochoo question has been definitely settled on the basis of the arrangement proposed by General Grant, which would comprise the cession to China of the Miao-shima group at the northern end of Formosa, and the recognition by China of the action of the Mikado's Government at Loochoo proper.

A rumour was current on Sunday last, and we give it for what it is worth, that a robbery of unexampled audacity was successfully perpetrated yesterday. It appears that a telegram was sent from Tokio, in the name of the Director of Telegraphs, to pay on application a sum of two hundred and fifty dollars, and the sum was at once applied for and paid, the whole proving a well-planned plot on the part of an unscrupulous gang of thieves. We believe no trace of either the sender of the message, or the recipient of the money has yet been found. It was said that the telegraph lines were cut immediately after the despatch was sent.

The Autumn Programme of the Yokohama Athletic Association was completed on Saturday last with the following results:—

#### THROWING THE CRICKET BALL.

W. L. Merriman scratch ... ..	1
J. W. Whitmore, 10 yards ... ..	2

Won by Merriman with a throw of 87 yards 2 feet, the other competitor only succeeded in throwing 65 yards.

#### ONE MILE RACE:—

F. V. Samuels. scratch ... ..	1
J. W. Whitmore, 25 yds. ... ..	0
C. E. Churchill, 50 yds. ... ..	0

These three competitors started at a very easy pace, and when they had run twice round their positions were scarcely altered. Whitmore retired, and Samuels gradually gained on his man, catching him about  $\frac{1}{2}$  mile from home. At the

finish of the fifth lap Churchill retired, when Samuels increased his pace, but only succeeded in registering 5.45 $\frac{1}{2}$  for the whole distance.

#### CONSOLATION. Once round, 292 $\frac{1}{2}$ yards.

H. J. Gedge, R.N. ... ..	1
C. E. Churchill ... ..	2

Gedge went right ahead, and finished about 35 yards in front of Churchill. Time, 38 $\frac{1}{2}$  sec.

In the *China Mail* we find the following detailed particulars of the loss of the British barque *Flechera*, to which we referred in our local columns last night. The case is one of grievous disaster, more so perhaps than at first sight appears on the face of it. It is just possible that the boats may have been seen by some passing ship, and the crew taken to a port; but it is now so long a time since they left the Pratas that it may be feared nothing more will be heard of them, as the Captain would have telegraphed had he arrived anywhere, and no ship would have cared to keep so large a number of men on board for any length of time. The boats must, it is feared, have encountered bad weather and gone down at sea. H.M.S. *Lily* went out this morning, but it is a hopeless search, as the boats, if afloat, would not have been long in reaching the land, and we must have heard of their arrival ere this. The particulars we have received are as follows:—

The British barque *Flechera*, official No. 54,966, Captain Thomas Luke Carlyon, 730 tons, owned by Thos. H. Ismay, Jr., of Liverpool, left Hongkong on the 12th ultimo, in ballast, bound to San Francisco. At first bad weather was encountered outside. On the 15th at about 6 p.m., the ship, then under royals, &c., during thick weather, struck on the Pratas shoal. The masts were cut away and the anchor let go. The following morning the boats were lowered and the whole crew, with provisions, &c., went to the small island at the entrance of the Pratas Lagoon. Several junks were fishing in the neighbourhood of the reef, but the crew were not molested. About the 19th or 20th the master with the crew, 19 in all, left the island in two boats for Hongkong. The cook (Chinese), from whom this information is obtained, refused to go in the boats, as they seemed too deep. A sampan from one of the junks in the offing came to the island, the crew landing there for the purpose of burying a man who had died on board the junk. The men in the sampan told Capt. Carlyon that the junks belonged to Macao, and that they would not go there until they had done their fishing. Before the crew left, the master gave the cook a letter which he afterwards took back and destroyed. He told the cook, who said he would wait until a junk started, to report the loss of the ship at any place he might arrive at. The cook remained on the island until the 4th instant, when he left in a junk, arriving at Macao on the 7th, and reporting the loss to the authorities there. The day after the boats left it blew very hard, but when the junk crossed it was fine weather. The junk people took sails, chains and other things belonging to the *Flechera*, which have been taken charge of by the British Consul at Macao. A likeness of the Captain, which was found in the cabin, has also been brought over.

We regret to have to add that, according to the *China Mail* of a later date the cruise made by H.B.M.'s gunboat *Lily* has, as was anticipated, been fruitless. She returned to port yesterday (16th Nov.) after a careful search for the missing boats of the *Flechera*, but reports that no trace of them could be found.

The British steamer *Glenjulas*, Captain Wilcox, from London October 3rd, arrived in Hongkong on the 17th November. She reports that from Singapore very bad weather was experienced, and, on the 11th instant, she was eighteen hours in a typhoon.

On Thursday morning the first of the Russian fleet, the iron-clad frigate *Kniaz Potemsky*, Captain Tiroff, arrived from Nagasaki. She reports that her consort may be daily expected. Later on in the day the German corvette *Vesta*, Captain Zirzow, returned from Chefoo by way of Nagasaki and Kobe. We believe that other men-of-war of this nationality may be looked for. Should this prove correct the harbour will present a lively appearance shortly.

Commenting on the unsettled difficulties between Russia and China, the *Shanghai Courier* writes that "the Kiangnan Arsenal, between two and three miles from the Settlement, will, just now, in view of a possible war with Russia, well repay a visit. It might be thought by many that the Chinese Government are pushing on warlike preparations with all possible speed, but this is an illusion which a visit to the Arsenal will soon dispel, for the manufacture of guns and cannons is proceeding at the old jog-trot pace, whilst half the machinery in the various branches of the establishment is absolutely at a standstill. Each department is superintended by a foreigner—Mr. Jno. Mackenzie, a gentleman from Sir William Armstrong's factory, and who was formerly superintendent of the Turkish Arsenal, having charge of the large gun department; Mr. Wm. Newton, also from Armstrong's, directing the manufacture of shot and shell; Mr. Samuel Ballard, who has likewise rendered conspicuous services to the (destructive) world, the manufacture of cartridges; Mr. Jno. Atkinson the manufacture of gunpowder; whilst Mr. John Rennie superintends the ship-building yard; Mr. Jno. M. Allen being superintendent marine engineer, and Mr. Bretschneider military instructor. Messrs. Ballard and Atkinson, it should be observed, are stationed at Loongwha, some three miles further up the river. The small arms factory has been under native management for the past three years, but we believe that some one is coming out from Remington's establishment in England to take charge of this department. The turn-out of (Remington) rifles appears to be very slow, being at the rate of only 60 a week—a work which it takes 200 men to perform. It should be stated that all the hands are Chinese even to the foremen, and that they work if slowly yet none the less surely, and certainly turn out excellent weapons. The difference between native and foreign superintendence is clearly shown in this department, by the small quantity of work performed. It is manifest to the most superficial observer that the Chinese engaged here consider that the first object in the existence and working of the Arsenal is to provide them with employment; the effectiveness of the preparations for national defence being a comparatively small matter. Accordingly many are to be seen at work with a fan or cigarette in one hand, or else lounging about drinking cups of tea. In the departments under foreign control greater vigilance is, of course, exercised, and as a result more work is got through; but even there it is found impossible to stimulate the men to any very great exertions, for they have their trade societies the same as European workmen, and these societies regulate the quantity of work performed. During the past two years eighteen forty pound Armstrong guns have been turned out, eight of which have been sent to Tientsin and eight to Nanking, and a hundred and twenty pounder is very nearly ready for proof, whilst others of the same size are to be manufactured in the ordinary course, as well as some eighty pounders. A screw steamer is in course of construction, not intended for fighting purposes however, and four of the alphabetical gun-boats are in dock being overhauled and having their bulwarks heightened. On the whole, there is nothing whatever to indicate expectations of early war on the part of the Chinese Government, or it would certainly avail itself of the material it possesses and push on preparations with greater speed. We should add that the entire establishment is under the management of Director-General Li-Ming-li, assisted by another mandarin named Chi."

Should the undermentioned ingenious invention prove a success, prosecutions on the charge of false marking at rifle contests will soon be a thing of the past, and the risk to human life, through the carelessness or ignorance of markers, reduced to a minimum. The *Alta California* writes that an ingenious self-recording target and indicator has been invented by Richard Savage, of the Empire Foundry, the intention being to obviate the necessity of markers, and while thereby diminishing the expense of rifle matches, also to reduce the chance of accident. It consists of a target which is subdivided into a number of areas, each of which is properly supported and guided, and is free to move backward upon the impact of a shot and be returned to its place by the action of elastic buffers, springs or hinges, in combination with certain details of construction.

It also has a timing device, whereby the velocity of the shot is measured.

In the columns of a late number of *Public Opinion*, we find the following communication referring to the "Sailor of Story, Stage and Song":—"Let me at once disclaim the faintest idea of disloyalty to the British Navy. The British sailor has of late years lost some of the insignia of the period of wooden walls. He does not wear a pigtail, he is no longer accompanied invariably by a quid, he uses the big big D "hardly ever," and I have seen him drinking tea—actually tea—quite freely; but my belief in him is unshaken, and I am certain that when his opportunity comes he will render as excellent an account of himself as he did in the Crimea and in the old time of yardarm to yardarm. My concern is not at present with the real sailor, but with his counterfeit presentment in story, song, and stage play. In very old times the literary class apparently looked upon the sailor with a by no means favourable eye. It is not a little curious that, in an age of maritime glory like that of Elizabeth, it should not have occurred to either Shakespeare, Marlowe, or Ben Jonson to draw an heroic sailor. On the stage the sailor of the Merry Monarch and Queen Anne period fared badly indeed. The sailor having been written up by Dibdin, the sea was next written up by Byron, and then came the nautical novels of Fenimore Cooper, Marryat, and Chamier. Dibdin's comic operetta *The Waterman*, in which the gardener, with his quaint song "Cherries and Plums," is made the foil of Tom Tug, who sings "Then farewell, my trim-built wherry" and "The Bay of Biscay," is the early form of the marine drama raised to the heroic level by Douglas Jerrold's *Black-eyed Susan*, in which the author and the actor, Mr. T. P. Cooke, said *le dernier mot* of that style of composition. It is over-laden with sea-similes to an extent never attempted by Dibdin. In his anxiety for local colour Jerrold, who had not forgotten his naval experience on board H.M.S. *Namur* and *Ernest*, packs his salt-water phrases as thick as herrings in a barrel. He protests altogether too much, and this is the probable reason for handing *Black-eyed Susan* over to Mr. Wills to have the surplus local colouring taken out of it for the St. James's Theatre. Perhaps an outcry may be made, but, if so, it will hurt nobody, for despite the yell of sacrilege, there is a first act to *Black-eyed Susan* full of long speeches and queer stuff, which lengthen the piece without assisting in its development. The second act is perfect in its way, and Mr. Kendal's delivery of the speech before the court-martial and the subsequent scene between Mr. and Mrs. Kendal leave nothing to be desired. *Black-eyed Susan* is quite a "white handkerchief piece," and all who enjoy "a good cry" will be heartily satisfied. To me William is interesting as the highest development of the sentimental stage tar, differing utterly from the jovial Jack Robinson, who finds his sweetheart married on his arrival in port, but even under these trying circumstances fills his pipe and finishes his glass like the philosopher that he is. Jack Robinson is of the same creed as that other cheery pigtail who sings of "Poll and my Partner Joe," but William is a legitimate descendant in right line from his namesake in Gay's ballad through Nancy's young man, who sings "Twas past meridian half-past four," and Tom Tug, "The Waterman," and a very fine fellow he is: if not quite like Nature, then so much the better for Art."

On the 6th October, says the *Englishman*, the entire curve of the Madras harbour was completed. This brings the total distance of the south arm to 2,938 feet, out of the entire length of 3,870 feet. The progress achieved during the past two months is unprecedented, and must have taxed the resources of the staff heavily. The north arm has advanced with as great rapidity as the south, and now stands at 3,512 feet, or only about 300 feet wanting to complete it. Should the present clear weather continue, it is anticipated that the north arm will be finished by the end of the year.

The *Penang Gazette*, of the 30th October, has the following remarks regarding the collision between the steamers *Breconshire* and *Braemar Castle*:—"We have scarcely any further particulars regarding the collision. All that has transpired is, that the *Breconshire* had a native put on board her from a pilot boat, who professed to be able to bring the vessel in, and that the Captain, seeing she was getting too close to the *Braemar*

*Castle*, ordered the reversing of his vessel's engines, and they were, as a matter of fact, going astern when the contact between the two took place. A Marine Court of Enquiry has been ordered for Tuesday next to enquire into the matter, so we cannot of course say much more regarding the case. Attempts are being made to save the cargo by Malay divers, but hitherto they have not been very successful.

"The sunken vessel is lying calmly and safely enough in a bed of blue mud, and appears to have sunk about a foot or more since the first day. Yesterday she had between 5 and 6 fathoms of water on her main deck, but as the tides are rising she will, during the ensuing springs, have about 7 or 8 feet more over her at the top of flood, and of course proportionably less at the lowest ebbs.

"It is impossible for us to avoid dilating on the dilatory conduct of the Executive in not having issued orders for the holding of the usual Court of Enquiry on the Captains and Officers of the *Braemar Castle* and the *Breconshire* more promptly than they did. The *Braemar Castle* was under water by 5.50 a.m. on Thursday. The Lieutenant Governor ought to have been in possession of the Master Attendant's report on the matter by noon, at the latest, on the same day, and yet it was not till late yesterday (Friday) afternoon that orders were issued authorising the holding of the Court of Enquiry. The consequence of this dilatoriness is, that instead of the case being gone into and disposed of to-day, which, if the Head of the Executive had been prompt in issuing his formal order would in all probability have been the case, the Court cannot sit till Tuesday, the 2nd proximo, as certain formalities in the shape of serving the different accused with copies of the charges have to be duly gone through, and we confess we see no reason to throw the blame on the shoulders of the Magistrate for the postponement of the trial, since, owing to a very slight informality in the *Ananda* case, the Administrator, acting on the advice of his Council, had to quash the whole of the proceedings, and although somebody, and possibly a good many were undoubtedly to blame, everybody got off free.

"Since writing the above we have been informed that the Assessors and those who were to stand their trial before the proposed Court of Enquiry were asked to attend the Magistrate's Court between the hours of 10 and 11 a.m. this morning by means of private notes addressed by the Harbour-Master to each required party. Those addressed were duly in attendance, but the Magistrate, not recognising the validity of "private" invitations to Assessors or accused, and not having received the required authority to hold a Marine Court of Enquiry, refused to move in the matter."

We regret to hear from Hongkong that the steamer *Douglas*, owned by the house of Douglas Lapraik & Co., has been lost. The *China Mail* of the 17th instant, writes:—"Telegrams have been received to-day announcing the loss of Messrs. Douglas Lapraik & Co.'s steamer, the *Douglas*, Capt. S. Ashton, in the Haitan Straits. All the particulars yet to hand are that the catastrophe occurred on Sunday afternoon and that it arose from the vessel striking on an unknown rock. From the description of the locality it is inexplicable that it could have arisen from any other cause. H. M.'s *Magpie* has, it is true, been surveying there lately, but it was believed that there were several dangerous rocks not fixed on the charts or accurately known. The place where the vessel is believed to have been lost, is some 40 or 50 miles from Foochow. The *Douglas* left Hongkong on the 10th instant, having on board 11 Europeans and 200 Chinese deck passengers. We are glad to hear that no lives have been lost. The insurance on the hull of the *Douglas* is spoken of as amounting to \$135,000 divided among the local offices, with the exception of one, and an insurance in a home office of \$20,000, in all \$155,000. Much sympathy will be felt for Captain Ashton, whose misfortune with the *Yesso* (twenty months ago almost to the day), will still be fresh in the minds of our readers."

This is the second steamer of the same name and belonging to the same firm, that has been wrecked on the coast of China during the last seven years.

Referring to the opposition shown by Chinese officials to railways being introduced into their country, the *Hongkong*

*Daily Press* remarks:—"It is only fair to add that the Chinese people have displayed no hostility to the innovation. It is the officials who are antagonistic to the iron horse; they seem to see in it an agent of revolution, and dislike it accordingly. The people generally, on the other hand, appear to have less prejudice against the railway than to most foreign institutions. They welcomed the Shanghai and Woosung line most cordially, and patronised it extensively. There would be little difficulty about *Feng shui* or anything else in making railways in China were it not for the officials and literati. It is a significant sign of native opinion on this question to find the *Sin-pao*—the reputed organ of the mandarins—quoting the number of persons who travelled by railway last year in England, with the number of those killed and injured, and adducing the figures as proof of the fact that travelling by rail is safer than travelling by boat. This is encouraging in any case, and if only the officials could be induced to take the same view of the matter, we should not despair of seeing railways intersecting various parts of China at no distant date. But to get rid either of the mandarins or their manifold prejudices is no easy matter, and may take a very long period to accomplish."

From New Zealand we learn that Traducer's stock have again won more public money than the stock of any other sire in the southern hemisphere, something like £10,000 having been credited to the descendants of the sire of the famous mares Lurline and Calumny. Betrayer, by Traducer from Idalia, is the largest individual winner, with £1,565. Then come Mata, by Dead Shot—Raupo, £1,107, and Chancellor, by Traducer—Sweetbriar, £1,020. As these are the only horses that have four figures attached to their names, Traducer's position is all the more creditable. Messrs. Mason and Vallance are the principal winners, with £2,434; followed by Mr. B. Ray, £1,821; Mr. W. Walters, £1,762; Mr. P. Butler, £1,756; Messrs. Stead and Griffiths, £1,749; Mr. H. Goodman, £1,504; Hon. W. Robinson, £1,325; Mr. A. J. Keith, £1,215, and Mr. E. Cutts, £1,107.

We read in the columns of a London paper that "a great many plans have been tried for feeding the furnaces of steam boilers with fuel of a less bulky and expensive character than coal, and the feat seems to have at last been satisfactorily accomplished. The steamer *Cesarewitch*, one of the fastest mailboats on the Caspian, is fitted with simple apparatus to burn the refuse of petroleum, which would represent, perhaps, the cheapest available fuel. The furnace, if furnace it can be called, consists of a metal box, into which open two tubes, each about one inch in diameter. One serves as a supply pipe for the liquid fuel, and the other, charged with steam from the boiler, blows the slowly-dropping matter into spray, which, when ignited, presents a broad sheet of flame of great heating power. There is no residue of any kind, and the furnace can be turned down as easily as one can turn down an ordinary lamp. The arrangement is, moreover, quite smokeless, an important consideration if the system can be adopted generally in manufacturing districts. The Brayton petroleum engine has been put into a launch for the United States navy. The advantages of that engine for such work are obvious, as it saves the space occupied by boiler and coals—for the petroleum can be carried in any out-of-the-way corner—while the engine is ready at a moment's notice, and gives off neither smoke nor steam to betray the presence of the boat.

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as make them readable and intelligible.]

#### COURT, POLITICAL AND OFFICIAL.

The *Nichi Nichi Shinbun* says that Mr. Yamaguchi Kanji, of the Senate has been appointed Chief Commissioner for the compilation of new regulations for the control of mercantile firms and companies.

We notice in a native paper that Mr. Obama, Under Secretary of the Home Affairs, returned from the Ogasawara (Bonin) islands on the 17th instant, after handing over charge of af-

fairs to Mr. Fujimori, a sakon of the first class of the Tokio Fu, and Assistant Judge of the Judicial Court.

The *Mainichi Shinbun* states that the Belgian Minister proceeded to the Akusaka palace on the 20th instant, where he was received in audience by His Majesty the Emperor, whom he decorated with the order which the king of Belgium recently sent to His Majesty.

It is said that the Government has almost decided upon recalling all students, now living at Government expense, in foreign countries.

A native paper writes as follows:—"The recent abolition of the Ministerial escort will bring about a saving of over thirty thousand yen in the annual expenditure of the Government, in consequence of which there has arisen a new proposal that the salaries of the Prime Ministers and the Privy Counsellors shall be increased by two hundred yen per month, but the proposed has been dismissed.

Last Tuesday, the new rice crop was officially offered to His Majesty the Emperor and consequently was observed as a holiday. All the Government Departments were closed and no Japanese newspapers were published.

Governor Kagotada, of the Shiga prefecture is, we learn, coming up to Tokio in the beginning of next month, in accordance with an order of the Home Department.

The *Nichi Nichi Shinbun* states that His Majesty the Emperor paid an official visit to the Military College, on the 26th instant.

The same paper informs us that the draft of the regulations for the receipt of petitions lately forwarded to the Cabinet by the Senate, was presented a few days ago to His Majesty, who took it with him to the Imperial palace.

According to the *Sei Dan*, His Excellency General Ida, Envoy Extraordinary and Minister Plenipotentiary at the Court of Vienna; His Excellency Nabeshima, Minister at Rome, and His Excellency Nagatoka at the Hague, are to be recalled in consequence of the proposed economy in the Government expenditure.

The *Hochi Shinbun* states that His Excellency Yoshii, Assistant Minister of Public Works, accompanied by Secretary Hayaashi, left for Osaka on Wednesday on pressing official business, but is expected to return in a week.

The *Mainichi Shinbun* says that His Excellency Hanabusa, Minister for Corea, left for his post on Wednesday last in the *Tokio Maru*.

The same paper states that His Excellency the Russian Minister, visited the Military Arsenal on Wednesday last, and that after having inspected the machinery, &c., he went to the Military Academy, where he was entertained at tiffin.

Another journal informs us that His Excellency the Brazilian Minister, visited the Eastern Admiralty Office yesterday, and in company with one of the officers proceeded to the Yokosuka dockyard, in the *Yokosuka Maru*, at about 11 o'clock a.m.

The Heads of all the branch police stations held a meeting at the principal police station, at 6 p.m., on the 23rd instant.

It is officially notified that His Majesty will leave the palace at 9 a.m. on the 4th proximo and proceed to the Fukiage Park. He will there witness a rifle match between the officers of the Imperial guard.

The *Mainichi Shinbun* reports that Mr. Kitagaki, Governor of the Kochi prefecture, has been ordered to come up to Tokio immediately, and is consequently expected here early next month.

The *Hochi Shinbun* writes as follows:—"We learn that the 3rd instant, His Majesty's birthday, was duly observed as a holiday at the Japanese Legation in Peking. A grand entertainment was given, there being fifty-six guests present, among whom Messrs. Saito, Nakashima, Nakoda and one of the foreign employes made speeches. In the evening the buildings were brilliantly illuminated with lanterns both inside and outside, and there was a display of fireworks."

#### NAVAL AND MILITARY.

Marine Courts are shortly to be established in all open ports, under the jurisdiction of the Naval Department. The judges for the above courts will be selected from officers of the said Department.

Another vernacular paper writes that the Government has decided not pay the expenses of the military cadets in future, with the exception of the orphans of military officers. Only thirty cadets will be allowed to study at one time.

#### TRADE, INDUSTRIES AND FINANCE.

A native paper writes:—"Governor Utsumi, of the Nagasaki prefecture, recently addressed a petition to the authorities on the financial crisis, the arguments in which are said to have been very well framed. He also suggests that a transportation company shall be established, for the encouragement of navigation to foreign countries. Nagasaki being a good harbour," says the journal, "the Governor's attention may have been well directed to this point."

The *Bukka Shimpō* writes as follows:—"The financial condition has improved in Tokio since the beginning of the present month, owing to the fact that the interest on the capitalized pension bonds has been paid. In the interior, however, the financial state is very bad, on account of the large demand for imported goods. The improved financial condition in Tokio, however, is only temporary, because there is a large demand for imports, and the value of the Government loan bonds cannot resume its original figure."

We learn from a native source that the four prefectures of Shizuoka, Yamanaishi, Miye, and Aichi intend holding a Competitive Exhibition of rice, sugar, silk cocoons, tea, and silk, in the town of Shizuoka. The exhibition will be opened on the 10th of February next.

We note in a native paper that the rise in the price of all articles is very general just now, one of the most notable examples being that of sweet potatoes, a bag of which now costs 20 or 30 sen more than formerly. Notwithstanding this there is still a good demand for them, the cause of which is supposed to be owing to the rise in the price of rice, in consequence of which many of the poorer classes have taken to living upon *Satsuma-imo*.

A native paper reports that a number of cases containing sulphur, were forwarded to the Government Printing Office on Wednesday last, by the Sulphur Manufacturing Company at Kawaguchi, Osaka.

Another vernacular journal publishes a rumour to the effect, that Mr. Takenaka and some other native gentleman have offered to purchase the Government printing office, now at disposal in accordance with the recent notification on the subject of economy.

We notice in a native paper, that the charcoal consumed in Tokio, during a year, amounts to the value of 750,000 yen.

The same paper contains the following list of exports from Yokohama by the *Belgie*, on Thursday last:—

Exporters.	Destination.	Casrs.	Number of Cards.
Mitsui Company.....	New York	136	54,400
do. ....	"	8	3,200
No. 48.....	"	10	4,015

No. 47.....	"	10	3,800
" 168.....	Italy	105	24,025
" 10.....	"	22	5,500
" 60.....	"	12	4,752
" 23.....	"	8	2,000
" 90.....	Havre	38	9,500

The same paper publishes an account of the holding of a competitive exhibition of Sugar in the Okinawa prefecture (Loo-choo). Eight persons, it appears, were elected examining officers, and there was an attendance of more than a thousand spectators. Eleven exhibitors of the best kinds of sugar received prizes. This exhibition was held for the purpose of encouraging the sugar industries in the above named prefecture.

The *Mainichi Shinbun* writes as follows:—"The cocoon trade is rather active at present, as the Japanese traders, having

taken a lesson from their repeated failures, were not in any hurry to sell. On the other hand, foreigners could not wait in consequence of having to complete their contracts for the export of cocoons. Purchases began about four or five days ago, and we hear that Mr. Fusejima, of Minami-Nakadori, alone sold about 50,000 cards at a rate varying from \$2.65 to \$2.00 per card. Other dealers have also commenced to sell."

Large quantities of coal have been sent to Tokio from Hakodate, by order of the Colonization Commission, for sale.

A native paper tells us that public loan bonds, amounting to about 30,000 yen, were forwarded to the Tokio Fucho the day before yesterday, from the National Debt Office of the Finance Department.

#### MISCELLANEOUS.

The *Nichi Nichi Shinbun* says that there are very many people in different cities and prefectures at present applying for leave to emigrate to Yesso, but their applications are not granted in consequence of the expected very severe winter there, when there will be so heavy a snow-fall, as to prevent the cultivation of the soil. The authorities now advise the applicants to wait until next Spring.

A telegram has been received, says another journal, to the effect that the railway at Sapporo has been completed for a distance of six ri in the direction of Hoshioki, and on the 11th instant, the trains carrying passengers and baggage commenced to run between Zenibako and Temiya.

A vernacular journal states that a great storm of rain and severe gale occurred in Ogasawara (Bonin) islands on the 21st ultimo, which lasted until the following day. The gale commenced from the south but afterwards shifted to the north-east, and became more and more violent. Sand and pebbles fell like rain, and the branches of trees were torn off and scattered in various directions by the tempest. Forty-four houses were utterly wrecked and twenty-three damaged, while a countless number of large trees were uprooted.

The *Nichi Nichi Shinbun* says that no newspaper editor has been confined in the Tsukuda prison during June and July, but that since August, the number of journalists in this gaol has gradually increased. At present there are no less than ten in confinement, who occupy their spare time in instructing their fellow prisoners.

According to the *Hochi Shinbun* of Monday last, a rumour has become current to the effect, that the Government officials are now eagerly demanding that the clause in the Public Meeting Regulations, forbidding them from attending at public lecture meetings should be abolished; and intend petitioning the Government on the subject. They give as their reasons that they wish to protect the acts of the Government, in these public meetings, against those lecturers who privately attack the Government.

A native paper states that the sale of the *Keisei Shinron* (a new book treating on political subjects) edited by Mr. Sugimoto Tei-ichi, has been forbidden by order of the Government.

The *Choya Shinbun* contains the following extract from a letter written at Sapporo, Yesso, dated the 4th instant:—"As fortifications are to be built at Fukuyama, one hundred artillerymen are to be raised for the protection of the coast. Snow commenced to fall on the 5th of last month. On the 3rd instant, His Majesty's birthday, Sapporo was in a dismal condition on account of incessant snow, rain, wind and thunder. The journal called the *Sapporo Shinbun* has been started, and will be published ten times a month. *Kakke* and fever are very prevalent. In the neighborhood of Sapporo Indian corn has been planted and the crop is very good, fetching about yen 4.50 per koku."

According to the same paper about three hundred villagers in Ukai, Shimoshita-gori, Osaka Fu, being enraged at the arbitrary measures of their mayor, suddenly attacked the ward office on the 13th instant. The local authorities pacified them, but the troubles are not considered over yet.

With regard the proposed tramway in Tokio, the *Hochi Shinbun* writes as follows:—"The Tokio Fucho authorities granted the construction of the proposed tramway in Tokio. The head office of the said Company will be temporarily established at No. 6, Sanjikkenbori, Kiobushi, Tokio, and the stations

at Asakusa and Uyenoh, and a new bridge for the tramway will be built between the Shimbashi and the Horniala-bashi bridges, near the Shimbashi Railway Station. When the machinery &c. ordered from abroad arrives, construction will be commenced at once, and should the experiment succeed, the tramway will be extended from Shimbashi to Yotsuya, and Kojimachi."

We learn from the *Mainichi Shinbun* that His Majesty the Emperor will visit the *Toyama-Gakko* on the 26th instant, on which occasion the ceremony of conferring diplomas on the graduates will take place.

We read in a native journal a report that competitive examinations, at which prizes will be given, are to be held at the Yokosuka Arsenal, with the view of creating a spirit of emulation among the workmen and consequently improving their skill.

The *Nichi Nichi Shinbun* of Friday contains the following paragraph:—"The Japanese students now abroad and living at their own expense, frequently lodge at cheap hotels and contract the worst habits of the lower classes and misbehave themselves according. To put an end to this evil, the officials of the Japanese Legations at different Courts have been instructed to take the matter in hand, and to find out respectable lodgings for these young students, to prevent their going astray."

A native paper publishes an extract from the letter of a correspondent at Gensan, Corea, dated the 14th of October:—"The erection of our settlement has almost been completed. The buildings are in European style; and a number of our traders wear European clothes. Just as was the case with some Nagasaki people who came and acted as interpreters when Yokohama was first opened, recently, six or seven Coreans who can speak Japanese came here from Fusan, and now act as interpreters between ourselves and the natives. Our place was at first frequented by robbers, but they have now been dispersed, thanks to the vigilance of the police. There are many wealthy merchants; the place itself differs greatly from Fusan, as the people are respectable, which is far from being the case in the latter neighborhood. The principal product is gold-dust, after which come ox-hides, ox and whale bones, &c., all of which abound in quantities. It seems that there is no limit to the amount of gold sand and ox-hides, so that a poor merchant cannot engage in this business. The Coreans buy our goods at good prices, but it is to be regretted that our traders are always in too great a hurry to sell and frequently lose in consequence. The *Tugonouru Maru* lately arrived here, and the whole of her cargo was sold in a few days. Our merchants have at present nothing more to sell, and are therefore living as if life was a holiday. The Coreans are consequently laughing at them for being in want of stock."

## TELEGRAPHIC NEWS.

Constantinople, 23rd Oct.—In consequence of the representations of Germany, Austria and France, the Sultan has ordered the surrender of Dulcigno in five days. Riza Pasha has promised to form a cordon against any possible Albanian invasion of Montenegrin territory.

Constantinople, 23rd Oct.—The convention between Turkey and Montenegro has not yet been arranged. Hodo Pasha has been summoned to Constantinople, but he has declined to obey. Rumours are current of a conspiracy to depose the Sultan and several arrests have been made in connection therewith.

Athens, 23rd Oct.—The Ministry has resigned in consequence of its defeat in the Chamber by the election of an opposition candidate as President of the Chamber of Deputies.

Capetown, 23rd Oct.—The Basutos threaten Col. Clarke's rear, but reinforcements are being sent to his support.

Constantinople, 23rd Oct.—The Kurds are renewing their ravages in Persian territory, and the Shah's troops are advancing to repel their raids.

Correction in Obituary: For Colonel Alexander Low substitute Major-General Edward Clancy Lowe.

Constantinople, 21st Oct.—Montenegro insists upon the surrender of Dulcigno taking place in the presence of the delegates of the Great Powers.

Four Albanian Chiefs, whom it is believed have been poisoned, are dead.

London, 22nd Oct.—The *Times* urges Greece to exercise moderation in its demands for carrying out the rectification of its frontier, as England is not prepared to assist alone in that object.

A shock of an earthquake has been felt in Spain and Portugal.

London, 25th Oct.—Lieutenant-General Sir Alexander Tylor has been appointed Governor of Cooper's Hill Training College.

Mr. Parnell, in a speech delivered at Galway yesterday, said that Mr. Forster and the House of Lords, by the latter's recent rejection of the Irish Bills, must be held responsible for the late assassinations in Ireland. Mr. Parnell also said that the sole remedy for the disturbed condition of Ireland was the concession of autonomy to the country.

London, 25th Oct.—The mission that has been appointed to mediate between Chili and Peru has sailed.

St. Petersburg, 24th Oct.—The semi-official *Agence Russe* counsels Greece to exercise moderation and discretion.

London, 26th Oct.—Mr. Parnell, in a speech delivered at Galway, said that should such of them who are to be prosecuted as are members of the House of Commons be convicted, he would urge the election of other agitators to replace them.

Consols 99½.

Athens, 25th Oct.—A new Greek Ministry has been formed under the presidency of M. Comnandouras.

Vienna, 25th Oct.—The Emperor of Austria has made a speech to a delegation that waited upon him, when he said that he had made strenuous efforts to secure the maintenance of peace and the observance of treaties, but the interests of the monarchy were his first duty.

A reduction of Austrian troops in Bosnia is about to be made.

## INDIAN TELEGRAMS.

Kandahar, 13th Oct.—Uneasy rumours continue to prevail. The last is that Ayoub Khan has been promised a contingent of Turcoman cavalry. It is also declared that Persia has offered him assistance in money, which he admits to be his chief want.

The Barackzies have been exhorted by one of their Sirdars, now at Herat, not to be downhearted, as Ayoub Khan means to return to Kandahar after the Bakri Fed. Ayoub Khan has now, beyond doubt, become the popular hero of Southern Afghanistan.

Kandahar, 13 Oct.—The sentry wounded last night died to-day and was buried this evening. The assassin is under medical treatment, and will, of course, be executed. He proves to be a naik of the 23rd N I, who deserted from Chaman about three months ago, taking with him three sepoy's of his regiment, his and their rifles. He is a British subject, and a native of the Punjab. He had served several years with his regiment.

Upon the recommendation of Dr. Bruce a divisional order has been issued forbidding the troops and followers entering the native town, several cases of enteric smallpox having occurred in the town. The order is simply precautionary measure. There are now in the hospital seven Europeans and sixteen natives suffering from this disease.

Kandahar, 14th Oct.—You may give an unqualified contradiction to the report published in India that General Primrose refused or hesitated to raise the British flag after occupying the citadel. The facts are that after the occupation everyone was so busy that no one noticed the omission to exhibit the ensign for two or three days. When noticed the flag could not first be found; when found, it was immediately raised. I give this upon unquestionable authority. General Brooke's body is to be exhumed and sent home to his relatives. Major Westmacott is arranging a regular bhangy dak.

Bombay, 15th Oct.—The troopship "Orontes" arrived here last night from Natal with 22 officers, and 444 men of King's Dragoon Guards.

Simla, 17th Oct.—The telegram received from General Watson dated sixteenth October announces the evacuation of Kurram that day. All's well.

Simla, 17th Oct.—General Sir Frederick Roberts arrives here to-morrow, and leave, on Friday with General Baker for England.

Simla, 17th Oct.—Mr. H. M. Durand, Under-Secretary, is gazetted Officiating Secretary to the Government of India in the Foreign Department, and Captain Ridgeway Under Secretary.

Bombay, 18th Oct.—The Hon'ble Morarjee Goculdas is dead. Mr. Lyall has gone on to Kandahar.

Allahabad, 19th Oct.—The Secretary of State has been sanctioned the erection of a new Government house at Simla. The building was commenced in Lord Lytton's time, but its progress was interrupted during the financial embarrassments.

The state of affairs in Rae Bareilly, where signs of distress are already visible, has induced the Government of India to pass orders relating to the probability of relief works.

Lahore, 23rd Oct.—The 92nd Highlanders reached Meer yesterday.

General Robert's railway journey was a little triumphal progress. All the stations were decorated with devices such as "See the Conquering Hero Comes." This honour surprised General Roberts.

All the arrangements for the comfort of troops while travelling are admirable.

Simla, 23rd Oct.—There has been a cholera outbreak at Peshawar during the last few days. Several regiments have suffered on their way down, especially the 6th Native Infantry. General Macpherson gets the Allahabad division with the rank of Major-General.

Bombay, 23rd Oct.—The convict Bulwant Phadke has escaped from Aden jail and has been re-captured. It is rumoured that the Lahore Durbar must be put off.

Kandahar, 19th Oct.—The greatest indignation is expressed here with reference to the recent attacks made by a portion of the Indian Press upon General Primrose. It is considered that the fair limits of criticism have been exceeded and that his motives and actions have misrepresented and misconstrued, while if enquiries had been properly made they would have effectually rebutted the charges made. The incident of the stoppage of Commissariat mules is an instance. General Primrose simply forbade the despatch of one or two mule loads unescorted, and temporarily delayed the party to keep the road clear for the artillery, which were being sent out in compliance with General Robert's urgent demand, as the danger of his reconnaissance party being forced into action was imminent and a general action might have followed. As to the Bengal division being unable to obtain information regarding nature of the country towards Mazra, the Assistant

Quartermaster General and many others knew it thoroughly. Neither can General Burrows in the action of the 1st be held liable to censure, as by arrangements he was all day in direct heliographic communication with and under the command of General Roberts; therefore, he was unable to act independently. General Primrose has already been censured by the Commander-in-Chief. Whatever his faults as a General may be, all who know him esteem him as an upright and honourable man, who would himself be the last to throw a stone at fallen men. It is, therefore, felt that he is not deserving of such ungenerous, not to say unjust, attacks. The Rev. A. G. Cane's departure for India is indefinitely postponed, the Rev. Mr. Le-fevre, who relieves him, being laid up with a sprained knee, Colonel St. John arrived yesterday from Quetta. The *Kandahar News* hears that the 3rd and 4th Bengal N.I. are under orders for Kandahar. Owing to the want of transport and the lateness of the season, the idea of sending a brigade to the Helmund has been abandoned. The whole division will winter in and around Kandahar. The small-pox in the town is reported to be not of a severe type and the cases are not numerous. Colonel St. John met Mr. Lyall at Quetta but nothing definite is known yet as to the subject or result of the meeting. A telegram received yesterday from Sibi states that since returning there Mr. Lyall has determined on coming on to Kandahar. Another alleged case of Ghazeeism occurred yesterday evening. Three sowars of the Sind Horse brought a prisoner into the camp, stating he had fired a pistol at them. One of them had a wounded arm. The pistol produced was one belonging to the Sind Horse. It is thought that the man's wound was the result of accident and the charge of Ghazeeism unfounded. The 8th Bengal Cavalry come to Kandahar.

Kandahar, 19th Oct.—A native of Kandahar of Persian origin alleged to me a few days ago, in conversation, that in the Malwand disaster he overheard Pathan sepoys of Jacob's Rifles declare that they would not fight against their brothers the Pathans of Afghanistan. This man states that he accompanied General Burrows's force to Kushk-i-Nakbud, and that at the commencement of the fight at Malwand he saw sepoys discharge their rifles in the air. I have failed to obtain any corroborating evidence, but the man says many in the town can substantiate this statement. The enquiries I have made relative to this man lead to the belief that his character for truthfulness is doubtful. He is, I hear, related to some men now in our employ here, and is of respectable rank. This statement may have some foundation of truth or may prove utterly unfounded. His race are bitterly opposed to the Pathans. They are Shiah Mahomedans. The others are Sunnee. Pending communication from Colonel St. John I withhold other particulars.

Allahabad, 19th Oct.—General Roberts left Lahore for Simla on the night of the 18th. He received Wali Mahomed and other Afghan Sirdars during his short stay at Lahore.

Bangalore, 19th Oct.—The 14th Native Infantry, under the command of Colonel Holding, arrived by train from Afghanistan this morning. The men looked well and were accorded a warm welcome. Lieutenant Colonel Sim has been appointed commandant of the Sappers and Miners in room of Lieutenant Colonel Prendergast, promoted. Heavy rain has fallen.

Simla, 12th Oct.—It is rumoured that the Durbar at Lahore is likely to be put off, owing to the prevalence of cholera in the adjacent stations, or if the Durbar does take place that it will be on a reduced scale. Eighteen cholera seizures and fourteen deaths have occurred at Jhelum in a regiment recently returned from the front. Many cases are reported from Peshawar.

General Robert arrived here (Simla) the day before yesterday, and is staying with the Viceroy. He embarks from Bombay on the 30th instant.

Allahabad, 17th Oct.—General Hume, commanding the Allahabad division, has been appointed to the Chief Command at Kandahar with the rank of Lieutenant-General. Reinforcements, consisting of three Bengal native regiments, have been ordered to proceed to Candahar immediately. The news of the Hon. Morarjee Goenidas's death has been received here with profound regret. The mill is closed today. Many bankers and traders closed their places of business yesterday.

Simla, 17th Oct.—A telegram from the Chief Commis-

sioner of British Burmah giving the result of further enquiries, confirms the former announcement that all is quiet on the Thayetnyo frontier, and that no cause for any alarm has been discovered.

Rangoon, 20th Oct.—The Chief Commissioner and suite returned yesterday from Moulmein in the "Enterprise." His Excellency Admiral Gore-Jones has arrived in the flag-ship "Euryalus." Conductor William Anderson, recently arrived from Afghanistan, has been acquitted on all the charges in the Commissariat bribery cases.

## THE JAPANESE PRESS.

### THE LOOCHOO QUESTION.

(Translated from the *Mainichi Shinbun*.)

ON the 19th instant there appeared an article in the *Nichi Nichi Shinbun*, headed "On the existing relations between China and Japan," which we will abbreviate for our readers, as follows:—"The recent mission of Mr. Inouye to China has given rise to countless rumours, none of which can be accepted as accurate. As there can be no doubt, however, that it was in connection with the Loochoo question, we may not be wrong in assuming that the entertainment lately given by His Excellency the Chinese Minister to the members of the Privy Council and the officials of the Foreign Department, was to celebrate the peaceful solution of the difficulty. It is indeed currently believed that China has arranged to take over the islands of Miako and Yaye, both of which are situated near Formosa, and has abandoned her original proposition that the Loochoo islands should be divided into three distinct portions. But when our country delivers up these islands what return does she get? Is it a pecuniary compensation? If so, this is not a cession but a sale! The only adequate return that China could make, as she has no islands she could give to us, would be a revision of her treaties with Japan, which are at present in a very unsatisfactory condition. We treat the Chinese very much more favourably than they treat us, so that the return we should expect is to be placed on a footing of equality with Europeans and Americans and to be allowed to carry on business as these latter do. This would indeed be a cession on which we should congratulate ourselves, &c." These remarks of the paper which we have quoted seem to be made upon precisely similar data to those upon which the *Hochi Shinbun* writes, and so every one who reads the two journals will agree that their views on the subject correspond.

As the Loochoo question is observed by the Government as a diplomatic secret, we would not have hazarded any suppositions on the matter, were it not that our contemporaries are publishing all sorts of ideas, so that we are obliged to follow their example. If the statements of the editors of the *Nichi Nichi* and the *Hochi Shinbun* are correct, the recent conclusion of the question is far from being a matter of congratulation; on the contrary it is actually a cause for regret, while if they are mistaken, it would tend to spoil the result of the negotiations. We do not think, however, that our Government has concluded the negotiations in the way imagined, but rather will arrange it in a most satisfactory manner. Our officials, who are well-experienced in these matters, would never agree to the cession of the two islands mentioned, in return for some Japanese subjects being allowed to trade freely in China as stated in the above-named journals, and we therefore venture to publish our own impressions on the subject.

We have frequently heard, since the question began first of all to be discussed, that all the Loochoo islands formed one of the dependencies of Japan, and that some years ago the Government nominated the King of Loochoo head of the clan, and re-named the islands "the prefecture of Okinawa," and ordered the King to reside in the capital. These measures would have been impossible if the islands had not always belonged to us. If China had ever had a right to them there would have been some justice in the remarks of the editors of the papers of which we are speaking, but we recollect, that on previous occasions, they themselves have asserted the sovereignty of Japan over these possessions. It would be a national disgrace to cede one inch of our territory, and we cannot therefore view the reported negotiations with satisfaction. What is really required is a revision of treaties and the abolition of the extra-territoriality clause, as these

two editors have frequently pointed out. We should like to ask them one question. If the Government, in order to obtain the revision of the existing treaties with the Treaty Powers, especially as regards the extra-territoriality clause, were to agree to cede to them part of the island of Kinshiu, in the west, and the island of Shikoku, in the south, would they consider it a matter of congratulation, and assert that in consequence of our concession, the clause respecting extra-territoriality has been ceded by the Treaty Powers? Such a proceeding would actually imply the submission of thirty millions of our fellow-countrymen to the yoke of the foreigners. Such revision would mean handing over the country to foreigners, so that if the writers to whom we refer congratulate themselves on the negotiations alluded to, they actually are favourably inclined to the sale of the country.

The treaty signed between China and Japan in the 4th year of Meiji (1871) provided that our countrymen were not to engage in trade in the interior of China. It was also arranged, however, that the treaty should stand for ten years and then be revised, so that the present year is the time for this revision. Both these two editors must be well aware that although the European and American Governments are particularly persistent, yet they always bow to argument, in consequence of which they intend at present to revise the existing treaties. The Chinese Government is as closely connected with our own as a man's lips are to his teeth: our religion and literature are the same, and if our government urges reasonably and justly a treaty revision, China could not reject the demand. One single Envoy could arrange this successfully, so how can it be necessary that we should have to hand over any territory to effect this? It may not be asserting too much to say that the editors of the *Nichi Nichi* and *Hochi Shinbun* have materially injured the progress of the negotiations between China and Japan, and if they have any reply to make to our observations, we shall be only too glad to hear it.

#### ITEMS FROM THE NATIVE PAPERS.

At half-past twelve o'clock on the night of the 17th instant a fire broke out at Uwomachi, Matsuyama, Yehime Ken. Thirty-seven houses were destroyed, and two people killed and four injured, by the time the conflagration was extinguished at five o'clock.

The medical practitioners at Shimashita-gori have been following the Chinese system; but now doctor Nagata has been appointed district medical officer, and the resident physicians have agreed to form a medical college, with doctor Nagata as president, in order to learn the art of medicine and surgery according to the western school.

On the 17th instant, the regular meeting of the Osaka Chamber of Commerce took place at seven o'clock in the evening. In pursuance of resolutions come to at special meetings of the Chamber, drafts were submitted to the present meeting of memorials for presentation to the Government on the prohibition of the export of rice, the protection of the export trade, and the increase of taxation. The documents as drawn up by the committees were unanimously agreed to, subject to some slight verbal alterations being effected which, in the opinion of some of those present, would make the memorials read more smoothly. The draft adopted on the question of prohibiting the export of rice, deals exhaustively with the transactions in that cereal which took place in 1869, and the necessity of providing against serious scarcity. The memorial on the export trade refers to the diminution of paper currency and the consequent inconvenience to merchants. In the opinion of the members of the Chamber, if the Government adopts their suggestions the financial position of the Empire will be in a satisfactory condition within ten years. The next business which occupied the meeting was the establishment of a Savings Bank. It was arranged to open a bank next month, and Mr. Hirose Saibei was appointed manager, with two other gentlemen to assist him. At ten o'clock the meeting concluded.

Mr. Okunishi Giichiro, after many years devoted to experiment, has discovered the art of dying white coral so that it cannot be distinguished from the valuable red coral. Many people have offered large sums of money to

learn the process, but Mr. Okunishi declines to disclose his secret.

It is reported that those persons who distinguished themselves by signal acts of loyalty and patriotism before or since the restoration, will be rewarded with social promotion to not less than the seventh grade.

We hear that local government secretaries of the first class, who have served four years in that capacity, will be appointed to any vacancies which occur among the governors.

Are we to attribute the following to the high price of food, or to the vigilance of the police? We are informed that the beggars are no longer allowed to wander about the city, and that many aged childless people visit the villages begging for food. All the old and helpless are becoming beggars, while the able-bodied join the society of the "Green Grove" (robbers).

In Kagoshima Ken recently, a man twenty-three or twenty-four years of age was walking in Ichome, Kamidori, Utsunoh, when suddenly two gigantic footpads sprang out, one before and the other behind him, and demanded his clothes and money. The man defended himself with his staff against the unked swords of his assailants, and told them that as he was a proficient in fencing, wrestling, &c., he had made up his mind to destroy all thieves. By his undaunted demennour and bold speech he intimidated the robbers, who fled. The man was equally frightened and ran home, rejoicing at his cleverness in escaping from such an unpleasant position.

We mentioned the other day that Messrs. Katsumata and Kondo had been despatched from the Home Department, to inquire into the matters which are causing so much unpleasantness in the assemblies of Kioto Fu and Miye Ken. When these gentlemen arrived at the latter place they found the assembly closed, as all the representatives had resigned, and nothing could therefore be done until a fresh election took place. They have consequently arranged to visit Miyo again next month. At Kioto things were in pretty much the same state. The assembly was closed, the members having returned the proposals of the Fuchō as unsatisfactory, and memorialized the Home Minister, to whom the governor had also appealed. The matters pending in Kioto and Miye are the most important which have occurred in local assemblies since the establishment of those institutions, and when Mr. Kondo returned to Tokio on the 16th instant, Mr. Tamiguchi, a secretary of the second class of Kioto Fu, went at the same time, in order to afford the Home Minister any explanations required.

Mr. Itagaki will return home by the *Nakasendo*, in company with Mr. Goto, the eldest son of Mr. Goto Shojiro. The monotony of the journey will be relieved by shooting in Kai and Shimano. A statement in the *Osaka Nippo*, that Mr. Itagaki had arrived in Kobe by steamer, is contrary to fact.

A letter from Kawabe-gori, Settsu, says that the Kocho Yakubu (village officers) oppress the people greatly. Their regulations are much more stringent and irksome than those of the Central Government, and the officials are more difficult of access than the district officers. The latter are very kind to the inhabitants and have therefore become extremely popular.

We hear that Mr. Kadota Saburohei, a wealthy merchant of Osaka, proposes to enter into an arrangement with the Bureau of Mountains and Forests in Germany, for the exchange of Japanese for German trees, plants, &c.

A girl about fifteen years of age, the daughter of a farmer residing at Yamahara-mura, Tadugo, Kawabe-gori, went to Imai a few days since. By the time she reached the top of the steep road called Nakayama-toge it was nearly sundown. For men sprang out of the thicket alongside the road at this spot, seized and outraged the poor girl, and then disappeared in the forest. The girl ran home and told her parents, who were of course very angry and distressed, but they thought to say nothing of the circumstance to the authorities for their daughter's sake. However, the police heard of what had occurred and are now making diligent search for these brutal ruffians.

During the last few days the governor of Osaka Fu has received a great number of post cards. It is reported that they all refer to the present high price of necessaries, and the great number of robberies. Some of the communications state, also, that since the governor arrived

he has introduced many great improvements in the administration of affairs, but that he has not yet caused the price of provisions to fall, nor burglaries to cease. For ourselves, we consider he is powerless to effect a diminution in the cost of goods, but we sincerely trust he will devote great attention to keeping the police force in a high state of efficiency.

Mr. Itagaki returned to Kioto from Tokio on the 17th instant. He arrived at Kobe by the *Wakanoura Maru*.

We hear that some of the Privy Councillors are in favour of resuming the system of paying the land tax in rice. Mr. Godai, of this city, is one of the foremost advocates of this view, and we are now informed that Mr. Koteda, the governor of Shiga Ken, has sent in a memorial on the subject.

A return has been prepared by the Kioto Fucho, showing that there are 630 mutes in the Fu. The Osaka Fucho is about to obtain similar particulars.

The subscriptions for providing a fund to erect a monument to those who fell during the southern war, has reached a very large sum. The members of the Hakkosha (society of military officers) are now considering designs for the monument, and its erection will be commenced next spring.

On the 17th instant, the 8th Infantry Regiment of the Osaka garrison was practiced in field manoeuvres at Ubuyu, Higashinari-gori.

Mr. Ishii, chief commissioner of the Imperial Telegraph Department, is expected in Osaka on the 26th instant.

The *Fukuoka Mainichi Shinbun* was suspended on the 12th instant for a breach of the press laws, but the prohibition was removed the other day.

A great number of the prisoners in the gaols at Osaka are suffering from itch, ringworm, and other skin diseases. In fact these complaints are inseparable from the mode of life pursued by the vast majority of the criminal classes when at liberty. Mr. Tsuji, the superintendent, is doing all in his power to stamp out these diseases by enforcing cleanliness, and separation of the affected prisoners.

It is generally admitted that the police of Osaka are indefatigable in their endeavours to suppress robbery, and the police of Hiogo Ken are also exerting themselves. The result is that such numbers of thieves, pickpocket, &c., are daily arrested, that the prisons are full and offenders have to be provided for in the servants' quarters, store-houses, &c.

A child of three years of age, the daughter of a farmer residing at Aseigome-mura, Kita-Seguraki-gori, in Aichi Ken, was recently playing in a garden and ate one or two shimi berries. Immediately afterwards the poor little creature was seized with violent pains and died in great agony. We have heard of several instances in which people have been poisoned through eating food fried in oil obtained from these berries, and hope that people will take warning and exercise greater caution in future.

Eight robbers were arrested by the police stationed at Honden, Osaka, a couple of days ago. They were found to be rice brokers who, since the suppression of the rice exchanges, finding themselves deprived of their occupation, turned to thieving as a means of subsistence. It is said that they have broken into no less than twenty-seven godowns in Osaka, and stolen property of the value of 2,700 yen.

At about one o'clock in the morning of the 16th instant, the dogs of Mr. Komori Mumejiro, a wealthy merchant residing at Rinzoji-machi, East district of Osaka, commenced barking furiously and awoke up his father, who is called Manjiro. He arose, thinking robbers were about, and sent two servants to examine the premises, watching the result attentively. Soon he saw a robber armed with a naked sword attack one of the servants, and then several accomplices came, overpowered the domestics and tied them up. The ruffians afterwards entered the house, when Manjiro, who had locked up the family, slipped out into the garden. The robbers pursued, but Manjiro escaped them by hiding behind a tree. He then found an opportunity of calling to the private watchman, who went to the police station. Twenty men in charge of an inspector were quickly on the spot and they silently surrounded the premises. When this manoeuvre had been effected the constables called out loudly, and the robbers, hearing the noise, emerged from the house, and tried to escape by separating. One was caught secreted in a bam-

bon grove, and another attacked Mr. Tani, the inspector, but soon retreated. Mr. Tani pursued, determined the ruffian should not escape, when the robber turned upon the officer and a desperate struggle took place, which ended when some of the constables came up. There were, it is reported, six robbers engaged in this affair, of whom two only were arrested. On examination, 158 yen were missing from the house, but as the money was discovered in the pocket of one of the captured men, Mr. Manjiro lost nothing.—*Hiogo News* Translation.

#### GENERAL ROBERTS' DESPATCH ON HIS DEFEAT OF AYUB KHAN.

*A Gazette of India Extraordinary*, published on the 12th instant, contains the following particulars regarding General Roberts' march from Kabul to Kandahar and his defeat before the latter place of Ayub Khan:—

From Lieutenant-General Sir Frederick Roberts, G.C.B., V.C., C.I.E., Royal Artillery, Commanding the Southern Afghanistan Field Force, to the Adjutant-General in India, Army Head Quarters, Simla—No. 88, dated Camp Quetta, 26th September, 1880.

Before detailing the operations, on the 31st August and the 1st September, which resulted in the defeat of the Afghan Army assembled at Kandahar, under the command of Sirdar Mahomed Ayub Khan, it may be desirable to give a short account of the march from Cabul,—a distance of 318 miles,—which was accomplished in twenty-three days, including two halts. The strength of the force, placed at my disposal at Kabul by Lieutenant-General Sir Donald Stewart, G.C.B., consisted of—3 Brigades of Infantry, 1 Brigades of Cavalry, 3 Batteries of Mountain Guns. Major-General J. Ross, C.B., commanded the Infantry Division, the 1st, 2nd, and 3rd Brigades of which were commanded respectively by Brigadier-General H. T. Macpherson, C.B., V.C.; Brigadier-General T. D. Baker, C.B.; Brigadier-General C. M. MacGregor, C.B., C.I.E.; Brigadier-General Hugh H. Gough, C.B., V.C., commanded the Cavalry Brigade; Colonel Alured C. Johnson commanded the artillery, Colonel E. Parkins, C.B., held the position of Commanding Royal Engineer, and Deputy Surgeon-General J. Hanbury, that of Principal Medical Officer.

The forces were thus composed:—the 1st Infantry Brigade, 651 men of the 92nd Highlanders, 701 23rd Pioneers, 575 24th Punjab Native Infantry, 501 and Goorkhas. The 2nd Infantry Brigade, 787 men of the 72nd Highlanders, 615 Sikh Infantry, 570 3rd Sikh Infantry; 561 5th Goorkhas. The 3rd Infantry Brigade, 616 men of the 260th Rifles, 650 of the 15th Sikhs, 629 of the 25th Punjab Native Infantry, 637 of the 4th Goorkhas. The Cavalry Brigade was composed of 318 men of the 9th Queen's Royal Lancers, 394 of the 3rd Bengal Cavalry, 408 of the 3rd Bengal Cavalry, 407 of the 3rd Punjab Cavalry 495 of the Central India Horse. The Artillery Division was composed of 6 Screw guns and 95 men of 6-8th R. A., 6 guns and 95 men of the 11-9th R. A., and six guns and 140 men (native) of No. 2 Mountain Battery. The total force may be set down as British Troops 2,562; Native 7,151; British Officers 273; Guns 18; Cavalry Horses 1,779; Artillery Mules 450; from these details it will be noted that the strength in artillery was not in proportion to the strength of the other branches. But there were strong reasons which made it desirable that the artillery with the column should consist only of mountain batteries. The whole question was one of grave importance, and it was not without due consideration decided that the force should proceed to Kandahar unaccompanied by wheeled artillery. The object was to reach Kandahar in the shortest possible time; and it was not improbable that the main road would have to be left, should the Afghan army at Kandahar endeavour to make its way towards Ghazni and Kabul by the valleys of the Argandab or the Argastan. The nature of the ground throughout Afghanistan is such that artillery can never be safely employed with cavalry alone, unsupported by infantry. Nor is rapidity of movement so much required of artillery in countries like Afghanistan, as the power of being able to operate over the most difficult ground without causing delay to the rest of the troops. It was not forgotten, moreover, that on

arrival at Kandahar the column would be augmented by a battery of 40-pounders, a battery of field artillery, and four guns of horse artillery. It is unquestionable that, had either horse or field artillery accompanied the force, the march could not have been performed with the same rapidity. Before leaving Kabul, everything that was possible was done to lighten baggage. Ten British soldiers were told off to each mountain battery tent, usually intended to hold six, and fifty to a sepoy's tent of two *pals*, 34 lbs. of kit only being allowed for each man. To each Native soldier 20 lbs. of baggage was allowed, inclusive of camp equipage, each officer was allowed one mule; and one mule was allowed to every eight officers for mess. The amount of supplies which it was determined to take with the force was as follows:—30 day's tea, sugar, rum, and salt for Europeans, 8 day's rum for Natives drinking spirits, 5 day's flour for Europeans, 5 day's rations for Native troops, 1 day's grain, carried by cavalry horses and transport animals in addition to the ordinary load. For the above, and for the carriage of foot-sore (soldiers and followers), European soldiers were allowed 2 per cent of ponies, Native soldiers were allowed  $2\frac{1}{2}$  per cent, Native followers were allowed  $1\frac{1}{2}$  per cent; it was found that the numbers of transport animals required, inclusive of 10 per cent spare, were—1,589 *yaboo*s (large Kabul ponies), 1,244 Indian ponies, 4,510 mules, 912 donkeys. In addition to these, there were purchased on the line of march—35 *yaboo*s, 1 mule, 208 donkeys, 171 camels. The casualties were—410 *yaboo*s, 106 Indian ponies, 217 mules. The numbers of Native followers were—

Doolie-bearers ... ..	2,192
Followers in the Transport and other Departments... ..	4,698
Private followers and syces of Native cavalry regiments ... ..	1,244
Total ... ..	8,134

The desertion of the whole of the Afghan drivers belonging to the Transport, shortly after leaving Kabul, and of the Hazara drivers directly their own country was reached, threw exceptionally heavy work upon the troops. As regards supplies, the greatest difficulty would have been experienced but for the admirable arrangements made by Major A. R. Badcock and the officers of the Commissariat Department, Captain A. T. S. A. Rind, Bengal Staff Corps, Lieut. C. M. Pitz-Gerald, Bengal Staff Corps, Lieut. H. M. P. Hawkes, Bengal Staff Corps, Lieut. H. F. Lyons-Montgomery, Bengal Staff Corps, and by Lieutenant-Colonel R. C. Low and the officers of the Transport Department, Captain W. A. Wynter 33rd Foot, Captain G. H. Elliot, Bengal Staff Corps, Captain C. R. Macgregor, Bengal Staff Corps, Lieut. L. E. B. Booth, 33rd Foot, Lieut. H. J. Elverson, 2nd Foot, Lieut. R. B. W. Fisher, 10th Hussars, R. H. F. W. Wilson 10th Hussars, Lieut. C. G. Robertson, 8th Foot. Sufficient praise cannot be bestowed upon all these officers. They never spared themselves; and often, after the longest march, and with the prospect of having to start off again at a very early hour following morning, had to work on until a late hour in the night. In the collection of supplies the Commissariat and Transport Departments were materially aided by Major E. G. G. Hastings and his staff of political officers. Fortunately for the welfare of the cavalry horse and transport animals, a fair amount of green Indian-corn was almost everywhere procurable. Barley was very scarce; but the Indian-corn proved to be so nutritious that the large majority of the horses, ponies and mules reached Kandahar in excellent health and condition. The reserve of flour had on several occasions to be indented upon; but by replenishing whenever supplies were to be obtained, we arrived at Kandahar with still about three days' flour in hand. The force appointed for the relief of Kandahar, moved into camp by brigades on the 8th August in the vicinity of Kabul, the 2nd Infantry and the Cavalry Brigade proceeding respectively to Indiki and Charasin. The 1st and 3rd Infantry Brigades encamped at Beni Hissar. The following morning the march commenced. The route lay through the fertile Logar Valley, that line being chosen, instead of the usual road by Maidan, on account of the facilities it offered for collecting supplies. On the 15th August Ghazni was reached,—a distance of 93 miles having been marched in

seven days. At Ghuzni, I was met by the Governor, and received from him the keys of the city gates. I placed my own guards and sentries in and around Ghazni,—deeming it best for the preservation of order, for the prevention of collisions between the troops and people, and for the execution of our demand for supplies. The fort was visited by numbers of officers and men, but no disturbance occurred; and before the break of the following day the force was many miles on its way towards Khelat-i-Ghilzai. No news having reached me from either the latter place or Kandahar, I determined to push on with all possible speed. I may here mention that I frequently despatched messengers, while on the road with telegrams reporting our progress. I am led to think that none of those messengers ever reached their destination except those sent from Khelat-i-Ghilzai, and from between that place and Kandahar. On the 20th August, shortly after reaching Panjak, I received a letter from Colonel Tanner, 29th Bombay Native Infantry, commanding at Khelat-i-Ghilzai, written on the 18th to the effect that all was well with his garrison; that the neighbourhood of Khelat-i-Ghilzai was quiet, and that General Phayre, writing from Quetta on the 12th August, had stated that he hoped to be in Kandahar on 2nd September at the latest. The following day, at Shahjui, Captain Stratton was able to open heliographic communication with Khelat-i-Ghilzai. By this means I heard of the sortie which had been made from Kandahar on the 16th August; and at the same time I received re-assuring news as to the staying power of the garrison,—that they were in no straits for supplies for troops and followers, that they were all in good health and spirits, and that they had forage sufficient to hold out for a longer period than it would take the force under my command to reach Kandahar. I decided, therefore, to push on to Khelat-i-Ghilzai, and there give the troops a well earned rest of one day. We arrived at Khelat-i-Ghilzai on the 23rd August, having marched from Ghazni, a distance of 134 miles, in eight days. This gives an average daily rate of  $16\frac{2}{3}$  miles. Colonel Tanner had everything in good order at Khelat-i-Ghilzai, and had been enabled to collect a fair amount of supplies. Being of opinion that it would be inconvenient to keep open communication with Khelat-i-Ghilzai for some time to come, and seeing no immediate advantage in continuing its occupation, I determined to withdraw the garrison and take it with me to Kandahar. All the necessary arrangement for this purpose were made during the day the force halted—the 24th August; and the charge of the fort was handed over to Mahomed Sadik Khan, a Toki Ghilzai, who had had possession of it when the British troops under Lieutenant General Sir Donald Stewart reached Khelat-i-Ghilzai in January 1879. On the 26th August, at Tirandaz, I received news from Lieutenant General Primrose, C.S.I., commanding at Kandahar, that on the 23rd Sirdar Ayub Khan had abandoned the villages to the east and west of Kandahar; and that on the 24th he had struck his camp and had taken up a position in the Argandab Valley between Babu Wali and Mazra, due north of the city,—thus practically giving up the investment of Kandahar. Being anxious to open up heliographic communication with General Primrose, and if possible with General Phayre, I ordered two regiments of cavalry under Brigadier-General Hugh Gough to march the following morning (27th August) to Robat, a distance of 34 miles, the remainder of the force moving about half way. Shortly after arrival at Robat, Brigadier General Gough was met by Lieutenant Colonel St. John, the Resident, and Major Adam, Assistant Quartermaster General at Kandahar. From the information brought by these officers, and from what I heard from the other sources I was led to believe that Ayub Khan intended to make a stand, and was strengthening his position which was said to extend from Gandizai to Kotul-i-Mureha. Upon receipt of this news I determined to halt for one day at Robat, and to divide the remaining distance to Kandahar, nineteen miles, into two short marches. Soldiers, followers and transport animals were much fagged by the long and continuous marching, and somewhat exhausted by the now daily increasing heat. I was, moreover, desirous of bringing the troops into Kandahar in as fresh a state as possible, and fit for any work that might be required of them. During the halt at Robat, on the 29th, I received a letter from Major-General Phayre,

C. B., dated Kila Abdulla the 24th August, stating that he hoped his division would be assembled there on the 28th, and be able to march for Kandahar on the 30th. I felt at once that this precluded the possibility of General Phayre's arrival at Kandahar in time to cooperate with me. I much regretted this, as I was well aware of the strenuous exertions he had made to relieve the beleaguered garrison, and privations and hardships which he and troops had under gone to effect this object. On the 31st August the force reached Kandahar, having marched from Khelat-i-Ghilzai (88 miles) in seven days, including the halt at Robat. The position I determined to take up was to the west of the city, with my right on the cantonments, and my left touching Old Kandahar. Such a position covered the city, gave me command of a good and ample supply of water, and placed me within striking distance of Ayub Khan's camp. Not knowing what opposition might be expected once we advanced beyond the city, arrangements were made, in communication with Lieutenant-General Primrose, for giving the troops their breakfast outside the Shikapore Gate, and for watering the transport animals. At 10 a.m. the 1st and 3rd Brigades moved off from under the city walls, and took up the position as shewn in the plain attached, *viz.*, Picquet Hill, Kareh Hills, and the north-eastern spur of the hill over Old Kandahar. This movement was accomplished without opposition. The Cavalry and the 2nd Brigade of Infantry were at this time on baggage and rear guards. From such a cursory examination of the ground as I was able to make on arrival in the morning, I was quite satisfied that any attempt to carry the Baba Wali Kota by a direct attack would be attended with very severe loss. I determined, therefore, if possible, to turn it. To enable me to decide how best this operation could be carried out, it was necessary to ascertain the strength and precise extent of the position occupied by the enemy. I was anxious to obtain this information without delay, and I therefore ordered a small column of the 3rd Bengal Cavalry, 15th Sikhs, two guns of 11-9th Royal Artillery under the command of Brigadier-General Hugh Gough to start at once and make as complete a reconnaissance as possible. Lieutenant-Colonel Chapman, Deputy Adjutant and Quarter-Master General, was directed to accompany the party and to assist Brigadier-General Gough with his great local knowledge and experience. The reconnaissance started at 1 p.m., from our left near Old Kandahar, and proceeded towards the high ground immediately above the village of Gandizan. Here the infantry and guns halted, while the cavalry advanced some two or two and a half miles, avoiding the numerous orchards and enclosures, and coming out in front of Pir Paimal village, where it was found the enemy were strongly entrenched. As soon as the enemy's fire along this line had been drawn, the 3rd Bengal Cavalry fell back, admirably handled by their Commandant, Lieutenant-Colonel A. R. D. Mackenzie. In the meantime the guns were brought into action, partly to test the range, and also to check the enemy, who were now observed to be passing rapidly into the gardens near Gandizan. A retirement of the infantry and artillery of the reconnaissance to within our picquets was then ordered. The instant our troops commenced to fall back, the enemy advanced in great strength and pressed the infantry. They eventually assembled in such large numbers, and endeavoured so persistently to follow, that the whole of the troops of the 3rd Brigade, and part of those of the 1st, were ordered under arms. The retirement was conducted with great steadiness by the 15th Sikhs, under the command of Lieutenant-Colonel G. R. Hennessy. At the end of the day our casualties numbered only ten. The reconnaissance of the 31st August having afforded me all the information I required, I decided on attacking the enemy the following morning. Orders were accordingly issued to the troops to breakfast at 7 a.m., and for one day's cooked rations to be carried by all ranks. Brigades were to be in position by 8 a.m., tents being previously struck and with the kits stored in a walled enclosure.

The plan of operations was explained by me personally to the officers commanding divisions and brigades at 6 a.m. The plan briefly, was to threaten the enemy's left (the Baba Wali total), and to attack in force by the village of Pir Paimal. The whole of the infantry of the Kabul-Kandahar Force, upon whom devolved the duty of carrying the enemy's position, were formed up in rear of the low hills which

covered the front of our camp,—the right being at Picquet Hill, and the left resting on Chilizim, while the cavalry, under the command of Brigadier-General Hugh Gough, was held in readiness in rear of the left, to operate by Gandizan towards the bed of the Argandah river so as to threaten the rear of Ayub Khan's camp, and endanger his line of retreat towards Girishk and Kakrez. E. B. Royal Horse Artillery (four guns), two companies of the 2-7th Fusiliers, and four companies of the 28th Bombay Native Infantry were placed at the disposal of Brigadier-General Gough to take up a position near Gandizan, and when opportunity offered, to support his advance. Guards for the protection of the city having been detailed, as shown in the accompanying return, marked No. 9, the remaining troops under Lieutenant-General Primrose's command were ordered to be distributed as follows:—

Brigadier-General Dunbeny's brigade to hold the ground from which the Kabul Force would advance to the attack. The remnant of Brigadier-General Burrows' brigade with No. 5-11th Royal Artillery and the cavalry of the Bombay Force under Brigadier-General Nuttall, to take up a position north of the cantonment, from which the 40-pounders might be brought to bear directly on the Baba Wali Pass; the cavalry being instructed to watch the pass called Kotaki Mureha, and to cover the city. It was clear from a very early hour in the morning that an offensive movement was contemplated by the enemy. The villages of Gandizan and Gandi Mullah Sahibdad were held in strength; and desultory fire was brought to bear upon our front from the orchards connecting these two villages, while an ill-directed shell fire was opened from the Baba Wali Kotai, which was held in force during the greater part of the day's operations.

At 9.30 a.m. fire was opened from the 40-pounders upon the Baba Wali Pass. Shortly afterwards the brigades of the Kabul-Kandahar Force were ordered to the attack, the 1st Brigade being on the right, the 2nd on the left, and the 3rd in reserve. Two batteries of artillery, *viz.*, C-2nd and 6-8th,—the latter being the new pattern jointed guns,—had meanwhile been placed in position to cover the advance of the infantry, and commenced shelling the village of Gandi Mullah Sahibdad. The instructions given by Major-General Ross to Brigadier-General Macpherson were to make his first attack on that village, after which he was to clear the enemy from the enclosures which lay between the village and the low spur of the hill short of Pir Paimal. He further ordered Brigadier-General Baker to advance in a westerly direction, keeping touch with the 1st Brigade on his right, and clearing the gardens and orchards in his immediate front.

The attack upon the village of Gandi Mullah Sahibdad was made by the 2nd Goorkhas and the 92nd Highlanders under the command of Lieutenant-Colonel A. Batty and Lieutenant-Colonel G. H. Parks respectively, the remaining two regiments of the 1st Infantry Brigade being in support. The village was carried in the most dashing style, Goorkhas and Highlanders vying with each other in the rapidity of their advance. The enemy withdrew suddenly and leisurely, a good number remaining to the last in the village to receive a bayonet charge. On this occasion the following officers and men were brought to notice as having behaved with distinguished gallantry:—

Major G. S. White, 92nd Highlanders; Private John Dennis, 92nd Highlanders; Drummer James Roddick, 92nd Highlanders; Lieut. H. S. Wheatley, 2nd Goorkhas; Sepoy Mangal Jaist, 2nd Goorkhas; Sepoy Wazir Sing Nagarkoti, 2nd Goorkhas; Sepoy Makkareah Rana, 2nd Goorkhas; Sepoy Bistram Thapa, 2nd Goorkhas; Sepoy Maniram Lohar, 2nd Goorkhas.

During the advance of the 1st Brigade on the village of Gandi Mullah Sahibdad, the 2nd Brigade had been threatening its way through the lanes and walled enclosures, which lay in the line of its attack. The resistance it encountered was most stubborn, the enemy being well protected by high walls, which they had carefully loon-holed. The loss suffered in clearing these enclosures was necessarily severe.—Lieutenant-Colonel Brownlow, *c. r.*, Captain Frame, and Lance Sergeant Cameron (a grand specimen of a Highland soldier: being amongst those who fell, Lieutenant-Colonel Brownlow met his death while gallantly leading his regiment, the 72nd Highlanders, and in him the army has experienced a great loss. He had on many occasions highly

distinguished himself as a leader,—at the Peiwar Kotal, during the operations around Kabul at the latter end of 1879, and notably on the 14th December when he won the admiration of the whole force by his brilliant conduct in the attack and capture of the Asmai Heights.

Of the regiments of this (the 2nd) brigade, the 72nd Highlanders and the 2nd Sikhs had the chief share of the fighting. They were the two leading battalions, and frequently had to fix bayonets to carry positions or to check the determined rushes of the enemy. Brigadier-General Baker speaks in high terms of the gallant behaviour of these two regiments, and notices especially the manner in which a charge of the enemy was repulsed by the 2nd Sikhs under the able and immediate command of Lieutenant Colonel J. J. Boswell, who was well supported by Majors H. M. Pratt, J. B. Slater, and F. E. Hastings. The following native commissioned officers, non-commissioned officers and soldiers are brought forward as having been very conspicuous during this part of the action.

Color-Sergeant G. Jacobs, 72nd Highlanders; Color-Sergeant R. Lauder, 72nd Highlanders; Lance-Corporal J. Gordon, 72nd Highlanders; Subadar-Major Garbaj Sing, 2nd Sikhs; Sepoy Hakim, 2nd Sikhs; Sepoy Jai Sing, 2nd Sikhs; Sepoy Partab Sing, 2nd Sikhs; Sepoy Bir Sing, 2nd Sikhs.

After severe fighting both brigades emerged at the point of the hill near Pir Paimal; and bringing their left shoulders forward, they pressed on and swept the enemy through the closely-wooded gardens and orchards which cover the western slopes of the hill. The village of Pir Paimal was in our possession soon after noon. When I heard from Major-General Ross of the success of the troops under his command, I determined to support his further advance by the 3rd Brigade, which had been drawn up in front of the village of Abasabad with the double object of being a reserve to the 1st and 2nd Brigades, and of meeting a possible counter attack by the enemy from the Baba Wali Pass. The capture of Pir Paimal, however, brought our troops in rear of that pass; and feeling that nothing had now to be feared from the enemy's left, I pushed on with the 3rd Brigade to join Major-General Ross. That officer, seeing the advantage gained, and knowing that he could rely upon the courage and eagerness of his troops, had very wisely determined to press forward without waiting for reinforcements. The position to which the enemy retired, after the capture of Pir Paimal, was an entrenched camp to the south-west of the Baba Wali Kotal, commanding an open piece of ground. This entrenchment they were evidently prepared to hold with their usual determination; reinforcements were being rapidly pushed up from their reserves, while the guns on the Baba Wali Kotal were turned round so as to increase the heavy fire of artillery which was brought to bear upon our troops. It became necessary to take this position at once by storm.

Recognizing this with true soldierly instinct, Major G. S. White, who was leading the advance companies of Her Majesty's 92nd Highlanders, called upon his men for just one charge more "to close the business." The battery of screw guns, under Brevet-Major J. C. Robinson, had been shelling the enemy with a well directed fire; under cover of which, and supported by a portion of the 2nd Goorkhas and the 33rd Pioneers, the Highlanders, responding with alacrity to their leader's call, dashed forward and drove the enemy from their entrenchments at the point of the bayonet. The gallant and ever foremost Major White was the first to reach the enemy's guns; being closely followed by Sepoy Inderbir Lama, who, placing his rifle upon one of the guns, exclaimed that it was captured in the name of the 2nd (Prince of Wales' Own) Goorkhas. While the 1st Brigade was advancing towards the enemy's last position, a portion of the 2nd Brigade, viz., a half-battalion of the 3rd Sikhs, under Lieutenant-Colonel G. N. Money, charged a body of the enemy on the extreme left, and captured three guns. The enemy were now completely routed; but owing to the nature of the ground, it was impossible for Major-General Ross, who was commanding in the front line, to realise the extent of the victory he had won. He, therefore, expecting the enemy to take up a fresh position further on, and to continue their resistance, ordered the 1st and 2nd Brigades to halt and replenish

their ammunition. When this had been done and the troops had advanced about a mile, Major-General Ross found himself in sight of the whole of Ayub Khan's camp, standing deserted, and apparently as it had been left in the morning, when the Afghans moved to the attack. With his camp, Ayub Khan lost all his artillery, numbering 32 pieces, including the two guns of E.B., Royal Artillery, which had been taken by the troops at Maiwand on the 27th July.

During this part of the engagement the following officers and men were especially remarked for their gallantry and forwardness:—Major G. S. White, 92nd Highlanders; Lieutenant C. W. H. Douglas, 92nd Highlanders; Corporal William McGillivray, 92nd Highlanders; Private Peter Grieve, 92nd Highlanders; Private John McIntosh, 92nd Highlanders; Private D. Grey, 92nd Highlanders; Major S. E. Becher 2nd Goorkhas; Havildar Gopal Borah, 2nd Goorkhas; Sepoy Inderbir Lama, 2nd Goorkhas; Sepoy Tikaram Kwas, 2nd Goorkhas. Further pursuit with infantry being hopeless, the brigades were halted on the far side of the village of Mazra, where they were shortly afterwards joined by the 3rd Brigade under Brigadier-General MacGregor. I had meanwhile ordered the cavalry of the Bombay Force, under Brigadier-General Nuttall, to advance over the Baba Wali Kotal and pursue the enemy up the left bank of the Argandah. The operations of the cavalry under Brigadier-General Hugh Gough were continued throughout the day, the brigade crossing the Argandah and pushing beyond the line of the enemy's retreat towards Kakrez. During this movement none of the regular troops were encountered, but some 350 of the fugitive *ghazis* and irregulars were killed. With the exception of the first Brigade, which halted at Mazra for the night, all the troops returned to Kandahar before dark. Shortly before the final advance, Major-General Ross, wishing to inform me by heliograph that he succeeded in turning the enemy's position, directed Captain Straton, 22nd Foot, Superintendent of Army Signalling, to proceed with a company of the 24th Punjab Native Infantry to the Baba Wali Kotal. This gallant officer had only gone a short distance when a *ghazi* springing out of a ravine close to him, shot him dead. In Captain Straton Her Majesty's service has lost a most accomplished, intelligent officer, under whose management army signalling, as applied to field service, reached a pitch of perfection probably never before attained. His energy knew no difficulties, and his enthusiasm was beyond praise. He had won the highest opinions from all with whom his duties had brought him in contact, and his death was very deeply felt throughout the whole force. On the capture of Ayub Khan's camp, the body of Lieutenant MacLaine, Royal Horse Artillery, was discovered lying outside what had been his own, and close to Ayub Khan's, tent. It was evident he had been quite recently murdered,—the act, I believe, of the guard placed over him by Ayub Khan. This incident I record with deep sorrow as the melancholy fate of a brave young officer, whose short career had been so full of promise. I have requested Lieutenant-General Primrose to furnish a report regarding the part taken by the troops under his command in the engagement of the 1st September. I beg to acknowledge the assistance that the Lieutenant-General and the officers under his command afforded me. The presence of these troops released the whole of the Kabul Kandahar Force for the turning movement by Pir Paimal, and contributed materially to the success of the day. I annex the following returns:—

No. 1.—Numerical Return of Casualties at Kandahar on the 31st August and the 1st September 1880, together with a Nominal Roll of British officers killed and wounded. No. 2.—Nominal Roll of Native officers, British non-commissioned officers and followers of the Infantry Division, Kabul-Kandahar Field Force, killed and wounded on the 31st August and the 1st September 1880. No. 3.—Nominal Roll of killed and wounded, Cavalry Brigade, Kabul-Kandahar Field Force, on the 1st September 1880. No. 4.—Return of actual number present of the Infantry Division, Kabul-Kandahar Field Force, at the action of the 1st September 1880. No. 5.—Return of actual number present of the Cavalry Brigade, Kabul-Kandahar Field Force, at the action of the 1st September 1880. No. 6.—Return of gun and rifle ammunition expended by the Kabul-Kandahar Field Force on the 31st August and the 1st September 1880. No. 7.—Numerical Return of Casualties in the

Bombay-Kandahar Field Force on the 1st September 1880. No. 8.—Return of ammunition expended by the Bombay-Kandahar Field Force who were on duty in the citadel and city on the 1 September 1880. No. 10.—Number of the Bombay-Kandahar Field Force under arms on the 1st September 1880. No. 11.—Return of Ordnance captured on the 1st September 1880.

I also attach four plans illustrative of the country over which the battle was fought—No. 1.—Gives the dispositions of the Kabul-Kandahar brigades at several important stages. No. 2—Shews the position taken up by the Bombay-Kandahar Field Force, as the Kabul-Kandahar Field Force were breaking ground for the attack. No. 3—Has the position of the whole force engaged, together with that of the enemy, and of the ground covered by our cavalry. No. 4—Is a pen and ink sketch of the battle field taken from the hill over Gandizan. It will be seen that our casualties amounted to—

Killed of all ranks ... ..	40
Wounded of all ranks ... ..	228
Total killed and wounded ... ..	268

It is difficult to estimate the loss of the enemy, but it must have been considerable, for upwards of 600 bodies were buried by us between Kandahar and the village of Pir Paimal alone. Probably 1,200 killed would not be an over-estimate. The number of the enemy against us has been calculated at—

Regular infantry ... ..	4,000
Cavalry ... ..	800
Ghazis ... ..	5,000
Irregular cavalry ... ..	3,000

Having briefly described the march from Kabul to Kandahar, and having given the chief incidents of the operations around Kandahar on the 31st August and 1st September, I am desirous of bringing to the special notice of His Excellency the Commander in Chief in India and the Government of India, the conduct and bearing of the troops under my command. The rapidity with which the march was accomplished,—taking into consideration the strength of the force, the variations of climate, and the difficult nature of the country traversed,—is the best testimony I can produce to the efficiency, discipline and spirit of the troops. Their conduct under circumstances often of the most testing nature, cannot be expressed in terms too strong or too full. They all seemed to be animated with but one desire, that, cost what it might in personal risk, fatigue, or discomfort, they would effect the speedy release of their beleaguered fellow-soldiers in the city of Kandahar. The unflagging energy and perseverance of the troops seemed to reach the full height when they knew they were about to put forth their irresistible strength against a hitherto successful enemy. Notwithstanding the provocation caused by the cruel murder of any stragglers (soldiers as well as followers) who fell into the hands of the Afghans following in the wake of our column, not one act infringing the rules of civilized warfare was committed by our troops. The persons and property of the natives were respected, and full compensation for supplies was everywhere given. In short, the inhabitants of the districts we passed through could not have been treated with greater consideration, nor with a lighter hand; and the conduct of the troops will ever remain as memorable as the results which they achieved. Where all did their duty so willingly and effectually there may seem little room for the selection of individuals for prominent notice. I cannot, however, refrain from recording the names of some officers whose exceptional services, I consider, entitle them to the favourable consideration of His Excellency the Commander-in-Chief. Major-General J. Ross, C.B., commanding the Infantry Division and 2nd in command, afforded me every assistance during the march from Kabul and the operations at Kandahar. By the able manner in which he conducted the attack on the Afghan position on the 1st September, he has given a fresh proof of his many soldierly qualities, and his fitness for command. Major-General Ross speaks in high terms of the following officers of his Staff:—Major G. de C. Morton, Assistant Adjutant General; Major R. G. Kennedy, Assistant Quarter Master General; officiating Deputy Surgeon-

General J. Ekin, M. B.; Captain J. D. Menacl, Rifle Brigade, A. D. C.; Lieutenant A. Davison, 2-60th Rifles, Orderly Officers; Lieutenant the Honorable M. G. Talbot, R.E., Orderly Officer. I am greatly indebted to Brigadier-General H. T. Macpherson, C. B., V. C., commanding the 1st Infantry Brigade; Brigadier General T. D. Baker, C. B., commanding the 2nd Infantry Brigade; Brigadier-General C. M. Macgregor, C. B., C. S. I., C. I. E., commanding the 3rd Infantry Brigade; Brigadier-General Hugh Gough, C. B., V. C., commanding the Cavalry Brigade. With such able and experienced officers in command of brigades, success was a certainty. Throughout the long and trying march from Kabul they maintained the strictest discipline, and brought their troops to Kandahar in the highest state of efficiency. I desire to bring to the special notice of His Excellency the Commander-in-Chief the valuable services of these distinguished officers.

From Major-General G. R. Greaves, C. B., Adjutant General in India, to the Secretary to the Government of India, Military Department,—(No. 5585-A., dated Simla, 7th October 1880.)

I am directed to forward, for the information of His Excellency the Governor General in Council, the accompanying despatch from Lieutenant-General Sir Frederick Roberts, G.C.B., C.I.E., V.C., reporting the march of the force under his command from Kabul to Kandahar, and the successful engagement with the Afghans under Sirdar Mahomed Ayub Khan on the 1st September last. The events reported are so ably and so clearly described by Sir Frederick Roberts, as to require no word in explanation. His Excellency the Commander-in-Chief cannot, however, refrain from expressing the pride with which he presents this despatch to Government, recording as it does one of the most complete and successful military operations of recent times. In the last days of July when the enemy under Ayub Khan had, after the unfortunate events at Maiwand acquired a prestige and strength which some thought to be irresistible, the Commander-in-Chief felt that unless his proposal to despatch a division from Kabul met with the fullest support from the officer selected to command it, it would have been impossible to carry out the intention. It was therefore most gratifying to His Excellency to find that Sir Frederick Roberts was so strong an advocate for the measure. The promptitude with which this force was organised and prepared to advance reflects the greatest credit on all concerned, and the Commander in Chief would here desire to record his appreciation of the admirable spirit displayed by Lieutenant General Sir Donald Stewart, then in supreme command in Kabul, in depriving himself of the flower of his force in order to make up a division for Sir Frederick Roberts. On the skilful and successful manner in which Sir Donald Stewart brought the remainder of his troops to India, it will be His Highness's pleasing duty to address the Government hereafter. Sir Frederick Roberts has referred to the fact that no wheeled artillery accompanied his force, and as regards this I am to say that notwithstanding the reports which had been received of Ayub Khan's artillery and the manner in which it had been served, Sir Frederick Haines after some doubts on the matter, fully concurred in the wisdom of the view urged by Sir Donald Stewart and Sir Frederick Roberts that no wheeled carriage of any kind should accompany the force. The march from Kabul to Kandahar has been criticised as a most rash military operation, with no base in case of ill fortune, scant supplies, and a hostile population along the whole route. It would be out of place to point to success in justification of undue rashness, but it is right to state here that after a full consideration of all these circumstances, those who knew best felt satisfied that such troops, with such a commander, could cope successfully with any obstacles which might present themselves, and the results have full borne out this feeling. In alluding to the troops, Sir Frederick Haines would invite the attention of Government to Sir Frederick Roberts' report regarding their discipline and behaviour on the line of march; neither fatigue, privations, nor the murder of their straggling comrades shook their discipline or morale, nor induced reprisals. The report touched lightly on this superb march from Kabul to Kandahar,—a feat which will take its place amongst the most brilliant records of

military history. It stands out as a proof of the wonderful power of endurance possessed by our troops, both British and Native, and of the admirable spirits which animate the men of all ranks and races of which our army is composed; whilst the mutual confidence which has been engendered by sharing together so many dangers in the field and so many hardships on the march, must prove a bond of union between the British and Native soldiers, which cannot fail to be a source of strength to the Government. The Commander-in-Chief must here express his regret that after the admirable efforts made by the troops under Major-General Phayre to reach Kandahar in time to assist in the overthrow of Ayub Khan, they should not have succeeded in doing so, and Sir Frederick Haines shares with these troops and their able commander the disappointment which all have felt in regard to this. The troops under General Phayre had to toil through Sind and the Bolan at the very hottest time of the year. Floods and the difficulty in procuring forage and supplies were serious obstacles to be overcome, causing great delay in the advance. The attitude of the Maris and other tribes created anxiety regarding the safety of the line of communications, by which alone supplies could be furnished for the garrison of Kandahar and the Kabul Kandahar Force; further delay was caused by this. It is solely due to the ability and energy of the commander and the spirit and the discipline of the troops, that they were so far forward on the 1st September. In regard to the action at Kandahar and to the reconnaissance of the 31st August which preceded it, His Excellency is only desirous of bringing prominently to the notice of Government the quick military appreciation of the situation by Sir Frederick Roberts and the excellent dispositions made by him. The admirable manner in which the orders were carried out, and gallantry of the troops, are shewn by his report. It may be said that it was a misfortune that the enemy did not suffer more in the pursuit, but a pursuit of Afghans is notoriously a difficult operation; and this will be readily understood when it is considered how easily they, under such circumstances, merge into the population, and casting away for the moment their arms, assume the role of peaceful inhabitants. The Kandahar Force rendered good service in the engagement of the 1st September but as no report has been received on the subject from Lieutenant-General Primrose, His Excellency is not in possession of the details beyond what are gathered from Sir Frederick Roberts' despatch. Sir Frederick Haines laments the death of such gallant soldiers as Lieutenant Colonel Brownlow, Captain Frome and Stratton, and Sergeant Cameron. To Lieutenant MacLaine's murder His Excellency has already alluded in my letter of the 25th ultimo. In such men the army has experienced a serious loss. The officers who are mentioned by Sir Frederick are commended to the favourable notice of Government, but their names will be more specially brought forward hereafter in the general recommendations for rewards for service in Afghanistan.

The Viceroy and Governor General in Council, having received from the Commander-in-Chief in India the accompanying despatch from Lieutenant General Sir F. S. Roberts, G.C.B., C.I.E., V.C., reporting the march of the force under his command from Kabul to Kandahar, and the successful engagement with the Afghans under Sirdar Mahomed Ayub Khan on the 1st September 1880, desires that it shall be published in the *Gazette of India* for general information. Sir Frederick Roberts has achieved what the Commander-in-Chief in India justly describes as one of the most complete and successful operations of recent times. The Government of India appreciate the foresight which governed the preparations of the force at Kabul, the energy which conducted it to Kandahar, and the skill through which its operations were fully crowned by the total defeat of the enemy against whom its movements had from the first been directed. These operations, in their inception and their execution, will remain an enduring record, no less of the courage and devotion of the troops than of the skill of the officers on whose services the Queen-Empress can rely for the security and honor of Her Indian Empire. The high soldierly spirit which animated this force throughout its ranks had been conspicuous in every form of the service during all the operations of the war in Northern Afghanistan and on Sir Donald Stewart's march from Kandahar, and formed the ample justification

of the Government of India in sanctioning an enterprise that could not have been prudently entrusted to a leader less able or to troops less efficient than Sir Frederick Roberts and the soldiers so worthy of his leading. Even had the march thus undertaken and carried out served merely to raise the investment of Kandahar, it would have been a military achievement of which any country might be proud. All the more, therefore, is Lieutenant-General Sir Frederick Roberts to be congratulated on the opportunity afforded him of showing, in the defeat of Ayub Khan, that the enterprise and endurance of himself and his troops were perfected by a consummate skill and devoted gallantry, adequate not merely to the battle of Kandahar but to any eventuality of war which they might be called on to meet. The Government of India deplore the loss of those officers and men who fell in the gallant performance of their duty; at the same time it is incumbent on them to record their recognition of the strategical skill displayed in the dispositions, through which it arose, that the loss was so light in comparison with the difficulties to be overcome and the important results which were attained. The Government of India will not now make more than a general reference to the individual services rendered in all ranks in this, the fitting close of a war in which so much distinguished service has been rendered. They desire, however, to add to the high and deserved commendation these services have received from Sir Frederick Roberts and the Commander-in-Chief in India, an expression of their own deep appreciation of their value, and it will be their most pleasing duty to submit to the Queen-Empress the names of those distinguished, for Her Majesty's Most Gracious consideration. Meanwhile, the Governor General in Council tenders to Lieutenant-General Sir Frederick Roberts and the Kabul Kandahar Force the cordial congratulations and thanks of the Government of India.

ALLEN JOHNSON, Colonel,  
Secretary to the Government of India.

—*Straits Times*.

### ON THE CLIFF.

Fifteen years ago Barmouth was a quiet little village. The whistle of the iron horse was not to be heard within many miles, and the passage of the coach between Dolgelly and Carnarvon was the sole event of the day. There was one hotel and some half-dozen shops and other houses where lodgings were to be obtained—but slight as was the accommodation it fully equalled the demand.

"Just the place for a fellow to be able to sketch without people coming to look over his shoulders," was the comment of Hugh Carson, a young artist, as he took his first stroll upon the sands.

A tall, well-built young fellow, with legs rather long for his body and a face rather heavy in repose, but bright and winning when he smiled. The tide was out, a few fishermen were mending their nets and tarring their boats, and a lady and child were down upon the rocks near the edge of the sea.

"A bright bit of color on those dark rocks," he said, "with the island on the left and the sea beyond, and that abrupt headland coming in—just the thing to begin with."

He had his sketching-block under his arm and his color-box in his pocket, and, sitting down on the sand hills, he set rapidly to work. For an hour and a half he worked steadily, and then the bright bit of color and the child moved off toward the shore. Still he worked on at his sketch, and was almost startled when a shadow passed across his paper. He glanced up and saw a girl some twenty years old, with a younger one of seven or eight. The child dropped the hand she was holding and came fearlessly up.

"Please may I look at your picture?"

He nodded silently, and went on with his painting.

"Oh, cousin Amy, such a pretty picture! And there are you and me on the rocks. Do look!"

The girl glanced at the artist, but neither by look or motion did he second the child's request; and with a little shrug of her shoulder she turned away, and walked on slowly until overtaken by her cousin.

"What a bear I am!" the young man said to himself. "I ought to have got up and grinned and taken off my hat, I suppose, and asked her to look at it: but it's no use, I can't get on with women. I never can think what to say to them. I have no doubt she thought me a perfect bear and so I am. But I suppose it is my nature." And he went on with his painting. "I o'clock: it's time to go in to dinner. The tide is coming up and covering the rocks; I will finish it to-morrow morning."

The next day he worked until dinner, and was greatly contented with the result.

"It will make a capital thing," he said; "I have been very lucky with the lights. I do think it will be the best thing I have done."

His pleasure was a little marred by the fact that the two girls had again been out on the rocks, and had on their return passed close by him; but this time the child had kept close to her cousin.

"Offended, evidently," was his muttered comment, "and no wonder. I wish I was not such a bear."

The following morning he was late in starting for a stroll across the sands. The tide had already turned, and there are few places on the coast where it comes in more rapidly than on the Barmouth sands. For a long time its approach is so gradual that it can hardly be noticed; but when it reaches a certain point it comes in with startling speed.

"There are those two girls on the rocks again," he said, and he shaped his course so as to carry him to the right of them. He had not gone fifty yards along the edge of the sand when he heard a loud cry behind him. He looked round and saw that the elder girl, who was reading, had risen from a camp-stool on which she was sitting, and that the child was on the rocks, already cut off by a rapidly increasing stream of water. The cry of the child on discovering her situation was echoed by her companion, who was about to rush into the water when Hugh ran up.

"All right, little one!" he shouted cheerily, "I'll fetch you out."

So saying he waded into the water, which was nearly up to his waist, reached the little girl, took her in his arms and carried her to the shore.

"There you are as right as possible," he said, as he put her down; "but you must mind, misay, for the tides are very rapid here."

"Thank you very much, sir," the elder girl said; "it is most kind of you."

The artist looked into the flushed face of the girl, and the eyes in which the tears were standing, and habitual shyness fell upon him. Muttering something about its being no odds at all, he raised his hat, and, turning upon his heel, again pursued his walk.

"He really is a bear," Amy Herbert said, as she hurried off with the child toward the sandhills, pursued by the fast-rising tide; "and yet, by his voice, I am sure he could be very nice if he liked."

Amy Herbert had no experience whatever of shy men. She was the only daughter of a Manchester cotton-spinner, and Manchester does not class shy young men among its productions. She was accustomed to admiration, for she was pretty and an heiress, and in both capacities made much of; but, though a little wayward and wilful, from always having her own way, she was not really spoiled and was as bright and loving a girl as was to be found in the metropolis of cotton.

For the next two days Hugh Carson missed the young lady and child from the shore, but several times saw the flutter of a light-colored dress high on the hills behind Barmouth.

"That rising tide has given her a fright," he said to himself, "and they've taken to the hills. Rather a nuisance, because I have done with these flats, and shall be doing the hills myself. However, they are extensive enough without our running against each other, as we always seem to be doing here."

In fact, as Hugh and his acquaintances took their meals at about the same hour, and both came in at the very last moment before them, it is not singular that each day they had, either morning, afternoon or evening, met at least once in the quiet little street; and each time Hugh raised his hat. Miss Herbert bowed frigidly, and her little cousin nodded brightly. Once when he passed the door of their lodging, just as they were going in, the child ran across the road as her cousin entered, and put her hand into his, and talked to him for two or three minutes, and conveyed to him the thanks of her mamma, who was not strong, and did not go out much, for having carried her across the tide. For the next three days Hugh Carson was engaged in painting a picturesque old farm-house lying far on the hill. The subject was a good one and he set to to produce a finished picture on the spot, and worked at it from early morning as long as the light lasted, making his breakfast and lunch of milk and bread and cheese obtained at the farm-house. Upon the third evening he was returning from his work, walking along the edge of the hill, looking down upon the sea, when he came upon the little girl lying on the ground, crying bitterly.

"Why, little one, what is the matter?"

The child, who had not heard him approaching, leaped to her feet, and upon seeing who it was, a look of pleasure flashed across her tear-stained face.

"Oh, please, sir; do help me! Cousin Amy has tumbled down the hill!"

"Good gracious, child, where has she fallen?" Hugh said in horror; for the spot where they stood was above one of the steepest slopes between Barmouth and Harloch.

"Down there, sir; she was picking a flower when she slipped; and I can't get at her, but I can see her."

And the child led the young artist to a point further on, where the plateau projected, and the face of the hill where Amy had fallen was visible.

The slope where she had slipped was very steep, but became even steeper lower down. Then a rocky ledge projected, and below it an abrupt precipice some fifty feet high. Amy Herbert lay on the ledge. She had rolled down on to it, and had evidently struck her head, for she was insensible. This ledge was some three feet wide; and, from the position in which the girl lay, it was probable that at the first movement made as she came to she would roll over the edge.

"All right, little one; don't cry: I will get to cousin Amy. She has hurt herself, but I dare say she will be all right when I get to her."

Hugh spoke cheerfully, but he was by no means sure that the girl was not killed. He looked closely at the grassy slope. It was easy enough to slide down; but there was no getting up again. He was fully a mile and a half from the town; but he dare not run for aid, for if the girl partially recovered she might be dashed to pieces before his return. It was evident that he must slide down to her. But the child puzzled him. He was afraid to send her to the village by herself, afraid to leave her alone on the top; besides, if they were to stop on that ledge till help came it would be much more pleasant with the child there, both for Amy, and himself.

"Look here, Pussy," he said, after a minute's thought, "will you be a good quiet little girl if I take you with me down to cousin Amy?"

The child nodded seriously.

"Here goes, then," he said; "now you take hold of my hand very tight, and we will go down far as we can, then we'll lie down on the grass; you put your arms round my neck and we will slide down."

So it was done—not without danger—but Hugh was strong and steady; and lying on his face, with one arm round the child, he held on to the tufts of grass and let himself slide as gently as he could. Still his heart beat fast for an instant when, on reaching the steepest point of the slope, they slipped down with a rush the last fifteen feet to the ledge where Amy lay, half over the brink of the sheer fall below.

"Now, Pussy, you sit down quiet while I see to cousin Amy."

Very anxiously the young artist lifted the girl's head from the grass. There was a little pool of blood below it, which had flowed from a wound just above the ear. He put his fingers to her wrist, and, after a minute of anxious suspense, he felt a very faint flickering pulse.

"Thank God!" he murmured devoutly.

Then he took out a whisky-bask and poured a few drops between the clenched teeth. Again and again he did this, the child all the time sitting perfectly quiet and with quiet frightened eyes. Presently the girl sighed faintly.

"Take hold of cousin Amy's hand," Hugh said, "and when you see her open her eyes speak to her gently. Tell her to lie still; put your face close to hers, so that she may see you when she opens her eyes."

Hugh was sitting on the ground supporting the girl, whose head rested on his shoulder. Presently there was a movement of the eyelids and then very slowly and languidly the eyes opened.

"There, cousin Amy, you are better now. Lie quiet. You have hurt yourself, and must be very good."

The eyes expressed recognition and a faint wonder, and then closed again. Hugh waited a little and then poured a few more drops of whisky between her lips. This time the effect was more decided. She moved, shook her head and tried to avoid the mouth of the flask. Then she looked up again.

"What is it?" she said faintly. "What are you doing? Where am I?"

"You must be quiet and good," the child said positively.

"You must not move; the gentleman says so."

This time the speech was vaguely understood, for she looked beyond the child's face to that of Hugh; closed her eyes again, as if she doubted them; looked again, and then made an effort to raise her head. Then Hugh spoke gently but decidedly:

"My dear young lady, you must lie quite quiet. You have fallen down and hurt yourself and you are faint and weak. You are quite safe where you are, but you cannot move, for we are on the side of the hill, and must wait till help comes. Your cousin is here with you. Kiss her, Pussy."

Amy Herbert listened in a sort of confused wonder. She did not understand in the least except that she was told to be quiet in her firm authoritative tones, such as had not been addressed to her since she was a child. The warm kiss of her little cousin seemed to assure her that all was safe and right, and with a little sigh she closed her eyes again, and was soon breathing quietly. Then the child turned to Hugh.

"Amy's gone to sleep. My name isn't Pussy, but Ida—Ida Herbert."

"All right, Ida. I'll call you so in future. Now, Ida, when you stand up, can you see the road down below there?"

"Just see it," the child said; "but it is getting dark. When are we going home?" "I am afraid we are not going home to-night Ida. Certainly not unless some one comes along that road, and there is not much chance of that."

"Where are we to sleep?" Ida asked, in surprise.

"We must sleep just where we are. Cousin Amy will sleep here, and you shall curl up close to me and lay your head against me on the other side, and I don't think you'll be cold."

"But I want supper before I go to bed."

"Ah you can't have supper to-night, Ida; but it will be great fun, you know, sleeping out here for a bit, and I expect that presently your mamma will send people out to look for you, and then we shall hear them shout and we shall shout back again, and then they'll come with some ropes and up we shall go to the top. Now shall I tell you a story?"

"Oh, yes, please," Ida said, delighted.

"Will you sit quiet by me, then? and when you feel sleepy you just lay your head down and go off to sleep. I will go on with my story till you're asleep; but we must talk very low, else we shall wake Cousin Amy."

For an hour he told stories of fairies and enchanters, and then the little head leaned gradually against his waistcoat, and in five minutes he stopped in the middle of his narrative. Then Amy Herbert spoke:

"I am not asleep; I have been awake for some time, and have been thinking. You are the gentleman who rescued Ida off the rocks, are you not?"

"Yes," Hugh said.

"I thought so. Now, please, how came you and Ida here, and where are we, and why don't we go home?"

"You rolled down a steep grassy slope on to a ledge. You struck your head in falling, and were insensible for some time. I came up, and should have run off for assistance, but I feared if you moved before I came back you would fall over another fifty feet, so I took Ida and slipped down to you."

"Can't I move?" the girl asked, presently.

"Are you uncomfortable?"

"No," she said shyly.  
 "Then you had better lie still," Hugh said decisively. "The ledge is very narrow, and you are weak, and I dare say giddy, for you lost a great deal of blood. So you really might fall over if you sat up. With my arm round you, you are quite safe."  
 And Hugh emphasized the fact by drawing her still more closely to him. Her slight figure yielded to the pressure, and with a little movement, which was very like the nestle with which Ida had prefaced her subsidence to sleep. Amy Herbert lay quiet, and in a few minutes Hugh was sure, from the regular breathing, that she too was asleep.

"It must be nearly ten o'clock," Hugh said to himself. "I should think we ought very soon to get out of this. The old lady will be fidgety at half-past seven, alarmed by half-past eight, and by half-past nine she ought to have all Barmouth out with torches. But women are so long before they set about a thing in earnest. They begin to fidget long before a man does; but they don't set to work to take decided steps. Still, searchers ought to be out by this time. I am beginning to feel horribly cramped. I suppose some fellows would like this sort of thing, but I don't see any point in it whatever."

In another quarter of an hour Hugh saw several lights coming along the road below, and could hear faint shouts, which seemed to be echoed by a party proceeding along the hill. They were moving but slowly, for there was lights half way up the face, and they were evidently searching very carefully. The wind was from them, and it was useless for Hugh to try and return their shouts. Gradually they got nearer, and he determined to make an effort, but to do so it was necessary to stand up. He moved slightly, and the elder girl moved also.

"Wake up, please," he said; "help is near at hand."

She raised herself up.

"I do think I have been asleep. I feel ever so much better."

"I will stand up to shout," Hugh said. "Will you lean back against the hill? I will lay your cousin down with her head in your lap. She is as sound as a top. Now for it!" and, standing up, Hugh gave a shout with all the power of his lungs.

There was a pause in the movement of the lanterns, and then a shout.

"Hallo-a-a!" Hugh shouted again; "this way!"

Rapidly the lanterns came flitting along the road till they were down in front of them.

"Here we are! Here are the ladies!" Hugh shouted.

"Any one hurt?"

"Not much; but we can't get either up or down. You must let a rope down to us from above. Here we are," and Hugh struck a match and lighted a large piece of paper. "Have the party above got ropes?"

There was shouting backward and forward, but the party above had not got ropes.

"Send back for them at once," Hugh shouted, "and be sure and tell the lady that no damage is done here."

"How do you feel now?—I was going to say cousin Amy," he laughed; "but I really haven't the pleasure of knowing your name."

"Amy Herbert."

"How do you feel now, Miss Herbert?"

"I feel weak and rather headachy," she said; "but there is nothing really the matter with me. What an escape I have had!"

"Yes, you had a narrow squeak of it," Hugh said frankly; "just another pound or two of impetus and you would have gone over the ledge."

She was silent and he went on:

"Do you object to smoke? Because if you don't I should really like to light my pipe."

"Not at all," Amy said.

"There's something comfortable about a pipe," Hugh said when it was fairly alight; "somehow one can talk when one gets a pipe alight."

"I think men can talk at all times," Amy said, with a flash of her usual spirits.

"Some men can," Hugh said. "I can talk with men; but do you know, somehow I can't talk with women? I can talk with you now because I don't see you, and because I am smoking; but I should feel horribly uncomfortable if I met you in the morning."

"I did not know any men were shy with women, nowadays," Amy said.

"Shy?" Hugh repeated. "Well, yes, I suppose it is a sort of shyness with me. I never had any sister, and so, you see, I never got in the way of talking to girls. It is very annoying sometimes, and makes people think me a bear. I suppose you thought so. You must have done so."

"Yes," Amy said. "I did think you rather a bear. I am not accustomed to shy young men, and simply fancied you did not want to speak to strangers. And now, please tell me exactly what happened, because I shall have to tell aunt, and I have only a confused idea of what has taken place."

Again Hugh told her the facts.

"Then I owe my life to you," the girl said, when he had finished.

"I really don't think you do," Hugh said, in a matter-of-fact way. "I question very much if you would have come round out of your faint before I could have brought help from Barmouth. However, of course, I acted for the best, and it avoided all risk. There was no danger in getting down to you: the little one and I slipped down as easily as possible. If I thought you were going to tell me to-morrow that you were very grateful, or anything of that sort, I give you my honor I should go right away by the coach to Carnarvon."

The girl felt by the tone of Hugh's voice that there was no affection about him—that he really meant what he said.

"I may just say 'thank you' now?" she asked quietly.

"Yes, just 'thank you,'" he said, lightly.

"If I were a man you would shake hands over it?" the girl asked.

"Yes," Hugh said.

"Please give me your hand."

He stooped down, and she put her hand into his.

"Thank you," in a deep, quiet, and earnest voice.

Then, as he rose again, she went on, in a changed voice:

"Now mind, it is a bargain. We have shaken hands on it. I am not to be grateful, and you are not to be afraid of me, but are to be just as natural with me as with Ida."

"That is a bargain," Hugh said, with a laugh. "I don't think I shall feel shy with you in the future. I never talked so much with a woman in my life. I suppose it's because I can't see your face."

"I don't know whether to take that for a compliment or the reverse," Amy laughed.

"The reverse, of course," Hugh said, laughing, too; "compliments are not in my line. Ah, here they are with the rope. They have been precious quick about it." And Amy Herbert felt there was a real compliment in the tones in which he spoke. "Now you must wake Ida. How soundly she sleeps! Now let me help you on your feet."

Even with the aid of the rope it was a work of considerable difficulty to get Amy Herbert up to the top of the slope, for she was weak and shaken and unable to do much to help herself. At last it was managed; and then she was helped down a steep path close by the road below, where a carriage from the hotel was waiting for them.

"Will you come up and see my aunt?" Amy asked as they stopped at the door.

"Not to-night, thank you. I will come in the morning to see how you are after the shaking and, please," he said, "tell your aunt of our bargain. It would be awful to come up to be thanked."

"Good-night," the girl said. "I won't forget. Come early. Now, Ida, come along; you will soon be in bed."

Two months later Mr. Herbert was walking up and down his breakfast-room in a towering passion. Amy was sitting in a great armchair.

"It is monstrous, it is incredible," Mr. Herbert exclaimed. "Here you, for whom I have looked for a capital match, who refused three of the very best men in the district last year, are away for two months and a half at this beggarly Welsh village, and you come back and deliberately tell me that you have engaged yourself to an artist, a fellow I never heard of."

"Dear old daddy," Amy said quietly, "don't get angry about it. Come and sit down and talk it over reasonably, as you always do things with me."

"No, Amy. I know what your reasonable talk means. I am not to be coaxed or wheedled or made a fool. It's all very well when you want a pair of new ponies or anything of that kind you have set your mind on, but there is a limit to everything."

"Well, but we must talk this question over, daddy."

"Not at all, not at all; no talk is necessary. You tell me you want to marry this fortune-hunting artist. I say at once I won't hear of it; that it's out of the question; that I will not hear a single word about such a ridiculous affair."

"Now, why should you call him a fortune-hunter?" Amy said, seizing at once upon the weak point. "He has not an idea that there is any fortune in the case. He saw me staying in poky lodgings at Barmouth, and, beyond the fact that I live at Manchester, he knows nothing. He tells me that he has enough for us to live on very quietly, in addition to his profession. So, you see, he can't be called a fortune-hunter."

"Well, it makes no matter. The thing is monstrous, and I will not hear of it."

"Well, daddy, I will do just as you like, and won't say any more about it now; but, of course, to-morrow I must talk about it, because it is out of the question that I should break my word which I have given, and should make him so unhappy and be awfully unhappy myself. So I shall have to talk about him, and you will have to listen"—the father had sat down now—"because though, as my papa, you have a prerogative to say 'I will not consent to your marrying this man,' still, you know I must talk about a thing which is making me very unhappy. And it will be so much better and nicer, daddy," and she went over to him now and sat herself down on his knees, with her arm around his neck, "if you give in at once. Because, you know, you can't keep in a naughty temper with me long; and, besides, you would be very unhappy if I was unhappy; and at least, you know very well, you will have to give up being cruel and cross, and will tell me to be happy my own way."

"Amy," her father said, trying to look very stern, "I have spoiled you, I have always allowed you to tyrannize over me."

"No, daddy, I can't allow that—certainly not tyrannize. I have led you for your own good, and you have been as happy as the day is long—"

"And now," he continued, ignoring the protest, "I am to reap the reward of my folly. That you should have married a man of high rank I expected, had you married a first-rate man of business I should have been contented. But an artist!"

"Well, daddy, we won't talk any more about it to-day. Now I'll just smooth those naughty cross wrinkles, and I'll kiss you on each cheek and the middle of your nose. There, now, it looks like itself. There! 10 o'clock striking, and you not off! Mind, I shall expect you to luncheon."

So Mr. Herbert went off shaking his head, and although still determined, yet, at heart very doubtful as to his power of resistance, Amy went to her special sanctum, and wrote her first letter to Hugh. The following sentence shows that she had no doubt whatever on the subject:

"Daddy does not take kindly to the notion as yet. He doesn't know you, you see, and it has of course come upon him a little suddenly; but he is the very best and kindest of all daddies in the world, and in a very few days he will see it in quite the right light. It is no use your writing or coming to see me here till he is quite reasonable; but I expect by this day week to have everything arranged. I will let you know what train to come by, and will meet you at the station."

It is to be presumed that Amy thoroughly understood her father; but at any rate, it was exactly that day week that Hugh Carson, having obeyed instructions, and got out at the station directed, five miles from Manchester, was a little surprised and much disappointed at not seeing her upon the platform."

"Your luggage, sir! Are you the gentleman for the Hawthorns? Very, well, sir. I will send you the portmanteau. Miss Herbert is in the pony carriage."

"Bless me, Amy," Hugh said, after the first greeting as they drove off, "you used to talk about your pony-trap, but this turnout is pretty enough to attract attention in the park. Amy," and he looked at her with a puzzled glance, "you are not a swell, are you?—Because that would be dreadful."

"Well, Hugh, if being a swell means having lots of money, I suppose I am one, for daddy has lots of money. He's got cotton-mills, you know. But there's nothing dreadful in that."

"You ought to have told me, Amy," Hugh said, a little gravely. "Pas si bete," the girl said. "In the first place, it was nice to know that you fell in love with me without knowing whether I had half a penny; in the second place, you would very likely have run away if you had thought I was rich; and to tell you the truth I had no idea of letting you run away. There, Hugh, there's the house; isn't it pretty?"

"It's almost a palace," Hugh said, in dismay.

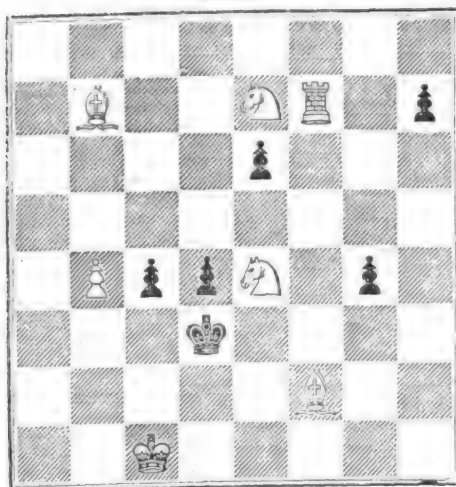

"Yes; and there's papa, at the door waiting to greet you. Now, look quite pleasant and bright. Hugh, for, of course, I want him to like you almost as much as I do."—*Pinsley's Magazine*.

### CHESS PROBLEM,

From the "Chess Players Chronicle," by SERJEANT-MAJOR

McARTHUR.

BLACK.

WHITE.

White to play and mate in three moves.

SOLUTION OF CHESS PROBLEM OF NOV. 20TH, BY W. H. TAYLOR.

White.

- 1.—Kt. to K. 4.
- 2.—P. takes Q. R.
- 3.—R. to Q. Kt. 5 mate.

### METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, NOVEMBER 19TH, 1880.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokio, Japan.

### REMARKS.

Heavy line represents barometer.

Light continuous line—max. & min. thermometers.

.....represents velocity of wind.

.....percentage of humidity.

Max. velocity of wind 9.3 miles per hour on Wednesday 11 a.m.

The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer during the week was 30.11 inches on Friday, at 7 a.m., and the lowest was 29.771 inches on Tuesday, at 2 p.m. The highest temperature for the week was 63°.5 on Friday, and the lowest was 34°.6 on Wednesday. The maximum and minimum for the corresponding week of last year being 62°7 and 34° respectively. The total amount of rain for the week was .112 inches, against a total of .810 inches for the corresponding week of last year.

### SHIPPING INTELLIGENCE.

#### I N W A R D S .

- Nov. 22, Japanese steamer *Kokonoye Maru*, Ditlefsen, 1,133, from Hongkong via Kobe, Mails and General, to M. B. Co.
- Nov. 21, Japanese steamer *Tsuyoshima Maru*, Hubbard, 946, from Sendai, Mails and General, to M. B. Co.
- Nov. 21, Japanese steamer *Wakanoura Maru*, Christensen, 1,343, from Kobe, Mails and General, to M. B. Co.
- Nov. 21, Japanese steamer *Hiogo Maru*, Moore, 896, from Hakodate, Mails and General, to M. B. Co.
- Nov. 22, German brig *Carl Gorman*, 221, from Newchwang, Beans, to Chinese.
- Nov. 23, Italian corvette *Vettor Pisani*, Comd. H.R.H. Duke of Genoa, 1,800, 12-guns, from Kobe.
- Nov. 24, Japanese steamer *Tokusago Maru*, Young, 1,230, from Shanghai and way-ports, Mails and General, to M. B. Co.
- Nov. 25, Russian ironclad *Kniaz Potemsky*, Captain Tirtoff, 4,291, 12-guns, from Nagasaki.
- Nov. 25, German corvette *Vineta*, Captain Zitzow, 2,000, 10-guns, from Chefoo via Nagasaki and Kobe.
- Nov. 26, American ship *S. F. Hersey*, Waterhouse, 920, from Newport, Coals and General, to order.
- Nov. 26, American ship *Guy C. Goss*, Reynold, 1,572, from Philadelphia, Kerosene and General, to order.

Nov. 26, British steamer *Sanda*, Reeves, 1,704, from Hongkong via Nagasaki, Mails and General, to P. & O. Co.  
Nov. 26, British steamer *Breconshire*, Thomas, 1,276, from Hongkong, General, to Adamson, Bell & Co.

## PASSENGERS.

Per British steamer *Belgie* from Hongkong:—Three Chinese for Yokohama; one European and 132 Chinese for San Francisco.  
Per Japanese steamer *Kokunoye Maru* from Hongkong via Kobe: Mr. H. Abrens and 5 Japanese in Cabin; 56 Japanese in steerage.  
Per British steamer *Hector* from London via Hongkong:—Mrs. Kate Kerr, Messrs. S. G. Smith, Burgess, C. Robelen, Dowuie, Ito Yaji, and A. W. Curtis in cabin; 2 Europeans in steerage.  
Per Japanese steamer *Togoshima Maru*, from Sendai:—Captain Burdiss, Messrs. Giese, Anger and 2 Japanese in steerage.  
Per Japanese steamer *Wakanoura Maru* from Kobe:—Captain Mahlman in cabin; and 80 Japanese in steerage.  
Per Japanese steamer *Hiogo Maru* from Hakodate:—40 Japanese in steerage.  
Per Japanese steamer *Takasago Maru*, from Shanghai and ports:—Mrs. L. Harlow, Mrs. Honda, Rev. I. H. Correll, Messrs. Mizuhara, Zancolo, Nabeshima, Uyimura, Momosaki, Yoko, and Fukao in cabin; 6 Europeans, 2 Chinese, and 140 Japanese in steerage. For America:—Messrs. J. Samson, J. W. Harding, and H. H. Cunningham.  
Per British steamer *Breconshire* from London via Hongkong:—Mr. and Mrs. Lang and child in cabin.  
Per British steamer *Sanda* from Hongkong via Nagasaki:—Mr. and Mrs. W. B. Walter in cabin; and 4 Chinese in steerage.

## OUTWARDS.

Nov. 20, Japanese steamer *Meiji Maru*, Peters, 1,010, stores, despatched by Lighthouse Department.  
Nov. 22, Japanese steamer *Sekiru Maru*, —, 680, for Kobe, Mails and General, despatched by M. B. Co.  
Nov. 22, Japanese steamer *Tokuchiku Maru*, Nye, 1,407, for Hakodate, Mails and General, despatched by M. B. Co.  
Nov. 24, Japanese steamer *Tokio Maru*, Swain, 1,146, for Shanghai and ports, Mails and General, despatched by M. B. Co.  
Nov. 24, Japanese steamer *Hiogo Maru*, Moore, 896, for Hakodate, Mails and General, despatched by M. B. Co.  
Nov. 25, Japanese steamer *Wakanoura Maru*, Christensen, 1,343, for Kobe, Mails and General, despatched by M. B. Co.  
Nov. 25, British steamer *Hector*, Billinge, 1,590, for Kobe, General, despatched by Butterfield & Swire.  
Nov. 26, British steamer *Belgie*, Davison, 2,627, for San Francisco, Mails and General, despatched by O. & O. Co.  
Nov. 26, Japanese steamer *Hiogo Maru*, Moore, 896, for Nobiru, Mails and General, despatched by M. B. Co.  
Nov. 26, British barque *Devonshire*, McGachen, 1,512, for Kobe, General, despatched by Mourilyan, Heimann & Co.  
Nov. 26, Japanese steamer *Tokai Maru*, Hogg, 1,042, for Kobe, Mails and General, despatched by M. B. Co.  
Nov. 27, Japanese steamer *Niigata Maru*, Walker, 1,603, for Hongkong via Kobe, Mails and General, despatched by M. B. Co.

## PASSENGERS.

Per Japanese steamer *Tokio Maru* for Shanghai and ports:—Dr. and Mrs. Murray, Mrs. Mancini, Mr. and Mrs. Kawasaki, Mr. and Mrs. Hiogo, Messrs. ## COMMERCIAL INTELLIGENCE.

**IMPORTS.**—Currency having improved up to 150 there was a decided prospect of more business, but the subsequent sudden collapse in Kinsatsu has reproduced the reign of anarchy once more. Quotations are nominally the same, but weak. The county dealers evidently require some goods, especially *Yarns*, but the financial depression prevents business.

**COTTON YARNS:—**

Nos. 16 to 24, Common to Medium ...	per picul	\$28.00 to 31.00

Kerosene Oil... ..	case	\$2.06

**EXPORTS.**

**SILK.**—Since our last report our Silk market has remained very excited and no less than 1,100 shipping bales have changed hands. In prices there has been an advance of fully \$40 per picul on our last quotations and even at the rates given below, it is very difficult to buy, as many Japanese refuse to sell at all.

The following are to-day's quotations.

	Exchange 3/91	Exchange 4/80
New Silks { Hanks.—No. 1 & 2.....	\$530 to \$540 = 174 to 178	= fcs. 48.30 to fcs. 49.10
" " 2 .....	\$525 to \$530 = 172 to 174	= " 47.40 to " 48.30
" " 2 2 .....	\$500 to \$510 = 166 to 1610	= " 45.70 to " 46.50

## MISCELLANEOUS.

## THE GREATEST

WONDER OF MODERN TIMES  
HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the druggist Mahomet to inform the Faky that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!  
HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock." Sold by all Chemists and Medicine Vendors throughout the World May 17th, 1878. tf.

"HIGHEST AWARD & PRIZE MEDAL PHILADELPHIA  
EXHIBITION, 1876."

## JAPANESE PRISONS.

### II.

THE Kanagawa gaol is shaped like a quadrangle, and has an area of about 5,133 tsubo. It is surrounded by a stout palisade about ten feet high. On the south and higher end an extension has recently been made, in which two large blocks of cells, including eight single cells for foreign prisoners, (who are composed of non-treaty subjects, or are confined at the request of Consuls who possess no gaol of their own) and a police guard-house. At a little distance outside the gaol towards the north is a considerable workshop, where male prisoners weave clothes for police clothing. There were in all about 700 prisoners on the day we visited the prison. They looked in good condition, clean, quiet, contented, and mostly healthy. There were but few among them that had really bad countenances. Meals are taken at 6 a.m., 11.30 a.m., and 5 p.m. They consist of rice and vegetables, with the addition of fish once a week, the scale varying according to the work on which the convict is engaged. In the prisons in the south beef is very frequently given. The Governor of Hiogo gaol explained that the allowance which he got for each prisoner, coupled with the cheap price of beef in the locality, enabled him occasionally to give the hard-labour prisoners a meal of good meat. During the past year in one of the Osaka gaols the governor, for similar reasons, found it possible to give his prisoners a small quantity of meat eight times a month. At Tsukushima, where there are nearly four thousand prisoners, the food is very carefully examined, especially during the summer months, by two doctors. Tobacco is allowed during meal times, and bathing before the evening meal is required of every healthy prisoner. As mentioned before, political prisoners are chiefly employed as teachers.

Though the prison at Kanagawa is a somewhat dingy-looking place, owing to the dull colours of the unpainted

wood of the various buildings and the dark shingle of the paths and open spaces, a close inspection of the cells, kitchens, workshops and other buildings shows that they are far from lacking in cleanliness. The buildings are very unpretending looking and are scattered about somewhat irregularly, but answer their purpose well enough. The general construction is that usual in Japanese houses—a verandah enclosing the main building, but both are closed by strongly framed barriers composed of posts five or six inches square, and the same distance apart, which afford sufficient ventilation. They thus form a sort of cage. In winter the inner barriers are papered half-way up, to lessen the cold, but, as there are no artificial means of warming, the cold must be considerable in severe weather. The new cells for Japanese are about twelve feet by fifteen, and nine feet high, or eight mats, exclusive of a small washing space. These are designed to contain six or eight prisoners; or from 200 to 270 cubic feet for each inmate. In the higher and cooler part of the enclosure is the hospital, and lower down, the convalescent ward and dispensary. The attention shown to these establishments, as well as to general sanitary arrangements in all the prisons is very great, and with the happiest result. During the great cholera epidemic of 1879 there was but one death from cholera in the Kanagawa gaol; nine in that of Kobe, and rather less than two per cent in the penal settlement at Tsukudajima. When the virulence and mortality of that epidemic amongst the Japanese are remembered, these facts speak volumes for the care taken to guard against such diseases in the prisons. There is at present no state provision for lunatics in Japan. Criminal lunatics are put in prison for the same term as ordinary culprits; but are treated with special attention. At the expiration of their term of imprisonment they are handed over to their friends; but if the latter cannot take charge of them they are detained in gaol. It is curious here to note that the serious crime to which Japanese lunatics are chiefly addicted is arson—next to murder, the most serious of all, in a country where the dwellings are built of wood and shingle. The diseases which chiefly attack the prisoners are kakké and consumption; and of those contracted outside, itch and venereal affections. At Tsukudajima we found only 180 sick in about 4,000 prisoners; these were treated on the European system by seven doctors, who were expected to devote themselves wholly to the prison. In Hiogo gaol there are two physicians to an average of six hundred prisoners.

At one corner of the Kanagawa gaol is an enclosure containing the gallows, and also the decapitation ground. There have been no hangings for several years; but an average of six decapitations. Punishment by death takes place directly after sentence. It is said that decapitation is likely to be abolished, and hanging substituted in all cases. The old flogging shed is also in this enclosure. This punishment has now been entirely abolished through-

out the empire. It used to be inflicted on the breech: the instrument (which we were shown) being a flat weapon about two feet long, one wide, and one-third of an inch thick, made of a core of paper served closely with whipcord. For severity it cannot be compared with our cat. The black hole, or place of confinement for grave breaches of prison discipline, is the worst feature of this gaol, being literally a black hole entered only by a small sliding hatch and with very meagre ventilation. In none of the other gaols did we find a similar cell.

We made special and detailed enquiries into the very important question of the power of punishment granted to the gaol authorities. It is satisfactory to find that this is exceedingly limited, and, such as it is, is guarded by very stringent restrictions. The only punishment permitted (besides the black-hole at Kanagawa) is that of putting the offender in shackles. These are formed of two rings connected by an iron bar about two feet in length. One of these is placed around the ankle and the other around the leg just above the knee. When these are placed on both legs, the prisoner cannot sit down, but is compelled to stand in one position. The governor of a prison has power to sentence a prisoner to stand in this position for ten hours a day for three days, with the exception of half an hour for each of the three meals, when he must be released; and this cannot be inflicted more than once in the same month. For serious offences within the prison, such as mutiny, conspiracy, or organised breach of prison discipline, the offender must be taken before the court of the district in the usual way. Moreover, monthly reports of the punishments thus inflicted by the prison officials, containing full particulars and evidence of the offence, must be made to the Home Minister, who is said to exercise a very strict supervision over this department of prison discipline.

In all the gaols there are rooms for the exhibition of the products of the prison. These are generally on sale for the public at very cheap rates. In Tsukudajima the prisoners work at rice-cleaning (two hours of this per day being the period for hard-labour prisoners) printing, paper making, carpentry, iron casting, porcelain manufacture, blacksmiths' work, brick-making, etc. In Hiogo gaol the chief feature of the work is match-making, although prisoners are found at work in other ways, but in smaller numbers. These matches find their readiest sale in China. 4,200 dozen boxes daily are made and packed ready for exportation in that prison alone. Indeed in all these prisons, a visitor might easily fancy himself, were it not for the prison dress, in a huge factory. While on this subject of prison labours, it may be well to mention what seems an admirable system of dealing with the prisoners' earnings.

Books are allowed in all the gaols, whether sent in by friends from outside, or belonging to the prison library. In England the prison libraries are large, and, where the chaplain is a man of broad views, excellent. The prison authorities exercise the right of vetoing the introduction of a certain work or class of works, here in Japan, but we believe, only political and immoral publications are excluded.

#### THE AMERICAN DIPLOMA FRAUDS.

IT is to be hoped that the recent action of the authorities of Philadelphia will forever put an end to the traffic in diplomas, which has for some years disgraced not only the city mentioned, but the whole United States.

It is difficult to understand, and impossible to excuse the apathy with which this shameful trade was contem-

plated for so long a time, not only by the local executive power, but apparently, by the old and respectable university corporations of Philadelphia, which were directly and seriously compromised, while to one familiar only with European universities, so strictly under the direct control of the Government, that such contemptible shams as that nominally presided over by *Buchanan* could have come into existence, even for a day, is beyond comprehension. It must be remembered, however, that, in the United States, higher education, at least that beyond the upper class of the free schools, and the State Universities, has no connexion with the State, after the charter of corporation is once granted. With few exceptions, and these included among the State Universities' the best known institutions of learning are practically private enterprises, establishing their own curriculum, rules, and standards of qualification for entry and graduation. A Department of education exists at Washington, it is true, but this Department has no controlling power over a single institution, its work so far having been simply advisory and statistical.

The free school system, of which the United States is so justly proud, is in no way connected with the Central Government, but is carried on under the special laws of each State, and, though a certain uniformity of method exists, due to similarity of need, and homogeneity of population, it is within the power of any State to alter or abolish its free school system, without reference to the central power. It is in most states perfectly easy for any one to secure the necessary charter for the establishment of a so-called college or university, which, once established, so long as the purely secular provisions of its charter are complied with, may continue to operate irrespective of the nature or amount of education given. The result of this state of affairs is that the country has an innumerable number of pseudo universities and colleges, in which, for the most part, public sentiment has secured that the curriculum shall at least be modelled upon that of the older and completely organized institutions, such as Yale or Harvard, but which, in most cases, having no endowment and but limited attendance, possess no sufficient corps of teachers or adequate apparatus. Should a false public feeling control the organization of any school, or its corporators be ignorant men, or under the influence of some absurd idea, the school will take character accordingly. Unfortunately these petty institutions but too often have the power of bestowing exactly the same degrees as are within the gift of the best universities of the country, and, as there is in no case, not even that of professional education, any post graduate government examination before the entry of the holders of these diplomas upon active life, save in the case of the army and navy, defective education may easily escape detection until, perhaps, revealed by some catastrophe to life or property due to the ignorance of one possessing a degree which should warrant his competency.

This absence of governmental control of the higher education is due chiefly to two causes. The citizen of the United States is always jealous of official interference, this jealousy applying first to the General Government, as a dread of centralization of power, or trespass upon State rights, and, secondly, to the Executive of the individual States, on account of an overweening fear of loss of personal freedom. More than this, the wonderful completeness and thoroughness of the public school system, at least in the greater portion of the country, has led the

majority of the people to regard higher education as a matter of personal and by no means necessary luxury, forgetting that it is to this higher education that the country must look for its supply of professional men.

It is to the jealousy of Government interference in matters believed to be purely personal, above alluded to, that is due the fact, that for many years no uniform laws of banking or bankruptcy existed in the United States and, that, at present, the laws of marriage and divorce in the different States vary so widely that while, in some localities, the facility with which divorce may be obtained is scandalous, in others the separation of the married is practically impossible.

The evils incident upon the present state of things have not escaped observation in America. Thinking men have long recognized the importance of a reform which shall provide that learned degrees shall mean something more than at present, and, as it is undoubtedly true that a defective system of medical education inflicts more direct and palpable evil upon the community than is the case, for example, with law or divinity, it is in this direction that reform has been inaugurated. All of the best medical schools and medical departments of the leading universities have, within the past ten years, considerably extended the time of study requisite to obtain a diploma, and have raised their standard of qualification both for admission and degrees. The result of this will be that other schools must follow the same course or, failing to do so, the degrees of the reformed schools will shortly so outweigh those of the others as to render the latter practically worthless. More than this, there is a growing sentiment that the protection of the personal liberty of the citizen may be carried too far and that laws which protect against assault and injury by insanity or crime should equally protect against murder by ignorance or incompetence. The propriety of interference by the General Government for the prevention of diseases, more especially of those forms which are likely to gain foothold through the neglect or ignorance of local authorities, is already recognized by the establishment of a National Health Board with somewhat exceptional powers. In some States action has been taken to secure that ignorance and rascality shall no longer imperil the lives of the people under the shield of a worthless or fictitious degree by the formation of State Boards of Examiners with permissive and prohibitory powers or by the relegation of the duties of examination and licensing to the State Medical Societies, either course affording a remedy for existing evils.

Considering under how defective a system professional education in the United States has heretofore been carried on, for what we have stated in regard to medicine is true with little modification of other professions, such as law and engineering, the marvel is, not that such cases as that of *Buchanan* should occur, but that American professional men occupy the position that they do. As we have taken medical education more particularly into consideration, and having regarded the worst side of the case, it is only fair that the brighter aspect of the question should be noticed. It is to the medical men of the United States that the world owes anesthesia with all the inestimable blessings to both patient and surgeon which follow in its train. The whole system of modern dentistry is confessedly of American origin, and is a triumph of both art and science. The surgery of women owes almost all of the great progress it has made during the past half century to American skill, the operation of ovariectomy alone, first performed in the United States and forced upon the attention of a re-

luctant medical world by the surgeons of America, having added enormously to the sum of human life. The American system of hospital construction has for years furnished models for the world, and wherever the essential principles of this system have been departed from by boards of guardians or other non professional corporations, it has been against the protest of all medical men concerned. And finally, though the list of benefits conferred upon the world by American surgeons is by no means exhausted, almost within a year the whole surgery of stone and allied affections has been revolutionized by Bigelow and Otis, both American surgeons, educated in American schools. In pure medicine too America has done much, perhaps as much as in surgery, though for many reasons success in the latter science is most generally appreciated.

In the general storm of indignation and reproach which has followed upon the revelation of the Philadelphia frauds, it has apparently been forgotten that America is not alone in the experience through which she is now passing. It is within the memory of men not yet old, that degrees in education were obtainable, without examination, from more than one of the minor, but regularly organized, German universities; while, in the past generation, some of the provincial institutions of Great Britain, were by no means beyond reproach in this respect. The present laws of both Germany and England render such frauds impossible, and, no doubt, action will soon be taken in the United States, not only to prevent direct rascality as concerns degrees, but to render uniform and thorough the whole system of professional education.

#### EDUCATION IN YOKOHAMA.

VISITORS to Yokohama, more especially those coming via India and China, are invariably impressed by the robust and healthful appearance of the children of foreign parents, now thank God, so numerous in Yokohama; Japan is indeed a children's paradise in many respects. The climate, exhausting as it sometimes proves to their elders, as a rule agrees marvellously with European children, as it needs but a glance at the rosy, merry, groups that may be found any fine afternoon in the Bluff gardens or on the Bund, to prove. The mortality among the children of Europeans in Yokohama is almost nothing, although, as is well known, in almost every other country the children of any community furnish the larger proportion of its death rate. There are reasons for this beyond mere healthfulness of climate. Several diseases most fatal to children elsewhere are rare or unknown in Japan, for example, diphtheria and scarlet fever, the former being very unusual and never epidemic, the latter totally unknown. The chief reason then, which compels European residents in India and China to separate themselves from their children, so soon as the latter attain an age slightly beyond infancy, does not exist in Yokohama, while there are even advantages to be gained by keeping our children here as long as possible. There is, however, a cause enforcing such separation here, almost as efficient as that of climate further South, though the separation may be longer delayed. We allude to the want of proper facilities for the education of European children in anything beyond mere rudiments. It is a fact that almost any Japanese youth, of the upper or middle classes, has infinitely better opportunities to acquire a round education, even in English, than are within the reach of the average child of European parentage, provided the latter remains in Japan. It seems

to us that there is no sufficient reason for the existence of such a state of affairs. The number of European children in the treaty ports of Japan is large and increasing, and is already sufficient to afford paying support to at least one school of the better grade. A school must be a really good one, however, in order to fill the requirement of that class of our residents upon which it must chiefly depend for pupils. It should be competent to impart all branches of education usual up to the age of entering high or special schools, and have a staff sufficient to guarantee thorough training in the leading European languages, the value and necessity of which are perhaps even better appreciated here than at home.

A school of the character here indicated would, undoubtedly, finally succeed in Yokohama, and might, after a time, attract pupils from the China ports; but its thorough establishment by purely private enterprise would, we fear, involve too long a time of weary waiting and struggle to allow us to hope for its speedy inauguration by such means. A combination among parents guaranteeing a certain number of pupils and retaining some control of the administration of the school, through a properly qualified committee selected from their own number, might do much to secure for our community those educational advantages for our children, the lack of which is so bitterly felt at present.

IT is currently reported in the South of China that the question with Russia has been settled definitely, and so far satisfactorily, that China has agreed to pay an indemnity of Taels 20,000,000 and to make some further concession of territory to her powerful neighbour, presumably near its Western frontiers. This report reaches us from semi-official sources and is generally credited by the Chinese. If it be true, then the Russian political demonstration in Asia has been more profitable in all senses than that of Lord Beaconsfield in Europe—which cost England some one-quarter of a million sterling there—as Russia will net some Taels 17,000,000 in this instance.

We see a great similarity between Russia's Naval demonstration in these seas and England demonstration against the effete Turkish powers in Europe, and we have no doubt that it serves our powerful neighbour as a counter move to that of Beaconsfield when he proposed to concentrate Indian troops in Europe. Russia has shown that she can threaten English commerce very seriously in these seas.

OUR readers will no doubt remember that on the somewhat premature announcement that Mr. Edison had overcome all the difficulties in the way of the application of the electric light to domestic purposes, it was stated that the solution of several of the problems involved had been found in the adoption of a filament of carbonized paper as the incandescent arc. It was soon found however that while certain lamps so constructed lasted for months, others, differing in no known respect, having arcs derived from the same samples of paper, quickly became useless through the breaking of the delicate slip of carbon. Continued experiment has failed to eliminate this defect in paper as a material. At the same time, the success attained by this form of construction was sufficient to induce the inventor to retain all the essential features of the lamp while seeking for a material which should give a carbon as durable under the heat of incandescence as that from paper, while possessing greater toughness and elasticity. After the examination and trial of an enormous number of vegetable fibres and fibrous substances, it was found that a certain small portion of

the woody structure of the bamboo, lying just below the silicious external coat, possessed the desired qualities to a greater extent than any other material yet known. Further investigation showing that different species of bamboo varied widely in their adaptability for the purpose required, Mr. Edison, with the enterprise and carelessness of expense which he has always shown when pursuing any important research, immediately dispatched agents to Japan, South America and elsewhere, with instructions to collect and ship large quantities of all varieties of bamboo which seemed likely to suit his requirements. We understand that the agent for Japan has already made large collections and will soon leave for China and further South upon the same business.

A meeting of the Seismological Society, held on the 29th ultimo in the hall of the University of Tokio, Professor Paul explained the effect of earth tremors on astronomical observations. In order to select the most suitable site for the erection of the naval observatory at Washington, a series of experiments, testing the effects of the earth tremors caused by railroad trains and other wheeled vehicles on the mercury employed in such observations were made, and some of these effects were sufficiently curious. A motion was then proposed requesting the committee of the Society to reconsider a bye law restricting the right of authors to republish their papers for a period of three years. The committee having agreed to the proposal, there was no further discussion.

THE writer of an article entitled "The Rousing of the Chinese" in the *Pall Mall Gazette*, thinks he can "see clearly that the party in China which is determined to assert and uphold the claim of the Empire to territory which has formerly belonged to her, no matter at what sacrifice, is likely in the long run to gain the upper hand," notwithstanding Colonel Gordon's influence, the preparations of Russia in Turkestan, and the presence of a large Russian squadron in these waters. The action of the Chinese respecting Macao, coupled with signs of warlike movement throughout the empire, seem to him only portions of a plan which has been steadily worked out since the suppression of the Mahomedan kingdom of Yunnan. The residents of China, he says, will perceive nothing of the great though slow improvement which is taking place in the country. She is arming herself with the best European weapons; sends abroad young Chinamen to study modern science and modern engineering; and, in matters of commerce whenever at two ends of a trade there are Chinamen, the Chinese trade comes into their hands entirely, the Europeans being merely the carriers." The possibilities of China as a great power, he regards as immense. "Underneath all the stolidity and marvellous industry of the Chinese is to be found, as the Abbé Huc said long ago, that power of organization, that capacity to endure fatigue and to submit to privation, that astonishing and indomitable perseverance, in short, which, properly led, might make them the most formidable of all existing peoples. A nation of perhaps 400,000,000 all educated to a certain point, and all writing the same language, may some fine day discover among their Tartar rulers or themselves a man capable of using these stupendous masses and stirring the naturally peaceful disposition of the Chinese people." He then dwells on the rapid spread of the Chinese through the Indian archipelago, and the Pacific States. There is the making of a very pretty quarrel in the latter; for the men of these States, it is plain, "do not intend to be cumbered with men of another race whom they can neither kill at discretion like the Indians, intimidate like the negroes, nor assimilate like the Irishmen."

We have the same question in some of our Australian colonies. "Evidently, however, whether we like it or not, this enormous storehouse of physical force is beginning to move in more than one direction, the long period of stagnation and gradual loss of provinces is at an end, and the yellow man seems about to compete with the white in arms as well as in commerce."

A subsequent issue of the same journal contains an article on "The Chinese and the shipping trade" noticing the remarkable growth of Chinese shipping. The whole China shipping trade under the United States flag is passing into the hands of the Chinese themselves; indeed, the growth of English shipping, which has about doubled in seven years, bears no comparison to the increase of the Chinese Mercantile Marine. "The tonnage of Chinese shipping entered and cleared at the open ports increased from 176,000 in 1873, to nearly four millions in 1877. The percentage of the total tonnage owned by Chinese was  $2\frac{1}{2}$  in the former year and 33 in the latter—the American percentage having decreased from 42 to  $4\frac{1}{2}$  and the British having risen from 44 to 54 in the same period; 80 per cent of the ships and 87 per cent of the tonnage are British and Chinese. In fact, between us we have taken up all that has fallen into the hands of the Americans, though the larger share has gone with Chinese. More than that, the Germans have in like manner, though more slowly, been yielding to the same two flags. Having in 1879 eleven per cent of the ships and seven and a third per cent of the tonnage, they have, five years later only six and four per cent respectively. In conclusion the writer says that "even in the rapid extension of statistics, which has been so marked a feature of modern commerce, there is no parallel to the speedy development of the shipping trade of the Chinese, nor is there perhaps any to the ease with which all rivals seem to fall before their enterprising competition, with the single exception of ourselves."

Referring incidentally to the former comparative statistics of the English and American shipping engaged in the China trade, the article says; "In 1864, the tonnage of ships entering and leaving the treaty ports was rather more than six millions and a half, of which upwards of two and three-quarter millions were under our flag, and a little above two and a half million under that of the United States." Since 1867, however, the American tonnage has steadily and rapidly declined. "In that year it was only two per cent behind our own. In 1877, whilst we had more than fifty per cent the Americans had not five. "This astonishing diminution of tonnage under the United States flag has no doubt been to a great extent due to the substitution of steamers for sailing vessels, but much more to the Chinese competition. Speaking of the proportion of sailing-vessels to steamers, the writer says: "Of between fourteen and fifteen million tons of shipping which enter and leave the treaty ports of the Chinese Empire in a year hardly more than a tenth is under sail, while, if the ocean-going vessels only were considered, only about one-thirteenth of the business remains with the sailing craft. It is also noticeable that the steamers have much increased in size, while the sailing-vessels have remained stationary."

#### REUTER'S TELEGRAMS.

LONDON, 29th November, 1880.

A Messageries steamer has sunk after collision in the gulf of Spezia; 250 lives were lost.

Dervish Pasha has entered Dulcigno after severe fighting. The Irish state trials commence on the 28th December.

LONDON, 2ND DECEMBER, 1880.

Parliament has been summoned to meet for the despatch of business in view of the Montenegrins having occupied Dulcigno.

The British Government have made representations to Russia relative to the attitude of the latter towards Kurdistan.

#### NOTES OF THE WEEK.

The American mail per O. & O. Company's steamer *Gaelic*, came to hand on the 29th ultimo, and the French mails per M.M. steamer *Tanais*, arrived on the 1st instant. The P. & O. steamer *Sunda* took the homeward English mail on the 3rd instant, and the P. M. steamer *City of Peking* is advertised to leave for San Francisco on the 8th instant.

We have been informed by the Agent of the Mitsui Bishi Company that in consequence of the P. M. steamer *City of Peking* leaving for San Francisco on the 8th instant, the *Hiroshima Maru* will arrive here from Shanghai and ports on the 6th inst. instead of on the schedule date, in order to effect a connection.

It is with much regret that we have to announce the death of Dr. Braine, surgeon on board the M.M. steamer *Tanais*. It appears that for some days past the deceased had been suffering from an abscess inside the cheek, and in order to alleviate his sufferings was in the habit of using anaesthetics. He spent last night with the chief officer of the *Menzelch*, and at about 10 p.m. left for the shore where he had lodgings. This morning he was found dead in his bed, the cause being believed to be an overdose of the remedies he was in the habit of employing.

On Wednesday last Yokohama was visited with one of the severest and, for a while, one of the most threatening fires that has occurred for many years. At about half past nine at night, confused shouts and cries in the streets told the settlement that something out of the common was happening, and in few more moments the loud clang of the fire-bells sounded the alarm. It was soon known all over the settlement that a serious fire had broken out at No. 66, Main Street, in the premises of Messrs. Van Tien Brothers, dealers in chronometers and scientific instruments generally. These gentlemen say that they have no conception as to how the fire originated, the first intimation they received of anything being wrong was that the gas went out, and on one of the brothers opening the door to investigate the matter, the room filled with smoke; by great luck, however, they succeeded in making good their escape. By this time a very large crowd both of foreigners and natives had collected and the arrival of the engines was eagerly awaited. Suddenly explosions commenced and great anxiety was felt as it became known that many boxes of cartridges were stowed away in the house. Some foreigners, however, at considerable risk extricated these and they were carried away to a place of safety not, however, without difficulty as it seemed impossible to make Japanese coolies believe that there could be any danger in leaving an opened box in the middle of the road, with showers of sparks falling on it. Twenty minutes after the first alarm the fine drapery store of Messrs.

Pratt, Bird & Co. caught fire, and was evidently doomed. Several foreigners, who kept their heads particularly cool, did their utmost to save as much of the valuable contents as possible, and with fair success. Among these Dr. Wheeler and Captain Martin were particularly conspicuous, and in fact nearly lost their lives by the roof falling in. The engines had now arrived, but the tide was at dead low ebb and it was impossible to reach the water in the creek with the suction hose of the steam fire engines, while the streams from the hand-engines were of little avail. The fire now leapt across the road to No. 86, which was speedily destroyed. There was fortunately little wind, but what there was varied so much as to render it impossible to foresee in which direction the fire would spread. It first seemed to be tending towards the houses occupied by Messrs. Malcolm & Co. and Dr. Eldridge, and there is little doubt but that for the energetic exertions of a few gentlemen present the latter houses would have been destroyed. The same want of a head which is such a painful characteristic of Yokohama was only too palpable. There was any amount of unemployed energy on the spot, if any one could have undertaken to control the mass. As it was, the scene of confusion baffles description; coolies running, somewhere, with articles of furniture; native police getting in everyone's way and clubbing any man who was really assisting; foreign firemen waiting patiently for water, engines waiting for hose to be put on, scores of native firemen rushing about aimlessly with lanterns, yelling; English, Russian, German, American, French and Italian men-of-war's men all trying to help, but as a rule unable in consequence of not knowing the vernacular; all this, we say, formed a scene easier to imagine than describe. Meantime the fire continued to spread. Foot's Hotel was actually on fire three or four times, and the true bravery of several cool-headed foreigners who really risked their lives in strenuous, and fortunately successful, efforts to save the building cannot be too highly praised.

Mrs. Vincent's store next fell a victim, but the stone-built repository of Mr. E. D. Moss was able to resist, and in fact stopped the spread of the fire any further in that direction, which was fortunate, as it is impossible to say otherwise where the fire would have ended. Messrs. Strachan & Co's tea-firing godown also proved an effectual check on the west of Messrs. Van Lissa Brothers' house. A stone godown in the rear, although it was burnt itself, stopped the fire there, as by this time the engines had chosen another position on the creek where the bank was lower and a capital supply of water was obtained, which poured a stream on the building adjacent to the godown and prevented the fire from spreading.

The conflagration, which had even threatened the whole of Main Street, as at one time the wind rose a little and blew from the S.E., seemed to be thoroughly mastered at a little after midnight, when the alarm was given that it had broken out with renewed violence at the back of the Temperance Hall. Great efforts were made to subdue it and with success, and the engines were taken home at about 2.30 a.m. everything being considered well under control.

The promises destroyed were those of Messrs. Van Lissa Brothers, where the fire broke out; Messrs. Pratt, Bird & Co.; a block of buildings owned by Mr. Marques and rented by several families, many of whom just escaped with their lives; Mrs. Vincent's store, and a house occupied by Mr. Remedios at the back of the Temperance Hall. The total loss is estimated at about \$150,000; every building destroyed was, we learn, more or less insured, and the same remark applies to their contents.

As an instance of the utterly want of organization which prevailed, we may mention that although there were numbers of men-of-war's men landed, some armed, yet so little use was made of them in the way of guarding property which had been moved out of houses considered in danger, that countless articles, many of them bulky, were stolen. We know of one instance where a gentleman lost every article he possessed, with the exception of the clothes on his back.

An unfortunate Japanese fireman was killed by a wall falling on him; considering the daring recklessness displayed in the efforts to master the fire it is a matter of congratulation that this is the only serious accident we have to record.

The base-ball match between the local club and the U. S. S. *Swatara* on Thursday afternoon resulted in a victory for the home team. We append the scores.

The *Société Suisse de Tir* held its final meeting of the season on Saturday last, the 27th instant. Owing doubtless in a measure to the presence of the band of H. F. G. M.'s ship *Vincta*, the attendance was good. About forty members competed, and on the "pool" targets, which were free, a number of matches came off at 300 yards, standing position.

Below we append the results:—

**CHAMPIONS.**—For all members who have won a prize during 1880. 300 yards. Ten shots. Three prizes.

Col. Murata	42 points	...	...	...	1
H. Abegg	34 "	...	...	...	2
A. Mottu	33 "	...	...	...	3

Eighteen competed for this.

**CONSOLATION.**—For members who have competed, but have not won a prize in 1880. Cible Patrio. Five shots.

C. Weinberger	...	...	...	...	1
H. Grauert	...	...	...	...	2
A. Baud	...	...	...	...	3

There were twelve competitors.

**ENCOURAGEMENT PRIZE.**—For members who have not competed at any meeting in 1880. Cible Patrio. Five shots.

T. Winckler	...	...	...	...	1
A. Alioth	...	...	...	...	2
J. Naudin	...	...	...	...	3

There were seven competitors.

From the *Japan Daily Mail* of the 3rd instant, we reprint the following:—We have to apologize to our subscribers for the late delivery of yesterday's *Mail*. It was through no fault of ourselves, but was caused by a strike on the part of the entire lot of our native employees. That our readers may judge for themselves as to the position in which we are placed, we reproduce a communication which was handed to us on the morning of December 1st.

#### "Literal Translation.

##### "CONTRACT.

"Owing to the recent unusual fall in the value of Paper currency, every necessary thing in Japanese life, have risen in their prices from 60 to 70 per cent and at the same time, *Japan Mail* Office where we are now engaged, have had, till late years, paid our wages with species which however they now replaced with kinsatz, we the undersigned will therefore request the proprietor to restore the said old way and pay our wages hereafter with cash, but should this be not granted we ourselves will strictly stick into the following stipulations:—

"1.—That should the decided reply be not given by the proprietor within five days from date we, all, shall at once leave the office.

"2.—That after such resignation if any of us shall either apparently or secretly serve the office it shall be considered as the breach of the contract, even he may receive better pay than the present rate, and such person can not lodge or promise not to lodge his complaint into the Police Station or Saibansho against any harm or rough treatment that he may or ought to receive from the rest of the undersigned and that may break the laws of our government with the exception of bodily harm, stealing, etc.

"3.—That after a certain time we left, if the proprietor will propose to take us all in satisfaction of our complaint, (i.e. granting our request) we shall ask payment for the interval, thus wasted, at the rate of cash wages, but in case such pay-

ment are refused, none of us should not be engaged and the breach of this point may also apply to the same injury stated at the end of 2nd paragraph.

"4.—That at present about 150,000,000 yens of Kinsats being a-floating in the empire we have no prospect of the improvement in their price and so shall not listen to any proposal that may be expressed by the proprietor towards the increase of our wages by Satz.

"5.—That this agreement is hereby shown to 64 compositors in Yokohama and get their consent as the annexed Document bearing their signatures and seal.

"29th November, 13th Meiji.

"NOTE.—Explanation.—That is to say a person receiving at present 19 yen satz, will expect to receive in future 19 silver yen.

On receipt of this "Literal Translation" certain steps were taken to avoid putting our subscribers to inconvenience. At this the "League" step forward and say—"As you have presumed to make enquiries in the labour market with a view of obtaining assistance, we will all leave at once and thus prevent the carrying on of your business." And leave they did accordingly.

It may be argued, and perhaps with some justice—in extenuation of the conduct of these men—that the present low rate of papercurrency has a very irritating effect on the native mind; but as far as we are concerned a reference to our books shews very clearly, that during the past eighteen months the wages of our workmen have been increased *fifty per cent.* Had our employes come forward and asked in a proper manner for an adequate increase of pay to make up for the depreciation of kinsatz and the consequent enhanced price of commodities, we should willingly have met them half-way; but, since they preferred threats and intimidation, there was only one course to pursue, viz.—to defy them to do their worst.

However, we do not wish to thrust our troubles upon the public, and only make this explanation to our subscribers in order that any little shortcomings for the next few days may be looked upon with a lenient eye.

There were two fires last Friday night in the vicinity of Matokagicho, but fortunately neither of them assumed very serious proportions.

Commenting the progress of trade in Kobe, our contemporary the *Hioyo News* remarks:—The improvement in business to which we alluded a few days ago is, we are glad to say, steadily progressing. To this the gradual but constant rise in the value of the paper currency contributes to no slight extent, and the evident intention of the Government to curtail expenditure is also an important factor in promoting a healthier tone in commercial affairs. It is, of course, only reasonable that the reaction should be felt here sooner than further north. Stocks are known to be very low indeed among the native merchants residing in the great centres of population and traffic which form the natural markets of Kobe, and further supplies are consequently obtained at this port. There is no disguising the fact, however, that native purchasers are taking good care to be on the safe side in their present transactions, their calculations being, we understand, generally based upon kinsatz going up to from 775 to 800. While on the subject we take this opportunity of remarking, that full recognition should be made of the earnest desire shewn by the Japanese merchants, to carry out the very numerous engagements into which they

entered before the period of commercial stagnation which now happily seems to be gradually away. Many instances occurred in which time was asked, requests which met with ready acquiescence; but although we have inquired carefully into the matter, we can find no instance of positive repudiation, but very many indeed in which the native purchaser suffered severe loss. The sudden fall in the value of kinsatz upset all calculations, the effect was not unfrequently ruinous—one merchant alone losing over sixty thousand yen in carrying out his contracts—but we sincerely believe that the experience gained in the last few months has created a radical change in the estimation in which many foreign merchants held the commercial morality of their native compeers.

The following additional particulars are to hand respecting the shipwrecked steamer *Douglas*. We read in the *Hongkong Daily Press* "that Messrs. Douglas, Lapraik & Co. have received the the following details in a letter from Amoy:—On Sunday, the 14th instant, at 3 p.m. whilst the *Douglas* was proceeding South of Passage Island, Haitan Straits, she struck and passed over a rock not marked on the chart and commenced to sink immediately. There was only just time to reach the nearest shoal, where she was beached and now lies E. by S. of Passage Island, near One Foot Rock, and being entirely under water at high tide. The passengers landed on the Rocks, and on Monday morning, the 15th instant, the Chinese gunboat *Chen Wei* came up and offered assistance. Later in the day, by the kindness of the mandarin in charge of Hai Tan Chin, gunboat No. 3 arrived to stand by the wreck, and the *Chen Wei* proceeded with the mails and passengers to Amoy. Upon receipt of the news at that port Her Majesty's gunboat *Swinger*, Lieutenant-Commander O. Tudor, left Amoy for the scene of the disaster with all possible despatch, and she will doubtless be able to render valuable assistance. It is to be hoped that the *Swinger* will soon be able to mark this dangerous rock, which it seems, from the account, lies just in mid-channel as given by the chart."

In Saturday's issue we printed an interesting and exhaustive article, from the pen of M. de Kergardec, French Consul at Hanoi, on the trade of Yunnan by the Red River Route. The Consul has, of course, good sources of information at his command in the capital of Tonquin, and he has made industrious use of them. In drawing deductions from the statistics compiled, he seems to have been actuated by a desire to carefully avoid painting the prospects of trade in too vivid hues. To some persons of sanguine temperament, doubtless, his conclusions will appear disappointing. But it must be confessed—however unpleasant the admission may be to those who built airy castles in connection with this Song-koi route—that M. de Kergardec has based his estimates on good hard, dry figures, and that he is more likely to be right than not in believing the Yunnan trade cannot fulfil the expectations formed, for some years at all events. As a matter of fact, it is very rarely that the trade established with a place equals the anticipations of those interested. Most of the Treaty ports of China afford illustrations in point, Hankow being a signal example. The province of Yunnan suffered so severely by the Mahomedan rebellion—in suppressing which the Chinese Government waged a war of extermination against the unhappy people without distinction of age or sex—that the population was reduced to less than one-half, whole districts being converted into silent wastes; and we believe that M. de Kergardec overshot the mark when he set down the population at eight millions. Six millions would be nearer the mark, probably, and the population is scattered, as he remarks, over a vast territory a considerable portion of which is incapable of cultivation. But Yunnan possesses great mineral wealth, and her copper and silver mines might all be rendered much more productive. M. de Kergardec thus sums up his review of the prospects of the trade:—"If it is true the mineral wealth of Yunnan is great, it is not less true that in practice copper, which forms its base, is not sold for export, that the Tonquin route is not favourable for lead and zinc, the districts producing these metals being too far from the Annamese frontier, and that the tin obtained near the frontier seems to remain the principal, or rather almost the only, element of trade by the new route. If the

production of this metal be tripled, it will represent a value of ten million francs. Tea, opium, and a few other products suitable for export, would add to this sum a few hundred thousand francs. In conclusion, we are compelled to admit that under the most favourable circumstances—under conditions very different from those of to-day—the trade by the Red River could hardly attain a total of twenty million francs." The Consul is, moreover, of opinion that for some years, even after the suppression of the black mail levied on the trade at Lao-kai, it would scarcely exceed ten million francs. Nevertheless he is clearly in favour of the Song-koi being opened up to trade, and believes that it would lead to a great development of the commerce of Tonquin. Of this we think there can be no reasonable doubt, and it is just as natural to suppose that the provinces adjoining Yunnan would participate in and swell the volume of trade, while the population of Yunnan, and consequently its producing and consuming power, would rapidly increase with quickening of trade and security of life and property gained by suppression of the Black and Yellow Flags.—*Hongkong Daily Press*, Nov. 22nd.

Not one of the four treaty ports opened to trade under the the Chefoo Convention can, so far, be said to have realised the expectations formed prior to the conclusion of that abortive agreement. Wuhu has, perhaps, of the four, more nearly fulfilled the promise it gave, but the other three ports, from all of which more was expected, have disappointed foreigners. It was believed that Wenchow would be a considerable tea exporting port. It was thought that Ichang would prove the great outlet for the productions of Szechuen and that vast inland part of China comprising Shensi, Kansuh, and Kweichow, of which so little is known, and into which, owing to the difficulty of communication and the numerous barrier stations, so few foreign goods penetrate. It was considered certain that Pakhoi, admirably situated on the west coast, and obviously the port of shipment for the products of western Kwangtung and the greater part of the province of Kwangsi, would speedily develop a large trade when thrown open. In no case, however, have events verified anticipations. It is however, satisfactory to note by the returns of trade for the year 1879 that the two ports which had hitherto yielded the most barren results—Ichang and Pakhoi—have latterly shown decided signs of improvement. We published the other day Mr. Piry's report on the trade of Pakhoi for 1879, in which he showed the sudden and gratifying increase in the trade of the port consequent upon the breaking down of the opposition to steamers and the issue of transit passes to foreigners. Mr. Edgar, assistant in charge of the Customs at Ichang, gives a very satisfactory account of the rising fortunes of Ichang, though the improvement is not so pronounced as that of the southern port. In his concluding remarks on the trade of Ichang, Mr. Edgar says:—"There is, I believe, a prosperous future in store for Ichang; but it will be when the means of communication are other than they are at present. The steamers hitherto plying between the port and Hankow are not the best that could be devised for the purpose, and, as a result, serious delays to shippers are by no means infrequent. The great detriment to trade is the uncertainty in the minds of Szechuen merchants as to how long their valuable goods, such as silk, safflower, musk, and medicines, when forwarded to Ichang, must remain exposed in boats, or stored, as was the case last year, in a rickety godown, before an opportunity of shipping occurs. Naturally enough, under these circumstances, which more or less involve loss of interest on capital, they consider it preferable to forward such merchandise by junks direct to Shashih and Hankow. Until therefore, there is some improvement on the present class of steamer, no very great development of the trade may be expected." The district around Ichang is comparatively poor and there is little demand there for foreign goods, but an increasing quantity of imports find their way into Szechuen under transit pass. Suitable steamers will no doubt ere long be placed on the river to carry on the trade with Ichang, which is evidently destined to develop steadily if not rapidly. Pakhoi is clearly a rising port, and seems likely to grow into an important centre of commercial activity. But in both places the trade is mainly in the hands of Chinese, and

seems likely to remain so, though most of the produce is shipped in foreign bottoms. That the trade is increasing at all, however is matter for gratification, especially as until very recently the wisdom of opening either port to foreign trade—and not unreasonably so from all appearances—had been several times called in question.—*Idem*.

According to the *Hogo News* of 29th ultimo, the "fire season" has already commenced in the southern city of Osaka. A correspondent to our contemporary gives the following account of a serious conflagration having taken place on the morning of 25th November:—"I was awakened out of my sleep by the ringing of the firebells at about half-past three o'clock in the morning, and looking out of the window saw the heavens illumined in the direction of Yokobori. As there have been so many robberies in the city lately, I thought it probable that a large incendiary fire had broken out and, hurrying on my clothes, proceeded to the scene of the conflagration, guided by the reflection in the sky and the constantly increasing streams of people bound on the same errand as myself. On reaching the fire, I learned that it had broken out in the rear of premises occupied by two timber merchants, where some strangers had lodged the night before and kept themselves warm by burning waste pieces of wood. The first intimation of their danger was given to the inmates of the houses by a policeman, who discovered the fire when going his rounds, and at once aroused the neighbourhood. Luckily he did so, or the loss of life must inevitably have been much greater than it was. When the alarm was given the fire had already taken a firm hold of the buildings, in fact the bark roofs were in flames, and the northerly wind which was blowing freshly at the time, rapidly extended the conflagration in a southerly direction. When I arrived at about four o'clock, the stacks of timber on the bank of the canal were burning furiously, and shortly afterwards a large pile fell blazing into the water, throwing up in its descent showers of sparks. A number of junks were moored close-by; some of the burning timber fell into them, and they were speedily in flames. The fire communicated from one boat to another, and then attacked the houses on the opposite side of the canal, notwithstanding the efforts of the water-police to remove the burning junks to a place where they would do no injury. At this time the scene was inexpressibly grand and impressive. The houses on both sides of the water were in flames and the burning junks between presented the appearance of a bridge of fire; the shouts of the firemen, the crash of falling houses, the homeless people struggling through the dense crowd with remnants of their property, and the eager rush to save the contents of buildings not yet attacked but in dangerously close proximity to the flames, all contributed to form a spectacle, which has fortunately not been seen in Osaka for a long time past. I must give the governor and superintendent of police the credit of exerting themselves manfully, they really appeared to be ubiquitous, and laboured hard to restore order, and encourage their subordinates. Not that these latter required much encouragement to do their duty. The men—both police and firemen—exposed themselves with the most reckless daring. One fireman I saw who appeared to be a sort of superintendent, standing on the roof of a house and directing his men with a flag. Presently flames were seen issuing from one corner of the roof, but still he maintained his position, and signalled with his flag as calmly as if at an ordinary practice. Then the roof fell in carrying the gallant fellow with it, and a great cry arose from the people who saw and wondered at his dauntless courage. I was glad to learn, subsequently, that he was saved by some of his men. Regardless of the imminent peril, they dashed into the flames and rescued their brave leader, who was much scorched and half blinded, but otherwise uninjured. The engines had been all this time working very satisfactorily and—as there was an ample supply of water—the unremitting exertions of the firemen began to tell upon the conflagration. Gradually the devouring element (to employ a penny-a-liner's term) was conquered at all points, and shortly after eight o'clock the most serious fire that has occurred in Osaka for a long time past, was finally subdued. I suppose you have had

details from the native papers of the number of houses and value of property destroyed, loss of life, &c., so I will content myself with saying that no less than one hundred and thirty-five firemen were more or less seriously injured, and conveyed to a school-house which was turned into a temporary hospital. This shews that the firemen did not flinch, and the few robberies committed—notwithstanding the confusion inseparable from such an occasion—is evidence that the police were successful in preventing the wholesale pillage which sometimes, in fact generally, accompanies similar calamities. I may state I was informed by a native acquaintance, that the Satsuma shizoku who form the majority of the constables stationed at Nishi-Nagahori, were very conspicuous for their energy and courage.

"I hear that there was another fire this morning at about half-past four o'clock; this time at Takeya-cho, when fourteen houses were destroyed. I believe the fire brigade quickly got the mastery by pulling down the adjoining premises."

"All the proposals," writes the *L. and C. Express*, "have been received, we understand, from Japan for the revision of the Treaties, and will soon receive the attention of the Foreign Office. His Excellency Sir Harry Parkes, H. B. M. Minister of Japan, has indefinitely postponed his departure for that country, as H. M. Government wish for his advice concerning the above-mentioned proposals."

We read in the *London and China Express* that the P. and O. Company are about to introduce the electric light upon their steamers.

In a leading article contained in the *Hiogo News*, of 27th November, we find the following comments "The criminal laws are in an infinitely worse condition than the civil procedure, which has proved so miserably inadequate. We read occasionally in vernacular papers of the preparation of fresh codes—civil and criminal—and happen to know that the task of drawing up these new laws has been entrusted to a gentleman eminently fitted to accomplish the arduous undertaking. Granting, however, that the new codes were put into operation to-morrow; does Japan contain men capable of administering them properly? Would the Judges appointed command the respect and confidence, we will not say of foreigners, but of their own countrymen? We feel convinced there can be but one reply to these questions. The best laws can easily be made tyrannical and oppressive by mal-administration, because much is necessarily left to the discretion of the administrator."—Going from argument to proofs, our contemporary relates an episode in the present criminal administration of Hiogo Ken and writes:—Our attention was drawn recently to an incident which illustrates the manner in which justice (so-called) is occasionally dispensed in cases where a foreigner happens to be the aggrieved party. A number of sails were stolen and traced—we believe by the complainant himself—to a man who, if not the actual thief, had certainly no claim to the property as against the rightful owner. After much circumlocution, and many examinations, journeys, letters, &c., &c., a Japanese policeman waited upon the plundered foreigner. The constable had a communication of importance to make, and he accordingly made it with all the gravity befitting the occasion. He informed his astounded auditor that the person in whose possession the sails were found had become insolvent, that the sails had been sold on behalf of the general body of creditors, and if he called for it he would receive his dividend! Subsequent inquiry shewed that the stolen sails furnished nine-tenths of the realized assets.

By a letter from the captain of the barque *Eme*, dated the 27th instant, it appears that after her departure for Kobe she experienced constant heavy gales, with incessant thunder and lightning, from the S.W., and W. in the vicinity of Rock Island, for seven days. As the barometer fell steadily it was considered advisable to put back for a while to Kaneda Bay, where the vessel now lies, waiting for better weather and a higher glass to proceed on her voyage. All is reported well.

We have since received information that the *Eme* left for Kobe last Sunday night.

The following observations Sugar trade of Java are from the *Samarang Vaderland* of the 24th October:—

"We are now witnessing the remarkable phenomenon that, in the store-houses in the chief town of Java, sugar is lying valued at 15 to 20 millions of guilders, which is unsaleable owing to want of orders from Europe, and is therefore not forwarded, although the roadsteads are swarming with vessels waiting for cargoes. Great scarcity of money is the natural consequence of this. The credit given to planters is contracted to what is only absolutely necessary. Trade in import articles is consequently dull to an extent hitherto unknown. The most solvent purchasers are obliged to apply for delay in payment. To make room in the over full store-houses of importers, many articles have had to be realised at a loss. Hence arises a depressed condition of trade and agriculture, such as has seldom been noticed, during the last year. It is said that this phenomenon is caused by the extraordinarily satisfactory outturn of the beet root sugar crop in France and Germany, so that over-production has been the result, and prices have fallen to a minimum. If this be true, the end of the crisis cannot yet be foreseen, and the consequences will be of a serious nature in the future."

STUART ELDREDGE, M.D.,  
Surgeon-in-Charge.

#### LONDON LETTER.

London, 8th October, 1880.

I have lately had the privilege of spending an evening with a gentleman from Japan. I don't mean either of my quondam Japanese friends, but an Englishman who has passed some years in the country and appears to have acquired a kind of Japanomania. He is in love with everything animate and inanimate in that country, and ever and anon by way of pointing his praises of the Far Eastern land he would contrast its phenomena, physical and human, with the corresponding features of our own country, and always to the disadvantage of the latter. It gives rather a new idea to a man who has been educated in the belief of the honest Bishop of Rochester, who when dying declared that there was no place like old England, to listen to the disparaging of everything he had been accustomed to feel proud of. In Japan, it seems, the sun is always shining, (I had not the presence of mind to enquire whether this phenomenon extended to the night), while in England the great luminary is seldom seen. One is obliged to admit that the position of the Sun in the Cosmos is so important that its absence for any lengthened period from any part of the earth's surface must involve a very serious deduction from the total amount of available vitality over that area. There is no gainsaying the fact that from September till April, the sun rarely penetrates the barrier of cloud that envelopes the British islands between the autumnal and the vernal equinoxes. During that period vegetation ceases to vegetate: it is about as dormant as life in general is under an Arctic winter. The cold is seldom intense, but excepting to the furious fox-hunter, or the enthusiastic foot-baller there is no freshness or elasticity about the atmosphere; no life in it, in fact. The natural effect of this depressing atmosphere is no doubt to kill off weak people and make

even the strong ones unhappy. Life is barely worth having, for its own sake, excepting to those who command unlimited means of locomotion. Catarrhs, rheums, coughs and the ailments properly appertaining to old age attack the manhood of this country, who begin to wheeze at forty, lose their breath at fifty, and hobble in their gait long before they reach their grand climacteric. It was amusing to hear this absurd caricature of the Englishmen at home, but it was merely a fancy back-ground to the glowing picture of the land of the eternal sunshine. There it would appear youth and spring are perennial. All nature is *en fête*. It is a land of the Cal. where there is neither cold nor cure. Servants are affectionate and faithful, cooks are loving and hospitable,—a very paradise of the impecunious. Work, if there is any in such an enchanted country, is mere pleasurable excitement. So far from Englishmen residing in Japan deserving the pity of their friends at home, it is the exiles who look with compassion on their kinsfolk condemned to grunt and sweat under leaden skies, surrounded by policemen, thieves and beggars, dishonest servants, infamous cooks, the pillory of formal dinner parties served by fat waiters "on job," and the petty exactions of an artificial society, devoted to the tithing of mint and rue and the maintenance of a calculated respectability.

The unfortunate "Powers" have their hands full of an imbraglio of their own seeking in the Adriatic. The spectacle of United Europe bringing her iron-clad fleet to intimidate one second-rate Power would be sublime—if it succeeded, but not succeeding it becomes in the highest degree ludicrous. It is as yet premature to pronounce the ultimate failure of this combined action, indeed it can only fail if the Turkish government shows itself demented. For what United Europe demands—be it just or unjust, possible or impossible—it must be done, and in resisting this irresistible will of Europe (I don't mean Mr. Gladstone) the Sultan seems to be courting his own destruction. Most of the Powers it is true are sick of the Demonstration and alarmed at its possible consequences, but they say they have been insulted, humiliated and what not by Turkey, and they must be avenged. *Noblesse oblige*. A gentleman easily gets insulted and humiliated too if he enters into controversy, but "que diable allait-il faire dans cette galère?" No reason has been rendered why the Powers should have made this combined attack on Turkey at the present moment. It remains a mystery which will perhaps not be solved until most of the actors in the scene are dead and buried. And if it is traced to the impetuosity of one man, and if the actuating motive of that man were hostility to a political rival and a foregone determination to reverse his policy, it will be a curious commentary on the outcry against "personal rule" which figured pretty largely in the political discussions in our periodical literature of the past two years.

#### PARIS LETTER.

PARIS, October 9th, 1880.

"The little Mozart," as Meyerbeer playfully called Offenbach, has had a funeral worthy of Rossini. Republicans forgot the deceased was a noted Bonapartist, and only remembered he had amused them during a quarter of a century, by his melodious dance music framing vanderbilts and screaming farces. The funeral ceremony took place at the Madeleine, and owing to bad arrangements, was filled by the general public, come to hear the singing, and not by personal friends and acquaintances. Fausse sang the *Pie Jesu*, and had to turn his back to the family of the deceased, to conceal his emotion: Sardon was too overcome to deliver an address at the grave, and other celebrities also broke down. Happily Mlle. Hortense Schneider had sufficient courage to walk on foot behind the bier, through rain and mud, to Montmartre cemetery: such virtue is not to be gainsaid. Talazac also sang during the mass, the *Dies Irvr*, and the *Agnus Dei*, with intercalated fragments from deceased's last composition—yet to be represented—the *Comtes d'Hoffmann*. The coffin had scarcely left the church, when the undertakers' men removed the trappings of woe with the agility of a theatrical machinist: a wedding party was waiting, and also a few baptisms: wailings on one side, brawlings on

another, with marked impatience on the part of a bridegroom, anxious to catch the *rapide* for Italy, and inwardly muttering a protest at people dying at awkward occasions.

Though other composers—Lecocq, Planquette &c. have treaded closely on the Kibes of Offenbach, the latter had the rare merit to remain king of his school till death. He was jealous of the unparalleled success of Lecocq's *Mme. Angot*, and it was in the end to eclipse that popularity, that he composed his *Fille du Tambour Major*. Wherever there is a music stand, or a piano, some souvenir of Offenbach's talent, rather than genius, will be found. His music is often fine and distinguished, and at other times of downright triviality. The basis of all his writings was dancing air, and whether he was inspired by reminiscences of Auber, Thomas, or the Italian masters, he retained not the less a special mark of individuality in all his compositions. The latter had the merit to be always short, and the librettos being buffoonery, were admirably suited to his comical ability.

He deserves great credit for having worked his way to fortune—unhappily to come down again by a bad theatrical speculation. He came from his native Cologne in 1842, when some 22 years of age, studied the Violoncello for twelve months at the Academy of Music, and was then nominated fiddler in an orchestra at the Opera comique, when the violoncello almost concended the little artiste. He felt he was destined for a higher life: managers as usual declined his compositions; then he hired rooms to execute them. It was in 1855 that fortune smiled on the naturalised German: he opened a little *salle* beside the entrance to the Exhibition building, and executed his "Walk up Gentlemen and Ladies," and it is said the Empress and Emperor went to see it in disguise. Then he rented other places, notably the Bouffes, where some of his most smutty operettas were interpreted. It was at the Varieties he brought out his *Belle Hélène*, the *Grande Duchesse*, which the brazen acting of la Schneider sealed with success. He lost all his money in the Gaité theatre, and since has had to be a hack for his creditors. This aggravated a nervous temperament and hereditary gout; struggling against all three, and writing still with his accustomed verve between paroxysms of pain, stamped him as no ordinary character. He was not a witty man, and aimed to be cynical and satirical, like Auber and Rossini, rather than humorous. He was markedly attached to his family, and under no circumstance would he spend a Friday from home; he held the day to be unlucky. After the war of 1871, he was asked by a friend, "what was to be come of France?" he replied; people will represent Offenbach's pieces, chant Offenbach's songs, and dance to Offenbach's music." The reply was true, and painted the man.

It is regrettable that he died so soon, as had he been spared a few months longer, he intended to put Turkey and the Western diplomatists in operette. However, the subject is felt to be approaching rather tragedy than comedy, and somehow a grand cataclysm, social, religious, and political, is considered to be hanging over Europe, which only the break up of the European concert, can inevitably bring to a head. The angest and coolest avow the outlook is bad; few states but have some home difficulties to settle, and that peace can alone solve. Only Switzerland appears to be happy revising her constitution every half year, or taking a plebiscitum on the unification of bank notes. In Constantinople, fanaticism reigns, not diplomacy.

Our ministers do not appear to be in the odor of sanctity with the nation; they do not possess one of the great secrets of governing—"let it alone," when some amelioration is proposed. The Cabinet does things awkwardly, though actuated by the best intentions; few journals sustain the ministry, the rats ever quit in advance the sinking ship. The second part of the Decrees will be executed, in part, in few days, as a sop to public opinion. The demand is becoming angry and general, to compel the divinity students to pass the usual fixed period under the flag: the measure would ultimately add 20,000 soldiers to the millions existing: this formidable total has received a further augmentation of 8,000, by the abolition of the drummers.

The Jesuits' Colleges that were closed in July, have reopened

as lay lycæums, for day pupils: the fathers have resumed their rôle of professors, but dressed and certified as regular clergymen: thus the more things are changed in France, the more they remain the same thing. The government will have some difficulty in dealing with the general transformations.

The happiest of politicians appears to be Felix Pyat; he glorifies regicide daily in the *Commune*; he has Vera Zasavlitch for a contributress, and reminds France, it is time to erect a statue to Berezonski, who all but killed the Emperors of Russia and Napoleon in 1867. He puts Rochefort's journal into the shade.

Something equivalent to a North Pole discovery has been made in the Odeon theatre: the stage prompter and manager heard from time to time, a wood-pecker kind of tapping in the roof, but never had leisure to follow up the investigation, till a few days ago, they undertook a voyage of discovery in the cock-lofts, and found a cobbler comfortably installed, and pursuing his lawful calling: he invited the visitors inside, stated he had occupied his crib for several years, rent free, since the occasion he was invited, by a former lessee, to appear in his full naturalism on the stage, and he believed since, he was in duty bound to hold himself ready for any emergency: so thought the porter also. Not being an Irish tenant, he could not evict the landlord, nor insist on compensation for non-payment of rent.

Oh shade of Bumble,—3,000 fr. compensation to a beadle for the loss of his nose, bitten off while in the full performance of his duty, in a church at Bord-aux, during a wedding, and by a drunken member of the bridal party, who, with a bottle of champagne, brandished it over his head, swearing by all the gods, he was as sober as a judge. The damages claimed were double the amount awarded, but as the morsel of the nose had been found, washed, and sown on successfully by a surgeon, such was considered an "extenuating circumstance."

Torte Saint-Martin theatre has brought out a fairly spectacular piece in three acts and thirty tableaux.—"The Christmas Tree"—The usual competition exists between the good and bad fairies, that no critic is ever expected to describe, and no auditor to comprehend. The eyes are dazzled with magnificent scenery, and splendid costumes: the decorations are in excellent taste—a circumstance very rare in extravaganzas. Lecoq has written a charming chorus for 100 children, and Jacobe the pretty ballet music. The piece ends with a gigantic Christmas tree, laden with favors, that would satisfy all the children of Paris. The principal rôle of "Bagatelle," is charmingly filled by Mlle. Zulma Bouffar.

Among the most noted in the necrological columns this week is, "The Exhibition building of 1878:" the roof has disappeared: the facade is gone, and nothing remains but a few huge sides, like an old ship laid up aground on a bank, with ribs rotting in the air.

The cabinet makers persist in their strike, and the masters in their lock-out; the former will likely have to yield, the men being skilled artisans, incapable of being replaced, and finding plenty of work in other branches of the wood trade, pending a settlement.

At Bergerac, an old soldier aged 86, has been married to a widow of 57; the villagers supplied the banquet, and cannon were fired in honor of the old fellow's pluck and gallantry.

Victor Hugo's five act tragedy *Torquemade*, will be rehearsed next month. Efforts are being made to keep it back still, in the interests of religious peace. Garibaldi has been allowed to read the manuscript, and pronounces it to be "sublime."

Society is at present discussing a question, as perplexing as that of the Oriental: "a young couple when married, ought they set out for travel, or go directly to their new home?"

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

#### COURT, POLITICAL AND OFFICIAL.

We notice in the *Choya Shinbun*, that on the 26th ultimo His Majesty the Emperor sent an invitation to His Royal Highness

the Duke of Genoa, to accept an entertainment at the Shiba palace.

The *Nichi Nichi Shinbun* says that the officials of the Board of Inspection for the Second National Industrial Exhibition held their first meeting on the 17th ultimo. H. E. Sano, Minister of Finance, presided as the Chief Inspector, and H. E. Kuki, Vice Assistant Minister of Education, sat as the Vice Inspector. It was resolved to meet in future every Thursday.

We read in the same paper that the German Consul, and three other German gentlemen, who are professors of the Imperial Agricultural College at Komaba, were entertained at a banquet given in the Audience Hall in the Home Department on the 27th instant. Mr. Sekizawa, Director of the College, presided as host. H. E. Shinagawa, Vice-Assistant Minister for Home Affairs, and Superintendent of the Agricultural College, and many other officials were present.

Another paper states that the local Governors of all cities and prefectures have been ordered to come up to Tokio sometime between the 1st and the 15th of next month.

The *Hochi Shinbun* writes as follows:—"We hear that the Chinese Government is well satisfied with the peaceful conditions of the Loochoo question, as offered by our Government, and the Chinese have lost all their anxiety, but Li Hung Chang alone is displeased. We would like to know if this can be true."

The *Nichi Nichi Shinbun* says that at 8.30 a. m. on Monday the 29th ultimo, His Majesty the Emperor, attended by Their Excellencies Junior Prime Minister Iwakura, and Privy Counsellors General Yamagata and General Yamada, and many other high officials, left the Palace for the Military College; on his arrival there, he had a short rest and then repaired to the shooting ground escorted by Colonel Nagasaka, Acting Director of the College, and witnessed various manoeuvres, after which he took a seat in a tent, and witnessed the marching manoeuvres of the military cadets. Target shooting, fencing by the instructors, and many other exercises followed. His Majesty partook of tiffin, and returned to the palace at about half-past two o'clock.

We notice in the same paper that there will be a musical entertainment in the Imperial palace on the 15th instant, to which the Princes of the Blood, the Prime Ministers, the Privy Counsellors, and the officials of the Imperial Household Department will be invited.

We read in a native paper that it is believed that the Foreign Department intends decreasing the subsidies of all Japanese Legations and the Consulates in the various open cities and ports in foreign countries, by the sum of 150,000 yen for the ensuing year.

We read in the *Mainichi Shinbun* that the Chinese Minister called upon His Excellency Prime Minister Sanjo, at his official residence at Nagata-cho, at about 10.30 a. m. on Sunday last, demanding an interview in order to hand him a document, but the latter being rather indisposed begged to be excused, promising to accept it some other day.

The *Nichi Nichi Shinbun* says that the shrine for Jinmu Tenno in premises of the Akasaka palace, has been completed, and that Their Majesties the Emperor and the two Empresses lately paid a visit there for the purpose of worship.

Her Majesty the Empress visited the Awoyama palace at about 1 p. m. on Monday last, and returned home about the sun-set.

The *Nichi Nichi Shinbun* writes as follows:—"We do not know what is the object of the Government in having lately summoned the local Governors, but we hear that a proposal has lately arisen in the Cabinet that in order to remedy the financial crisis, the revenue shall be paid in rice, and consequently the Governors of cities and prefectures have now been summoned to be asked their opinion. We cannot guarantee the truth of the statement."

His Excellency Privy Counsellor General Kuroda, having recovered from his long indisposition, attended at the Daijo Kwan on Tuesday last.

Some changes in the Educational Department are expected to take place before the end of this year.

Another native paper states that His Excellency Privy Coun-

Councillor Okuma called at the U. S. Legation after 6 p.m. and returned home after 8 p.m. on the 29th ultimo.

The same paper relates that Mr. Secretary Go of the Finance Department has repeatedly addressed petitions to His Excellency Privy Councillor Okuma, on the subject of the financial administration.

Another journal says that His Royal Highness the Duke of Genoa is to be presented in audience with His Majesty the Emperor to-day at 2 p.m.

#### NAVAL AND MILITARY.

The positions of the new fortifications at Kwan-on-zaki have, according to the *Nichi Nichi Shinbun*, been thoroughly surveyed and their construction is to be commenced at once. A detachment of Sappers, under command of Lieutenant Hanikawa, have been ordered to the locality.

We see in a vernacular journal that Rear-Admiral Hayashi, and the third Secretary of the Kanagawa Kencho, visited the *Vedro Pisani*, yesterday morning.

We gather from a local native paper that the *Amaki Kan* being ready in Nagasaki, will take Minister Hanabusa to Corea. The term of this vessel's station in Corean waters for the protection of the Japanese trade being about to expire, she will shortly be replaced by the *Benjo Kan*.

The *Hosho Kan* having undergone a thorough overhauling in the Yokosuka dockyard, returned last Sunday to her anchorage.

The same paper says that medals and honourable mention have been sent here from France for the Japanese exhibitors who sent their exhibits to the Paris Exhibition of 1877. In Tokio, the Mitsui Bussan Kaisha and eleven other exhibitors have received medals, and Takagi Gorobei, and nineteen others, honourable mention.

The *Nichi Nichi Shinbun* writes:—"The Minister of Navy has addressed a memorial to the Cabinet, suggesting that the navy shall be strengthened and that two or three men-of-war always shall be stationed in all parts of Japan, with exception of Yokohama, even in times of peace."

The Pilotage Bureau of the Naval Department intends to make a complete chart of Japan which will be exhibited at the Second National Exhibition in 1881.

The construction of the Naval Observatory at the 5th ward of Iigura, which had been commenced, has been stopped for the present.

The *Nichi Nichi Shinbun* says that in consequence of the reduction of the budget of the War Department, the Military College has been closed since Tuesday last, and the buildings are to be sold by tender.

The *Akebono Shinbun* states that His Excellency General Oyama, Minister of War, entertained the Foreign Representatives at his private residence at Nagata-cho, Tokio the day before yesterday, the guests amounting to about seventeen.

#### INDUSTRIES, TRADE AND FINANCE.

The *Mainichi Shinbun* contains the following paragraph:—"As we lately mentioned, the number of cocoons received in Yokohama this year amounted to 490,000 cards. Of this number about 210,000 cards have been already sold, whilst about 100,000 cards have been exported direct by native merchants. The remainder amounts to about 180,000 cards, of which only about 50,000 are said to be of good quality. The average price of those sold in Yokohama, is \$1.75 per card."

We notice in the *Akebono Shinbun* that in Nanawo, in the prefecture of Ishikawa, before the recent revision and increase of the saké tax, brewing was conducted on a large scale, but now many of the brewers intend to abandon the business because the increased tax has lessened the demand.

"The following in the return of exports and imports, at Gensan, Corea, from the date of the port being opened until the 30th September last:—

Exports	...	...	...	...	yen 73,600.00
Imports	...	...	...	...	" 73,503.5
Excess of Exports	...	...	...	...	yen 96.44

Of exports, gold-dust alone amounts to 49,957 yen, and of imports, foreign articles amounts to 63,010 yen.

A branch office of the 44th National Bank is, according to a vernacular journal, to be established in Vladivostock.

The same paper says that the number of cocoons exported during the past month amounted to 148,817 cards.

From the commencement of the cocoon season until the 30th of last month 442,820 cards arrived in Yokohama, of which 341,118 cards were exported, up to the despatch of the last French mail steamer *Volga*.

The *Shizuka Maru* arrived in Yokohama, on Tuesday last with the cargo of 174 cases of Tea from the port of Shimizu.

The National Debt Office in the Finance Department forwarded public loan bonds, amounting to ten thousand yen, to the Tokio Facho on the day before yesterday.

#### MISCELLANEOUS.

The *Nichi Nichi Shinbun* writes as follows:—"In consequence of the high price of commodities at the present day, it is a matter of great difficulty for the lower classes, who live from hand to mouth, to get their daily bread. The people of Kioto even, whose patience is a proverb, seem to have become tired of their struggle to obtain a livelihood, and suicides, either by drowning or hanging have become wonderfully prevalent lately. On one day no less than thirteen people committed the suicide by hanging themselves." Our contemporary remarks, "the four simple words 'the fall of rice would be a good medicine for this disease.'"

A native contemporary informs its readers that the Tokio Fire Brigade is shortly to be increased by 150 men.

The same paper says that cholera still prevails in the prefecture of Kagoshima; since it broke out in July last forty-three persons have died from the disease.

Another native journal reports that branch telegraph offices are to be established at Oogaki, in the prefecture of Gifu, and at Tamashima, in that of Hiogo.

From the same source we learn that Sapporo in Yesso has been taken as a central position, from which telegraph lines are to be extended in all directions. In order to make the necessary survey for this two officials have been despatched there from the Central Telegraph Department.

The press laws continue active. We notice in a native contemporary that Mr. Tomobe, editor of the *Hochi Shinbun*, was fined ten yen for an offence against the law of libel.

The *Maru Maru Chinban* (the Japanese Punch) published, in its No. 171, the following political caricature. A man is walking over a bridge across a deep valley, when he finds himself beset by snakes and other horrible animals. Full of terror, he is about to fall down into the river at the bottom of the valley. The allusion is to the Japanese Government, represented by the man, who is attacked by and is afraid of the snakes &c., representing the applicants for the establishment of a National Assembly, and the poorer people who are suffering from the present high price of commodities and new taxation, all of whom are dissatisfied with the Government, which is therefore in a critical condition. For having published this picture, Mr. Iwasaki Yoshimasa has been sentenced to one year's imprisonment, in conformity with the 18th article of the Press Laws.

Another journal informs its readers that the locomotive engines that have been manufactured at the Railway Department, for the Tsuruga and Sapporo lines, will be sent to their respective destinations as soon as a ship can be chartered to take them.

The *Nichi Nichi Shinbun* tells us that the number of hotels in Tokio and the surrounding five post towns, viz., Shinagawa, Naito-Shinjuku, Itabashi, Senju, and Komatsugawa, amounted to four hundred and fourteen in all in 1879, but it has now increased to sixteen hundred and five. Our contemporary remarks that this is owing to the fact that as the farmers in the interior are becoming wealthier, many of them now come to visit Tokio. Communication both by land and by sea having been much facilitated, many people visit Tokio from different districts for trading purposes. More especially since the commencement of the present year, a large number of applicants for a National Assembly have arrived in the capital from various provinces one after another, which alone may have contributed to a prosperous state of affairs with hotel-keepers.

The same paper writes as follows:—"Winter is fast approaching, that season when the fire-bell so often awakes the

residents of the capital from sleep. The fire-brigades of the different divisions in the city have commenced to take the strictest precautions against fires. From the 1st instant, until the end of April next, in each division, parties of fifteen firemen each commenced keep watch every hour of the night. When heavy winds are blowing patrols of two men each commenced move about the streets, keeping watch against accidents both by day and night.

The *Mainichi Shinbun* publishes the following items from a correspondent in Fusan, Corea:—"We can learn nothing about the doings of the Korean Embassy since their return from Japan, but some of the officials are reported to have said, in conversations, that they could not see why the embassy should make such a long journey as to Japan and then return without having accomplished the object of their mission. We have heard, however, another report to the effect that Choya Toniu (a Korean) recently went from Gensan to the capital, where he remained three days, after which he returned and left for Japan in the *Imaki Kan*, on the 4th November. At the capital the subject of extending foreign intercourse is very deeply discussed, and it is reported that the party of progress has completely defeated their opponents. The people have suddenly acquired a great fear of Russia, and consequently are in much anxiety.

Another correspondent writes from Gensan:—"To-day, the 15th of November, the weather is very cold, and snow is falling in quantity. The buildings for the Japanese Consulate-General have been completed.

The *Hochi Shinbun* writes as follows:—"The Kioto Exhibition, established by the citizens of that city in the old premises of the Imperial Palace, which was open from the 1st of April until the 8th of June last, had 2,170 exhibitors, and 106,938 visitors during the above mentioned period. The number of articles exhibited there was 471,796, valued at yen 69,211.76. 410 exhibitors received prizes. The above mentioned Exhibition was first opened in 1875, since when it was annually held there, but as the old palace is now to be removed, the residents of the city, of all classes, intend to establish new buildings for the Exhibition in the same premises at their own expense."

The following statistical report gives the number of births in Tokio during the past month:—Legitimate, 556 males, and 579 females; illegitimate, 37 males, and 19 females.

The *Mainichi Shinbun* has enlarged the size of its paper, and raised the price to 3 sen per copy. We also hear that both the *Nichi Nichi* and the *Hochi Shinbun* are going to follow the example of the *Mainichi Shinbun* from the New Year.

#### IMPERIAL GOVERNMENT RAILWAYS.

#### AMERICAN MAIL TELEGRAMS.

St. Petersburg, October 22nd.—The arrest of Warschafsky a well-known capitalist and Purveyor of the Russian army, is in connection with the army supply contract in the last war. It is stated that there is evidence forthcoming to show that Warschafsky defrauded the authorities out of 22,000,000 rubles. Bord, Secretary and Chief Army Administrator during the late war, has also been arrested at Odessa, simultaneously with the arrest of Warschafsky.

Vienna, October 22nd.—The Turks dropped two conditions objected to by the Montegrins, owing to the efforts of the Ambassadors at Constantinople.

Castel Moro, October 22nd.—Prince Nikita has invited all the leading men of the country to a council of war in Cetinje on Saturday.

Berlin, October 22d.—At the election in Saxony for member of the Imperial Parliament, the sitting member (High Conservative) was re-elected, polling 4,221 votes, closely followed by the Socialist candidate with 3,586 votes.

Madrid, October 22d.—The ceremony of Churching the Queen took place at Chapel Royal to day in the presence of a brilliant assemblage and an immense crowd.

Madrid, October 22d.—Earthquake shocks were felt throughout Spain and Portugal to-day. There is a violent storm raging at Lisbon.

Rome, October 22nd.—The distinguished German authoress, Eliza Lin Sardt, committed suicide at Civita Vecchia by throwing herself into the sea.

Rome, October 22nd.—A violent hurricane occurred in the province of Reggio di Calabria. Several houses were washed away. There was some loss of life.

Vienna, October 22nd.—It is reported that in view of the difficulties raised by the Porte, Austria, France and Italy have instructed their ambassadors at Constantinople to remind the Sultan of his promise, which was that the surrender of Duleigne should be unconditional.

Constantinople, October 25th.—The fund for the relief of the Batum refugees at Ismidt is exhausted. The Secretary of the British Embassy reports that all the children are dead, that the women are dying, and the men certain to succumb.

San Buenaventura, October 25th.—Two sharp shocks of earthquake were felt here at 10 o'clock last night. The motion did not seem to have any lateral direction, but was a perpendicular upheaval from below.

General Miller and Hon. J. W. McCallum will address the Republicans here to-night.

Cape Town, October 22d.—The Colonial loss in the fighting at the relief of Mafetung was trifling. Previously a party of yeomanry fell into an ambuscade and suffered a loss of 20 killed and 17 wounded.

New York, October 22d.—The *Evening Commercial* says: The number of Chinese frequently seen at the Money Order Department in the New York Post-office led to some inquiry respecting the number and amount of their transactions through this channel. Investigation showed that within the past month the total number of orders issued was 14; the aggregate amount \$562.50; the average, \$80.38. Nearly all of the orders taken were on San Francisco. It is well known that Chinese laundrymen and vendors of all sorts succeed in gathering much money, which they carefully hoard and send to their native country, but there is good evidence, as stated by a Wall-street bullion broker, that their principal dealings are with a sort of head man well known in the region of Mott street, and who has a partner now in Europe.

Chicago, October 23rd.—Charles Randolph, Secretary of the Board of Trade, has completed the census of labour and capital employed in Chicago manufacturing establishments, and returned the same to the United States Census Bureau. There are 3,752 manufactories, employing 113,507 hands, and representing a capital of over eighty million dollars. The number of women employed is 15,718, and boys and girls under 16, 4,797. The value of the product made per annum is \$243,000,000. The value of material used is \$178,000,000. The wages paid are \$37,000,000.

Chicago, October 23rd.—General Grant appeared before the Warren Court of inquiry to day as a witness, but his recollection was not very clear as to the details of the battle of the Five Forks. He was asked as to his order

authorizing General Sheridan to relieve General Warren, but Stickney, Warren's attorney, opposed the personal opinion of the first soldier of the country being used as a weight against his client. General Grant made a statement of his motive in calling in the Fifth Corps to hide General Warren's defects. There was a tilt between the counsel. Some dispatches were produced. General Grant could not say whether General Warren had suggested the attack on the enemy's rear. He found that when officers undertook to think for themselves, instead of obeying orders, it generally led to a defeat. He did not like it, and it had led to the removal of an officer (referring to Warren.) Stickney thereupon insisted on this being stricken out. This part of the testimony was then struck out together with some other answers derogatory to General Warren.

Washington, October 23rd.—In Brooklyn, to-day, a Secret Service officer arrested E. W. Spencer, alias Bill Brockaway, Charles H. Smith and Jos. P. Owens, charged with being concerned in the counterfeiting of \$100 National Bank Notes, also with counterfeiting United States \$1,000 coupon bonds of the issue of '61. Smith has confessed that he engraved the plate from which the bonds were printed, and the counterfeit bonds are in the possession of Doyle in Chicago. He also states that he engraved the plates for several of the counterfeit \$100 notes which recently appeared. The last engraved was on the Pittsburg National Bank of Commerce. Owens was the printer of these notes and bonds. Smith claims, in addition, that he engraved plates of the counterfeit \$30 bonds which were put upon the market in 1867, about \$85,000 of which had been taken by Jay, Cooke & Co. before their character was discovered. The examination of the arrested parties is set for Tuesday next. A number of the bonds taken from Doyle in Chicago will be forwarded to Brooklyn, to be used as evidence.

New York, October 23rd.—The Protestant Episcopal Convention refused the application of the Diocese of Virginia for an Assistant Bishop. Resolutions were adopted empowering the Committee on expenses to make necessary arrangements with the railroads for reduced fares, and to raise money for the travelling expenses of the next Convention. A resolution was unanimously adopted that the General Convention of 1883, should be held in Philadelphia. A resolution offered by Rev. Dr. Dix was adopted, calling upon the House of Bishops for information as to whether the ordination of Bishop Riley of the Mexican Branch Catholic Church, was in accord with Article 10 of the Constitution, and also what Creed and Liturgy were used in that diocese.

Cape Town, October 23d.—The Government intends to send large reinforcements to Basutoland.

Cape Town, October 23d.—Following are details of the fight which took place previous to the relief of Mafeking.

An ambuscade of yeomanry were charged by a large body of Basutos, who descended the hills at full speed. A hand to hand fight ensued. The Basutos were armed with assegais, imitating the Zulus, and killed 24 yeomen. Reinforcements arriving, the rebels were repulsed with considerable loss. The Basutos made a second charge at full speed, which was entirely checked by the well directed fire of the Cape Town Rifles. The enemy were estimated to be 8,000 strong. The Basutos are reported to have occupied the country in the rear of the force which relieved Mafeking.

St. Petersburg, October 23rd.—There is a well-founded rumor that in consequence of court intrigues against General Melikoff, he will retire to the Caucasus, and that the Committee of Ministers, which is antagonistic to Melikoff's policy will be reorganized.

The *Russia* has been suspended for publishing the above.

All fortified ports on the Turcoman steppes are fortified and provisioned for six months. Bami is fortified and provisioned very completely. All arrangements are nearly concluded for an attack in less than a month hence, when 9,000 men and 100 guns will advance.

The *Vedomosti* says: There is news from Turkistan that the troops there are to be reinforced by a regiment of Cossacks and a battery of artillery. The sappers and infantry will also be reinforced.

St. Petersburg, October 23d.—An address is being privately signed among students of the University here,

embodying a petition already submitted to the Rector for for presentation to the Minister of Public Instruction. It demands the establishment of special student corporations with the right of making representation to the authorities by deputies; the right of holding periodical meetings the right of association for objects to be submitted to the authorities; the institution of a Court of Honor, for the purpose of expelling offenders from the University; the right of participating in the deliberations of the Council of Professors, and finally, demands that no student shall be subject to summary treatment by the police, or reported without previous cognizance of the Rector without having expelled from the University.

New York, October 25th.—In the Protestant Episcopal Convention to-day the Committee on the State of the Church presented, through the Rev. Dr. Vandusen, their report to the House of Deputies. The committee say: "While we would not diminish but rather increase all the appliances and instrumentalities for carrying the blessings of the Gospel to the Western States and Territories; while aborigines of this land, mostly found there, are receiving our sympathy and aid and arousing increased zeal in their civilization and evangelization, why is it that the Southern Dioceses, depressed and impoverished, receive no more of the church's benefactions, and are left to carry on their mission work with little more assistance than can be secured within their own limits? Why is it that the condition of four millions of colored men, now clothed with the elective franchise, eligible to all places of trust, to our Legislatures, to seats in Congress, or acting in many instances as teachers of the young, should awaken far less enthusiasm and calls forth not more liberality than it does?" The Committee, in concluding their remarks on his subject, invoke the attention of the whole Church to this inconsistency and inequality in the interest, sympathy and charity of the Church. The report further censures the tendency of the clergy to frequent places of amusement and adrodate tendencies which are inconsistent with ministerial fidelity, and approach the realms of worldly conformity, levity and indifference. They mention theatricals, dances and suppers as a means to draw money to carry on church work. They believe these practices destroy public respect for many teachers of our holy religion, and appeal to motives from which men should not act in the Redeemer's service. The report was adopted and sent to the House of Bishops.

Rome, October 25th.—The *Liberta Italia* announces that General Garibaldi and his son Menotti have withdrawn their resignations as members of the Italian Chamber of Deputies.

Rome, October 25th.—The Pope on Sunday, in receiving former pontifical functionaries, energetically reaffirmed his right to temporal power, and described the fête to commemorate the entry of Italian troops into Rome as "accursed."

Vienna, October 25th.—Negotiations are resumed at Mirbarza, Montenegrin Territory, which is more conveniently situated for communication with Scutari than Rjeka. The Porte submitted three other stipulations referring to military measures, in place of the two withdrawn. Riza Pasha proposed that the Montenegrins should advance on Duleigno by a circuitous route instead of passing before Mazura Heights, in order to avoid a collision with the Albanians encamped there.

Pesth, October 25th.—There is a Ministerial crisis at Belgrade, caused by Austria threatening to entirely close her frontier against Serbia should she not meet her engagements on the conclusion of the treaty of commerce.

Paris, October 25th.—M. Constans, Minister of the Interior, at first gave permission for a public meeting on the Cisse affair, but afterwards prohibited the meeting. Some six hundred persons, however, assembled on Sunday, and were dispersed by the police.

The Cabinet Council rescinded the permission granted by Constans, Minister of the Interior, for a public meeting on the General de Cisse affair, deeming it monstrous to allow Communists to publicly vilify a General whose honorable career was not effaced by certain indiscretions.

New York, October 23th.—The report of the Executive Committee to the members of the Provisional Inter-oceanic Canal Society on the present condition and prospects of the Nicaragua Canal, just issued in pamphlet form, sets forth the following among other statements: As soon as the concession was made by the Nicaragua Congress this com-

mittee sent one of its members to London and Paris to confer with financial firms. Satisfactory interviews were had with many lending financiers of the world. It is generally conceded that subscriptions in this country of, say \$15,000,000, to the Nicaragua Canal stock, and guarantees of protection by the United States, which indeed is fully provided for in the treaty stipulation with Nicaragua, would secure in Europe any amount necessary for the completion of the canal. Its comparative small cost will enable the company to earn paying dividends upon rates of toll that would be ruinous to the Panama enterprise, without crediting any amount for passenger business, and without an allowance for the growth of business and population of the Pacific States in the interval of the canal construction. We have found a traffic actually awaiting its opening amounting to 3,706,426 tons, about most of which there is very little room for dispute or doubt; but the committee prefers to adopt 3,000,000 tons as the basis of estimates, while still omitting all passenger traffic, and not making reference to the valuable land grants. A charge of \$2 per ton for canal tolls, and of fifty cents for all other charges, would give a business of \$6,000,000 receipts; \$75,000 for expenses of a business of \$6,000,000 net gain, or eight per cent. upon \$75,000,000. A business of \$2,000,000 would, after deducting for expenses, net nearly five per cent on the capital invested.

Paris, October 25th.—The Tribunal of Conflicts will meet on the 6th of November to decide the Jesuit question, and unless the arguments are very long, a decision in one case, which will govern all, will be given the same day.

London, October 22nd.—A railway train from Dortmund, Westphalia, to Berlin to-day, was precipitated down an embankment. Two persons were killed and twenty-six injured.

London, October 22nd.—The steamer *Ceylon*, Captain Robinson, arrived at Bristol from Montreal. She experienced fearful weather and lost two-thirds of her cattle and sheep. Her decks were swept, boats were lost, hatches smashed and cargo damaged.

London, October 22nd.—The whole block of buildings in Russell street, was burned to-day. Loss, \$250,000.

Paris, October 23rd.—General de Cissey is now here. M. Gambetta favours a searching inquiry into the case. The scandal is assuming immense proportions.

Dublin, October 23rd.—The indictments against the Land League will include 200 speeches, drafted testimony of 350 witnesses, and various newspaper articles.

London, October 25th.—At Newmarket to-day the first Welter handicap was won by Milan; Brotherhood second, Forager third. Thirteen horses ran, including Sandford's Mirth.

The nursery handicap was won by Grisot; Don Fulanos second, Don Zella third. Twenty-five horses ran, including Moss Davis and Idea, both of whom were unplaced.

Thebals won the Criterion stakes.

London, October 25th.—The *Times* summarizes Parnell's argument in his speech yesterday at Galway as meaning that crime and outrage are justified by the determination of the Government to keep the peace and the refusal of the House of Lords to pass the Compensation for Disturbance in Ireland bill, and says: It is impossible to mistake the meaning of such an argument or the purpose of the man who uses it. The condition of Ireland and the temper of the men who are criminally misleading the people calls for immediate attention.

London, October 25th.—Matthew Harris, a speaker at the Land meeting at Galway yesterday, asked whether it were better one bad man be shot or hundreds of families be driven from Ireland, and said that after witnessing the evictions of farmers, he had resolved, if the farmers shot landlords like partridges, he would never say a word against it. His speech was received with cheers. He then denounced the agent by name, but was mildly rebuked by the Chairman of the meeting.

Queenstown, October 25th.—Parnell, speaking at a banquet at Galway to-day, said: "I feel convinced if ever you call upon your countrymen in America for aid, and show them there is a fair chance of success, you will have their trained and organized assistance for breaking the British yoke."

Dublin, October 27th.—At the weekly meeting of the Land League yesterday, John Dillon, member of Parlia-

ment for Tipperary, presiding, the reporter of the *Ulster Gazette*, a Conservative journal, was ordered to withdraw. Letters were read from Justin McCarthy and Frank Hugh O'Donnell, both members of Parliament, expressing a desire to join the League. A resolution was passed reciting that in view of the prosecutions of the League, the Irish race throughout the world are called to answer these coercive measures by a resolute organization, and requesting Mr. Davitt to remain in America for the purpose of directing a great responsive movement among Irishmen there.

At a meeting of the Dublin diocesan synod a resolution was passed urging the Government to take measures to protect their Protestant countrymen. A copy of the resolution was sent to Gladstone.

The law officers of the Crown held a consultation in Dublin to-day, and it is reported here to-night that they decided to cause more arrests of Land-Leaguers immediately. The warrants were issued, and they will be enforced, in the morning. It is believed that the arrests will be privately made, but that bail will be taken. Parnell and Dillon, it is said, will be the first to be arrested. In view of the threatened secrecy of the proceedings the Land-Leaguers are naturally greatly excited. It is stated that the prosecution will begin formally on Tuesday.

New York, October 27th.—From Rio de Janeiro come advices that there have been great inundations in the Santa Catharina colonies, caused by the overflow of the river Itajabai. The loss of property is immense. A hundred houses, many mills and all the bridges were destroyed, and the crops carried away. Great distress prevails among the colonists. A few lives were lost.

London, October 27th.—A dispatch from Teheran reports that a son of Sheik Abdullah was killed in an attack on the entrenchments of Morngha. The Persian reliefs are ten days' march from Urmiah.

Paris, October 27th.—The *Monde* says: The Pope has written to the Archbishop of Paris, deploring the decrees against the religious communities and their application.

London, October 27th.—A correspondent of the *Standard* at Paris learns from an authentic source that General Farre, Minister of War, minutely inquired into the conduct of General De Cissey and submitted a report of the investigation to M. Gambetta. It was then decided not to prosecute General De Cissey. The De Cissey incident had its origin in a charge made in the Paris *Gaulois* that Lieutenant-Colonel Jung had abstracted State papers from the Ministry of War and delivered them to the German Government. The allegation was made on the strength of a private conversation between General Ney, Duc d'Elcheingen and Ivan de Woestyne of the *Gaulois*. Jung sued De Woestyne, who was sentenced to six months' imprisonment and to pay a fine of 1000*fr.* and 5000*fr.* damages. During the course of the trial, Allon, counsel for Jung, and Lachaud, counsel of De Woestyne, stated that General De Cissey, while Minister of War, was completely under the influence of the Baroness de Kaulla, whom Jung had married and from whom he had separated. She it was who was in the habit of transmitting information from the French Minister of War to the German military authorities. The testimony showed that there was not the slightest foundation for the inference that she had renewed her relations with her husband, or that information of any kind had been conveyed by him to the German Government.

At the time of these revelations General De Cissey was in command of the Eleventh Army Corps. The affair led to his resignation of his command. In so doing he issued an exoneratory order, which drew down on him a public censure from General Farre, Minister of War. De Cissey is obnoxious to the radicals. A number of them obtained permission from M. Constans to hold a meeting in Paris on Sunday to express their sentiments regarding De Cissey. This permission was, however, revoked by the Cabinet. Some six hundred persons assembled, but were dispersed by the police. General De Cissey is a distinguished officer. He has been in service for forty-five years. He fought with valor before Metz in 1870. He contested to the last the party of Bazaine, and vehemently opposed the policy of capitulation. He was taken prisoner by the Germans, and on his release was at once put in command of the army of Versailles, which put down the Commune. He gave Henri Rochefort in particular much reason to hate him, and the editor of *L'Intransigent* is now paying off the score. As

Minister of War he had much to do with the scheme of military reorganization that M. Thiers had projected, having introduced the study of German into the army and improved its weapons in many respects. But he happened to make a great many enemies, who, when he retired in 1876, threw doubt on the pretext of ill health which he alleged as the cause of his retirement.

Paris, October 22th.—The second of the March decrees was still further put into execution to-day. The Franciscans have been expelled from their establishments in Rennes and Avignon. At the latter place the police were obliged to force doors and demolish barricades. The work of ejection lasted three hours. The Superior declared that he owned the building, but he was nevertheless expelled. There was considerable excitement. Fourteen persons, including eight women were arrested. The Superior of the Capuchins at Perpignan on the appearance of the police pronounced an excommunication.

London, October 28th.—A dispatch from Meshed states that 20,000 Kurds under Sheik Abdallah are advancing on Tabriz. They are now at Maragha. They have massacred the entire population of So-Uj-Bolak. The garrison of Tabriz is only 2,000 strong. Re-enforcements of 7,000 men and twenty guns with five Austrian officers, under command of an uncle of the Shah, has been hurriedly sent from Teheran.

A dispatch from Teheran says that the first Kurd division has evaded the Tabriz troops and has gone south in the direction of Hamadan. The Teheran division has gone to encounter it. The Kurds occupy 3000 square miles of Persian territory.

Buenos Ayres, October 28th.—All the provincial armies are to be abolished. The proposal has been made in Congress to grant a subsidy of \$100,000 yearly to Roach's line of steamers between Buenos Ayres and New York.

Pesth, October 28th.—In the Budget Committee of the Hungarian delegation to-day, Baron Von Haymerle, replying to a question, said that if after the settlement of the military affairs connected with the surrender of Duleigno, and after the withdrawal of the Turks, Montenegro should not have occupied the debated territory within a certain short period, the naval demonstration would cease, and Austria would not participate in any steps which might lead her into further complications, or into warlike action against the Porte.

London, October 28.—Floods are reported from Monmouthshire, Oxfordshire and other parts of the country. The floods at Leeds have stopped several mills and hundreds of persons are thrown out of employment. A terrible south-western gale is reported from Plymouth last night. Daybreak showed five vessels stranded, but the crews were saved. The brig *John May*, from Bull, River, S. C., for Friedelshstadt, drove alongside of Batten breakwater this morning and remains there. Captain Michel was drowned while endeavoring to get on shore. At Bradford there was a heavy rain and snow storm and railway traffic was impeded. At Leicester the rain began to fall on Tuesday evening and has continued since, flooding the low-lying districts. Winlock experienced thirty-six hours' heavy rain. Many houses are flooded. At 6 p.m. the gas suddenly went out, leaving the whole town in darkness. At Oldham there was a heavy snowstorm. At South Shields there was a heavy sea. Fishing boats were unable to go out, and ships put back to the harbor. In the woods of Sussex the low-lying lands present the aspect of lakes, while in Warwickshire the waters in some places extend as far as the eye can reach. Hundreds of acres are submerged, the roads are under water and traffic is much interrupted. At Scilla last evening the barometer fell to 28.60.

There have been serious floods at Barbary, Bourlemont, Chestall, Coleshill, Derby and Darlington, causing much damage to the crops and other property. The telegraph wires in Edinburgh were blown down, and the new pier works at Hartlepool were seriously damaged. Thousands of acres of land are inundated in various parts of Leicestershire. Many of the Shields trawlers are missing, and it is feared that their crews, numbering in all fifty-two men, have been lost. Numerous vessels have been wrecked during the storm on various parts of the coast with loss of life.

London, October 29th.—A Cape Town despatch says: Magistrate Hope and his two clerks were murdered while

witnessing a war dance. The Government has called out 3,000 more colonial troops. The Basuto chief Leruthodi's village was stormed and burned on the 22nd instant. The rebel losses were considerable. Our loss is one killed and ten wounded. Volunteers are moving into Transkei to suppress the outbreak in which Mr. Welch was murdered.

Paris, October 29th.—There was seven hours of continuous rain yesterday in the city of Reggio di Calabria, Italy. Seventeen persons were killed in two neighboring villages, their cottages being swept down.

Kandahar, October 29th.—The Chief Commissioner in his report to the Viceroy of India says: The aversion of the population to the Ameer is undeniable. Annexation would at first encounter opposition, but judicious arrangements would probably reconcile the people to our rule. The Sirdars believe that Yakooob Khan will be unable to make another attack for two years, when probably he will attack Cabul. The Commissioner thinks Candahar more advantageous than Cabul as a centre of British influence.

London, October 30th.—In a terrific storm on Thursday and yesterday fifty vessels were wrecked between Spurn Head and Horsea. Twelve vessels were stranded near Winchelsea. A vessel under bare poles drove through a new pier at Winchelsea and carried away fifty yards of the structure. At Horsea a brig fouled with the new pier and was damaged to the extent of £9000. There has been a large number of shipwrecks, attended with great loss of life, on various parts of the coast.

New York, October 30th.—The *World's* cable dispatch says: The Czar's marriage with the Princess Dolgorouki is pronounced a myth in Russian circles here. Though the officials at the Russian Embassy solemnly deny that the Czar is in an alarming state of health, it is generally believed that his physical and mental prostration is so great that his death is likely to occur at any moment.

St. Petersburg, October 30th.—The most important Nihilist trials are approaching. They are those of the authors of the Moscow explosion, the designer of the dynamite mine, and the Nihilist Congressmen from Lipetsk and Tamboff who resolved on taking the Czar's life.

Berlin, October 30.—Three days ago the socialists determined to evacuate Hamburg, and discontinue their printing arrangements there. During the last few days the Berlin police have seized several thousand revolutionary pamphlets, including copies of the *Zurich Social Democrat* and the *London Freiheit*.

Castel Nuevo, October 30th.—Seven thousand Montenegrins are collecting near Autivari, and will probably attack Duleigno shortly.

Constantinople, October 30th.—The Sultan thinks the relations with England will soon be restored and harmony will prevail.

The populace of Varua, Bulgaria, having assembled before the French Consulate hoisting and throwing mud at the French coat-of-arms, the French Ambassador has ordered a gunboat to proceed to that place.

London, October 30th.—A lifeboat capsize yesterday in the harbor of Wells, Norfolk country. Eleven of the crew were drowned.

Paris, October 30th.—There have been expulsions of various orders at Toulon, Lille, Carpentras and Marseilles to-day. The authorities in two instances were compelled to force the doors. No serious disturbance occurred.

Teheran, October 31.—It is officially announced that the garrison of Urumiah has been relieved by 4,000 Persian troops, the Kurds retreating southward. Only seven villages in the Selmos district escaped devastation. Four hundred Kurds pillaged the country to within twenty miles of Tabriz.

London, October 31.—A Tehran dispatch says: The Kurds besieging Urumiah have been defeated with great loss. They have evacuated the whole district of Urumiah. The Kurdish chiefs occupying the Vardjbulak district have surrendered to the commander of Tabriz. The troops are near Magagha. The troops have also evacuated Sundjbulak.

London, October 31st.—Later news from Cape Town contradicts the report of the murder of Mr. Welch, a magistrate at Tiolo. He was compelled, however, to take refuge in the jail. A force has been sent to his relief.

London, October 31st.—The gravity of the situation in Ireland occupies English attention almost to the exclusion of

the foreign and colonial difficulties. The reports during the week from Dublin conflict alike respecting the prosecutions of Land League leaders and the policy of the Irish Executive touching the whole question. The latest accounts says that the Government intends to indict only six of the leading agitators, Mr. Parnell included.

Growing impatience is manifested by the Irish landlords in regard to what they consider to be hesitation on the part of the Government. This impatience is shared by the English public, who begin to suspect that the agitation is directed not against bad landlords merely, but so far as it is agrarian, and not political, against the principle of ownership in land except by actual occupiers who cultivate the soil. Threatening letters multiply daily. No one of them has affected public opinion more than that which has compelled Lord Clancurry to abandon his estate, although he was engaged in no quarrel with his tenants or laborers, nor had not raised the rents or evicted the occupiers. He was ever popular personally, and considerate towards everybody. His sole supposed offence is that he attempted to farm lands when the lease fell in, and a new tenant could be obtained. The authorities finally warned him that it was impossible for them to guarantee his safety. An impression no less deep has been produced by the letters of the special commissioner of the *Daily News* from Mayo. His accounts, which are equally picturesque and impartial, reveal that an immense majority of the population are banded together to ruin every obnoxious landlord or agent. No case has produced a greater sensation than that of Mr. Baycott, Lord Erne's agent. His offence consisted in serving processes on defaulting tenants. The penalty attempted was the ruin of Baycott, who is himself a large farmer. All his laborers have been compelled to leave him, and the domestics have been driven from his house. His crops are rotting on the ground, and his cattle are starving. Tradesmen refuse to supply bread or meat to his family. Mr. Baycott and his family are doing shepherds' duty. His fortune and life are alike imperilled, because he refuses to betray or desert Lord Erne. Under similar threats Mr. Simpson, a Scotch farmer, heretofore leasing 2,200 acres from Lord Lucan, has been driven from the country, and nobody has been allowed to take his farm. Lord Lucan's own life has been menaced, because he undertakes to cultivate his own land. This old man of 80 years exists only under police protection, and rides about his farm accompanied by a brace of constables. The Marquis of Sligo, who owns the adjoining estate, has been driven abroad and his agent has been shot at. It is reported that Lord Ardilan, who returned to Ireland, intending to reside on his own property in the same country, finds that he cannot remain there, though he is spending hundreds of pounds for the relief of his tenantry. Mr. Burke, his agent, is unable to stir abroad without police protection.

The Land League leaders continue to deny their responsibility for violence alleging—perhaps truly—that it is not themselves but the Ribbon lodges which commit the murders. This sinister name has quite suddenly reappeared. Whether Ribbonmen or not, the whole population of the disturbed country are armed to the teeth. The Land League meetings are mostly peaceable, the peasantry concealing their arms under advice from the leaders and the Government concealing its police from fear of precipitating a collision. A very small part of the intelligence reaching the Government in Dublin is allowed to be made public. Still less is known respecting the intentions of the Executive, if intentions they have. Mr. Forster, though profoundly impressed with the danger of the situation, is hampered by his pledge not to propose measures of coercion without submitting measures of conciliation for the relief of the tenants simultaneously. Mr. Chamberlain, speaking at Birmingham on Tuesday, reiterated the assertion that the Government would not be deterred from reforming the land laws by the League outrages. Apologists for the Ministry have hitherto said, privately, that the League prosecutions, though not expected to result in convictions, would supply a basis for a future appeal to Parliament to suspend the *habens corpus* or renew the Coercion Act. A recent conversation with a Cabinet Minister, however, indicates no such purpose on the part of the Government. The Ministers exhausted their vigor in resolving on these prosecutions, and beyond them they have no ulterior purpose and no definite policy for insuring protection to

life or property. It is impossible to say what they may have decided to attempt, but hitherto the individual Ministers have manifested a repugnance to any measure of effective repression, hence no Cabinet meeting is held or summoned, and no heed is paid to the swiftly augmenting anger of the English people.

Paris, November 1st.—The agitation against the enforcement of the religious decrees is increasing, protests being signed in Paris and other Departments. Several more magistrates have resigned in consequence of the decrees. In Marseilles 1,500 leading merchants have signed a protest against the expulsion of the religious congregations. The further enforcement of the decrees has been postponed until Wednesday on account of the festivals of All Saints and All Souls.

The municipality of Paris, despite the strong protests of the moderate section, has commenced the discussion of a scheme for substituting an elected Mayor for the twenty district Mayors now nominated by the General Government, and for rendering municipalities almost independent of the Government.

General De Cisse, in his actions against the *Intransigent* and the *Petit Parisien*, claims 25,000 francs damages for each of the alleged libels upon him published in those journals.

The Dominican monks who conduct the College of Soreze have by special permission of the Pope, been released from their monastic vows by the General Superior of the Order. They have been enrolled among the secular clergy of the diocese of Albi, and as such have been re-entrusted with the schools which they formerly conducted as monks.

London, November 1st.—One hundred and eighty-six British and foreign wrecks were reported last week. Of these, 161 vessels were lost on the British coast.

New York, November 1st.—A special to the *World* from London, November 1st, says: Healy and Walsh, the Land-Leaguers, disappointed their antagonists bitterly yesterday. The large and enthusiastic meeting which was held in their behalf, as these misapprehensions were announced, in the neighborhood of Bantry, County Cork, yesterday afternoon, was fairly peaceable and well conducted. Healy and Walsh returned to Bantry to-day to stand their trial. It is the general opinion of all parties that the Government blundered in arresting them on such a charge, as either Manning or the agent of the land has since virtually admitted that the facts were misrepresented to the authorities. Both Healy and Walsh have begun suits against the Government for false imprisonment. The hearing to-day was attended by a vast concourse of Nationalists, who came into Bantry after yesterday's meeting, and the streets in the vicinity of the courtroom were crowded with them. The fact that to-day was a Catholic holiday helped to fill the town. There were hundreds of constabulary within easy distance of the centre of interest, but as far as has yet been learned there was no occasion for their services, the people being in commendable good-humor and disposed to look upon the legal proceedings in the light of a farce, from which the Government, no doubt, wishes itself well rid. The formal hearing was conducted before seven magistrates sitting as a Court of Sessions, and occupied but very little time. The prosecution declared that when the defendants visited Manning, they frightened him by telling him his crop would be left to rot if he did not surrender the farm to the evicted tenants. This the defendants denied. The hearing resulted in the accused being held for trial. In order to establish their action for false imprisonment they refused to give bail, though there were any number of offers of financial assistance, and they were committed, as demanded by the counsel for the prosecution. It is believed here that the charge against them will never be pressed in the Superior Court, and that they will soon be at liberty.

New York, November 2.—A *World* special from London says: I learn this morning through reliable sources that the German Government has just decided that the treaty of 1868 with the United States shall not be recognized as affecting Alsace and Lorraine, and that naturalized citizens of the United States residing in the New German provinces shall be subject not only to military duty but shall be fined and imprisoned for non-service. One naturalized American citizen has been already arrested and is now in prison. The German Governor proposes not to give him

up. A strong feeling is being manifested about the matter, but our Legation at Berlin is powerless.

New York, November 2th.—A special to the *World* from London, November 1st, says: It is understood that at the Guildhall banquet on Lord Mayor's Day, the 9th inst., Gladstone will deliver a most important speech in reply to the usual message of "Her Majesty's Ministers," on the subject of the Irish land agitation and the claims of Greece under the Treaty of Berlin. It is likely that, with reference to the grave condition of affairs in Ireland, the Premier will announce in emphatic terms the intention of the Government to crush anarchy and enforce the law at whatever cost.

Dublin, November 2nd.—The police and people quarreled at Hendford, and many were seriously injured. The house of a priest who opposes the Land League has been sacked.

Limerick, November 2nd.—It is rumoured that Dillon is arrested.

New York, October 29th.—A London telegram says: I have the best authority for the statement that Forster, the Irish Secretary, and the leading spirit of the anti-Land-League fight, is particularly anxious to bring Parnell and Dillon before the courts. It is said that he wishes to get Parnell out of the way at any rate, and is firmly impressed with the belief that if that agitator is once imprisoned his following will fall to pieces. The excitement throughout Ireland is intense, and there is scarcely a doubt but that bloodshed will follow the arrest of any of the leading agitators. I am informed that the details of Gladstone's Irish bill will depend entirely upon the conclusions of the land tenantry commission.

An enthusiastic meeting of the loyal inhabitants of the counties of Antrim, Belfast and Down was held at Belfast last night. Seven thousand people were present. Resolutions were adopted denouncing agitation and assassination.

Paris, October 29th.—A dispatch from Ragnan says: The inhabitants of Duleigno have declared their determination to resist the Turkish regulars, and have occupied St. George's bridge over the Rhodan river in order to oppose the advance of the regulars. Riza Pasha is making dispositions of his troops to prevent the mountaineers from assisting the people of Duleigno.

London, November 1st.—News is received from the west coast of Africa of the death of Chuch, Governor of the Whydahist. His funeral will be celebrated by a massacre of natives, after which the King had announced his intention of holding a grand celebration in memory of his father. The celebration will last four months, during which 200 captured chiefs will be beheaded. The English have refused to go to the celebration.

London, November 1st.—Sheik Abdullah has sent a communication to the American missionaries in Kermah, requesting them to hoist the American flag over their mission building, in order that they may be recognized and respected when the city is attacked by the Kurds.

Copenhagen, November 1st.—Another terrific hurricane, accompanied by a blinding snowstorm, has passed over Denmark. The railways are blocked and a score of wrecks are reported.

London, November 1st.—A dispatch from Berlin says that 10,000 troops have concentrated at Khabarovka, on the Russian shore of the Pacific, in view of a possible war with China.

London, November 2nd.—The ex-Empress Eugenie has sold the "Villa Eugenie," a plain two-storied residence on an elevation near the sea at the famous little watering place of Biarritz, on the Bay of Biscay, where she and Napoleon III. spent part of the summer regularly from the time of their marriage until the overthrow of the empire. The price paid by the purchaser, whose name has not been made public, is said to be £100,000, and the ex-imperial estate will be cut up into building lots and resold.

London, November 2nd.—In the sculling match between Laycock of Australia and Hosmer of Boston, Mass., for 2000, over the Thames champion sculler the Bostonian was defeated. Laycock rowed easily and won by three lengths. The weather was splendid and the river perfectly still.

A royal yacht and regatta will be held on the Thames. All the arrangements have been made except the details.

London, November 2nd.—At the Court a silver at Maitland, Thomas McGrath, member of the United States Navy,

who killed a man in an affray at Gravesend August last, has been convicted of manslaughter and sentenced to six months' imprisonment with hard labor. It was proved on trial that McGrath was greatly provoked and had borne a good character.

London, November 2nd.—The score of the walking match at 3 o'clock p.m. was as follows: Rowell 210 miles; Littlewood, 172; Dobler, 201; Howard, 160.

## THE JAPANESE PRESS.

### THE FORTHCOMING FOREIGN LOAN.

(Translated from the *Sei Dan*.)

TO be a statesman in the true sense of the word it is absolutely necessary for a man to have full reliance on himself, paying no attention to the opinions of the public, and never wavering from his principles, whether they obtain praise or blame. No marvel, whether as high as a mountain or as broad as the world, can shake his steady purpose, so that his conduct is a guide and example for a nation for thousands of generations. How is it possible for a man of ordinary life, bent only on his own personal ends, to attain such excellence? The Chinese sage Kanshi said, "There are but few men in this life who can pursue any fine of conduct without fear of what their own family will say of it; in a nation there will be but one man who will adhere strictly to the course he has set himself without dreading the disapproval of his fellow-countrymen; and daring a hundred thousand years there will be but one man who will enforce his opinions with determination even if the whole world should be convulsed in consequence."

We ourselves once expressed the opinion that a foreign loan should be raised and the paper currency drawn from circulation so as to clear away the financial difficulty on the one side and to save us from poverty on the other. Those ignorant of the principles of political economy at once said that such a course would result in the export of our labours abroad to benefit the pockets of foreigners, and in support of their argument quoted the examples of Turkey and Egypt, attributing the cause of the poverty of these two countries to their having raised foreign loans. They did not realize however that a loan thus raised can be put to disadvantageous as well as advantageous uses, and it is in the former way that these two countries spent it, while Japan would apply it advantageously. Their opinions simply tend, therefore, to bewilder the public. We, however, felt certain that the true principles of reason could never disappear any more than can a metal or a stone, and that sooner or later, a foreign loan would be raised, thus trusting in ourselves and never wavering from our opinions, after the example of the statesman mentioned above. We have lately heard that our Government, with a view of settling the financial crisis, has laid down a plan for the reduction of expenditure and thus opened a way towards the negotiation of a foreign loan and our observations on the subject, agreeing, as will be seen, with principles of right, the public will no longer oppose it, and in a very short time negotiations can be entered into. This is indeed a matter of congratulation, and we would here mention the economic propositions suggested:—

1st.—That the income of specie shall be thoroughly calculated and its expenditure controlled as much as possible.

In accordance with our present financial arrangements about 3,500,000 yen in specie is paid in annually to the Treasury and between 17,000,000 and 18,000,000 yen is collected for the instalments of the present foreign loans, while about 3,500,000 yen is required for the expenditure of the different Government Departments. In such a state of affairs the treasury must always be in want of specie; in future, therefore, we consider that the total amount of specie required for the loan and the Government expenditure as well, ought not to exceed 3,500,000 yen.

2nd.—That a saving of about 10,000,000 yen shall be effected every year as follows:—

The Central Government intends diminishing the budgets of all the Government Departments by 2,500,000 yen from the beginning of the next fiscal year, and expects to have a surplus of 4,000,000 yen from the revision of the salt tax. Another item of 1,500,000 yen increase is expected in con-

sequence of the expenditure for the construction and repairs of local Government offices in all Cities and Prefectures, and penal establishments having been transferred to the local taxes, from the expenditure of the Central Government. If to these sums be added the sum of 2,000,000 yen annually provided for the withdrawal of the paper currency, a total of 10,000,000 yen will be given.

Again, in accordance with these economic proposals, the Central Government issued a notification from the Council of State dated the 5th of November, ordering that all affairs connected with the executive are to be conducted in as simple a manner as possible, that no new enterprises are at present to be started, and those that have been actually commenced are to be reduced to the lowest limit. In the various Departments the following reductions are intended :—

Home Department .....	120,000 yen.
Finance " .....	120,000 "
War " .....	250,000 "
Naval " .....	150,000 "
Educational " .....	200,000 "
Public Works " .....	120,000 "

Total ..... 960,000 "

All these Departments were ordered to send in their budgets by the 30th ultimo, with suggestions for making the necessary reductions. It will thus be seen that from this source the Government desires to bring into the treasury an annual saving of 960,000 yen. On the same day, another notification was sent to the Home, Finance, and Public Works Departments and the Colonization Commission with instructions to sell all factories in their hands to private firms, with a view to economy.

It is there fore to be seen that the Central Government contemplates extraordinary economy in order to effect a saving of 10,000,000 yen. It is not yet settled, however, as to whether the Government intends withdrawing paper currency to that amount from circulation and burning it in the premises of the Government Printing Office, as was done before, or whether it will be applied to the purchase of produce to be shipped direct to Europe and America in return for specie. Both these measures would however be far too slow to effectually remedy the present pressing crisis. For instance the notifications referred to, take effect from the 14th fiscal year of Meiji, so that the Government cannot avail itself of the saving of 10,000,000 yen until after the 17th month of the 14th fiscal year (i. e. July 1881).

Shall we reduce the paper currency by withdrawing from circulation and burning 10,000,000 yen? the amount now afloat is no less than 140,000,000 yen, to reduce which to 100,000,000 yen only, would take four years, that is to say until after the 12th month of the 18th year of Meiji (1885). What! four years to remedy a present and pressing crisis! Is not that rather too slow?

Shall we then adopt another method; purchase produce with our 10,000,000 yen and convert it into specie by exporting it abroad? the amount, in specie, would not exceed six or seven millions, and can any one dream of clearing off our mountain-high load of debt with that trivial sum? It is not only insufficient, but when scattered over the country, would actually open the way for the import of foreign articles and prevent the encouragement of our own industries. As both these two suggestions are thoroughly impracticable, there remains but one available course which is the negotiation of a foreign loan upon the basis of this annual saving of 10,000,000 yen and this is why, after reading the government orders for effecting economy, we asserted confidently that the way for a foreign loan has been opened, and that its negotiation is close at hand. A country that contemplates raising a foreign loan must have the necessary funds for repaying both interest and principle. This was not the case with Turkey and Egypt and we assert therefore that they abused the advantages offered them. Our country, however, has the necessary capital, and moreover there are many foreign capitalists willing to lend. "In time of want borrow, and in time of plenty, lend." This is a true principle of political economy. The simple step of negotiating a foreign loan will prove sufficient to remedy our financial crisis: why should we trouble ourselves about adopting other trifling measures instead?

## UPON THREATENING DEMANDS.

(Translated from the *Choya Shimbun*.)

OUR readers may have noticed in our miscellaneous column, which always contains something of general interest, the following item communicated by a correspondent :—

"Even though an application may in itself be made in an improper manner and the movers of it act rudely and wrongfully, yet if a number of persons form a conspiracy, and enforce their demands upon some one, he is obliged perforce to yield, as if the demand was just and reasonable in order to avoid consequences. I hear that the employés of the *Echo du Japon* have hitherto received their wages in kinsatzu, but owing to the present depreciation of paper and the consequent rise in the price of all commodities, they have been greatly troubled, and have made repeated requests to the proprietor of the paper for a increase of salary, but he, feeling the fall of kinsatzu equally as much, found himself in great difficulties also, and being unable to raise the subscription to his paper, was compelled to evade the question. His employés thereupon lost their temper and some of them drew up a circular and sent it round, stating that in order to consider the necessity of their wages being raised, a meeting would be held at a certain house. This was arranged and the meeting took place, about fifty or sixty people being present. The president addressed them as follows, in an excited manner: "We must now form a league and send in a demand to our employers to the effect we must in future be paid in Mexican dollars, as if you were at par with them, and say that if our request be not instantly complied with, we, the members of the league, will at once leave our office; let those in favour of my motion hold up their hands."

"Before this words were fairly spoken, everyone present held up their hands in approval. The league's then vowed not to break their compact and went straight to the office of the paper in a state of great confusion and excitement. Arriving there, they surrounded the proprietor, and forcibly pressed their demands upon him. He was much surprised and angered, but finding himself helpless to resist them, he could do nothing. Realizing that to pay them as many Mexicans as they had until then received yen per month, would entail serious loss, he explained the circumstances of the case to them at great length, and, at last, succeeded in arranging to pay them in kinsatzu for the future, at an increase of sixty-seven per cent., with which concession the members of the league retired highly satisfied.

"When the staff of the *Herald* heard that the employés of a French newspaper had conspired and succeeded in obtaining a concession by making a forcible demand upon their proprietor, they considered it to be a disgrace that they, belonging to an English office, should remain supine and not make similar exertions. This opinion once expressed, a movement was set afloat, and now they intend to follow their example, and make forcible demands on the proprietors of the *Herald*.

"I am very sorry" (continues our correspondent) "to hear of such proceedings. You, members of the French office staff, why do you not consider a little the troubles of your employer? Is it not a fact that his business suffers quite as much as you do by the depreciation of kinsatzu and the enhanced price of commodities? However, you have not only made a wrongful application, but you have actually formed a conspiracy, and acting rudely, and with threats have made forcible demands upon your employer. What shameful conduct is yours! Nothing can justify you, even if your master did evade your first application for a time, although such action on his part is not altogether free from blame. He had to give in at last, as he would have done if the application had been made in a proper way. This is only in accordance with common sense. All offices who receive a similar application should give their closest attention to the matter."

## GOVERNMENT OFFICIALS AND PRIVATE LECTURERS.

(Translated from the *Hochi Shimbun*.)

A RUMOUR has become prevalent to the effect that many of the Government officials are very anxious for the abolition of the law which at present prohibits them

from attending public lectures, and intend petitioning the Government on the subject. We learn that they urge, in favour of their request, that by so doing they will be able to defend the acts of the Government from any attacks that may be made upon it. They have hitherto been debarred lest their attendance might prove detrimental to the Executive, but if they intend to defend it, so far from not allowing them, the Government will find it to its advantage to employ their instrumentality: for if attacks upon their policy are made, it is only right that some defence should be made: if then the officials attend lectures for this sole purpose, some good fruit must undoubtedly accrue. The outside public have the privilege of conducting lectures and discussing politics freely; although the arguments used are frequently based on wrong premises, yet they find favour with the audience, even when against the administration. In instances like these, if the officials could hold meetings, they could act, so to speak, as counsel for the Government, and could answer the arguments of its opponents, a course of conduct which should decidedly be permitted. Lectures have become very popular of late and have gained considerable influence over the public. At such times if the Government finds itself unable to forbid these lectures, it is the duty of any official of sufficient boldness, to study the art of lecturing and to oppose the influence acquired by the private lecturers. If this is allowed, as we said above, the result would decidedly prove beneficial to the Government, it being well understood, however, that any official maligning its acts should be dismissed from his place.

The above represents the views of the officials who are now about to petition the Authorities, but we will not decide how far they are correct. At the time when the order debarring their attendance at public lectures was first issued, Mr. Ooye, one of the staff of this journal, wrote an article to the following effect:—"The officials are, of course, bound to obey the orders of the Government. They have now been forbidden to attend public meetings while private individuals can do so freely. If any of the officials therefore wish to receive any and better assign their offices and retire into private life; and if they do not care to take this step, they had better give up all desire of lecturing." Now at the time, Mr. Ooye's remarks were considered by everybody as being too severe, but he doubtless had some good reasons for using such strong expressions. The officials are Government servants with Government pensions; if they therefore should attack the political administration instead of defending it, the people would despise them for being double-tongued. If, however, the rumour is reliable that the officials are anxious to act as counsel for the Government and to deliver speeches in its behalf, we are only too glad to hear it. In lectures on political matters people have their own ideas, often founded upon partiality for one side or another, and it is on this account that our political lecturers are very desirous of having their opinions criticized, just as, in the English Parliament, some members attack, and others defend the policy of the Government, by which at length a satisfactory opinion, based on the arguments of both sides, is arrived at. In our country, where we have no National Assembly, should government officials and private lecturers be allowed to hold discussions, there will no doubt be some place, fixed upon in which the *pros* and *cons* of all political matters can be argued, and the private lecturers will feel very gratified if they gain the best of the argument. If the officials bestir themselves and obtain the permission required, it would lead to the Government gaining more and more influence, and the people would become more and more encouraged. We regret having no definite knowledge as to the truth or not of the rumour, but we most earnestly hope, for the sake of the populace, that this important step may be granted.

#### ITEMS FROM THE NATIVE PAPERS.

We have heard that the body guards furnished by the Government for the protection of the Ministers and Privy Councillors will be abolished, and that they are each to be allowed two hundred yen a month to provide substitutes.

Highway robberies have been very frequent of late at Maeda-mura, Yabe-gori, Settsu, and the authorities of Hiogo Ken have therefore established a police station at the place, in order to protect travellers from further molestation.

A very hilly road called Kanegasaka runs along the boundary line of the districts of Taki-gori and Ikami-gori,

in Tamba. The road is very steep and, in fact, almost impassable; wherefore the residents of the locality have determined to make a tunnel about one hundred and fifty ken (fathoms) long, which will render the road available for wheeled-traffic. The estimated cost of the undertaking is 30,000 yen, which will be borne entirely by the inhabitants of the district.

The police of Kioto Fu are unremitting in the vigorous discharge of their duties. On the 18th instant, a robber they were in search of fled to Hiogo Ken, and three constables followed in pur-suit. On the 21st instant the criminal, who is a most notorious thief, was arrested.

We hear that at a recent meeting of the Cabinet, one of the Privy Councillors moved a resolution that the navy should be strengthened. The proposal was agreed to.

It is rumoured that the next meeting of the Local Governors' Assembly, will take place at Tokio in the spring.

Information has reached us that His Royal Highness Prince Henry of Germany has arrived safely at Plymouth in England, with his ship the *Prinz Adalbert*. When His Royal Highness visited Japan we were, it seemed, careless enough to offend his dignity, and our editor, Mr. Matsui Shingiro, was fined 150 yen and imprisoned for five months. We are therefore in great fear of this Royal Highness. However, he is not likely to visit Kobe again in a hurry, and consequently we, the journalists, and also the members of the police force, can pursue our respective avocations free from apprehension, as far as the prince is concerned.

It is reported that thirty of the Tsushima islanders, who have been residing at Fusan for a considerable time, are to be enrolled in the local police force.

The *Hakodate Shimbun* states that the rice crops have been very good in Akita Ken. In fact the yield is reported to be double that of last year.

The same paper says that Russian soldiers stationed at Saghalin kept the inhabitants in good order, but they have been recalled to the mainland, owing to the rumours of war with China. The consequence is that a number of the convicts have broken out from the penal establishments and the remainder of the people are in a state of terror.

Mr. Watanabe, a wealthy resident of Isumakichi-mura, Kariba-gori, Niigata Ken, recently had the foundations dug out for a godown. The workmen employed came across a jar containing over 34,000 ancient bronze coins of twenty different kinds. The matter was reported to the authorities.

At the request of the police committee of the Kobe Municipal Council, the Hiogo Kencho officials have selected eight constables from the Hiogo police, for service in the newly organized Kobe force. The men enter their new sphere of duty on the 1st of next month, and will receive a monthly salary of \$8.00 each. We are informed that a sergeant has yet to be appointed, who will be paid \$12.00 per month.

We understand that Admiralty Courts will shortly be established. The judges appointed will be chosen from the officials in the Naval Department, and these tribunals will first be opened at the treaty ports.

Mr. Takasaki, the governor of Okayama, will visit the capital in a few days. On his way to Tokio he will call at Osaka.

An official of Hiogo Ken has gone to Tokio on business relating to the laying of a telegraph cable to the island of Awaji. It is confidently expected that this useful work will soon be carried out.

The passenger carriages on the railway between Kobe and Kioto have hitherto been varnished with imported varnish, but the carriages on that portion of the line between Otsu and Tsuruga, are to be painted with Japanese lacquer, which is both handsomer and more durable than foreign varnish.

Two new journals have made their appearance; one in Tokio called the *Rikugo Zasshi* (Universal Intelligence) and the other in Kioto, styled the *Rio-Kio Zasshi* (Intelligence affecting our two Religions). The Tokio paper regrets that there is not in this Empire one settled form of religion in which all classes can join. It states that Christianity is a very good faith to believe, and will supply the want. Therefore the *Rikugo Zasshi* is started with the idea of assisting in the introduction of the Christian religion to Japan. The *Rio-Kio Zasshi*, on the other hand, is established for a diametrically opposite purpose.

It is announced that the mission of the paper is to protect the Buddhist and Shinto religions from the alarming increase of Christianity in the Empire.

On the 23rd instant, the officials of the Kobe Custom House held a social gathering at the Tokiwa-ro, on Suwa Hill. Mr. Takahashi, the Commissioner, and several others addressed the meeting, and a very enjoyable evening was spent. There were fifty-eight present, and it is said that these re-unions are to be held quarterly.

A large whale, said to be thirteen hiro (sixty-five feet) long, was caught at Nishinomiyu, Kawagori, Hiogo Ken, on the 24th instant. When first seen the monster was in pursuit of a shoal of sardines, but the fishermen soon captured it. A speculator has purchased the whale, and intends to exhibit it in the temple grounds at Temma, Teijin, Osaka.

The authorities of Osaka have determined to economize even in the smallest details. In those rooms of the government buildings in which a hibachi is used, no stove will be allowed, and where there is a stove, the hibachi will be banished.

It is reported that the governor of Nagasaki Ken has addressed a memorial to the Central Government, urging the advisability of establishing an extensive shipping company at Nagasaki to engage in foreign trade.

There are many applications to the Government from people in all the provinces, for permission to emigrate to Hokkaido. The authorities state, however, that as there is much snow at present in the north, which interferes with farming operations, the applicants had better postpone their departure until the spring.

The price of yarn is well maintained. Wax appears to be falling in value; because, although holders are trying to raise quotations, buyers are holding off for a fall. There are no transactions to report at present, but the tendency is downwards.

In metals there has been a falling off, and purchasers anticipate further reductions. Quotations are:—Bar Copper, 35.25 yen per picul; Lead, 10.50 yen; Tin, 54 yen; Zinc, 13.20 yen; Tin plate 9.60 yen.

For some days past but little rice has been received. The daily consumption and sales for other localities therefore caused a diminution of stocks, which has been followed by an advance of 50 sen per koku. The principal reason of the scarcity is the unwillingness of farmers to sell their produce. Under these circumstances it appears useless to expect any reduction in price until the new crop comes forward, and we are all very anxious to see supplies arrive.

The price of imported iron will, it is anticipated, continue firm. At present no sales are being effected, as purchasers are unwilling to invest at the high quotations ruling. Some business must, however, be done at the end of the current month to meet winter requirements. Stocks held are large.

A much improved condition has to be reported in the money market. The merchants appear to be better supplied with money, and the interest on the Government Loan Bonds is being paid. The current rate of interest has fallen to 7 or 8 mon per dien.

In kerosene, the price has receded about six sen per case, owing to the fall in dollars, and large orders have consequently been pouring in from the provinces.

At Kobe, foreign merchants are holding off at present in consequence of the decline in specie, but no alteration in prices has yet been attained. As soon as the money-market commenced to improve considerable business was done by the native merchants, and the daily rate of interest went down from 8 mon to 10. This is reported to be owing to many traders raising loans of kinsatsu on the deposit of silver as security.—*Hiogo News*.

#### THAT NIGHT IN JUNE.

"What a charming day, grandmamma!" says Mr. Wilding, walking into the small morning-room in Pennywell road, South Kensington, and directing a genial glance at the faded remains of what once was beauty, reposing in an antiquated armchair. It is a charming day. Outside, the sun is beating heavily on road and house and such luckless beings as must be abroad. The whole earth is bowing before its majesty, going humbly, and imploring with faint gasps a breath of air. Inside, the blinds are all pulled down as though to exclude it, and in the grate a fire—an actual, roaring, maddening fire—is burning.

"Charming, is it?" says grandmamma, declining to see the geniality of her visitor. "Can nature produce a charming day in

this age? I think it chilly." She is sitting with her knees well into the fire, and with the grim expression that usually greets her grandson's approach upon her withered lips.

"Why not try a foot-warmer and a fur cloak?" says Mr. Wilding, furtively wiping his brow. "You don't take half care of yourself; and really during the present inclemency—"

"May I ask what has brought you here to-day?" interrupts she, with an amount of ungraciousness difficult to conceal. But he is accustomed to her incivility; and as Brenda is nothing to him, and he is less to Brenda, he hardly takes it to heart.

"An overpowering desire to see you," he replies indolently, but with an admirable assumption of amiability.

"Pray spare your gibes when addressing me," says the old lady, tartly. "Keep them for your unfortunate clients, if you have any. Something besides a dutiful consideration for my welfare has brought you here to-day. What is it?"

"What an intelligent person you are, grandmamma," murmurs he languidly, with what is meant for enthusiasm, but ends in sarcasm. "Concealment with you is impossible. Another hint, of course, a very secondary motive has brought me here this morning. The fact is, I have some stables for the opera, and I thought perhaps Brenda might like to hear Patti again."

"And to hear with you alone? Certainly not! Nothing of the sort," says Lady Molyneux with emphasis. "If that is your mission, George, it is unsuccessful. I shall never give my consent."

"I never dreamt you would," replies the prudent George, who had dreamed it fondly, nevertheless. "Josephine will come with me. You can scarcely object to trusting her with her married sister."

"Humph, Jose! I always say Jose is only half married, that man makes such a fool of her."

"And even if Jose were not in question why should she not come with me alone?" pursues he, his foot on the fender, his eyes on the repellent old face, so lined and seared with age and querulous discontent. "Surely a cousin may count as a brother any day."

"May it? I don't think so. I can't say how society may regard it in these indecent days, but, in my time, one relative was never mistaken for another. Besides, there are cousins and cousins."

"And which am I?" asks he, with so much careless indifference as stings her.

"You are your father's son," replies she bitterly. "No one of the blood ever came to good."

"I can't say you are over civil," returns he with an insolent shrug; and then the door opens, and Brenda comes quickly, and with the unpremeditated manner of one who anticipates an empty room. Seeing George, she starts perceptibly, smiles involuntarily, and blushes beautifully.

She is a very pretty girl, of middle height, with large dark eyes shaded by lengthy lashes, a riante mouth, and the dearest little nose in the world.

"Ha! Brenda," says grandmamma, looking round—the blush and ready smile have faded by this time, and are a secret between her and her cousin—"come here."

The girl having shaken hands with George in a calm, orthodox fashion, goes up to Lady Molyneux's chair, and, standing behind her, leans on the top of it. So standing, her face is hidden from grandmamma.

"I have some tickets for to-night. I want grandmamma to let you come and hear Patti," repeats Wilding coldly.

Miss Molyneux is preparing to go into ecstasies over this news when she is stopped by a vigorous gesture of the hand and a frown from her cousin. Changing her role on the spot, she says differently:

"I have seen Patti so often. It is good of you, George, to think of me; but really—"

"Oh!" says grandmamma, making a praiseworthy but utterly hopeless effort to turn her neck so as to see the flower-like face bending over her chair. "What is it you say? Not care? I beg, Brenda, you will not try to copy the *bad* airs that distinguish, and render obnoxious, the youth of to-day. I think you ought to go. The tickets are bought, and I object to extravagance. Certainly you should go, if it were not for Disney. Is it that you think he would object?" anxiously.

"I was not thinking of Lord Disney," says the girl proudly.

Wilding is staring very hard at her, and she lowers her eyes and flushes hotly—she scarcely knows why. Perhaps she fears he may see the repugnance and detestation and deep grief that disfigure the beauty of her face.

"Even if Brenda is to marry Lord Disney," says Wilding calmly, carefully particular about giving him his formal title. "I do not see—"

"If," interrupts the old dame, fiercely; "if, indeed!"

"Dost thou answer me with 'ifs'?" says Wilding in a low tone to his cousin, who returns his glance with a faint, a very faint smile.

"Of course she will marry him," goes on grandmamma, shrilly. "What I throw even a doubt upon an engagement that has lasted since Brenda was fifteen! an engagement so admirable, so romantic, so splendid with regard to settlements! It is like you, George, to disregard its importance. A girl without a penny; the father, the son; reckless—reckless!"

"Do you think he will break this suitable engagement if Brenda goes to the opera with her sister?" asks Wilding in an impossible tone.

"I don't know, I'm sure, what he may think of it," says grandmamma, perplexed. "You see Disney in many ways is an eccentric."

"He would be, you know, at his age," says Wilding, slowly.

"What do you mean, George?"

"I mean eccentricity generally accompanies old age," says Wilding obstinately.

"He is not old. Certainly not old. He is just in his prime."  
 "So difficult to define that word 'prime,'" murmurs he, provokingly. "But of course I erred. He can't be old. He is even younger than you, grandmamma!"

"Perhaps, after all, I may as well see Patti again before the season closes," puts in Brenda lightly. "As you seem to advise my going, grandmamma, I shall accept George's offer."

"Well, be sure you take my latch-key; I can't have my servants kept up all night," says Lady Molyneux, determined to sustain her unamiability to its dreary end. "Half-past 10 is my hour. And as Jose will be with you, you can let yourself in and go to bed, for one night, without assistance. Good-luck into hours." As Jose, her ladyship's maid, is virtually mistress of the house, tyrannizing even over the tyrant grandmamma, every one sees the sense of this remark.

"I shan't forget, dear," says Brenda, straightening Lady Molyneux's cap, which has gone somewhat awry during the heat of argument.

"Then I suppose the matter has arranged itself," says Wilding, quietly. "Good-by, grandmamma. I shall see you to-night, Brenda," holding out his hand. She gives him hers, and raises, to his eyes luminous and glad. She does not care to conceal from him the satisfaction that warms her heart as she dwells upon the pleasure that lies before her. Perhaps she hardly knows how dangerously sweet that pleasure is. Is it indeed Patti's or George Wilding's voice she likes best to hear? She has promised to marry Disney, and she will marry him—of course, that is quite settled. Nothing can alter that; but just now—now—for a little while out of all her life why not be happy?

And Jose will be with her. Dear Jose! Nothing can be sweeter than Jose! Once or twice before she has gone to the opera with her and George, and she has always been so engrossed with the music and so deaf to all other sounds, and so absolutely determined not to enter into any conversation of any sort, with any one that Brenda and George might as well have been alone.

"Yes, to-night," she says softly, and smiles at him again, and sends him away outwardly calm, but with a heart that curses fate, grandmamma, and above all, Lord Disney.

At the appointed hour he calls for her, and at his command she descends the stairs beneath the gaslight, clad in her prettiest gown, with a soft cashmere cloak around her, and on her head the daintiest of swansdown hoods, from which her eyes looked out, dark and misty and loving. Her hair is roaming at its own sweet will across her low broad forehead, her color is somewhat heightened, altogether she looks distractingly pretty as she steps into the night bloussian, and away drive they in the omnibus to take up Jose.

Alas! Jose is not to be taken up! (the expression of sorrow is all my own); upon the stairs, with a huge white fleecy shawl twisted round her unhappy head, she stands, "like Niobe, all tears."

"It is toothache," she explains in muffled tones. That fiend amongst pains has laid hold of her, and having her safely in his clutches, refuses to release her without a heavy fine. Fred—her husband—has gone for a dentist to extract this fiend.

"And of course it is dreadful, darling, really quite too dreadful, but you see I can't go; so (George must have sole charge of you to-night."

"Grandmamma will be so angry," says Brenda, nervously.

"Why need she know? Grandmamma is an old bore," says Jose, with heartiest meaning. She is very young, and is a person of undoubted spirit; and, as a fact, regards grandmamma with irreverence, and Lord Disney with disgust and openest disdain. "She will never find it out," she goes on as cheerfully as the fiend in possession will permit her. "If I had listened to all her crotchets and worldworn theories, a year ago, I shouldn't be married to Fred now. Oh! dear, oh! dear, will he never come! This pain is maddening. There, go away, you two. And take great care of her, George. And bring her home directly, you know; and I shall tell Fred to suppress all about the dentist to-morrow."

"It sounds very deceitful, doesn't it?" says poor Brenda.  
 "It is nothing when you are used to it," replies the married sister.

"And I am safe to be found out; I always am," says Brenda.  
 "Well, it is all grandmamma's own fault. On her head be it," says Jose, who seems to enjoy the situation far more than the other two. "Never be a bugbear, Brenda; you see what awful mischief accrues from making one's self a bogey. Oh! I shall go out of my mind if this hateful pain continues much longer. Go away, do. And come and see me to-morrow, and tell me all about it."

The opera is charming, and Patti excels herself; but time flies and bright things fade, and soon the curtain drops, and Spanish castles fall; and Brenda sighs, places her hand upon her cousin's arm, and soon they have made their way through the fashionable throng, and are speeding homeward through the deserted streets.

As they arrive at No. 7, some clock in the distance chimes 12. They run up the steps, and Brenda puts her hand in her pocket to draw out the latch-key.

"Be sure you don't commit yourself about Jose's defection," says Wilding; and then he stops short, struck by the change in her face.

"George, did I give you the key?" she asks in a frightened tone.

"No. It was on the sideboard when we came out. I told you to remember it. Have you not got it?"

"I have not. I never brought it at all. I must have given it to you," desperately.

"I am sure you did not."

"Nevertheless try. Try your pockets. Try every pocket you have," says Brenda, miserably.

"Well, never mind," says George. "We must only put a good face on the matter, and ring up the servants."

"Ring! You might ring until morning! You might ring until you were black in the face!" exclaims Brenda with the impatience of despair, "and nobody could hear you. Why, they all sleep at the very top of the house, beyond all hearing; and grandmamma never will get a bell put to their rooms. What is to be done?"

"Come to Jose."

"Jose has no servants' bell either, and they all go to bed early," replies Miss Molyneux, on the verge of tears.

"Good gracious," says Mr. Wilding, at last thoroughly roused to a sense of the awfulness of the situation; "what on earth shall we do!"

It is a dark and gloomy night. The "Chaste Diana" has sunk and gone to bed; the stars are nowhere. Not a sound disturbs the silence that envelops the quiet road, except an occasional cough from Fenmore the coachman, who is waiting with the brougham to convey Wilding home, and who sits upon the box the very model of propriety, and never so much as glances in their direction. Perhaps he is wrapt in fond dreams of days gone by when he and Mrs. Fenmore were "acourting," and has a secret sympathy for the two on the doorstep.

A huge black cat, hideous as a gnomie, springs from some dark corner, and with a weird yell rushes across the road and disappears down some area at the opposite side.

"This all comes of doing what I knew was wrong," says Brenda presently, facing her companion silent. "I wish," ungratefully, "you had never asked me to go to that horrible opera."

"I thought she sang very well," alluding to Patti. "And I certainly couldn't be expected to know how things were going to turn out," says Mr. Wilding, somewhat aggrieved.

"You shouldn't have listened to Jose; you should have brought me straight home. It is all your fault," says Brenda, most unfairly.

"Well, it wasn't I forgot the latch-key, anyhow," says Mr. Wilding, unwisely incensed.

At this unlucky speech his cousin, seeing at last a good opening, gives way to bitter reproach.

"Yes, that is just like you," she says, large tears gathering in her lovely eyes. "To upbraid me now, when I am most unhappy. If you were in trouble, George, I would not treat you so."

"Don't speak to me like that," says Wilding, miserably. "I am far more upset about this unfortunate matter than you can be."

"That is impossible. Grandmamma can't look at you as though she meant to devour you in one bite."

"If I had anywhere to take you," goes on George, "any home of my own, with some old aunt at the head of it, for instance. Lots of fellows have aunts who live with them," grudgingly. "But I never saw the aunt that would live with me; and of course a bachelor's rooms wouldn't do, not if I vacated the streets all night. Why on earth am I not married?" says Mr. Wilding, distractedly.

"Is this a time to talk nonsense?" asks Brenda with sudden vehemence. "Of course, if you were married I should not be here at all, and that would end the whole matter."

She is looking up at him from under the bewitching hood, with two angry eyes that say far more than their owner is aware of. Her lips are quivering; two crimson spots enrich each rounded cheek. Wilding, gazing at her extreme beauty, loses his head.

"I am not sure of that," he says musingly. "I think if I were married, you, and you only, would be standing just there."

"George! George! have you forgotten?" entreates she, shinking from him.

"I have forgotten nothing, not even Disney," returns he, recklessly. "I know you don't care for that ghastly old corpse, laid out by Poole; how could you? And I love you, darling—darling. Forgive me, Brenda; I should not speak to you like this now, and here, but it has been on my heart so long, and—I can't help it. But, if you will give me even the faintest encouragement, you shall never marry Disney, I swear."

Perhaps he might have said even more, but Miss Molyneux has burst into tears, and has covered her face with her hands, and is sobbing quietly but bitterly.

"Don't do that, Brenda," exclaims he passionately. "I can stand anything but that. Look here," desperately, "something must be done, you know; you can't stay here all night. Wait one moment. Rushing down the steps he touches the devoted Fenmore's elbow, and says something to him in a low tone. An earnest conversation follows. Then comes a faint sound as of silver falling upon silver, and then Wilding returns to his cousin's side.

"Come," he says quietly, taking her hand, "I have arranged for you. There is no help for it, Brenda; you must do as I tell you."

Brenda, still crying silently, suffers herself to be led to the carriage, and together they enter it again and drive away.

At luncheon, next day, Brenda is singularly silent. Lady Molyneux has fortunately asked few questions about last night's proceedings, and Lord Disney—who is with them—disdains to seek information about anything in which Wilding had a part. Theodore, Brenda's brother, is also present.

Grandmamma's indifference is all that can be desired; Disney's sullen silence equally happy; and, in fact, all is going merry as a marriage-bell, until Theodore unconsciously, but fatally, lets fall a bombshell that blows the blessed calm to atoms.

"I say, Brenda, it was well you forgot your latch-key last night," says this misguided youth with the utmost bonhomie. "I found it on the sideboard after you had left, and but for it could not have let myself in, as I have lost my own."

His sister turns very white.

"Brenda's—my latch-key, you mean," says grandmamma, quickly. "But you dream, Theodore; Brenda had it with her at the opera; she herself could not have got in without it."

Brenda casts an anguished glance at Theodore, who is—and, what is worse, looks—distinctly puzzled.

"Explain, Brenda. You surely had it," says grandmamma in a

value that admits of no evasion. Disney, laying down his knife and fork, gazes with half-closed eyes at the embarrassed girl.

"Hail what, grandmamma?" asks she faintly, to gain time.

"What? The latch-key. Are you deaf?" says grandmamma.

Brenda is silent. Lies are at any time abhorrent to her, and now to tell one will be useless; as her hesitation has been marked.

"Brenda, speak!" says grandmamma in an awful tone. "You had it with you?"

"Of course she had! What a fuss about nothing. It must have been my own I found," breaks in Theodore, lying valiantly, but vainly.

"I had not, grandmamma," says Brenda, bravely, but in accents hardly intelligible.

"Then pray how did you come in last night?"

"I did not come in at all," replies Brenda in an agony. "Grandmamma, listen, let me explain—"

But grandmamma is quite past explanation. She has risen, and is standing with both her old withered hands pressed upon the table, as though to support her under this crowning horror, and is glaring at the terrified child with fierce dark eyes.

"Am I to understand," she says, "that you spent last night out of my house?"

"If you would let me speak," says Brenda, sobbing.

"Answer me, wretched girl. Were you with your sister?"

"No. She—"

"Not here, nor with your sister, but with George Wilding. I presume. Hah! Not another word! I always knew what would come of your intimacy with that degraded young man."

"This is all shocking—shocking," says Lord Disney in his slow, aggravating manner. "And, or—brilliantly—shocking! Of course, Miss Molyneux, this young man—your cousin—having found more favor in your sight than I have been fortunate enough to find, I beg to resign my present position, and withdraw from an engagement that no doubt is irksome to you. You will pardon me, Lady Molyneux, if I say this is all very sad, very sad," with an elaborate bow.

"Sad—it is disgraceful. Go, girl, to your room, and stay there until I decide on what shall be done with you. My roof shall no longer cover one so lost to all sense of—"

Theodore, rising abruptly, goes to his sister's side and passes his arm round her.

"Look here, grandmamma, stop all that," he says with a frown; "it might do at the 'Duke's,' but it is out of place here, and I won't have Brenda abused."

Here some one, with a grateful smile, removes his arm from Brenda's waist, and places his own there instead. It is George Wilding, who has entered unannounced; just a minute or two before a small, plain woman, who appears, and stands unnoticed in the doorway, with a pretty swaddown cloak and hood upon her arm, that contrasts oddly with her own meagre garments.

"Who is abusing Brenda?" demands George Wilding, looking quietly upon the assembled group, yet with a curious light in his eyes that marks him dangerous in his present mood. "Who is casting even the faintest slur upon her? He shall answer to me for it."

He stares coolly, and somewhat insolently, at Lord Disney as he speaks, and that discreet nobleman, dropping his eyeglass, discovers a difficulty in finding it again.

"I've made some lovely mistake, you know. It is all my fault," says Theodore, with extreme contrition.

Here the plain little woman in the doorway, perceiving a lull in the conversation, comes timidly forward.

"Please, Miss Molyneux, I have brought you your opera cloak," she says, "as I feared you might be wanting it again to-night."

"Oh thank you," says Wilding, turning to her promptly. "Perhaps, Mrs. Fenmore, as you are here, you will kindly tell Lady Molyneux of all your goodness to Miss Brenda last night. How you took her in, and made her very comfortable in your own house, when—because of the stupidity of the arrangements in this house—she found herself out in the cold; and how, yourself, brought her safely back here this morning."

"Oh I'm sure, my lady," says the coachman's wife, dropping a courtesy. "I'm only sorry I couldn't do more for Miss Molyneux. I doubt she was desperate uncomfortable, my lady; but I did my best."

"What is all this?" says grandmamma. "I fail to understand; and riddles are an abomination to me."

"When we found it impossible to ring up your servants, and knew the latch-key had been forgotten, I took Brenda to Mrs. Fenmore's house, where, if not exactly in a Belgravian mansion, she was at least as safe as in the home of a duchess," with a kind bow to Mrs. Fenmore. "Don't cry, Brenda, tears are too sacred to be wasted on such a miserable occasion as the present."

"Did Miss Molyneux sleep in your house last night?" asks Lady Molyneux, addressing the coachman's wife, and insolently giving Wilding to understand she refuses to credit his history unsupported.

"Yes, my lady, she came to me a little after 12 o'clock, and proud I was, my lady, to be of the least service to her. I brought her back myself this morning, which I hope, Miss—respectfully to Brenda—"you didn't catch cold, and are none the worse for your strange bed; which Fenmore do say that change of sheets at any time is most dangerous."

"I am quite well, and I thank you very much, Mrs. Fenmore," said Brenda in a stilled tone. As her face is pressed against George's gray coat, this is hardly cause for wonder.

"As for you, sir," says Wilding, turning to the disappointed lord, "having heard you with my own ear decline the honor of an alliance with this young lady, I beg to tell you it was just as well you did so—it saves trouble, as she had not the smallest intention of marrying you."

"Sir!" exclaims the aristocratic lord, taking fire at this insult. "No, sir, not the smallest," repeats Wilding, contemptuously; she has the good—I mean, of course, the bad—taste to prefer me, which, after all, when one comes to think of it, is only natural. What bond could there be between May and December?"

"Brenda," begins grandmamma, with much wrath.

"Go and put on your things, Brenda, and call on George, sternly. I shall take you to your sister, to my love, in a food whisper to the trembling girl who at the world's cup is badly from the room."

"You, madam, have behaved infamously to her," goes on George, determined to carry things with a high hand. "And when you said she should never step another night beneath your roof, you spoke the truth. I will not have her heart broken. If you wish to apologize to her for this morning's conduct, you can see her at Cromwell road."

Having made this galling suggestion, he has the good sense to beat an instant retreat.

"I must say I think you deserve every bit of it," says Theodore to his stricken grandmamma. "You have acted toward Brenda for the last two years like a regular old Tartar, and here's the end of it."

"Leave the room, you wicked boy," commands grandmamma in a shrill tone; and Theodore for once obdies her, more, I think, because he wished to get than from any high sense of duty.

"And I have always borne with that boy, and honored him in every respect," says Lady Molyneux, snuffing her eyeglass indignantly. "To say I deserved such treatment—I!"

"I can't help saying I agree with Theodore," says Lord Disney, solemnly, with aggravating slowness.

"Oh!" says grandmamma, instantly putting down the handkerchief, and turning to face the enemy with renewed vigor, as she scents hostility in a fresh and unexpected quarter.

"Yes, I say you have acted abominably," goes on Disney, who is evidently not afraid of an old woman. "You have accused that charming young lady, your granddaughter, of an indiscretion she would scorn to commit. You have jumped at conclusions, and it's—it's—it's execrable form insidious, to jump at conclusions."

"Form!" says grandmamma witheringly, what is it you mean by that? In the human form divine you are mumbling about; or is it slang you are using? If so, I think it most unbecoming in any one of our age to use the vile manners of the present day."

This is a cruel snarl; and the elderly bent, in spite of Pools and Moby and Blunder winces perceptibly.

"You should have investigated matters before going too far," says he, somewhat depressed.

"So should you," retorts she; "you were in a vast hurry no thanks, to relinquish your bride."

"I thought you for it all," returns he fiercely.

"Talk, man! Don't think I care for either your blame or commendation," says this indomitable old dame, regarding him scornfully. "George Wilding will marry her as soon as, but that puts a finish to it. And I'm not sure I'm not better off, demanding your portion, Disney, I begin to think he is the man of the two."

"Your opinion, madam, I am, of course indisputably," with a low bow. "But yet I flatter myself your granddaughter was willing enough to become Lady Disney, until you—"

"Did you ever hear of young Lochinvar?" ask grandmamma with a maddening eagerness; "it reminds me somewhat of your case, I And what was that George Wilding said about May and December?"

"Ha—ha—good, very good!"

"You are an odious old woman!" says my lord, losing all patience.

"Oh?—where's your vaunted manners, Disney? Your courtesy, bow—your incomparable salute! I will trouble you to leave this room, this instant," says she, striking her gold-headed cane upon the floor with considerable force.

"I obey you, madam, willingly and now take my leave of it and of the house, and of you too, I hope forever," returns he furiously; and striding up the room and through the hall, passes beyond the portals of No. 7, never to return to Brenda's door.

## METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, NOVEMBER 26TH, 1880.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.

Light continuous line—max. &amp; min. thermometers.

.....represents velocity of wind.

.....percentage of humidity.

Max. velocity of wind 31 miles per hour on Friday 2 p.m.

The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer for the week was 30.110 inches on Monday, at 7 a.m., and the lowest was 29.453 inches on Friday, at 2 p.m. The low barometer on Tuesday was accompanied by a wind of considerable force, which reached a maximum velocity of 31 miles per hour. The highest temperature during the week was 61°.2 on Friday, and the lowest was 30°.8 on Tuesday. The maximum and minimum for the corresponding week of last year were 61°.5 and 35° respectively. No rain fell during the week and none fell during corresponding week of last year.

THE GREAT TEST

## WONDER OF MODERN TIMES HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the Dargomah Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

## SIMPLE, SAFE AND CERTAIN! HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World  
May 17th, 1873.

## INSURANCE AND THE FIRE DEPARTMENT OF YOKOHAMA.

OUR CITIZENS with some reason complain of the high premia charged for insurance of property from fire, rates which were established fourteen years ago after a conflagration of an altogether exceptional nature. The extent of the damage inflicted at that time was due, at least to some extent, to the comparatively inferior character of the buildings then forming the settlement, to the lack of sufficient appliances for extinguishing fires, but chiefly to the causes always most efficient in promoting the spread of fires in towns, long continued dry weather preceding with high wind at the time of the outbreak of the flames. The class of buildings now standing, and in process of erection, are far superior in the power of resistance to fire than those formerly in use, for the stone now so generally employed, either as the sole material or as an outer casing of walls, soft and deficient in strength as it certainly is, has a remarkable endurance when exposed to heat; while brick, also much used at present, is generally acknowledged to be the most thoroughly fireproof of ordinary building materials. The settlement is also tolerably well supplied with engines, both hand and steam, under the control of bodies of men lacking neither strength nor courage. It would seem therefore that there is no sufficient reason for further continuance of the excessive charges of the insurance corporations.

On the other hand, however, it may be urged, and with justice, that though apparatus and men are, if properly used, sufficient for all ordinary cases, at present neither men nor machines are able to effect more than a fraction of the good, of which they are really capable, from the practical impossibility of any uniform and combined

action on their part, arising from the absence of proper organization under one competent and responsible head. Individual effort, or the independent action of each separate company, can accomplish but little compared with what may be done under thorough and semi-military discipline and organization. The combination of existing companies and brigades into one force, with a single responsible and properly empowered marshal or superintendent at its head, is the first and most important step to be taken toward placing our fire department—if it deserve that title at present—in a condition where the brave and ready labor which it always performs may not be directed at cross purposes, or wasted under well-meant but mistaken orders. A second, perhaps, equally important requisite is the securing of a reliable and sufficient supply of water for any emergency. This should not be difficult so far as the settlement proper is concerned, and several possible solutions of the question will undoubtedly present themselves. Cannot tanks be sunk at convenient localities, to be filled by the influx of the tide, self-acting valves retaining the water during the ebb, or as is often done on a small scale by private parties, similar tanks be connected with neighboring buildings so as to receive the drainage from their roofs? The latter is probably the only feasible method so far as the Bluff is concerned, and in this country of large rainfall need seldom fail to afford the necessary supply of water.

The extent and impunity with which robbery is carried on during fires has of late years rendered salvage of property almost impossible. So far as the owner is concerned, it makes but little difference whether his effects are consumed by the flames or absorbed in the capacious receptacles of the native town. At present, unless a large and devoted body of Europeans is extemporaneously organized upon the spot, with a clear understanding of the circumstances, and definite arrangements as to a rendezvous and the maintenance of a guard upon every item of property removed, as was successfully done in at least one case during the late fire on the Main Street, it is hardly worth while to attempt to save more than can be carried on the owner's person. Such an impromptu but competent organization as we have just alluded to, can, however, only be accomplished under exceptional circumstances, and many causes may interfere with or destroy its efficiency. The protection of valuable property no doubt properly belongs to the police, but long and bitter experience has taught us how little we have to expect from it in this respect: while were the native police force all that could be wished for in efficiency and activity, from the very nature of things, salvage being invariably performed by a heterogeneous mob of Foreigners, Chinese, and Japanese, it would be impossible for the police to determine whether a given package of valuables was in the hands of the owner, his servant, or the veriest thief of Honmura. Any one who witnessed the rapid disappearance of the property

saved from the flames at No. 86, on the night of the 1st instant—and from at least one house upon that lot almost everything was successfully removed—and is informed that of the large amount of effects rescued from burning hardly a dollar's worth has been recovered by the owner, can appreciate the magnitude of the evil of which we speak. This plundering, which really appears to be conducted with system and in a business-like manner, is by no means necessarily confined to houses in flames, or even to those in imminent danger. The confusion and alarm which extends throughout the neighborhood of a fire affords opportunities which, in the recent case already quoted, were quickly seized upon by the thieves to their considerable advantage. We see no means for the avoidance of this really grave danger to the property of every member of the community but in the formation of a properly organized and equipped salvage corps, separate from but working in harmony with the fire department, should the latter be put into proper condition. The personnel of such a corps could be largely of natives, selected from the many known to residents as reliable, and, consequently, chiefly from the employés of foreigners, but should include a sufficient number of Europeans to direct, control and support the native element. The members of the organization should wear a simple but distinctive and not easily imitated badge and should, with the exception of owners and their households and members of the fire department, be the only persons admitted to burning buildings or those in imminent danger. To be thoroughly efficient such a corps should be equipped with baskets, sacks, ropes and hooks, and should possess at least one suit of the new patent clothing for firemen, with respirator attachment, an item which might play an important part in saving life as well as property. In addition to these there should always be at command a few large fire and water proof canvasses for covering perishable property from sparks and wet, some chains, with hooks, for grouping into a mass, not easy to be moved, any property capable of being so united, but above all, a dozen or more light but strong covered carts with locks, for the removal and temporary storage of valuable and portable articles. Wherever these vehicles have been brought into use they have been found most useful, and as they could be made here for little more than the price of a jinricksha, the experiment would not be a costly one.

A salvage corps such as is proposed could be paid by an assessment upon the property saved, an arrangement calculated to stimulate to the utmost the efforts of its members.

Such, briefly, are some of the ideas suggested by recent events, with a knowledge of what has been accomplished under somewhat similar circumstances elsewhere. Few will deny that reform or improvement is necessary, while should our system of management of fires be substantially bettered, the community will be in a position to demand and obtain from the insurance companies a considerable reduction in the rates of insurance—now so heavy a burden on all classes of our citizens.

#### THE TRADE OF CHINA FOR 1879.

WE are in receipt of the fifteenth issue of the Reports on Trade at the Treaty Ports in China, issued by the Inspectorate-General of China Customs. It contains statistics and remarks on the total trade for the year 1879, as well as on the trade of each port. Before proceeding to lay before our readers the general results of an examination of this volume, we may again draw attention to the

great utility of these reports—instituted we believe first by Mr. Hart, the present Inspector-General. In this respect the British Consular reports cannot, it seems to us, compete with them. The latter first go home to England, are then, in course of time, printed and laid before Parliament, and on their return to China are little better than ancient history; for another commercial year, with all its excitements and speculation has passed, and the previous year is all but forgotten. There is even some delay in the publication of the Custom's Report; but when the bulk of the volume, and the large masses of figures which are analysed are remembered, the time taken will not seem unduly great. We may also refer to the useful weather charts which are supplied by many Commissioners from their districts, and to the excellent maps of portions of China invariably contained in the reports. Thus in the present issue we have a well executed map of the province of Kiang-nan to explain the distribution of foreign goods from the port of Chinkiang, the towns in the interior being marked in such a manner that we distinguish at a glance what towns take 100, 1,000, or 10,000, &c. taels worth of foreign goods; also another map of Amoy and the surrounding districts, the geography of which seems to be at present but little known to foreigners.

Coming now to the trade, we find that its total value for 1879 attained the highest figure yet reached, viz, Taels 258,851,215 or £71,219,869 starting as against £70,632,188 in 1878. Of this sum foreign trade monopolized approximately Taels 155,000,000, the balance of about Taels 99,000,000, representing the home trade of China at the Treaty Ports. The comparison of the value of trade at each of the ports in 1870 and in 1871, shows that Ningpo decreased 11.64 per cent., while in every other case there has been an increase.

In seven of the ports this increase has been over fifty per cent, and in eleven over twenty per cent. More than half of the total trade is done at the four ports, Shanghai, Hankow, Canton and Tientsin. We find that of the direct foreign trade 77.56 per cent is with Great Britain and her dependencies, 7.82 per cent with the United States, and 8.60 per cent,—or half as much again as the whole trade between Russia and China—with Japan. The Statistical Secretary, remarking on this last item says:—"The trade with Japan has, since the year 1875, when it only amounted to Tls. 4,500,000, been steadily, though slowly, gaining ground. In 1878 it had increased Tls. 5,750,000 slightly receding, however, in 1879, during which period it fell short of the previous year by about Tls. 100,000." The whole of the great increase in the general trade, as compared with 1878, appears to the credit of Great Britain and her possessions, and consists chiefly in the large increase in the importation of Cotton piece goods (Tls. 7,000,000) and Opium (Tls. 3,500,000). The foreign import trade consist principally of Opium, Cotton and Woollen piece goods. The total amount of this trade is Tls. 63,928,083, of which Opium amounted to 44.43 per cent, Cotton piece goods to 27.48 per cent and Woollen piece goods to 6.03 per cent. The total value of the Cotton goods imported was Tls. 22,599,679, of which Tls. 3,868,743, or nearly five times the quantity imported in 1876, represented the value of the American Cotton fabrics. The demand for fabrics has been steadily and rapidly increasing in recent years. The mode in which these staples arrange themselves at the chief ports is peculiar. Shanghai, Chinkiang and Swatow are the chief distributing centres for Opium, Tientsin and Hankow for Cotton fabrics, Hankow for Woollen, while Ningpo is one of the chief emporia for metals. As to Kerosine oil, which forms such an im-

portant item of foreign imports into Japan, we are told that the Chinese have at last discovered that it not only gives a better light, but costs in reality much less than the Bean and Tea oil they have hitherto been in the habit of using; "it has now found its way by means of transit passes far into the interior, and its consumption throughout China will in a few years probably amount to something enormous."

The total value of the exports for the year amounted to Tls. 72,281,262, equivalent to £20,278,910 sterling. The staple exports are Tea and Silk. The percentage of the former was 46.03, and of the latter 39.60 of the total export trade. Foochow and Hankow are the chief centres of the Tea; Shanghai and Canton of the Silk trade. Takow and Swatow are the great ports for the export of Sugar; the greater portion of the Takow sugar being brown. In 1879, 284,000 piculs of this class were shipped to Japan. Amongst the items of export we find 744 piculs, valued at Tls. 18,784, "the highest on record" of human hair from Swatow. This was exported to Hongkong, to be transhipped there for foreign countries, and is doubtless at the present moment adding to the charms of many belles in Europe and America—who were probably in blissful ignorance of the fact that their beautiful curls may at one time have adorned the scalp of a savage Formosan Bôtan.

We have already furnished our readers with a *résumé* of two articles in the *Pall Mall Gazette* on the shipping trade of China, the figures of which were in all probability taken from the report now before us. We may, however, reproduce some very instructive general results. Of the total value of the coasting-trade of China 50.19 per cent is carried under the British flag, 41.91 under the Chinese, 4.67 under the German and 2.01 under the American; but of the total tonnage we find that 58.85 per cent is British, 31.26 Chinese, 5.18 German, 1.94 American and 0.99 Japanese. In 1870, 48.61 per cent of the tonnage was American; from this date it gradually decreased until from 28.55 per cent in 1876 it fell to 4.64 in 1877. The Chinese tonnage, on the other hand, which was only 0.44 per cent in 1870, gradually increased; until from 13.74 per cent in 1876, it suddenly rose to 33.17, in 1877. The total revenue derived by the Imperial Exchequer from foreign trade in 1879 was over 11,000,000 of taels; of this large sum 67.84 per cent was from British, 15.45 from Chinese, 6.83 from German, 2.25 from American, and 1.09 per cent from Japanese trade.

The population of the ten provinces of China within which the treaty ports are situated is estimated at 245,700,000. The number of foreign residents is 3,995, of whom 2,070 are British, 469 American, and 61 Japanese. In concluding his laborious and valuable report, the Statistical Secretary has the following general remarks of interest:—"It will be seen that the Foreign trade of China has for many years past been steadily increasing: new articles of trade have been coming forward year by year, and establishing themselves in continuous and growing demand. A desire, in fact, to take advantage of Western arts and sciences is surely, if slowly, gaining ground among the Chinese, and with the development of this will come the necessity for closer intimacy with the outside world, and a consequent appreciation of many ideas and appliances hitherto regarded with indifference or contempt. Many new articles have yet to be added to the list of Foreign imports; and Foreign machinery will in time to come enable the Chinese to take greater advantage of the resources of their country and thus increase its available wealth. The

establishment of Legations and Consulates abroad, by affording to those best qualified to judge, opportunities of knowing what room there exists for improvement at home, will in due time bear abundant fruit. In short, every incident which tends to draw China nearer towards the comity of nations will not fail to exert a favourable influence on her Foreign trade, and such incidents will be neither few nor far between as time wears on and a better knowledge of each other grows up between Natives and Foreigners. A study of the present and past would thus stimulate hope for the future. Higher results yet remain to be achieved, and everything seems to augur that the year 1879, replete as it may have been with unprecedented commercial prosperity, will but mark a stage in the onward progress of the trade between China and Foreign countries."

The Japanese Government will probably be surprised to find that, in one district of China at least, they are regarded as responsible for an increase in the consumption of opium. The Commissioner of Customs at Takow reports that in 1874, a sudden rise in the importation of the drug took place in Southern Formosa, and that it has continued on the increase ever since. He thus explains the fact:—"In 1874, on the occasion of the Japanese invasion, a number of northern soldiers, a large proportion of whom were opium smokers, were brought into this neighbourhood, and beside being themselves consumers, they induced by their example no small number of the country people to smoke, who had previously abstained, and thus the habit spread largely."

THE following paragraph from the *Times* of October 15th, will be of interest to those of our readers who take an interest in Hongkong politics, and we therefore reproduce it in full. It has evidently been supplied from the Colonial office, and it would therefore appear that much interest has been excited on the subject in England. It will be noticed that governor Hennessey's policy respecting the treatment of Chinese criminals in the colony has, in every respect been approved, and that His Excellency has now received instructions to alter the ordinances of Hongkong in accordance with this policy. The gist of these instructions is that Chinese are to be treated in the same manner as other criminals within that colony, and that the laws with respect to flogging are to be assimilated with those of Great Britain. It may be interesting to refer here to the fact, mentioned by the writer of the article on Japanese Prisons in our last issue, that flogging in Japan—although it was always mild compared to flogging with the cat—was completely abolished some time since. Japanese criminals are certainly not less numerous in comparison, or less daring, than those of other countries, and yet the government had no hesitation in dispensing altogether with corporal chastisement. Another point in connection with the treatment of criminals in Japan, also mentioned in the same article, that might well be followed elsewhere, is the very limited and strictly guarded power of punishment given to the gaol authorities for breaches of prison discipline. In Japan again, "that best of reformatory elements—industrial labour" has been completely adopted with marked success. Those whose knowledge of the Chinese is limited to those residing in Japan, can endorse the Governor's statement that the Chinese are not an exceptionally criminal race, or that they should be especially dealt with by flogging. On the whole, it has always seemed to us that punishments which are considered sufficient for the criminal classes of powerful, determined and reckless races like the Teuton, Anglo-Saxon and Celt, should also be sufficient to

restrain the criminal classes of a race possessing none of these qualities.

The Earl of Kimberley, acting on the recommendation of the Governor of Hongkong, has given instructions for the repeal of the local laws authorizing the branding of Chinese criminals, the repeal of all laws in Hongkong which impose flogging on individuals of the Chinese race exclusively, the abolition of public flogging and of flogging on the back. His lordship has also directed that all flogging be abolished in the colony except for such offences as entail flogging in England. In conveying those instructions to the Governor, Lord Kimberley writes:—"I have come to this decision mainly because I entertain grave objections on general grounds to the infliction of the punishments in question, and specially that of flogging for ordinary offences. In this country flogging has ceased to be employed as a means of repressing crime except in the case of certain crimes of brutal violence, and as a means of prison discipline it is confined to the cases of convicted prisoners who are guilty of serious offences against the regulations of the gaol. It must be borne in mind, however, that it is not always safe to conclude that punishments which are unsuited to a European community can be dispensed with in dealing with such a population as the Chinese population of Hongkong; and it will be necessary, therefore, that the effect of the changes you recommend should be very carefully watched." In the despatch conveying the Governor's recommendations on which the Secretary of State has now acted, the opinions of the Chief Justice, Sir John Smale, of Mr. Tonnochy, the superintendent of the prison, and of the other officers concerned in the administration of the criminal law were enclosed, and were to the effect that crime had been reduced and prison discipline improved while the Governor had, in the exercise of the Royal Prerogative, suspended branding and public flogging and reduced the annual number of floggings to one or two, instead of having them counted by hundreds. In the same despatch the Governor thus records his own experience of the Chinese race:—"For nine months past I have not sanctioned a single case of flogging, and life and property have never been so secure in Hongkong as at this moment. Crime has been reduced to a minimum, and while this has been done, the Chinese population of the colony has largely increased, and the influx of Chinese from the Kwangtung province has never been so great. Speaking with an experience of three years at this side of the China sea, and of four years' administration of a Chinese community (Labuan) at the other end of the China sea, I venture to think that the views of those European gentlemen who assert that the Chinese are an exceptionally criminal race, and a race that should be especially dealt with by flogging, are not correct. On the contrary, having some small experience in the government of nearly every race in Her Majesty's Colonies—Europeans, Negroes, Malays, and Chinese—I am more disposed to say that the latter are, as a race, the least criminally inclined, and that they are the easiest to influence by that best of reformatory elements—industrial labour." In referring to the statistics of crime recently published in the colony, the *Hongkong Daily Press* says: "If it be true that figures may be made to mislead, they certainly do not do so in this case, as the state of good order and security the colony has latterly enjoyed was frequently remarked upon before the appearance of these statistics. It is hardly necessary now to re-open the question as to the proper mode of dealing with crime which formed such a burning topic in the colony a couple of years ago; but it is only fair to note the fact, that under the present régime, crime has sensibly declined."

FOR some time past we have received quite a number of telegrams from Europe announcing numerous massacres and other outrages committed by the Kurds. We reproduce from the *St. James's Budget*, an article entitled "The Kurdish Inroad," which will be found to contain many details of interest to the general reader:—

Hackaki and Hamz Aga, of Monsour, known to the humane and clean-handed government of Persia "for their perverseness," and as "having no object beyond pillage, to which they are much inclined," may possibly turn out to be the most important persons now moving in Asia. Even if their present undertaking is meant to be a mere foray (but the latest news represents it as a far more serious enterprise) it is a very significant illustration of the actual condition of Persia and Asiatic Turkey. The Kurd is, and always has been, a robber. A late traveller in his neighbourhood distinguished between him and the nomad Arab by saying that the latter only plunder, while the former murders into the bargain. They have always been more or less in the habit of levying black-mail on their less warlike neighbours, and have constantly made their profit out of the civil wars of Persia. The present or Kajir dynasty owed their victory over their Zend rivals very largely to their alliance with Kurdish chiefs. But it is something new to see two leaders, apparently only of secondary importance, collect a force numbered at fifteen thousand men, plunder a wide tract of country, and show such confidence in their strength that they do not even return with their booty to the hills, but send it back under escort while the main body remains encamped in the invaded country. Such an inroad would be impossible unless the corruption of its Government had reduced Persia to a state of complete disintegration. Moreover, there is the fact to be considered that a large part at least of the invading army comes from Turkish territory. The Kurdish chiefs are at no time very submissive to the Sultan; but they would scarcely dare to act with such violent independence unless they had good reason to believe that he had become too feeble to call them to account. When we remember, too, that the Arabs under Turkish rule have long been in a state of smouldering revolt, it is plain that the native States of Western Asia are in the familiar condition of Oriental countries when on the verge of a great convulsion. Even if the Kurdish raiders do confine themselves to plunder on a great scale, they will have struck Persia a terrible blow. The example will not be lost on HAMZ AGA's neighbours and kinsmen. Inroad will follow inroad—at first for plunder, and then for conquest.

Indeed, we are afraid the best hope for Persia is that the barbarian invader who ends the lingering agony of corrupt States should appear, and that soon. It has been the invariable rule in Asia that when a country fell into the condition of Persia at this moment (and Persia is the most effete and most miserable State in all the world—princes and people alike), it was invaded and conquered by some nomadic neighbour not less barbarous but more healthy. The process is attended with immense temporary suffering—which is, after all, only a magnified form of what they habitually endure at the hands of their rulers; but it is generally followed by improved administration. The new despot will be a barbarian and rule with a rod of iron; but he will also be a man of parts and energy. He will shear his subjects very close, but he will be too good a man of business to allow a horde of inferior extortioners to fleece them and so indirectly rob his treasury. Besides, there is always the chance that the man who has been educated in the world, and has fought his way to the throne, will have sense enough to understand that the prosperity of the subject means the greatness of the prince: which is just what Oriental monarchs trained in a zenana fail to comprehend. It is the difference between a GAIKWAR of Baroda thinking of nothing but dancing-girls and jewels, and a born ruler of men like RUNJEET SING.

It may be too much to expect that any of the Kurdish chiefs now plundering the land and probably hope one day to rule are the equals of the great Sovereign of the Punjab; but lesser men than he have founded kingdoms. The opportunity is very tempting, for it is obvious that the present state of things in Persia and Mesopotamia cannot last much longer. These countries are slowly expiring under their present Governments; and, to save them, the only alternative is a vigorous foreign Government which can come but in one

of two ways—the rise of a new Oriental despotism or European conquest. The regeneration of the East by Western civilization has long been seen to be a dream. Friendly intercourse between the two means the addition of European vices to Asiatic corruptions, and the ruin of native art and industry. Europe never does any good in the East except by conquering and governing. This alternative may follow of course; they who think it will, and that before long, have much to say for themselves; but, on the whole, the best hope for the peoples in question is that some vigorous chief, able to rely on the support of a race which has not lost the virtues of barbarism, should arise to profit by the disintegration of Turkey and the prostration of Persia. That such a chief should be a Kurd is neither impossible nor even improbable. They are a race of robbers, it is very true; but so were and are the Tartars, Turks, and Arabs; and yet all three have founded great States and produced great rulers. The history of the world is full of instances of races which, after vegetating for centuries on the borders of more civilized peoples, have suddenly developed an aggressive ambition, and the will and the capacity to rule. There is evidence, too, that the Kurds are not incapable of appreciating and establishing good government according to the Oriental standard. Besides, it is well to remember that they are no more foreign in Persia than the present Kajir dynasty, which is Turkish by race and Sunni in religion. The present government of that country is, in fact, in the hands of the nomadic tribes of the north, which are of pure Turkish blood. The town population has always been at the mercy of whosoever had the power of the sword, while the nomads of Persian descent are too weak and divided to be capable of opposing any compact force. But the essential question, at least for us, is not the comparative worth of this or that race; it is that a great portion of the earth lying at the very gates of one of our possessions, and to the fate of which we cannot be indifferent, has been reduced to such a condition that it must infallibly fall into the hands of the first determined assailant who has a few thousand trustworthy fighting-men at his back. It is, of course, impossible to forecast the details of the struggle which is apparently beginning: but there is no reason to doubt that, European intervention apart, things will follow the familiar course of Oriental history. If the result is to establish a new and at least temporarily vigorous monarchy, we may well be content. It is, however, doubtful whether things will be allowed to go so far without the intervention of Russia; and then it will be hard to say who or what may follow. The Anglo-Turkish Convention was suggested by the extreme probability that after the Russian occupation of Kars Catherine's policy towards Poland would be repeated in these parts, and that anarchy, fertile in excuses for occupation, would be fostered in territory marked out for ultimate conquest. And however it may have originated, anarchy is afoot; and to all appearance is destined to prosper."

THE "diary of Liu Ta-Jên's Mission to England," published in the *Nineteenth Century* for October last, should be read by every one interested in the prosperity of China. It is the record of the reflections of an acute and cultivated Chinese mind, when brought for the first time directly into contact with the power and mechanical skill of the west. Liu went as joint Minister to England in 1876, soon after the signing of the Chefoo Convention. He is said by the translator, Mr. Bourne of the British Consular service in China, to be probably a fair representative of the literary, and therefore ruling, class in China, and his opinions on European civilisation are interesting on that account. Mr. Bourne has, we think, done wisely in reproducing only such portions of the diary as deal with the views and reflections of this prominent individual, and his comparisons between Chinese and European institutions. He refers several times, with contempt, to the thirst of Westerns for material improvement, and contrasts it unfavourably with the 'moral' civilization of the Chinese. In the project for a railway between India and China, he sees only a desire for conquest; and warns England it may work in two ways. "The new railway will be ready at hand to convey the (Chinese) rabble

into India, and the tables will be turned upon the English. . . . Let not the English forget that if they light a fire, the wind may change, and the flame kindled for others may cause their own destruction." The old statesmen of China he regards as equal to those of the West, for their mental vision could reach to the first principles of right, while the English rush madly on the road to wealth, and are ignorant of every thing else. His notion of the origin of telegraphs and steam has at least the merits of novelty. They were invented by the English to obviate the necessity of keeping large garrisons at their various trading stations all over the world. Railways are no more practicable in China than Buddhism in Europe, because they would throw large numbers of the population out of work, and also because they would make transport too expensive! As might be expected, he does not think much of the Japanese. The rapidity with which the latter have adopted the best results of western science and thought, and the respect which they are earning for themselves among the people of Europe and America, can hardly be viewed favourably by an ardent supporter of the ancient régime. "Japan," he says, "has made her administrative system accord with that of European states; and she has copied Western dress, ceremony, and customs. Accordingly Europeans despise the Japanese, as having sacrificed their own natural tastes and habits in the desire to accord with those of another race." He is full of praise for the kindness displayed by the English on the occasion of an assault on a Chinese servant in the streets of London; but compares that august individual, the Lord Mayor, to a village elder in China. "I had always regarded the English," he says, "as a people living in small and contemptible islands, of unbridled violence, and without an idea of deference or politeness." He confesses, however, to having been mistaken. His ideas on seeing, at a reception at Buckingham palace, the dresses of the ladies can be easily imagined. A visit to the *Times* printing establishment gives rise to the following sufficiently curious calculations. "Although a good many men are employed in the *Times* office and in delivering the paper at the houses of subscribers, the number engaged in attending to the machinery is very small. If two men look after the type and five or six regulate the machinery, that is enough. It seems to me that if no machinery were used in printing the *Times*, but hand labour alone, there would be no difficulty in turning out the necessary number of copies. Each workman might be ordered to prepare a separate type, and, as soon as the composition of the paper was concluded, a time might be fixed by which each man should produce 100 copies. If this plan were followed, 2,800 men would be employed to produce the 280,000 copies required; and if the daily receipts \$4,375 (?) were divided amongst these 2,800 men, each man would get rather over \$1.50 a day; and, although living is dear in England, this sum would suffice to support a family of eight persons, and thus a population of more than 20,000 souls would live by this industry alone. Why, then, use machinery and rob these 20,000 men of their means of existence?" His comparison between European and Chinese civilization is, of course, very much in favour of the latter. Indeed, throughout, he shows a contempt for our boasted achievements in science, and their application to the increase of material wealth, that is worthy of Mr. Ruskin himself. "Property is wealth to the foreigner; moderation in his desires to the Chinese: material power is might to the foreigner; to live and let live is might to the Chinese."

One rises from a perusal of this very remarkable paper with a sense of the utter hopelessness of discussing these subjects with Chinese of the type of Liu-Ta-Jên. They reject with contempt our very first premises; they treat our boasted

triumphs over the power of nature—our railways, telegraphs and steamships—with scorn, and ask, are we any happier than the Chinese who have none of these things? “If Europeans,” they say “in truth understood the duties resulting from the five relationships, then we should discern the effects in their lives. . . . But do we see these results in Western countries? No, indeed! Their whole energy is centred in the manufacture of different kinds of machines,—steam-vessels and locomotives to bring rapid return of profit, guns and rifles to slay their fellow men. They rival one another in greed, and in cunning methods of acquiring wealth; they say they are rich and mighty; and put it all down to their *true knowledge*, forsooth!” We suspect that if His Excellency Liu, during his residence in England had an opportunity of arguing with a typical “Manchester man” on this subject, he did not come off second-best in the dispute.

### FIRES IN THE SETTLEMENT.

TO THE EDITOR OF THE “JAPAN DAILY MAIL.”

SIR.—As has been noticed by yourself and your contemporaries, the lack of any organization in Yokohama was painfully apparent on the occasion of the recent fire, and might have led to serious consequences: may I be permitted to make a few suggestions which I venture to consider would, if carried out, be found of value.

1.—All the foreign fire-brigades should be put under the control of some one of influence in the community: such a man could surely be found, by convening a meeting of the foreign firemen, who could elect a head, the brigades still maintaining their individuality; just as the various companies composing a regiment are all under the control of their Colonel, but at the same time engage in friendly emulation. If some ex-naval or ex-military man could be found to fill the post, so much the better. He should have full powers, on the occasion of a fire, and be in fact the prime motor of the relief work.

2.—The native police should be employed simply to draw a cordon at a reasonable distance round the houses actually on fire, or threatened, in order to keep the firemen from being hampered in their movements by the crowd who simply come to look on from curiosity. Without wishing in any way to detract from the character of the Japanese police, it appears to me that they not of much use in a fire; their personal valour is undeniable, but like most Asiatics, they lose their heads, and are just a little too fond of exercising their authority. Another thing against them is, that they do not always understand every foreigner's Japanese, and so cannot co-operate properly with them.

3.—The foreign men-of-war's men, of whom we generally have a good supply on these occasions should be employed in assisting to preserve the cordon, and in guarding property which has been removed from the burning houses. Their usual ignorance of the vernacular militates greatly against their rendering the amount of assistance that they are always willing to give.

4.—Such native fire-men as are not actually working at the engines, or shifting hose, could wait in the roads at the places where the police keep the cordon. Having a clear space to work in, the leader of the operations could tell when he wanted their assistance, and could summon, by messengers, as many as he required.

5.—Any volunteers from the ranks of the spectators must consider themselves, for the time, implicitly bound by all orders given by the Superintendent.

I would explain that the above suggestions refer only to occasions when fires break out in the foreign portion of Yokohama: as regards the native town, it would be better to leave it entirely under native control.

Yours faithfully,  
X.

TO THE EDITOR OF THE “JAPAN DAILY MAIL.”

Yokohama, December 10th, 1880.

DEAR SIR.—The problems of your correspondent X, in your issue of the 9th inst., to keep and enforce order during fires, are very excellent if there wasn't unfortunately one great drawback, and that is:—In a cosmopolitan community like ours, where there are many heads and as many minds, there will be very few who would like to be ordered about, especially if they don't know much of the leader who might be enforced on them by a few of the many heads. Try it on and then see the comments which will be made on his actions should the slightest hitch occur. Newspapers would have to furnish an extra sheet, I fancy.

If men-of-war's men are to help the Japanese police force to form cordon, by all means let them come on shore unarmed, so that there may not be any more indiscriminate poking about with bayonets, as happened at the last fire. I presume residents going to a fire would not relish being spitted without any notice, nor do I think it just that the administration of the police in the settlement should be taken out of the hands of the Japanese Government in any way, after it has been surrendered to them unanimously by the Consuls. Where is the European police sergeant? I should think it would be his duty to see effective measures taken to keep order amongst the European part of the spectators; the Japanese constables can handle their own countrymen well enough.

I enclose my card, and remain yours very respectfully,  
VOX POPULI.

### REUTER'S TELEGRAMS.

SHANGHAI, 5TH DECEMBER, 1880.

The steamer reported as sunk in the Gulf of Spezia, causing a loss of two hundred and fifty lives, proves to be the *Oncle Joseph* belonging to the Valer's Company, and not to the Messageries Maritimes.

LONDON, 6th DECEMBER, 1880.

Strong reinforcements are being sent to Ireland, as the outrages are increasing. County Leitrim has been gazetted as disturbed.

LONDON, 9TH DECEMBER, 1880.

The *Times* publishes a Telegram to the effect that Greece is intriguing with Turkey.

Five vessels of the Pacific Squadron have sailed for Japan.

## The Japan Weekly Mail.

DO-YO-SI.

### NOTES OF THE WEEK.

#### BIRTH.

On the 7th instant, at No. 233, Yokohama, the wife of SAMUEL M. BRYAN, of twins, sons.

#### DIED.

At the General Hospital, on the 5th December, WILLIAM HYDE of Battersea, Hants, Hampshire, aged 35 years.

The American mails per O. & O. steamer *Oceanic* came to hand on Thursday last, and the P. M. steamer *City of Peking* left for San Francisco on the 7th instant. To-day's mails go forward by the M. M. steamer *Menzaleh*, which vessel is advertised to leave to-morrow morning.

One the passengers by the P. M. S. S. *City of Peking* which left for San Francisco on Thursday, was the Hon. Wm. H. Trescott, one of the United States Commissioners to China, who, we believe, is the bearer of the draft proposals for the new treaty between that country and his own Government. As the vessel left her anchorage salutes were fired by the men-of-war in harbour. Mr. Swift, another Commissioner, has returned from Peking to Shanghai, at which port he will remain for some time on private business.

On the 5th instant a telegram was received from Paris to the effect that Mr. Sameshima, Minister to France, who was previously reported as suffering from disease of the lungs, had died that day. A later telegram states that the funeral of the deceased Minister was solemnized on the 7th instant, with most imposing ceremonial. The President of the Republic and M. Gambetta, were specially represented: all the members of the *Corps Diplomatique* attended, and all sections of French society came also to pay a tribute of respect, both to the deceased and to the nation which he had represented.

We notice that Mrs. Vincent, whose establishment was burnt down by the late fire, has made arrangements to re-commence business on Tuesday next. The new location is on lot No. 77, Main Street, in the store formerly occupied by Messrs. Kuhn & Co.

Another terrible fire, this time in the native town, broke out at about two o'clock this morning in a bath house in Benteu Dori, and not, as we were previously informed, at the printing office. The streets were immediately crowded with thousands of natives and the scene was such as always distinguishes native fires, men rushing hither and thither, women and children escaping from their homes and just managing, as a rule, to save their most useless effects, and firemen tearing recklessly through the crowd. The flames soon spread towards the Specie Bank in one direction, and thence right through to Honcho Dori, every house of which, from the Basba Michi for two hundred yards in the direction of the Machigwaisha, was destroyed with the exception of a few isolated buildings whose construction was sufficiently solid to withstand the conflagration. The engines *Relief* and *Victoria* were soon on the spot and rendered great assistance, but were unable to save most of the best curio shops which formed such a wellknown feature of the locality. The portion destroyed reaches from Benteu Dori to Honcho Dori, and is as we said before about 200 yards long. We have heard of several minor injuries, but fortunately, at present, of no loss of life.

On Tuesday last the s.s. *Oceanic* brought a visitor to Japan to whom the world at large owes a debt of gratitude. We need hardly say that we refer to Mr. Cyrus W. Field, to whose original energy and enterprise are due the now numerous Atlantic cables which have done so much to bring Europe and America together. Mr. Field told us to-day, that the advantage of his work had never appeared so palpably before him as when on his arrival he received a telegram, dated only a few hours previous, from New York, announcing "all well." On being interrogated, half in earnest, as to whether he had come to lay a cable across from Yokohama to San Francisco, Mr. Field informed us that it was simply a matter of money, and that if that were forthcoming, the cable would be also, as no less than three routes, with accurate soundings, had already been marked out. His present trip, however, is to get a little rest and to see the world, after forty-five years of steady hard work.

The football match of Saturday last was a pleasantly contested game, but had no special details of good play. Neither side obtained a goal, the game being drawn in favour of the club by two touchdowns to nothing.

Communication with Kobe, Nagasaki and beyond, was restored at a late hour on Thursday night. A fire at a point a little to the west of Shidzuoka is reported as having caused the interruption.

In a London telegram received yesterday by the O. & O. str. *Oceanic*, dated November 18th, we read that the sculling match

between Edward Hanlan, of Toronto, and Edward Trickett, of New South Wales, over the Thames Championship Course, from Putney to Mortlake, for the championship of the world, Sportmen's Champion cup and £400, came off to-day, and was won by Hanlan in his usual style. The race was a mere procession from the start to the finish. Hanlan rowed in splendid form. He stopped several times, allowing Trickett to come up. A tremendous crowd of people witnessed the affair. The river was perfectly still. The *Sportsman* says beta on the Hanlan-Trickett match represent in the aggregate a far greater sum than has ever depended upon the result of a boat race. The Marquis of Lorne, Governor General of Canada, had given instructions to have the result specially telegraphed to him.

In the morning, Trickett was the favorite in betting, 5 to 4 being taken on him, and laid to the extent of £1,000; but before the start, Hanlan had taken the first place in betting. Seven to 4 on him was offered freely, and some wagers were made of 2 to 1. The start place at 12:14 o'clock, at which time the tide was nearly full, and the water slack and smooth. Throughout Hanlan had the Surrey side of the river. A very even start was effected, Hanlan striking the water at the rate of 35 strokes to the minute, and Trickett at the rate of 41. Hanlan rowed easily and in perfect style, showing his superiority from the first stroke. Crabtree was passed in six minutes and four seconds from the starting point. Here Trickett began to labor and look ill, and by the time the Soap Works were reached, the race was absolutely over. Occasionally Hanlan stopped rowing, and Trickett came up, when a few powerful strokes would send Hanlan ahead of him. Between Hammer-smith and Cheswick Hanlan laid down twice. He stopped entirely once, and again paddled along at first with one scull then with the other. He turned over to wash his face, and chatted with Elliott, who was rowing alongside, and finally won by three lengths, which he could have made a half a mile if he had chosen.

It is rumored that Hanlan has decided not to row in the regatta for the American prizes. Blackman has retired from the contest, owing to sickness.

In Toronto there is unprecedented excitement and exultation over Hanlan's victory. The city wins over \$300,000 by the victory.

The *Daily Alta California*, commenting on Trickett's defeat writes—"Hurrah for Canada! Toronto is in great glory over Hanlan's triumph. That city is reported to have won three hundred thousand dollars on the Hanlan victory. If the race was an honest one, Hanlan had no antagonist worthy the name. Trickett, made but a poor show. He came all the way from Australia, or went that distance, for the honor of being defeated without an effort by the Canadian, Hanlan. Australia cannot compete with Canada. Climate, sir! climate has much to do with making men. But, after all, was the race a square one, or was it a sell-out? So many frauds have been perpetrated by these professional scullers that one cannot put the utmost confidence in any of them. When the business reaches the point of sawing one's boats in two in order to avoid a contest and feared defeat; and when the champion is found unexpectedly to be beaten, as Hanlan was a few months ago, it is not strange that people have but little faith. When boat-racing reaches a point of chance like that where waxed cards and loaded dice are used, it becomes a game of chance like monte or any other gambling game. The physical power and skill displayed may, and often does, lift the exhibition out of the low grade of gambling, and so far, is to be commended. But it is, perhaps, too much to anticipate that anything capable of creating excitement in advance of the test, can be presented to the public that will not produce the feeling which is the basis of gambling. Boat-racing, like horse-racing, appeals to the 'backing of one's opinions.'"

Our American cousins seem likely to go as crazy over Sarah Bernhardt as folks did in England when that eccentric genius visited that country, and we may now look for all kinds of anecdotes respecting her. This is how a reporter of the *New York Sun* gives her written photograph:—"The Bernhardt stood and with modest action received the homage of the re-

ception company on the steamer. She was dressed in a simple robe, trimmed with plaid. The material may have been plaid as well as the trimmings. There was a luxuriance about the garb that it would puzzle a male observer to analyze in a five-minutes observation. From her shoulders, threatening to fall off, hung a sealskin sacque. On the deck afterward, when the sacque was buttoned up, it completely enveloped Mlle. Bernhardt. It had cape and skirt, and extended to the tops of a pair of kid boots, which seemed to lie loosely over the feet which they contained, but which were scarcely four inches from heel to toe. Her hands and her arms—that portion of them which protruded from her dress sleeves—were covered by kid gloves fastened with many buttons. These gloves lay in wrinkles above their contents, which may have been plump, notwithstanding. A bunch of ferns nestled amid lace under the chin. The face was thin, but still its lines were curves rather than angles. What could be seen of the throat afforded no sharp lines. The cheek bones were high; the nose aquiline and prominent; the mouth large and ingenuous, showing, at every smile, teeth which were good, but not regular; the eyes blue, small, snapping, and seemingly without lashes; the skin smooth and colorless, and the head from the eyes over to the nape of the neck, a shock of fine yellow hair, which was fluffy and seemingly without bands or restraint. This aerial hair stuck straight out for at least a foot from under the back of a Gainsborough plush hat, which was drawn down over the actress's ears and fast bound under her chin. A miniature beast nestled in the right side of this hat. It had an open mouth, and was called a fox by connoisseurs. The picture would be called interesting by anybody, and some would call it pretty. Any candid observer would say that there was exaggeration and probably pique in the remark of Dumas, who said of a picture of Bernhardt and her dog, that it was a picture of a dog looking at a bone."

A railway accident believed to be entirely without precedent has occurred on the Midland line, at Kibworth, near Leicester, England. Something had gone wrong with the Scotch express, and the driver stopped in a dark cutting near Kibworth, to examine the engine. It was found all right, but in starting again, the driver—said to be a very sober and experienced man—reversed the engine, and neither he nor the stoker perceived the change until they ran the train into an ironstone train standing half-a-mile off at Kibworth. Several compartments were "telescoped," and though no one was killed, one passenger had both legs broken and several more were severely cut. It is suggested that the driver heard a knocking inside his engine, and was so absorbed in guessing at its cause that he did not notice which way he was going, but the extraordinary point is that two men must have been so absorbed that neither noticed that the air in their faces was blowing the wrong way. There is no suggestion and no probability that they were drunk. How far would an engine-driver be responsible for so dangerous a blunder, when the error was really due to over-carefulness?

According to the *Parisian*, the wine crop of 1879 was about twenty-five million hectolitres, or thirty million hectolitres below the average of the last ten years. The annual consumption in France is forty-five million hectolitres. Everybody expected a rise in the price of wine, and some conscientious dealers laid in a stock from abroad. The rise in price, however, never came, and the market remained well supplied. The reason was that the natural deficit was compensated for by artificial means. Wine was manufactured out of dry grapes. All the raisins to be found in the Eastern ports were bought up, and wine manufactories sprang up all over the country. Around Paris alone there are seven steam power wine manufactories. The cost of a cask of raisin wine is about fifty francs, and it was sold at one hundred francs, thus giving a profit of a hundred per centum. But the competition has now become such that the price of raisins has risen from twelve francs to seventy-five francs the one hundred kilogrammes.

The consequence is that raisins have been abandoned, and wine is now manufactured out of glucose, a sugary matter

obtained from the potato, out of the residues of molasses, out of rotten apples, dried prunes, dates, figs and all kinds of refuse fruit, and even out of beetroot. These abominable liquids are colored artificially, and coupés more or less with Spanish wines or white wine. The adulteration and manufacture of wine has attained such vast proportions that the principle dealers, who had taken measure to supply the market royally with harvest wine from foreign countries, have taken steps to put a stop to the gigantic fraud. The imposture has reached such a pitch that not one-third of the wine drunk at Paris is real grape wine.

The enormous wealth left by the late Commodore Vanderbilt is frequently commented upon by American papers: the *Ithaca* journal contains the following ingenious calculations:—Some one has made a curious calculation of what Mr. Vanderbilt could do with his money. William H. Vanderbilt's income from his investments in \$51,000,000 4 per cent Government bonds is represented at \$3,000 daily, which is \$208,25 per hour, \$3.47 per minute, or 5 cents per second. Assuming that he is paid by the second, he cannot possibly spend his money, as he could not select purchases and lay down pieces fast enough. He could not throw it away; to pick up, cast, recover, pick up, cast again, would take up two seconds and if he worked all through the twenty-four hours without rest he could only dispose of one-half his income. By living economically, saving up for four years, he could, placing his five-cent pieces side by side, make a nickel belt around the earth, or by converting his savings into one-cent pieces and mounting them in a pile, he could in twenty years erect a road to the moon and have \$500 to invest when he got there. Should his amusement take a charitable twist he could out of a year's receipts donate twenty cents to every man, woman and child in the United States, and have money left over. Other vast possibilities occur to the glowing fancy of the calculator. In one day he could go to 8,000 different circuses, eat 10,000 pints of peanuts, drink 5,000 glasses of lemonade, and have money left to get his boots blacked. He can afford to have 500,000 shirts washed in one day, and on the day of his death his income will buy ten first-class funerals."

So much has been done by the "Ghazees" in the present terrible war in Afghanistan, that the following extract from the *Bombay Gazette* may prove interesting:—"The word Ghazee has been so indiscriminately applied during the present Afghan war that its true significance has been lost sight of, and there is a vague notion that a Ghazee is something between a brigand and a patriot. The true Ghazee is a Mussulman who resolves to earn Paradise by slaying an infidel in open fight. He must not attack the unbeliever in the night, or from behind. He must go up to him boldly in the light of day, and slay him, and if necessary, be himself slain in the act. When all these conditions are fulfilled, the act of Ghazeeism is complete, and the Ghazee goes straight to Paradise and is there received by the black-eyed girls. When a man sneaks up behind a soldier or a camp-follower in the bazaar, and stabs him in the back with a clasp-knife, he is not a Ghazee, though he, perchance, may be a patriot, or even a thief. The Ghazees—men really worthy of the name—have proved themselves much more formidable in fair fight than the Afghan regulars, who appear to have their personal dash drilled out of them, and have not acquired in lieu thereof the European sense of discipline and habit of cohesion. The Afghan cavalry throughout this campaign have, as a rule, shown themselves altogether destitute of spirit. The Ghazees alone have fought well."

#### LONDON LETTER.

LONDON, October 22nd, 1880.

Our newspapers are now very full of the proceedings of the Election Commission, which is taking evidence as to the conduct of the candidates or their agents during the recent general election. The revelations are very much what might have been expected. The bulk of the constituencies are simply bought and sold. The vote is regarded as a piece of property convertible into money. Some men are a little more particular

than others as to the way they fulfil their corrupt bargain. One man will vote straight for the candidate who has paid him, another will receive bribes from both candidates with perfect impartiality and then not vote at all; while a third takes money from one side and then votes for the other. Our public writers profess to discover a lamentable immorality in all this; but it is only the immorality of the horse that kicks, or the duck that takes naturally to water. A perfectly conventional standard of conduct has been assumed as the guide of the householders who now vote for parliamentary representatives, and when the enfranchised householders fail to act up to a standard which they never recognized, and which they know nothing about, there are lamentations over the corruption of the voters. The Ballot which was introduced ten years ago was intended to prevent bribery at elections, but it has had the contrary effect. The evil which was to be cured was the unfortunate predicament of poor voters who were intimidated by wicked landlords, parsons or superiors of some kind into voting against their conscience. These honest but timid voters were to be protected by the secret method of voting. But secret voting equally protects the receiver of double bribes, and the remedy has proved worse than the disease. The fallacies of theoretical politics are often rudely exposed, but it is generally too late for correction. Open voting will never be restored in England, however clear the demonstration that secret voting is a failure.

A very common political error shown up by these proceedings is that of legislating in advance of the public conscience. Such legislation is sure to be a failure. Judges may denounce, and the Press, in their conventional half-hearted way may deplore the depravity of the people, (the hollowness of this affected sentiment is with a charming unconsciousness satirized by Mr. Tenniel in the last cartoon of *Punch*.) but the publicans and sinners merely appear with a childlike and bland smile. Legislation against election bribery in England is something like legislation against murder in Ireland—it does not reach the conscience of the community, and depends solely on the severity and certainty of the penalty. Public opinion lends no moral support to the enactments of the law.

And these playful freaks of the election-mongers are directing men's minds to the broad questions of forms of Government. Is a democratic Government necessarily corrupt? That depends probably on the state of culture of the persons who have the right of voting. If they are so low in the scale of humanity as to be won over to a certain way of thinking, or rather voting, by more or less beer, or winter blankets, or hard money, or even, as in some instances has happened, by having their wives kissed by the candidate, then on Dr. Johnson's principle that "who drives fat oxen should himself be fat," the successful candidate will generally be the man who has the least delicacy and the fewest scruples. No doubt very good men stoop to conquer and allow themselves to be dragged through the dirt of public-house tactics in order to gain a seat, and from their serene elevation try to forget the questionable means whereby they ascended. But on the whole it would appear that whatever security popular suffrage may confer upon a state in other ways (and if it only prevented war that alone would cover a multitude of sins) it necessarily tends to the continuous deterioration of the men who are elected. The true Liberal theory is that one man is as good as another, and the Irish Liberal would add "and a little better," that all government should be by the people, for the people, and that the voice of the whole nation is the voice of Wisdom. According to the spokesmen of the creed, the more popular your representation, the sounder and more infallible will its judgments be. This, like all those other great principles which are daily appealed to as the standards of statesmanship, is of course a mere afterthought invented to explain and authorize a line of action already past. I don't know how it is reconciled with common observation. The majority of a nation like ours is wonderfully ignorant, and of a very low kind of morality. Taken separately you would think it a serious misfortune if your son or daughter were entrusted to their management. But ignorance and brutishness, multiplied by a million or so, does not become wisdom and purity, if to a mass of these ignorant men, merely because of their numbers, you entrust the

selection of men to rule the empire. Autocracy is no doubt a bad form of government, unless you can change your autocrat at pleasure by assassination or otherwise. Oligarchy has not proved permanently successful either, and an aristocracy can hardly be trusted with power for fear of their governing in the exclusive interest of their own class. Since then the best are so bad there seems no sure resting place, save in a wide democracy, which is likely enough to prove in practice the worst of all.

Ecclesiastical affairs are never without interest in England. There are always so many idle people who, having none of the healthy anxieties of life to employ their thoughts and regulate their emotions, take a morbid interest in the accessories of religious observances; and there are a proportionate number of fashionable and effeminate priests and preachers whose eccentricities of doctrine or ceremonial fascinate these religious dilettanti. A suspicion of heresy in a popular preacher in London adds tenfold to his popularity. The more the orthodox shudder at his views the more the amateur free-thinkers crowd to hear him, glorying chiefly in the thought of how the average run of pious people would be shocked at the new readings of old texts. These clerical stars are not all mere notoriety hunters. Many of them are extremely earnest, but being men of liberal education and having practical knowledge of the world, they are not restrained by the discipline of the church from thinking their own thoughts. These men often experience a difficulty in reconciling the theories of the theologians with the actual state of the world, and as patent facts cannot be explained away, they feel that they cannot choose but sacrifice the theology. This conclusion is not of course reached till after years of mental struggle, during which time it is curious to mark the efforts they make to clothe their own broadening views in the old formulas of the church. To preach Christianity with the miracles left out, would seem at the first blush to be an intellectual feat of a rather formidable kind. Yet this is what Mr. Stopford Brooke and others who remain within the fold of the church have been actually doing for years. The effort to reconcile rational religion with the Thirty-nine articles and the Creeds of the church, or, to put it in another way, the attempt to compress new free and fast growing ideas within the rigid forms of official christianity, causes at last an explosion; the chrysalis bursts its prison house and spreads its wings in the sun with a joy which is confessedly not unalloyed. The latest of these seceders from the English Church is Mr. Stopford Brooke, a very popular preacher in Bloomsbury, where a somewhat fashionable congregation listen Sunday after Sunday to his novel expositions of familiar subjects. Henceforth I presume Mr. Brooke will preach to his congregation a religion of his own, as Mr. Charles Voysey has been doing for some years at Langham Hall. This kind of disintegrating movement is too unimportant as yet to attract very serious attention, but there seems no reason why it should not assume larger proportions. The right of private judgment which was vindicated in theory at the Reformation, has never been permitted to be exercised until our own days. The authority of the Pope was deposed, and that of Presbyteries, assemblies, Bishops, and Church courts set up in its stead. But the heaven that was hid in the three measures of meal has not lost its vitality, and in these latter days, aided by an intellectual movement of an enquiring and verifying kind such as has scarcely been seen before in the world, it is working in the Church with the effect of making each man a pope to himself. Where this is to end it is impossible to foresee. So long as Mr. Voysey and Mr. Brooke retain their energy and their eloquence, so long will they hold their congregations together. But they cannot form a new Church or a new sect without a creed, and the very reason of their existence is the negation of creeds. They will probably vanish with all their works in a few years, like soap bubbles which glance a few moments in the sun. Yet they contribute something to the broad stream of intellectual life, and possibly they may solace a few earnest souls, whose spirituality is of too pure a type to clothe itself in the crude propositions of any known church.

The marvellous negotiations between the Great Powers of Europe and the Sultan are still proceeding, and I am fain to

confess myself as unable to comprehend them as ever. Dulcigno is indeed to be surrendered to the Montenegrins, and it is pretty well known that this was a sop to Cerberus, for it was a concession made to the French and German Ambassadors at Constantinople, on the implicit assurance that therefore the concert of Europe would be broken up so far as the naval coercion of the Sultan was concerned. It is not to be supposed that this very little mouse is an adequate result of the labour of the mountain; and if the Powers proceed no further in their demands upon the Sultan, stultification is a very mild term to apply to the situation they have created. England and Russia are generally supposed to be anxious to proceed further and to levy war by sea and land on the Sultan's dominions, but Mr. Gladstone's continued appeal to the concert of Europe—which was merely a phrase coined by himself for the convenience of his own arguments—will tie his hands against any such isolated action. The object of the Powers—of all except one—is obscure. Some of them are passionately desirous to break up the Turkish Empire, others are equally solicitous to preserve it at least for some time longer. But what they respectively hope to gain or lose by the one contingency or the other is hidden from common observation. The policy of England is the least intelligible of all, for it is not to be seriously believed that all these warlike forces have been set in motion merely to quench Mr. Gladstone's thirst for revenge against the inhuman Turk and the Mephistophelian Beaconsfield. There can be no doubt that underlying all his white-hot rhetoric there is a strong patriotic feeling in Mr. Gladstone. He does not expend the country's money except for the country's good, and he therefore sees some good near or remote to England in the agitations which he has set on foot in the East. Yet no attempt has been made to explain to the public how England is to benefit by the movements. Russia's policy is easily understood, because it never varies. She wants Constantinople, or as much of Turkish territory as she can get by the blind and innocent blundering of some of the Powers and the holy rage of others—or by any other means. Everything works for the objects Russia has in view so long as she maintains her habitual, constant, steady pressure towards the goal.

#### WHITE CHRYSANTHEMUMS.

(From the Japanese of Satomi.)

##### I.

Like flowers on a moorland seen in dreams,  
The Kikus's bloom in the morning gleams;  
For the hoar-frost white, thro' the Autumn night  
Sank cold and keen on the garden scene,  
And, to and fro, like eddies of snow  
The frost and the flowers blend and bloom,  
The frost and the flowers blend and glow  
And fringe the gray of the Autumn gloom  
With quivering lights when the breezes blow.

##### II.

In masses of umber,  
The clouds without number  
Are breaking away,  
And clear as the day,  
The moon's silver splendor  
Seeks silent and tender,  
The late-blooming flowers  
In their fair, Autumn bowers;  
And whiter and whiter,  
Like crystals of snow  
The Chrysanthemums grow,  
And brighter and brighter,  
Like star-blossoms they glow,—  
White Moon in the Heavens,  
White blossoms below!

Tokio, 24th November, 1880.

F. B. H.

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as make them readable and intelligible.]

#### COURT, POLITICAL AND OFFICIAL.

##### GOVERNMENT NOTIFICATION.

The *Nichi Nichi Shinbun* publishes the following Government Notification:—

Notification No. 53.

It is hereby notified that any document forwarded to the Government by the people concerning the general interests of the public shall be looked upon as a Memorial, no matter how it is entitled, and will be handed over for consideration to the Senate by the Governor of the prefecture whence it originates.

Signed SANJO SANETOMI,  
Prime Minister.

December 9th, 1880.

The *Choya Shinbun* states that great changes are shortly to take place in the Finance Department. The Superintendents of all the Sections of the Department held a meeting at the private residence of His Excellency Yoshiwa, Vice Assistant Minister of the Finance, on the evening of the 2nd instant, and did not return home until very late at night.

The following item is taken from the *Mainichi Shinbun*:—“His Royal Highness the Duke of Genoa, left Yokohama by the 10.30 a.m. train on the 3rd instant, for Tokio. His Majesty sent his Chamberlain, Mr. Yamaguchi, to the Shimabashi Station, and the Italian Minister, and the Japanese Minister of the Foreign Affairs also proceeded there. They received the Duke, who, then, attended by Mr. Yamaguchi, proceeded to the Imperial Palace in a carriage provided by the Foreign Department. The Duke was then presented in audience with the Emperor, and after being entertained with cakes and tea, retired from the Court at about 2.40 p.m.”

His Excellency Prime Minister Sanjo resumed his office on the 3rd instant, having quite recovered from his illness.

The *Choya Shinbun* says that the Japanese Consulate at Amoy is to be closed, and all affairs connected with it are to be transferred to the care of the Japanese Consulate in Shanghai.

The *Nichi Nichi Shinbun* says that on the 30th ultimo, the Prime Ministers and the Privy Councillors held an official meeting in the palace to consider the recent economical proposals in Government expenditure.

We read in the same paper that the new French Minister visited the Foreign Department on the 3rd instant, where he had an interview with the Minister of the Department, to whom he handed in certain documents concerning the treaty revision, from the French Government.

The *Hochi Shinbun* writes as follows:—Admiral Lemosofsky of the Russian fleet injured himself recently on board of his ship. He is now under medical treatment in Nagasaki, and as he is an old man, it will take forty or fifty days for him to recover. As it is now winter, which will prevent his going home, he will spend the season in Japan. The power of deciding peace or war with Russia entirely being in his hands, his indisposition will postpone the negotiations with China.

The same paper publishes a current rumour to the effect that Mr. Secretary Inouye of the Daijo Kwan, returned to China so suddenly in consequence of receiving a telegram to the effect that the *Tsung-li Yamen* have again expressed some undecided opinions on the subject of the Loochoo question.

The *Mainichi Shinbun* says that a few days ago His Excellency General Kuroda, addressed a memorial to the cabinet, the contents of which have not as yet been made public.

We read in the *Nichi Nichi Shinbun*, that on Tuesday last His Majesty the Emperor attended a rifle match and some athletic sports, held in the Fukiage park, by some of the officers and non-commissioned officers of the Imperial Guard.

In accordance with the recent Government orders, the different local Governors continue to arrive at the capital; the latest arrivals we note announced in the native papers being the Governors of the Okayama and Saitama prefectures.

The *Mainichi Shinbun* says that His Excellency General Kuroda is prevented from attending his office in consequence of ill-health.

It is reported, according to a vernacular paper, that Mr. Watanabe Kiyoshi, Governor of the prefecture of Fukuoka, is shortly to be made a member of the Senate.

Economy in Government expenditure is being strenuously pushed forward in all the various Departments. We notice in a native contemporary that all students now studying law at Government expense, in the Judicial Department, are to be dismissed in three months, with the exception of those that shew themselves to be really proficient.

We learn from the *Nichi Nichi Shinbun* that on the night of the 7th instant, a soiree was given at the Italian Legation in honour of His Royal Highness the Duke of Genoa. Field Marshal Prince Arisugawa and the Princess, Mr. and Mrs. Inouye, Admiral and Mrs. Inomoto, and many other prominent ladies and gentlemen were present and the entertainment was a most decided success. H. R. H. the Duke left Yokohama yesterday for Nikko, intending to have some shooting on the way back.

All the local Governors now in Tokio, attend daily, as we notice in a local paper, at meetings held in the Home Department.

The *Mainichi Shinbun* says the new French Minister, M. de Roquette, attended by Mr. Hojo, Master of Ceremonies, was presented in audience with His Majesty the Emperor, at 2 p. m. on Wednesday the 8th instant, on which occasion he presented his credentials from the President of the French Republic.

The *Nichi Nichi Shinbun* states that His Majesty the Emperor attended a review of the forces comprising the Imperial Guard, at the Hibiya Parade ground, on the 9th instant.

From the same source we learn that His Majesty will witness some horse-races, to be followed by manoeuvres to be executed by police officers above the rank of sergeants, in the Fukiage Park, to-day. The manoeuvres will include a sham fight in which six hundred police will participate. They will be divided into two parties, one dressed in white and the other in red; the former will be commanded by Assistant Police Inspector Ogasawara, and the latter by Assistant Police Inspector Kendo.

According to the same journal, there is a report that the place of the late Minister for France is to be filled by Mr. Shiohama Samuro, a 3rd class official in the Department for Foreign Affairs.

#### NAVAL AND MILITARY.

His Excellency Admiral Enomoto, Minister of the Navy, as we learn from a native paper, is about to inspect all the men-of-war in Yokosuka.

Port Admiral Hayashi paid a visit of inspection to the *Hoshokan*, in Shinagawa, on the morning of the 3rd instant.

Two hundred and twenty non-commissioned officers of the Japanese Navy who served in the Formosa expedition, and the Satsuma rebellion, received rewards in money on the 2nd instant.

We notice in a native paper that General Tani, Military Inspector of the Western district, returned to Tokio on Monday last. General Miyoshi is expected on the 14th instant from his tour in the Central provinces.

A native journal publishes the appointment of Dr. Shima to the post of surgeon on board the *Kanko Kan*, in place of Dr. Masuni, who has been placed in charge of the Marine Barracks at Tokio.

Port-Admiral Hayashi paid official calls to the *Champlain* and the *Vettor Pisani*, the day before yesterday.

The *Hochi Shinbun* says that Admiral Ito has been appointed Superintendent of the Board of Naval Warfare in the Naval Department, and that Admiral Nakamura is to be Superintendent of the Eastern Admiralty office.

A native paper notifies the appointment of Rear Admiral Hayashi, Commander of the Eastern Naval Division, as Vice-Administrator of the Navy; his place has been filled by Vice-Admiral Nakamura.

Commander Sato has been gazetted captain of the *Settan Kau*.

The *Rinjo Kan* left Shinagawa the day before yesterday for Shimizu, and we learn from a local native paper that she will return very shortly and leave on her cruise to Australia.

Official visits to the Italian and Russian men-of-war now in harbour, were paid on the 9th instant by His Excellency Admiral Enomoto and Admiral Nakamura.

We read in the *Mainichi Shinbun* that early next spring at Ashigara, in the province of Sagami, Shizuoka prefecture, a sham fight between the troops of the Imperial guard and those forming the Nagoya garrison will take place. The presence of His Majesty the Emperor is expected.

#### TRADE, INDUSTRIES AND FINANCE.

A native paper informs us that the Finance Department has advanced 500,000 yen to the newly organized Trading Company.

The *Nichi Nichi Shinbun* writes as follows:—"There are now about sixty women employed at the Woollen Manufactory at Senji, who commence work at 5 a.m. and finish at 5 p.m. every day, turning out twenty pieces of woollen cloth per diem. The cloth thus manufactured by them is for naval and the military clothing, and is found so much superior in quality to imported material, that the manufactory has received large orders from the Naval, Military, and Police Departments, and also from all the different garrisons. In consequence of this an extensive manufactory is to be built, in which workmen of between 16 and 18 years, and workwomen between 16 and 30 years, will be engaged."

The following monthly return of the exports and the imports at all the open ports of Japan during the month of October last, is taken from the *Hochi Shinbun*:—

Exports .....	Yen 2951,985.83
Imports .....	„ 2881,694.41

Excess of imports.....	Yen 70,291.42
Custom's revenue.....	Yen 240,067.72
Export of specie and bullion.....	„ 1,152,124.24
Imports .....	„ 37,000.00

Excess of exports.....	Yen 1,115,124.62
------------------------	------------------

The *Nichi Nichi Shinbun* publishes the following paragraph:—As regards cocoons, which are considered one of the best articles of our export produce, the first exported were only 500 cards, after which all the silk-worm growers in the different districts, commenced to manufacture them, and the quantities thus produced were in excess of the demand by at least ten times. Consequently they have suffered loss year after year, whereupon the Government drew a distinct line between home use and export cards, levied taxes upon them and thus prevented excessive exports. When, however, the merchants complained of this, the official notification was abolished after being in force two years only, and excessive manufactory was again commenced. Quantities greatly in excess of the demand being produced, cards were burnt and the price was lowered year after year, while others were literally given away to foreigners. Then the silk-worm growers belonging to the Shimamura company of Joshin became very much displeased at such a state of affairs, and Mr. Tojima hei and Tajima Yasamuro of the said company, made up their minds to visit Italy themselves, taking about 57,000 cards of cocoons. As regards direct export, however, various opinions have been expressed, but the sentiment that gained favour was that it was better to sell cocoons at places where a market was obtainable in Europe, than to sell them to a few foreigners in Yokohama. Thus direct export was approved of, and the Italian merchants now in Yokohama are at present very glad to buy eggs that they actually rejected not long ago.

The *Hochi Shinbun* states that the well-known Mr. Godai, of the Osaka Chamber of Commerce, has arrived in Tokio with a memorial suggesting infallible methods of remedying the financial crisis. It is believed that he strongly deprecates the export of rice.

A native journal announces that the tea season is virtually over, and that only small contracts are now made.

From another native source we see that Mr. Shibusawa, President of the 1st National Bank, has made a successful application to the Board of Agriculture for permission to establish a sheep breeding farm on the Sengoku plains, Hakone.

The same paper states that an extensive sugar manufactory has been erected in the province of Kimofuri, Yesso: thirty-

seven machines have already been set up, and work will soon be commenced.

Writing on the subject of the silk trade the *Mainichi Shinbun* has the following paragraph:—"In the Yokohama silk market, as we have stated before, holders are asking high prices, in consequence of which both the native and foreign silk merchants are in great difficulties. Sales are daily decreasing as holders will not accept the low prices offered by foreigners. A report has become prevalent, that according to home rates, a reduction of \$20 per bale must be made here if European shippers wish to cover themselves against loss. Foreigners are consequently not buying and native dealers are very anxious as to what is to be done. There are now unsold in Yokohama about 10,000 bales of this year's crop."

Another native journal informs its readers that the government is directing its attention greatly toward encouraging direct trade abroad.

#### MISCELLANEOUS.

A native paper says that a number of students who have lately completed their education in the Imperial Engineering College, have been engaged by the Tokio *Fu* at salaries of 50 yen per month. This is for the construction of a new harbour in the Yedo Bay.

Another paper says that communications have been opened between the Japanese Post Office at Nagasaki and the Russian Post Office at Vladivostok. Mails are now sent from Nagasaki to Vladivostok or vice-versa by every mail steamer. The postal rate is just the same as that to China, i.e. five sen for each gramme of letters: and one sen for fifty grammes of newspapers.

During the last month, we learn from a vernacular contemporary, no less than 13,259 persons travelled on the steamboats that ply between here and Yokosuka.

We learn from the same source that the ringleaders of the recent riots at the Takashima Mine have been arrested, and will shortly be imprisoned. The disturbance is reported to have arisen in consequence of the mine being greatly in debt, which led to the discharge of some useless workmen. Other employes, who were worth nothing, had had their wages decreased in order to effect a saving: these men, therefore, being in a state of discontent, stirred up all the really good workmen by hinting that it would next be their turn to go. Foolishly enough, these people listened to them and contemplated stealing all the available cash in the office of the mines. With this intent they set the place on fire. The company has lost considerably in consequence, and it will be a matter of great difficulty to carry on business.

The *Choya Shinbun* contains the following paragraph:—"On the 26th ultimo, the *Yamato Maru* met with a most severe gale off the coast of Yenshu; as she was about to sink, a fire broke out on board, whereupon the crew all jumped overboard and just succeeded in saving their lives. The ship was lost."

According to the *Nichi Nichi Shinbun*, pirates are committing great ravages round about Kobe, and the harbour police are consequently exercising extreme vigilance.

We learn from a native paper that, on the 30th ultimo, what might have been a serious accident, occurred on the Kioto-Kobe Railway. It appears that one of the passengers accidentally dropped some still warm ashes from his pipe into the window—casing and as the train was running at full speed, they were speedily fanned into a blaze. Great anxiety was felt for some time for the safety of the passengers, but fortunately on arriving at Kanazaki the fire was effectually got under.

We notice in another local journal that the cost of the brick buildings erected on Giuza-dori (between the Kio-bashi and the Shin-bashi) after the great fire of 1872, amounted to 830,000 yen. Of these, buildings to the value of 400,000 yen have been already sold, and paid for; buildings worth 440,000 have been sold, but not yet paid for; while there are 72 houses of the second class and 53 of the third class, valued at 40,000 yen, still unsold.

A new journal entitled the *Suzukida Shinbun*, and published by Mr. Suzukida, ex-editor of the *Yomiuri Shinbun*, made its first appearance on Monday last.

The *Nichi Nichi Shinbun* writes as follows:—"Russia has

already made some claim respecting a dockyard in Nagasaki, all-giving in fact that she has already made stipulations for it. The matter is one requiring such careful handling that, so report has it, Mr. Miyamoto, Chief Secretary of the Foreign Department, will shortly leave for Nagasaki to investigate the whole affair. Judging by the present state of affairs this may be only a idle rumour, and we shall only be too happy, if ordered by the Government, to cancel it as false."

The *Nichi Nichi Shinbun* states that in Yokohama the price of general commodities is so enhanced that even saké has gone up. The best quality, which in October last was 28.33 yen per koku now costs 30 yen, and all other provisions have risen in like proportion. Many people in Motomachi and M'mechi are literally starving.

We read in the *Hochi Shinbun*, that the sum of 29,000 yen is shortly to be advanced to the Nagasaki prefecture from the Finance Department, for opening the Yetsumi-toge.

A native paper states that a new branch telegraph office is to be opened in Takata, a town in the province of Yeshigo.

The same paper reports the restoration of communication between Nagoya and Otsu, which had been interrupted since the 8th instant.

The British barque *Madame Demorest* has been sold to Japanese for the sum of 14,000 Mex.

#### ARRIVAL OF THE AMERICAN MAIL.

Dublin, November 5th.—The Court of Queen's Bench this morning was crowded. The Court adjourned on behalf of members of the Land League, who have four days in which to answer the summonses. They will merely lodge formal appearance in Court through their solicitor. Several of the most prominent had resolved to conduct their own defence, but have abandoned that intention in deference to a general desire to expedite the trials. A great indignation meeting will be held on Sunday at Rathdrum, near Wicklow. An appeal by the Land League to the people of Ireland will be published this afternoon.

Dublin, November 5th.—All the agitators who were indicted have been served with summonses.

At a Land League meeting Parnell said he had reason to believe that the Government desired to postpone the trial until the January term, which would prevent those traversers who are Members of Parliament from taking their seats at the meeting of Parliament in February. Parnell said he intended to press for immediate and speedy trial.

Paris, November 6th.—The execution of the decrees against unauthorized religious orders is now complete, excepting Algeria and Corsica.

Dublin, November 6th.—The indicted agitators have retained Mr. Donogh, Q. C., who was counsel for defendants in the O'Connell case.

Dublin, November 6th.—The Court of Queen's Bench was again crowded to-day, but the indicted Land Leaguers do not intend to appear until Monday.

London, November 6th.—The International Regatta Committee have decided to start four trial heats on the 18th instant, so that there will be three heats and four scullers in each, and one heat with five scullers. The first three heats will be rowed from Putney to Chiswick on the flood, and the fourth from Chiswick to Putney on the ebb. The first two men in each heat will be allowed to scull again on the 19th, when two heats will be rowed from Putney to Chiswick. The four best men in these two heats will then

row in the final heat, which will be from Putney to Mortlake, on the 20th.

The race between A. C. Laycock of Sidney, New South Wales, and J. H. Riley of Santiago, for £200 a side, came off to-day over the Thames Championship Course. Laycock defeated Riley by several lengths. Riley, it is reported, backed himself two to one. Time, 25 minutes, 4 seconds. Betting at the start was three to one on Laycock. The race was won by four lengths. At Hammersmith Bridge Riley was leading slightly, Laycock rowing easily. Immediately after passing the bridge Laycock began to forge ahead, and maintained the lead throughout. At Mortlake the two men were together. Laycock had the race well in hand and might have won as he pleased, Riley being hopelessly beaten.

London, November 6th.—Interest in the result of the contest for the Astley belt has ceased. The score at 3 o'clock stood: Rowell, 525 miles; Littlewood, 450; Dobler, 441.

5 P. M.—Rowell, 534; Littlewood, 454; Dobler, 443.

London, November 6th.—Lowell, the American Minister, delivered the opening address of the winter session of the Edinburgh Philosophical Institute last night. His subject was "Shakespeare."

Paris, November 6th.—The reason for the delay in the Panama Canal scheme is that it is considered prudent to await the meeting of the Congress of the United States in December when it will be clearly known whether the scheme will encounter hostility.

Havre, November 6th.—Salvini, the tragedian sailed to-day for America.

London, November 6th.—The Earl of Roseberry, Liberal, has been elected Lord Rector of Edinburgh, defeating Sir Robert Christian, Bart., Conservative.

Paris, November 8th.—The Cabinet discussed on Saturday the declaration to be made at the opening of the Chambers. The programme is expected to be a reorganized Ministry, reform of the laws relative to the press, and the right interpretation of the education laws.

Marseilles, November 8th.—The siege of the Abbey of the Primontre Fathers continues and troops still surround the monastery. The subprefect states that the authorities dare not break open the doors, but will continue the siege a month if necessary. The Fathers declare that they have sufficient provisions and will not yield.

At Chambéry, The Trappists of Timie were dispersed on the 6th inst by a body of seven brigades of the gendarmerie and fifty troops of the line. The Nantes Capuchins have embarked for Cork.

St. Petersburg, November 8th.—At a trial before the military tribunal all the Nihilist prisoners acknowledged to belonging to the Revolutionary party. One, named Schernoff, admitted that he participated in the preparation of the mines under the railway at Moscow in December, 1879, and two others recounted the proceedings in connection with the mine on the Simphorapol railway.

Constantinople, November 8th.—The Porte is making tremendous efforts to be in position to effectually close the Dardanelles at short notice.

Athens, November 8th.—The Committee appointed by the Chamber of Deputies to draw up a reply to the speech from the throne, submitted a draft of an address accusing the former Ministry of violating the Constitution by increasing the forces without obtaining the consent of the Chamber.

London, November 8th.—Parnell addressed a large land meeting at Athens on Sunday. The usual resolutions were passed.

Dublin, November 8th.—Several land meetings were held in Cork on Sunday, in which prosecutions of the indicted members of the Land Leagues were strongly denounced. At Shanagary the Land Leaguers were dispersed by a powerful body of farmers and farm laborers, who were led by Mr. Walsh, a former member of the Land League. The Walsh party stormed the platform, and, after a desperate conflict, Walsh harangued the meeting, denouncing Land Leagues.

New York, November 8th.—The *World's* special has the following incident: At the Athlone Land League meeting yesterday, Timothy Sullivan, in the course of his speech, had recourse to one of those dramatic touches that act on a crowd like wildfire. Spouting of the indictments

pending against himself and his fellow-members, he suddenly thrust his hand into his pocket and threw his indictment far out among the crowd. For some time it was almost impossible to restore order. The paper was seized and torn into a thousand fragments, and the whole assemblage broke out into execrations and curses against the Government.

Edinburgh, November 8th.—The Philosophical Institution gave a banquet in honour of Minister Lowell on Saturday.

London, November 8th.—The Board of Trade returns for October show a decrease of £4,881,000 in value in imports into the United Kingdom, and an increase of £978,000 in value of exports, compared with the same month last year.

Shots have been fired through the window of the Land Agent's house at Woodlawn, County Garway. Nobody was hurt.

London, November 8th.—In the Hanlan-Trickett sculling match, betting is 5 to 4 on Hanlan.

Berlin, November 9th.—Three thousand Jews have left Roumania for America by way of Bremen.

Athens, November 9th.—The death is announced of Zaimis, the Greek statesman, who was many times President of the Council. His death was sudden.

London, November 9th.—The *Times* says: News has reached the India Office that up to the 24th October all was quiet at Cabul.

Constantinople, November 9th.—The Porte has called out 30,000 reliefs and dispatched reinforcements to Salonica and Volo.

Teheran, November 9th.—American missionaries are sheltering and feeding 500 Mussulmans and Christian fugitives in the mission building outside of Urumiah.

London, November 9th.—The *Times* reports that O'Donnell, Member of Parliament for Dungavin, has withdrawn his application for admission to the Land League, because Redpath, the American journalist, referred insultingly to the Queen at a recent meeting of the League.

Dublin, November 9th.—A force of troops (hussars) was dispatched hence for Ballinrobe by special trains at 2 o'clock this morning. Four hundred infantry have just arrived at Ballinrobe, and will encamp near Lough Mask. These precautions are taken in view of the intention of the Northern Orangemen to send laborers to harvest the crops of Mr. Boycott, Lord Ernes' agent, for whom the local peasantry, at the instigation of the Land Leagues, refuse to work. The Government will protect a moderate force of laborers, but refuses to permit anything approaching to an armed demonstration, which would certainly provoke a collision.

A report is current to-day that the Channel Squadron is to be prepared to land a brigade of 2,800 troops at Queenstown, if ordered to do so.

Liverpool, November 9th.—William Forwood, of the firm of Leach, Harrison & Forwood, has been elected Mayor of Liverpool.

London, November 9th.—D. R. Charis of Barrow has failed. Liabilities, £60,000. Several Liverpool firms are somewhat involved.

Paris, November 9th.—The French Chambers reassembled to-day. A ministerial declaration was read stating that the change in the Ministry during recess involved no change in the policy of the Government, which is sanctioned by the Chambers.

Paris, November 9th.—The Siege of the Abbey of Premontré Fathers at Marseilles has been raised by the monks neglecting to guard the door by which they communicated with friends without. The monks left the abbey with many friends.

The Advanced and Extreme Left in the Chamber of Deputies have approved the proposal of Lasaint for a committee of investigation into the case of General De Cissy, to be submitted to the Chamber, which meets to-day.

Paris, November 9th.—It is announced that members of the Chamber of Deputies of the Department of the Seine of Oire, will propose a grant of 50,000,000 francs for the construction of a tunnel through the Simpon Mountains. It is said Gambetta suggested the proposal.

Paris, November 9th.—Felix Piat has gone to Brussels to avoid imprisonment.

Madrid, November 9th.—General Martinez Campos has had a cordial interview with Marshal Serrano, who told

him he was determined not to issue from his retirement.

London, November 9th.—The death is announced of Don Jose Mari Orem Marquis of Albaida, a Spanish statesman, Democrat, and advocate of the abolition of slavery in the colonies. His age was about 80 years.

St. Petersburg, November 9th.—The political trials which have been proceeding at Kharkoff the last six days, were concluded to-day. Three of the accused have been exciled and four sentenced to various terms of imprisonment.

Bucharest, November 9th.—The Volga is frozen and many grain-laden vessels are caught in the ice. The harvest has been so short that the detention of the vessels will be seriously felt. The early approach of winter also prevented the completion of sowing in South Russia.

Dublin, November 10th.—At a meeting of the Land League today, Justin McCarthy was elected a member. Parnell addressed a meeting at Belleek, County Fermanagh, yesterday.

At the meeting of the Land League, a letter from L. H. Donnelly, M. P., was read withdrawing his request for admission to the League.

London, November 10th.—Forster, Chief Secretary for Ireland, has left Dublin for London.

London, November 10th.—Parnell announced the meeting at Belleek, County Fermanagh, yesterday, as the opening of the land campaign in the north of Ireland. The meeting was well attended, despite the inclemency of the weather. Resolutions were passed inviting the people, regardless of religious differences, to unite on the land question.

Paris, November 10th.—It is hoped arrangements will be effected with regard to the resignation of the Ministry.

Paris, November 10th.—The meeting of the Ministers and Under Secretaries lasted from 8 o'clock until midnight. The Ministers finally determined, at the request of President Grevy, to defer the decision concerning their resignations. There will be another Cabinet council this evening.

The *Journal des Debats*, the *Republique Francaise*, the *Siecle*, and other Republican papers consider yesterday's vote due to a deplorable misunderstanding, and express a hope that the Ministers will retain their posts. The Radical papers declare for a new Cabinet or a dissolution of the Chambers.

Paris, November 10th.—Fully fifty members of the Chamber of Deputies have assured the Ministers that they did not by last night's vote desire to upset the Cabinet. Gambetta considers that Jules Ferry can, without loss of dignity, withdraw his resignation.

Paris, November 10th.—A rumor being current on the 8th at Turcoing, that the religious decrees were to be enforced against the Marists, 5,000 persons assembled before the doors of the convent. Shortly afterwards many members of the Catholic Clubs arrived, and a serious disturbance between the factions ensued. Numerous grave affrays occurred. Sticks and stones were freely used and several windows in the convent were broken. The gendarmerie repeatedly charged on the crowd, and 60 persons were injured.

Rome, November 10th.—The *Aurora*, organ of the Vatican, publishes an article favorable to the Irish land League, in which it says; "In consequence of the insupportable state of the Irish peasantry, the people must shake off their oppression. The crimes committed in Ireland are not attributable to the Land League. Radical reform is indispensable, otherwise Ireland will be compelled to choose between anarchy or starvation."

London, November 10th.—Later particulars from Agram, Croatia, concerning the earthquake felt throughout South Austria yesterday, states that 200 houses and two churches were irreparably damaged. A part of the Cathedral must be rebuilt. The palace and country seat of the Cardinal and Archbishop, the Government schools, and a cigar manufactory were half destroyed. Buildings within a radius 14 miles were terribly damaged.

Constantinople, November 10th.—The Foreign Embassadors have presented a collective note to the Porte demanding the execution of the assassins of the Russian Cammeroff.

Ragusa, November 10th.—The Porte has appointed Resa Pasha Governor of Salonica.

London, November 11th.—The *Times* says: It is certain the most important question considered by yesterday's

Cabinet council was, whether all citizens of Ireland can be protected by the ordinary machinery of law. We have reason to believe that those who are most directly responsible for the administration of Irish affairs have come to conclusion that without increasing the power of the executive, the present state of things must not only continue, but enlarge its borders and become daily more enterprising and audacious. The article recommends a suspension of the *habeas corpus* act as a remedy.

London, November 11th.—Lord Crichton, Member of Parliament for County Fermanagh, speaking at a meeting of Orangemen at Newton, said Ireland could well dispense with the services of Redpath, a man who had insulted the Queen.

London, November 11th.—The loss by the earthquake in Agram and Croatia on Tuesday, is estimated at 3,000,000 florins, without reckoning the damage to churches. Reports of havoc by the earthquake have been received at Agram from the whole surrounding country.

Agram, November 11th.—Fresh earthquakes threw down many houses, causing a fearful panic. The Diet adjourned on account of the danger.

Athens, November 11th.—The Cabinet is actively advancing military preparations, but the army will not be ready until March.

Paris, November 11th.—The decision of the extreme advanced Left to adhere to the course which caused the Ministry to resign shows that Gambetta is no longer certain of commanding a majority in the Chamber of Deputies.

The Education bill, which the Government desired to place first in the order of the day, contains a provision which the Government considers would obviate the necessity for the immediate dispersion of religious communities.

Madrid, November 11th.—Liberals view with much apprehension the large body of religious orders settling in Spain. They point out that society contains sufficient elements of clericalism and intolerance already.

Dublin, November 11th.—It is expected that the Boycott relief expedition will reach Claremorris at half-past 2 this afternoon, and will be searched to ascertain whether they are armed. They will have to walk from Claremorris to Lough Mask, fifteen miles, as conveyances cannot be procured for them.

A telegram from Ballina represents that great excitement prevails there in consequence of a report that fifty Orangemen would pass through that place for Boycott's farm. Firearms were purchased and carried by bands of men to oppose the passage of the Orangemen. A meeting was hastily called, revolvers were produced, and the most violent language against the Government was used.

The expedition will be composed of two divisions from each county, inclusive of leaders. No disturbance at Ballinrobe is apprehended, as 200 soldiers are in the vicinity.

Ballinrobe, November 11th.—Two squadrons of hussars and one of dragoons have started for Claremorris to meet the Orangemen.

Cavan, November 11th.—The Monaghan contingent of the Boycott relief force arrived here this morning. The police were stationed at intervals between Clones and Cavan. Signs of hostility having become apparent, the Monaghan and Cavan contingent have now effected a junction. The peasantry at Ballinrobe, who last night waited for hours in expectation of the arrival of the Orangemen, are again assembling. Fifty constabulary and twenty mounted police will patrol the road from Claremorris to Ballinrobe, independently of escort, in order that no obstruction is placed thereon. The Magistrate telegraphed last night for a detachment of artillery with two guns.

London, November 11th.—The escort of the Orangemen going to Boycott will be two squadrons of dragoons, 150 infantry, two cannon and 150 constabulary. It is in doubt whether the troops have orders not to fire on any account or not. Great apprehension is felt here of trouble.

Ballinrobe, November 11th.—A number of peasantry, some armed, are en route to Claremorris.

Teheran, November 11th.—Sheik Abdullah is surrounded near Urmie. The Persians have captured the town of Soujbolak—the Kurds losing 200 killed and 180 prisoners.

Paris, November 12th.—Bank notes of the value of six

hundred thousand francs were stolen from a postman to-day in Rue St. Vinne.

Sutormann, November 12th.—Dervisch Pasha has ordered the Albanian chiefs to surrender Dulcigno, threatening to use force if they fail to obey. The Albanian Popular Assembly asked Dervisch Pasha to grant a month's time in which to reply.

Paris, November 12th.—Baudry d'Asson was released, on his promise not to re-enter the Chamber for 15 days.

Dublin, November 12th.—The Orangemen arrived at Boycott's farm without being molested. When they reached Lough Mask, Boycott was seen standing near his house with a rifle in his hands. Within two hours after their arrival a number of men commenced work on the farm. It is estimated that a week or ten days will be required to do the work, if machines are brought from Dublin in reasonable time. The Orangemen will break the corn and bring it to market. The Hussars, who acted as escort for the Orangemen, have returned to Ballinrobe. The other troops remained. The baggage and implements of the Orangemen arrived in the evening. They were not interfered with.

Cork, November 12th.—Wheeler, a land agent, has been shot dead near Oola, County Limerick.

Chicago, November 12th.—A cable special says: Boycott has been hunted and pursued and kept a prisoner in his dreary home. Nobody dared to sell him bread, even, and he is deluged with communications of anything but a reassuring tone; but he remains more defiant than ever.

Ballinrobe, November 12th.—Though few men were seen on the line of march, it is said that scouts were on every hill, and pains were taken to identify the Orangemen. The expedition is encamped in front of Boycott's house.

London, November 12th.—The *Times* says: Some prominent members of the Land League followed the Orangemen on a car, but left it at Boycott's gate. Several shots were fired at the barracks in Ballinrobe where the Orangemen slept on Thursday night, but nobody was hurt. The military were ordered to repel any attack at the point of the bayonet. The Land League however, has advised the people to be quiet. As long as the Orangemen remain at Lough Mask, the garrison will be 100 infantry, 60 cavalry and 50 police. The resident magistrate will constantly attend.

Berlin, November 12th.—In the Prussian Parliament, yesterday, Richter violently attacked the budget on account of the increase of taxation it proposes.

Paris, November 13th.—The Chamber of Deputies appointed a committee favorable to the proposal for instituting an inquiry into the case of General De Cisse. The Chamber commenced the discussion of the bill for the reform of the magistracy.

Paris, November 13th.—The Correctional Tribunal has passed sentence upon the individuals who obstructed the police of Paris in the execution of decrees against unauthorized societies, among them, M. Cochon, to one month's imprisonment; Viscounts De Lossus and Amelot, and the Marquis de Boishart to imprisonment for a fortnight.

Havana, November 13th.—The Spanish mail brought for the use of the Island Government \$1,000,000 in specie.

The birth of the Spanish Princess has been celebrated by King Alfonso conferring upon a number of persons here titles and decorations.

Havre, November 13th.—The steamer *Silesia*, from Hamburg, sailed hence for New York to-day, taking 2,300,000 francs in gold.

Constantinople, November 13th.—Two thousand Turkish troops have been sent to Volo.

New York, November 14th.—The *World's* London special says: So far as those not in the confidence of the Ministers can judge, the course of events in Ireland is likely to be about as follows: If the Boycott relief expedition accomplishes its object without bloodshed the Government will not ask a suspension of the Habeas Corpus Act, but will summon Parliament a month earlier than usual, namely, about the first week in January, to bring down a new and sweeping Irish land measure. Should this be rejected, as it very probably would be, at least by the House of Lords, Gladstone will promptly dissolve Parliament and make an appeal to the country, not a day being lost in bringing the whole question to a practical issue.

London, November 15th.—It has been decided to be

expedient to retain an extra regiment of cavalry in Ireland throughout the Winter.

Forty tenants on the Loughmark estate have issued an address, calling on all Irishmen, regardless of party, for assistance in money to enable them to go to the residence of Lord Erne.

Dublin, November 15th.—Four hundred Boers at Potcheistrom assaulted a Sheriff. Troops have been ordered up.

Dublin, November 15th.—In the case of the indicted agitators, a bill of particulars has been furnished by the prosecution to the traversers. It states that the traversers have tried to terrify landlords and prevent them from legally enforcing the payment of rent by holding meetings, displaying placards and banners, and circulating reports of speeches made at the aforesaid meetings in various papers.

St. Petersburg, November 15th.—The Commander of the Troops in St. Petersburg District has confirmed the sentences of the convicted Nihilists, with slight mitigations. The Czar has commuted the sentence of death passed upon three prisoners to imprisonment for life.

Paris, November 15th.—In the Senate, to-day, Buffet interrogated the Government concerning the Ministerial crisis which resulted in De Freycinet's resignation, and concerning the expulsion of unauthorized religious congregations. Buffet expressed his belief that the application of the decrees was a mere pretext for De Freycinet's overthrow, the real reason being his disapproval of the speech delivered by Gambetta at Cherbourg.

Ferry denied Buffet's insinuations. He declared that the leaders of the monarchical coalitions were in league with the religious establishments, and their resistance to the laws amounted to veritable rebellion, to which it was necessary to put an end. He charged that money and positions had been offered police officials if they would refuse to execute the decrees. Ferry asked the Senate to reject the interpellation, in order to put an end to anarchy.

De Freycinet said the question between himself and his colleagues was whether the enforcement of the decrees was opportune.

The debate was adjourned until to-morrow.

London, November 15th.—About forty tenants under the Loughmark estate, under the leadership of members of the Land League, will leave Ballinrobe in a body, on Thursday, for Newtown Butler, to tender full rents to Lord Erne and ask him to dismiss his agent, Captain Boycott. Lord Erne has hitherto declined to receive rents except through Captain Boycott.

Ballinrobe, November 15th.—Boycott states that he must quit the country when the soldiery leave, as he has received threatening letters.

Snow fell heavily here on Monday.

The Anti-League movement in Ulster is steadily progressing. A meeting of Orangemen and other loyal subjects has been held recently, strongly denouncing the agitation.

London, November 15th.—The *Times* says the Queen will hold a council at Windsor Palace on Saturday, when Parliament will be formally prorogued from the 25th of November to a later date.

Toulouse, November 15th.—The manager of the *Triboulet* has been condemned to pay 12,000 francs damages to Constans, Minister of the Interior, and 6,000 francs to the Prefect of Toulouse, for libelling them.

London, November 16th.—Haulan has been inundated with congratulatory telegrams. Among them are despatches from the Marquis of Lorn, the Governor-General of Ontario, the Mayor of Toronto, Governor Pachard, American Consul-General at Liverpool, and many Canadians.

The *Sportsmen* says: "We believe that Haulan is far superior as a sculler to Trickett, and we do not think Trickett was at all as well as could be hoped. A week ago, when he made a trip to the Isle of Wight and France, he was over-trained. He had worked himself to a pitch of muscular tension which nature refused to sustain long, and relaxation ensued. Probably he was suffering one of those relapses yesterday. It must also be remembered that Trickett has always had bronchial affection, but we do not hesitate to say that he would never beat Haulan, even if in the best health. With regard to Haulan, probably many years will elapse before such a perfect sculler again appears."

Haulan seemed delighted with the friendship shown here for him. He rowed most of the distance in a literally lazy

manner, as though he would prefer to stay, did not circumstances compel him to progress. He astonished the crowds by his manœuvres and tactics, even deceiving the crowds once into thinking he had fainted in the boat, and then laughing merrily at their evident concern, in which the crowds heartily joined. Hanlan's time was 26 minutes 12 seconds; Trickett's time, 26 minutes 19 seconds.

London, November 16th.—Hanlan stated last night that unless illness prevented, he would certainly participate in the International Regatta.

San Domingo, November 16th.—Via Havana.—Congress has passed a decree that, considering the proofs sufficient that the remains found in the Cathedral on September 10th, 1877, are the remains of Christopher Columbus, a monument to enshrine them shall be erected at the capital. All the American Governments are solicited to contribute to the fund. The Government of Santa Domingo gives \$10,000.

Vienna, November 16th.—The meeting of Austro-German Constitutionalists held here on Sunday last was an imposing demonstration. Nothing can shake the fact that the Liberal German party in the Reichsrath has quite nine tenths of the well-to-do educated Germans of Austria behind it in any struggle against Federalist attempts.

Paris, November 16th.—Colonel Paris, commanding the Paris Battalion of Pompiers, has just published an interesting work giving comparative Fire Brigade statistics of New York, Chicago and Paris, and calling for a reform of the fire service here on the American plan.

Paris, November 16th.—In the Senate to-day, the debate on Buffet's interpellation was resumed. Chesnelong, Legitimist, asked whether occult direction did not exist behind the Ministry. He intimated that the Cabinet, from dread of Gambetta, had retracted what it had previously approved. This remark caused an uproar in the House. Jules Simon attacked the Government and praised the policy of De Freycinet. Leon Say then read the order of the day proposed by Simon. "that the Senate, being unable to countenance a policy of arbitrariness which disturbs the public peace, passes to the order of the day." Duverney moved "that the Senate, regretting that the policy of De Freycinet had not been followed and hoping it would be pursued in future, passes to the order of the day." Premier Ferry declined to accept either of these orders, and demanded the adoption of the order of the day pure and simple, and his motion to that effect was carried—143 to 137.

London, November 16th.—Parnell will go to Paris immediately.

London, November 16th.—John Bright, speaking at Birmingham yesterday, strongly condemned the land laws of Ireland, which virtually gave the proprietors a monopoly of the land. He attributed the state of affairs in Ireland to the rejection by the House of Lords of the Compensation for Disturbance bill. With regard to the future, he said that force would effect nothing. The Government would not approve chimerical projects for the transfer of land to tenants. He believed that the remedy would be a well considered plan giving tenants security in the possession of farms, and protection against a constant increase of rent. This plan would include a provision by which landlords willing to sell would be able to deal with tenants willing to buy.

Cape Town, November, 16th.—Fifteen hundred men have gone patrolling through Basuto-land.

Brussels, November 16th.—There is good reason to believe that 8000 rifles were shipped recently at several Italian ports for Ireland, and that the rifles were purchased in Switzerland, by Irishmen from the United States.

Ballinrobe, November 16th.—The commanders of the troops here has been ordered to be ready to proceed at a moment's notice by forced marches in the direction of Galway, probably on account of the alleged importation of arms into the disturbed districts from America, by way of English ports.

A member of the land League informed a correspondent that the expedition of the deputation of Loughmark tenants to Lord Erne's residence has been abandoned, as the Executive of the Land League refused to sanction it, on the ground that Boycott intends to quit the district. The address of the tenants has been withdrawn.

Ballinrobe, November 16th.—Four hundred additional troops will be sent here immediately.

London, November 16th.—The *Standard* in a leading editorial, says: "It is understood that to day's Cabinet council will take an important decision in regard to Ireland." The article hints at a split in the Cabinet.

The *Times*, in its leader, also speaks of serious differences of opinion in the Cabinet in regard to Ireland.

New York, November 17th.—The *World's* London special says: Forster, Chief Secretary for Ireland, told me that Gladstone, Earl Cowper and himself are daily receiving threatening letters, which have now become so much a matter of course that they never pay the slightest attention to them. Forster has been so far impressed by the rapid spread of the Land League movement, and by the people, that he said to me to-day that in his opinion a reform of the existing legislation on the land question in Ireland is imperative, if England is to maintain her position in Ireland.

Constantinople, November 17th.—Fifteen battalions of Turkish troops have marched from Van against the Kurdish invaders.

Havana, November 17th.—The celebration of the birth of the Spanish Princess began yesterday and will last until Saturday.

London, November 17th.—The International Regatta Committee decided by lot that the first trial heat to-morrow, at 120 PM., shall be between Laycock, Elliott, Hawdon and Targer; the second heat, 2, between Riley, Ross, Langan and Eccley; the third heat, at 2.20, between Warren, Smith, Hosmor, Gibson and Anderson; the fourth heat, at 3.30, between Trickett, Nicholson and Clasper. The contestants will oppose each other on the 19th inst.

London, November 17th.—The Press Association says the reports of differences in the Cabinet seem well founded. Bright and Chamberlain have pronounced absolutely against coercion in Ireland. Several Ministers favor the convocation of Parliament in December, to authorize the suspension of the Habeas Corpus Act. No decision has been taken.

St. Petersburg, November 17th.—At the sitting of the Press Commission the editors of several St. Petersburg and Moscow journals favored the abolition of the system by which press offences are dealt with, and suggested that such offences be tried by the law Courts.

Rome, November 17th.—Garibaldi has written to the President of the Chamber of Deputies, energetically reuewing his request to resign.

Paris, November 17th.—The managers of *La Commune* and General Cluseret have each been sentenced in default to fifteen months' imprisonment and a fine of 2,000 francs, for defending a criminal act.

London, November 17th.—The name of the steamer reported lost off St. Govan's Head, Wales, is still unknown. She is supposed to be a small coaster. Six bodies have been washed ashore.

Paris, November 17th.—The director of *La Civilization* has been condemned in *contumacian*, to three months imprisonment and a fine of 2000 francs for insulting President Grévy, by the Tribunal of Conflict and Council of State.

Constantinople, November 17.—The Turks are fortifying the borders of Thessaly.

London, November 17.—Fifty-five thousand pounds in engles were withdrawn from the Bank of England for New York on Saturday.

Ballinrobe, November 17th.—There is every reason to believe that the order for the despatch of 300 soldiers to reinforce the troops at Ballinrobe has been countermanded, as the expedition to Lord Erne's residence has been abandoned. Boycott states that he will leave with the troops, but will return shortly.

London, November 17th.—A monster meeting of Catholics was held at Belfast yesterday, at which sympathy was expressed for members of the Land League.

London, November 17th.—The great Shropshire handicap stakes was won by "Missenius," "Speculation" second, "Sidonei" third. "Preston Pans" was the favorite.

London, November 18th.—The *News*, in a leading article, denies that there is a split in the Cabinet. It says that no conclusion has been reached in regard to an early session of Parliament. Every symptom points to increasing harmony within the Cabinet.

The *Times*, in a leading article, repeats its statement of yesterday that there are differences in the Cabinet. It says the arguments in favor of coercion in Ireland are weighed as strongly as ever, and that the Cabinet has cer-

tainly not decided on setting these aside. On the other hand, the objections of Bright and Chamberlain have not been surrendered. It may be assumed that the question is an open one, but every day tends to its settlement in a sense favorable to the contention of Bright and Chamberlain, who perhaps have not converted their colleagues to their views, but have prevented a decision the other way, and it will soon not be worth while to attempt to enforce opposite views.

New York, November 18th.—At this hour there is no additional news of the steamer foundered off the coast of Wales. All the papers have gone to press, and their editions have nothing to solve the mystery.

New York, November 18th.—The *Herald's* London special says: Our Shanghai correspondent telegraphs that a treaty was concluded yesterday, thoroughly controlling the question of Chinese immigration.

New York, November 18th.—Special despatches say that Bret Harte is seriously ill at Newstead Abbey, England.

### THE JAPANESE PRESS.

#### THE NEUTRALITY OF JAPAN.

(Translated from the *Choya Shinbun*).

Will Russia and China come to an amicable arrangement? At present both countries are daily making warlike preparations, as though neither seem inclined to make any concessions. Will war break out between the two countries? Ambassadors have been despatched to the capitals of the respective countries so that communications are still maintained. We cannot therefore assert that a rupture has taken place, nor can we foretell whether the crisis is to end in peace or war. The existing state of matters, however, is most serious, and our country is bound to give it its most careful attention.

Japan has no enmity against either Russia or China, and consequently cannot side with one or the other. Judging, however, from the broad points of our policy, we notice that China has the same literature that we have, and her people belong to the same race as ourselves. Moreover, she is our old friend, so that our mutual relations ought to be as close as those of the lips and teeth. If we enter in an alliance with her we shall be able to control the arbitrary actions of Europeans and Americans) and thus save Asia from decay. On the other hand, Russia is one of the most powerful nations in the world and has great influence in Asia; and in addition she is about to establish a great naval station at a place in the north, separated from Japan by only a narrow strait, so that we must be careful to avoid any difficulties with her, and to cultivate her friendship. Thus in the event of war breaking out between Russia and China, we should not take one side or the other, but observe a position of neutrality.

There are, according to International Law, two distinct kinds of neutrality, viz: "Strict neutrality" and "Friendly neutrality." A country observing the former, when two other powers are at war with one another, refuses not only to take up arms for either of them, or to sell them arms and ammunition, but even to supply them with coal, provisions or any munitions of war. In the other kind of neutrality, she may supply them with everything except weapons. In reviewing the many wars that have taken place in Europe and America, we find some countries observed one kind of neutrality and others another, in accordance with the circumstances in which they found themselves placed, and the way in which their own interests were affected.

Now, should war break out between China and Russia, which policy of neutrality would be most advantageous for Japan to observe? It may be argued that as the war will take place close upon our confines, we shall have to adopt an armed neutrality, or our strict neutrality will be of no avail; but that this will entail such enormous expense that we ought to consider carefully its advantages and disadvantages. We believe, certainly, that in the event of war resulting from the strained conditions of China and Russia, our present position renders it absolutely necessary that we should observe the strictest neutrality, but we do not see that it would entail any very great difficulties. A strictly neutral country sometimes finds it necessary to

adopt an armed neutrality because its boundaries are contiguous to those of the countries engaged in war, or from other unavoidable circumstances. Our country, fortunately, being surrounded by water on all sides, is not connected with either Russian or Chinese territory, so that fighting could not happen near to us. We should therefore be put to no expense in the way of warlike preparations if we observe a strict neutrality; why then should friendly neutrality be talked about?

If, contrary to our advice, our country should furnish the Russian fleet with coal and provisions, we assert that these acts would be a deliberate incentive to Russia to go to war. If we allow any Russian man-of-war that requires repairs to get them done at Yokosuka or Nagasaki, we really assist the Russian navy to bombard the ports of China. Japan is bound by no treaty stipulation to render Russia any such assistance, nor can she share any benefit which may accrue to Russia from the war; what use then is it to observe a friendly neutrality? Nor is this all; China would in consequence be certain to harbour feelings of revenge towards us, and would be always trying to settle the score. Thus all hope of saving Asia from the arbitrary acts of Europeans and Americans will be dispersed, and in their place, we shall be looked down on by those nations with contempt, and will have a great country, close by us, for an enemy, which will entail a constant drain on the nation for keeping up the requisite military and naval expenses. From all these circumstances it seems that our best policy is one of strict neutrality.

We are quite prepared to hear it urged that the policy we propose may undoubtedly prove agreeable to China, but that it is very probable to cause Russia to harbour feelings of ill-will towards us. One moment's reflection show the absurdity of such reasoning. Strict neutrality is highly respected by International Law and is approved of by all nations for its justice and impartiality. Should we show friendly neutrality to China, Russia may be evil-disposed towards us, but as long as we act according to what International Law justifies, and all nations approve, we shall certainly be safe from the displeasure of powerful Russia, although we may not have succeeded in winning her good will. With what reason then do we hesitate about adopting strict neutrality, which is most suitable for our circumstances, position, and interests?

We have written this article in consequence of the approaching arrival of the Russian Fleet under Admiral Lessofsky, and trust that it will receive the careful consideration of our readers.

### LAW REPORTS.

#### IN H. B. M.'s COURT FOR JAPAN.

Before R. T. RENNIE, Esq., Judge.

Wednesday, the 8th day of December, 1880.

#### MONTAGUE LEVY v. THE CHARTERED MERCANTILE BANK.

This was a claim to recover the sum of \$251.44 being a difference in exchange; the defendant denied that the bank was responsible for the same.

His Honour delivered the following

#### JUDGEMENT.

I regret that owing to my absence from Yokohama judgment in this case should have been so long deferred.

The issue in it is very narrow. The plaintiff alleges that the defendant corporation being employed by him as his agent to collect certain drafts on New York under special letters of instructions, dated respectively 12th Dec, 1878 and 27th Jan, 1879, failed to carry out these instructions, whereby and by reason of their negligence, he has suffered loss to the extent of \$251, and he seeks to recover that amount from them. The defendant corporation appeared by its manager, who admitted that the special instructions given by the plaintiff in regard to the collection of the drafts had not been carried out; and that apart from certain further instructions in writing, dated 4th March 1879, given to him by the plaintiff the Bank would certainly be liable to the plaintiff for the loss sustained by him.

It is then only necessary for me to consider how far, if at all, the earlier instructions given by the plaintiff to the defendant corporation, so far as the collections of the drafts was concerned were controlled or varied by those sub-

sequently given. In the earlier instructions the defendant corporation was requested to collect at current rates of exchange so that plaintiff might receive the exact amount of the drafts. In the later instructions the defendant corporation was told that in the event of the drawees of the bills in question refusing to accept they were authorised to deliver to the drawees the shipping and other documents relating to the bills.

I fail to see how this special authority to deliver up the collateral securities in the event of the drawees refusing to accept the drafts in question in any way alters or varies the former special instructions to collect or obtain payment of the full amount of the drafts, or that it in any way authorised the defendant corporation to acquit or deliver up those drafts to the drawees on payment of a lesser sum than that for which they were drawn, and I am therefore of opinion that the plaintiff has made out his case as to the principal sum claimed. There only remains the question of interest, and I think that the plaintiff is only entitled to interest from the date of the petition being filed.

His Honour here said he would like to hear anything Mr. Lowder might have to say on the question as to what date interest should commence to run from.

Mr. Lowder said that he thought his client ought to receive interest from the date when the principal sum was due and not from the date of the filing of the petition. The Court had always allowed interest from the date when the principal claimed became due which was the practice according to the common and statute law, mercantile usage, and custom. He quoted authorities in support of his argument.

His Honour said that under the statute the plaintiff was only entitled to receive interest from the date on which the petition was filed, and there was no evidence adduced on the point of mercantile custom or usage.

Mr. Lowder begged to differ on this point, but,

His Honour said that he could only allow interest from the date of filing the petition, and continued.

There will be judgment for the plaintiff for the sum of \$251 and costs, with interest on the principal sum at the rate of 10 per cent per annum from the date of the petition being filed.

#### JOSEPH THOMAS v. ALFRED J. CLODE.

This was a case of rent due to plaintiff by defendant who had asked for a re-hearing on the previous occasion, when judgment was given against him.

His Honour informed the defendant that he had gone through the records of the first hearing, and really could not see on what possible grounds he asked for a re-hearing.

Mr. Clode said that he had not received any notice of the house in which he lived having been transferred to the plaintiff, and he considered that such information was due to him, as was laid down in Smith on the law of "Landlord and tenant," portions of which he proceeded to quote in support of his plea.

His Honour said that the quotations had no bearing on the case. He considered that the case had been fully made out at the first hearing and would advise defendant to pay the money claimed; he must give judgment to plaintiff with costs of court.

The Court then adjourned.

*Thursday, the 9th day of December. 1880.*

REGINA v. W. H. TALBOT AND R. ANGLIN.

Mr. Lowder appeared for Mr. Talbot and Mr. Litchfield for Mr. Anglin.

This was a charge against the proprietors of the *Japan Gazette* for contempt of court, as stated in the following summons:—"Whereas information on oath has been laid before this Court for that you did print and publish in number 3924 of Saturday the 27th day of November last of a newspaper called the *Japan Gazette* printed and published by you and one James Raymond Anglin at the *Japan Gazette* Printing Office at No. 70 Main Street Yokohama Japan a certain letter headed "Mr. Martin Dohmen as a British Judge" and signed "British Subject" and containing serious imputations and contemptuous expressions against Mr. Martin Dohmen as a Judge of Her Britannic Majesty's Court for Japan.

Therefore you are hereby commanded in Her Majesty's name to appear before this Court on Thursday the 9th day of December instant at 10.30 a.m. in the forenoon to show cause why you should not be dealt with according to law for the said contempt."

The court room was crowded by residents and a number of Japanese. In the jury box and on chairs on the opposite side of the bench were several Japanese judges, including Messrs. Nishigata and Otsuka of the Joto Saibansho, Nakamura, president of the Yokohama Saibansho, and Yamamoto also of the Yokohama Saibansho, who were accompanied by Mr. Russell as interpreter.

On the right hand of the judge was Mr. Martin Dohmen, and on the left Mr. Nichi Shigenori, president of the Joto Saibansho.

On the opening of the Court

His Honour said:—"I understand that the two defendants both appear, in accordance with the summons, to shew cause why judgment should not be passed on them.

Mr. Lowder:—"I presume that the best method to begin will be to have the order summoning their attendance read by the clerk of the court.

His Honour said it might be taken as read; there was a certificate of its having been served.

Mr. Litchfield now applied that as both defendants were present, his client might be allowed to leave the court as he was particularly busy, but the application was refused.

An enquiry was raised by Mr. Lowder as to the constitution of the court; he believed that, according to the law, only His Honour was able to ask questions and he therefore objected to the presence of the Acting-Assistant Judge on the bench. There was no Order in Council which gave him such a right.

His Honour:—"But you really do not mean to tell me, Mr. Lowder, that I have not the power to invite him to sit on the bench with me when I feel inclined?

Mr. Lowder:—"No, but I do not think he should be allowed to put questions.

His Honour:—"Well, I will take your objection down although it seems to me one of the most frivolous that has ever been urged.

Mr. Lowder:—"I only object to the acting assistant judge taking part in these proceedings.

His Honor:—"Very well. It will then be time enough for you to object, when he does take part in the proceedings.

Mr. Lowder then proceeded with his argument on the non-jurisdiction of the Court. He said:—

May it please your honor, the point I am about to raise is so simple that it will not require any great length or elaboration of argument. The power of punishing contempt of court by fine or imprisonment is one which should never be put in motion but with the utmost care and circumspection. Contempt of court is a criminal offence; and it is the only criminal offence known to the laws of Great Britain in respect of which the court itself is at once the accuser, the judge, and the jury; and where the accused therefore, is deprived of those safeguards with which the liberty of the subject is surrounded when he is accused of other offences. It is a power of such potency that it may be doubted whether its unrestricted exercise ever should be, or can have been intended to be, entrusted to any judge whose education has not taught him how and when to wield it. Its use in the hands of the unlearned is liable to the most terrible abuse, the consequence of which to an innocent person may be to the last degree disastrous, because he can have no appeal. The subject is, therefore, or may be, as regards this particular crime (that is to say if the courts in Japan possess this power), literally at the mercy of the temper, or the caprice, or the indulgence,—it may be the digestion,—of a fellow-being whose feelings he may have had the misfortune to wound; of one who, while he may possess, ex-officio, the power of punishing, his discretion may yet be unlearned, uninfluenced, and unrestrained by history, and those teachings of tradition which go to form the character and which govern and guide the thought and action of Englishmen, in whatever position they may find themselves, whether presiding in a court of law, or whether conducting a newspaper; and of one who may, as a consequence, be utterly incompetent to form a just and accurate conception of the reason why so great a power is intrusted to English judges, or on what occasions that power may be

fully used. It is conceivable that the law may be invoked to the assistance of the court against one person, and not against another, though the true dignity of the court and the due administration of justice may stand in great need of protection from the latter than from the former. And indeed this community has lately witnessed,—in respect of these very proceedings,—just such a capricious exercise of this power as I have imagined to be conceivable. No sooner was it known that the defendants, who are now before the court, had been cited to appear and purge the contempt that is alleged against them, than the editor of another newspaper proceeded to comment upon their actions in a manner intended to injure them in the eyes of their fellow-residents, and calculated to prejudice the trial of this case. And yet I have not heard that the court has been moved to take notice of this clear case of contempt on the part of the editor of the *Japan Daily Herald*—

His Honour :—I really cannot listen to all this ; it is really not in connection with the case.

Mr. Lowder :—I merely mention it to shew that that court has noticed one case, and not the other.

His Honour :—Well, I cannot listen to you.

Mr. Lowder :—Then I will say nothing further on the point, and proceed with my argument. The object of that argument is not to obtain the punishment of other wrong-doers nor, for the present, at least, the vindication of my client from the offences of which he is accused. What I shall endeavour to show is, that this court does not possess the power which, as I gather from the form of the citation, it may purpose to exercise, namely, the power of summarily punishing a contempt committed otherwise than *in facie curiæ* and of the nature of that alleged against the defendants. Contempts of court may be divided into two general classes of contempts *in court*, and contempts *out of court*. By the common law of England the superior courts at Westminster have, from time immemorial, possessed and exercised the power of punishing, by summary process, all such contempts. Other courts of record, inferior to the courts of Westminster, have also, from time immemorial, possessed, at common law, the power of punishing contempts committed *in facie curiæ*; but not other. My contention will be that this court, though it undoubtedly has the power to punish for the first, and in some instances for the second class of contempt, its authority and jurisdiction are not coeval with the authority and jurisdiction over contempts possessed and exercised by the superior courts at Westminster; that it is an inferior court of record; and that if it is so or not its power to punish for contempt is strictly limited and confined, and does not extend to the punishment of a contempt committed out of court, such as that of which the defendants stand accused. I have looked through all the authorities at my command, and I have been unable to find a single instance where it is said that an inferior court of record has inherent power to commit for a contempt out of court. The superior courts at Westminster represent the supreme court of the land; and their power is coeval with their original constitution and has always been exercised by them. They are all divisions of the *aula regis*, where the king himself is supposed to have dispensed justice, and their power to commit was an emanation from the royal authority, for any contempt would be a contempt of the sovereign. But it is not so in the case of inferior courts; and no case can be found where this power has been exercised by an inferior court.

His honour :—What do you call an inferior court, Mr. Lowder?

Mr. Lowder :—I shall come to that presently, your honor. [Argument continued.] These considerations alone, for which I have, and will presently adduce, the highest authority, would, I submit, be sufficient to dispose of the order in response to which I am here to-day. But there is another aspect of the case. The Order in Council itself, under which this court is constituted, shows the extent of the power of punishing for contempt which was intended to be conferred on the court, (Read sect. 155). All the powers conferred by § 155 are incident to the common law. Why, therefore, confer those powers by special provision unless the object were to show how far the court is entitled to proceed under the common law,—or, in other words, to restrict the power the court would have possessed under the common law but for this section. But it may be said that this section was

not intended to curtail the general jurisdiction of the court to fine or imprison at the discretion of a judge, for contempts other than those enumerated in the section. This would lead to an inconsistency. If the contempt were committed in the face of the court, the judge could only imprison the offender for seven days, or fine him \$25; while for a contempt out of court, surely a lesser offence, he might fine him hundreds of dollars, or imprison him for several months. I therefore contend that the Order in Council must be understood to confine the power to the instances given, and to the extent limited by section 155. This was so held in the case of *The Queen v. Lefroy*, reported in L. R. 8. Q. B., 134. See also, sections 4, 64, 78 of the Order, and miscellaneous rules, criminal and civil, No. 1.

Mr. Lowder read the whole case, and applied it, by comment, to the present case.

His honour :—I don't know, Mr. Lowder, that you have shown that this is an inferior court.

Mr. Lowder replied, contending that the constitution of Her Britannic Majesty's Court for Japan is based on the same grounds, and is limited to the same power, as the English county courts; and maintained that even if the court was a court of record yet it had no power to punish for contempt committed outside of the court; even though the Court for Japan were a Supreme Court, yet it has no power to try for contempt committed out of the court, as was clearly shown by section 4 of the Order in Council. Continuing his remarks, Mr. Lowder said :—I say that the jurisdiction of this Court must be in accordance with section 155 of the Order in Council.

His Honor :—It seems to me that you have proved at present nothing which applies to this Court, as it is not limited.

Mr. Lowder :—I beg pardon; this Court tries cases with only five on a jury.

His Honor :—Yes, but this arrangement was made by a special permission, as appears in the orders in Council. At the same time this does not constitute any limit and with a jury of five only criminal cases can be tried.

Mr. Lowder :—I wish to prove that this court as an inferior court has no jurisdiction. Even admitting it to be a court of record, its power over cases of contempt of court is limited, as § 155 in the Orders of Council proves.

His Honor :—I cannot agree with you there; I consider that there is no limit at all.

Mr. Lowder :—The section in point goes most plainly to define exactly how far these powers go, which surely limits them.

His Honor :—The courts at home, it is true, are limited, but not those out here; if they were, who would have any jurisdiction? You assume that this is an inferior court of record. I should like to hear your argument.

Mr. Lowder :—I will draw the attention of your Honor to § 4 of the same Orders (counsel here read the order.)

His Honor :—Then I understand that because this rule has been put in the orders of council, you consider that it takes away all other powers from it.

Mr. Lowder :—Yes, decidedly, it seems to me that the clause can bear only that one construction.

His Honor :—The point is an important one, and I will adjourn the case until Monday.

Mr. Litchfield :—I have first a few remarks I would like to offer. I do not wish to keep the court long, but in an important case like this, I should like to say a few words on the subject of contempt of court, when committed not before the court, but outside it. There are two forms of contempt of court; one being committed actually before it, and the other by writing letters, or speaking publicly, in a contemptuous or libellous manner. As had been already pointed out in the case of *Regina v. Lefroy*, when the contempt was committed out of court, an inferior court of record has no jurisdiction.

His Honor :—But you do not mean to assume that this is an inferior court?

Mr. Litchfield :—Decidedly not. I wish, in fact, to argue the point whether the court has actually more power than is given it by the statute; as it is a new court, it can have no more power than was conferred on it at the time of creation. (Counsel here quoted several authorities and wound up by asserting that the powers of the court were limited by § 155 of the Orders in Council.)

His Honor:—You have instanced country courts in England as being limited by Acts of Parliament. Putting aside the limits assigned by §155, how else is the power of this court limited?

Mr. Litchfield: By §§ 84 and 47 of the Orders in Council, which I contend were meant to show that only such powers as are expressly laid down, belong to it. I mean that otherwise we should have the less offence equal to, or even greater than the greater; the less offence of contempt committed out of court punishable more heavily than the greater one of contempt committed in the court.

Mr. Lowder: I trust that in connection with this point, your Honor will take into great consideration the cases I quoted.

His Honor: Do you also mean to contend that this §155 limits the powers of the court?

Mr. Lowder:—Yes, I do; I could not bring forward a stronger argument.

His Honour:—Suppose now that the Shanghai Supreme Court granted an attachment, to whom would you appeal for a prohibition. To the Privy Council?

Mr. Lowder:—I don't know whether the Privy Council would exercise its powers.

His Honor:—Does not that shew then that the Shanghai Court is a very high court, with very full powers.

Mr. Lowder quoted Blackstone in favour of his argument, and

Mr. Litchfield referred His Honor to a case in Canada where a man was sent to prison for contempt of court by a judge who issued the summons on his sole authority and heard the case himself. An appeal to the Privy Council reversed the decision on the ground that under the constitution, one judge had no such power.

The Court here adjourned until Monday, the 13th instant, at 10 a.m.

Before MARTIN DOHMEN, Esq., Acting Assistant Judge.  
Friday, December 10th, 1880.

REGINA *ats.* KOGA GENJIRO AND YENDO KIKUTARO *vs.*  
A. HERBERT BLACKWELL.

In this case, the complainants, charged the defendant, who is manager of the *Japan Mail*, with assaulting them on the morning of the 2nd inst. at No. 16, *Japan Mail* office.

Defendant pleaded not guilty.

Koga Genjiro, cautioned; I am a compositor and one of the complainants. About 7 o'clock on the morning of the 2nd instant, I went to No. 16, and while I was consulting with some of the others regarding the employment of some Chinese in the office, defendant came into the boy's room, situated in the back premises, and struck me on the shoulder with a stick. I had no intention of not doing my work. Defendant came in and said "why are you not doing work?" I replied that I was consulting with the others, and he then struck me.

His Honour said this last statement differed from what he had just previously said.

Complainant: I meant to say that defendant would not give me time to speak before striking me.

By defendant: It was about half-past 7 when you struck me. Seven o'clock is the usual time to commence work. The blow did not mark me, but there is a cut on my knee where I fell when I was put out of the yard.

Yendo Kikutaro, cautioned: I am the other complainant. On the morning of the 2nd inst. we were all consulting together in the boy's room at No. 16, regarding the question of exchange, when defendant came in with a stick, and said "If you are not going to work you had better leave." We all then went out. Defendant did not strike me, but pushed me out, and I fell and hurt my shoulder.

Defendant called his Honour's attention to the fact that this complainant had charged him, in the summons, with having kicked him, and now he said that he was pushed out only.

Complainants called, as witnesses, Todo Kenzo and Yoshibi Katsunosuke, two ex-compositors of the *Mail*, who stated that they saw defendant strike Koga Genjiro with a stick on the morning in question.

Defendant called—

Henry Collins, who was sworn, and, in answer to defendant, said: I did not see you strike the complainants'

with a whip. You told the men to go, and two of the ring-leaders (complainants) remained behind, and you put them out of the place. If you had struck them I must have seen it from the position I was in. I came out at your request to witness what took place.

By the Court: I was in the passage where the row took place, and could not have failed to see had defendant struck complainants. The compositors, pressmen, and even the office and delivery boys were on strike; they refused to go to work when ordered.

By defendant: You have always used your men well; I have never seen you on a single occasion ill-use them.

Defendant said he admitted ejecting complainants, but he denied striking them. He called attention to the discrepancies in the evidence of the complainants and their witnesses, who all told a different story as to the details. The whole case was a trumped up one by the two complainants, who were the ringleaders in a conspiracy—which had been defeated—to prevent the publication of his (defendant's) journal. There had been a regular mutiny in the office and threats of killing, burning, and destroying had been made use of, and something had to be done. On the morning of the 2nd, the whole native staff were on strike, drinking, talking, and laughing in the back premises, and when he went out to the men he took a hunting crop in his hand for his own protection, as they were twenty to one; he also took Collins to witness what occurred. He told the men either to go to work or to leave, as he would not have them loafing there. They jeered him, and used abusive language, and refused to go to work; but all left, on his ordering them to do so, with the exception of complainants, whom he thereupon ejected.

His honor said that he could not entirely disregard the evidence of the two complainants and their witness, who all swore that defendant had struck complainants. But there certainly were strange discrepancies in their evidence. However, he considered the case was a most unimportant one, and ought never to have been brought at all into Court. He should therefore only order defendant to pay the costs of the Court.—*Japan Herald*.

## A REALLY GOOD CASE.

### [A LEGEND OF ST. MICHAEL'S HOSPITAL]

Every one knows that St. Michael's, as we shall take the liberty of calling it, is the largest and most celebrated of the London hospitals. It is situated quite in the heart of the city, and is about equidistant from London Bridge, Westminster, Gower street, Smithfield and Whitechapel. I was a student there, and there the happiest days of my life were passed. And now to my story.

A large number of the students had gone down for the short Christmas vacation, and I should have gone also, but was just then "dresser" to Carver Smith, and could not leave town; moreover, it was my week of residence. I must beg you to remember, what is perhaps but little understood by the general public, that a large part of the watching and care, and a certain proportion also of the treatment of hospital patients, devolve upon assistants selected from the senior students. Some of the less important appointments, such as the "dresserships," are held by every student in turn; but the more responsible offices, some of which require twelve months' residence in the hospital, can only be gained by a few men each year. And for these appointments, which are esteemed positions of great trust and honor, and which are exceedingly valuable as steppingstones to professional success, there is very keen competition. On the surgical side of the hospital each of the four visiting surgeons had a resident house-surgeon, and to be Sir Carver Smith's "H. S." was one of the highest ambitions of a "St. Mike," for Sir Carver was at that time one of the leading English surgeons.

A man named George Adams held the post at this time, and as he is the hero of my story, so far as I have a hero, I will just say a word about him. He was one of those men that we occasionally meet with, who seem to stand head and shoulders among their fellows—very quiet and reserved, and when he chose quite inscrutable. No one knew where he came from. But his very great ability, his calmness in all emergencies—I never saw him discompose except once—his mature judgment, and his great kindness, won him the respect alike of the students, the nursing staff and the surgeons. Under him were four dressers, juniormen, who assisted in the hospital under his direction. I was one of them. Each week, one of us in turn resided in the hospital, and, as I said, Christmas week fell to my turn, and that is how I came to spend Christmas in St. Michael's. I ought to add that there were four assistant surgeons to the hospital, but their care was over the outpatient department, and it was only in the absence of the visiting surgeons that they had any duty in the wards.

Well, it was Christmas night, and our work for the day was done, except some late visits to the wards by-and-bye, and of course any casualties that might turn up. But Christmas day is usually

pretty slack in that respect. It is medical rather than surgical casualties that Christmas day produces. We had got up in honor of the day a little entertainment in an empty ward, for any of the hospital inmates who cared to attend and were able to do so.

We had a famous little programme. One or two of our residents could play and sing well; another had a curious facility of whistling to the piano; another was an amateur ventriloquist and prestidigitateur; and I fancy there were also some recitations and tableaux to come off. Also, there was one of the patients, an old sailor, who could sing in a grand, rich, stentorian baritone and bring down the house. Our chairmen—Adams, of course—had just begun, and was delivering himself in a semi-serious way of some very eloquent remarks, amidst great applause, for nothing pleases the lower classes, better, than a few oratorical flourishes—when "tinkle, tinkle, tinkle" went a small, high-pitched, imperious bell. It was the accident bell.

Oh, ye lay mortals, ye little know how the social and domestic joy of a medical man are at the mercy of a bell! We invite our friends to tea, we welcome them, and anticipate a pleasant evening, and—there goes the bell! We come home tired and wet, change boots for slippers, and get comfortably by the fire, and—there goes the bell! We turn into bed on a cold night, and just get warm and snug when—there goes the bell! My bell experiences began that night at St. Michael's and I shall not soon forget it.

It was Sir Carver's "taking-in week," and his assistants had to attend to the accidents. Adams nodded to me, and off I went to investigate, knowing that it might be anything from a cut finger to a railway smash. I found a scene of considerable excitement in the accident-room. Two policemen, aided by a crossing sweeper and a cabman, had just brought in a patient, and some other spectators had pushed their way in out of curiosity.

"Just happened outside, sir; knocked down by a runaway cab, sir."

"Lost a lot of blood; afraid it's a bad case, sir." Thus the policeman spoke.

"Ask Mr. Adams to come down at once, and clear the room." I said.

It was a young, fair-haired girl of eighteen or nineteen, perfectly pale, unconscious and almost pulseless—a strange contrast to her rough, swarthy, weather-beaten bearers. A deep wound in the neck was bleeding profusely; but, on tearing open the dress, I found I could stop the hemorrhage almost entirely with my finger.

Adams was there immediately; in a minute he knew all about it, and had settled his course of action. Quietly he said: "Send for Sir Carver. Take her to the theatre [the operating room] at once. Ask the other men to come, and get everything ready for operation." And then to me: "Keep up steady pressure, and don't take your finger away for an instant."

Nothing could be found out concerning her. No one was with her when she was struck down. She was very tastefully though not expensively dressed. Her features were exceedingly regular and pretty, and when the color was in her face she must have possessed a very considerable share of good looks. Nothing but a purse and a handkerchief were found in her pocket. The former was well filled and the latter was marked "E. Stead." Adams said at once that she was a lady.

I do not know whether it ever happened before at St. Michael's that on the occurrence of a sudden emergency, no one of the surgical staff was at hand. Strange to say, it happened so to-night. Sir Carver Smith and three of the assistant surgeons lived close to the hospital; but in five minutes the messenger returned with the news that Sir Carver had been called to some aristocratic celebrity at the West End, who had met with an accident, and had taken one of the assistant surgeons with him. The second was out of town and the third, who had been left to act in emergencies, had been taken suddenly ill.

We had been discussing the case, and offering advice upon it with all that calm assurance which characterizes embryo surgeons. But matters now become serious. Half an hour would suffice to summon one of the other surgeons; but it was plain that something must be done at once. We all looked at Adams, who had said very little hitherto, but had gone on making everything ready. He simply said: "Begin to give chloroform; I am going to operate."

"What are you going to do?" we asked.

He told us; but I will not inflict any details upon my readers, but will simply say that the sharp end of a broken shaft had made a narrow, deep gash in the root of the neck and had wounded a large artery. The operation contemplated afforded almost the only chance of life; and to delay it any longer, Adams said, would be throwing that chance away. It was an operation of the highest difficulty and danger under the present condition of the patient; and could its performance have been anticipated, the theatre would have been crowded with spectators from all the hospitals in London. And there was a young surgeon of 25, called upon at a few minutes notice to undertake what many a long-experienced surgeon might hesitate to attempt, for it was impossible to perform it without additional loss of blood; and it was not at all improbable that the patient might not survive the operation, to say nothing of after dangers.

Adams carefully explained to the other house surgeons what assistance they would have to give him; and when the patient was ready, commenced at once. Perfect silence reigned, broken only at intervals by a word from the operator, but indeed he had little need to speak, for we were well drilled at St. Michael's, and everything he needed was put into his hands almost before he asked for it. I think I can still see that quiet, eager group of young men under the brilliant gaslight, standing around the pallid, slumbering, unconscious girl; and in the centre the young surgeon, cool, collected, with steady hand, without hurry, without hesitation, doing his work. I have witnessed many of the most brilliant operators in England, and of course have seen Adams himself many times in that theatre in later years; but I think I

never saw that night's operation surpassed either by himself or any one else. A special demand sometimes calls forth special powers, and acts almost like an inspiration; and so it seemed now.

In a short time it was done, and successfully done, and the patient was carried away to a quiet ward, where she was duly cared for by the nurse in charge, Adams, and Sir Carver Smith, who came on later. Our miscellaneous entertainment did not come off; but we scarcely regretted the change of the programme. In a place where accidents are hourly, and operations daily occurrences, one more or less seldom creates much excitement; and when I go on to say that this case excited more interest among residents and non-residents than almost any other case I ever saw in the hospital, I wish you to clearly understand that this fact was due entirely to the extreme professional interest in the case and the great enthusiasm of St. Michael's men for the study of surgery. At the same time, I may state, although not particularly bearing on the question, that the patient was an uncommonly pretty girl; and day after day passed by without any light being shed on the question as to who she was and whence she came—circumstances quite sufficient to excite in a mind not preoccupied with such matters as burden the intellect of the average medical student, the liveliest interest and curiosity.

After the operation she was at first too ill to be interrogated, and when she got a little better she declined to give any information; at any rate none could be obtained from her. Perhaps she was a little "queer" with feverish or hysterical excitement.

At the expiration of two days I went in to help with the dressings. She was very grateful for every thing done for her, and bore her pain very well. For a long time she was in a very critical state. As the euphonious phrase of the young profession went, "She had a very close shave for it." At the end of three weeks, however, she was in fairly smooth water, and for the first time some of the clinical class went in with Sir Carver Smith to see the case. He had hitherto said nothing on the subject of the operation. He was a man of few words; but one word of praise or blame from him was never forgotten by any of us. Turning to us from the patient, he said, "This, gentlemen, is a case of so-and-so," and he briefly explained it. Then he added, "Nothing but the most exceptional circumstances could justify a house surgeon in this hospital in undertaking an operation of such importance. In this case those exceptional circumstances existed. The operation is one of great difficulty and rarity. I have once, many years ago, performed it myself, and the patient died. Had my patient recovered, such a recovery would then, I believe, have been without precedent. But the gratification to myself of having performed the first successful operation would not have been greater than is my gratification now at having under my care a case which will, I believe, recover, and whose recovery will be due, without doubt, to the prompt and skillful action of a St. Michael's student, my own house surgeon, Mr. Adams."

"Strong for Carver, and good for Adams" was the general comment. Adams pretended to be writing notes; but there was not one of us who would not readily have suffered "plowing" in our "final college" to gain such a word from Carver Smith.

And now my fair readers, if you will turn to the clinical report of the celebrated case in the pages of the *Lancet*, somewhere about March 18—, you will find it stated that "after this point the case presents no features of special interest; convalescence was rapid, and the patient was discharged cured on the forty-seventh day after admission." I therefore give you fair notice that you may lay down this record here and not read any further unless you like.

Yes; she recovered rapidly; and prettier and prettier she grew as she got better. She talked very little, and said nothing at all to help her identification. Inquiry was fruitless, even though the case got into the newspapers. The interest among the students increased daily. It was reported that she was an heiress who had quarrelled with her guardian; that Adams was madly in love with her; that she was waiting for him to propose, and then would marry offhand, that Adams knew all about her, but kept it snug. And then men got to chaffing him in a mild sort of a way, wanting to know the "state of the heart" and the chances of "union by first intention." But Adams was impenetrable. Personally, I am inclined to think that whatever the condition of his patient's heart might be, he was a little affected in that region. She was evidently very fond of him, and liked no one but him to dress the wound. Still the mystery increased.

At last one afternoon I was sitting in Adams's room in a leisure interval, when a lady's card was brought in. It had a deep black border, and bore the inscription: "Mrs. Stead, The Cedars." She wished to see Mr. Adams. Immediately afterwards the lady was shown in. Adams motioned me to stay. She was a fine, tall woman of fifty, dressed in deep mourning, with hair just turning gray, a firm mouth, soft, keen gray eyes and a face combining intellect and kindness.

"Have I the pleasure of speaking to Mr. Adams?" she said. He bowed. She then produced a paper which gave an account of our famous case and of the part Adams had played in it.

"May I inquire whether this patient is still in the hospital? Can I see her?"

"Yes, certainly. Would it not be better for the patient to see the card first, to avoid sudden excitement; that is, if the lady's visit were likely to cause excitement?"

"Perhaps it would be better to take up the card and say that Mrs. Stead desires to see her."

Wonderfully calm and self-possessed the lady seemed to us, and yet she could not entirely suppress some signs of emotion or excitement. She said that illness in her family had prevented her from seeing the papers for some time, or she would probably have been here before.

I took the card up and showed it to the patient. She turned very pale, then buried her face in her pillow and burst into tears.

"Shall the lady come up?" I said.  
I thought she sobbed out "Yes."

The visitor came up. Slowly and calmly she walked up the ward. The news had somehow got about, and several of the men found that they had business in that part of the hospital just then. The lady stood by the bed and said softly, "Elizabeth."

The girl looked up, and their eyes met. One glance at that face was enough.

"Yes," said the lady; "I can identify her."

"It is your daughter?" asked Adams.

"It is my cook," said the lady, "Elizabeth Saunders."

I think I said that I only once saw Adams considerably discomposed, and that was on the present occasion.

"I—I—thought her name was Stead," he said, and his eyes rested on a pocket-handkerchief lying on the pillow.

The lady's eyes followed his, and a slight smile played on her features.

Yes, it was even so. The acute scientific observer, the far-sighted young surgeon, famed for his diagnostic acumen, had seen through his case, but not through his patient. It turned out that the girl, being remarkably good-looking, and having acquired from a previous situation in a nobleman's family a very correct way of speaking and some very ladyish manners, was fond of dressing up in her holidays and frequenting places of amusement, where she usually attracted a good deal of attention. Her mistress having been called away from home to nurse a sick relative, had allowed her servant to go, as she thought, to visit her parents in the country; but the girl, having her wages in her pocket, had preferred to remain with an acquaintance in London, where she enjoyed her Christmas holidays very much to her own satisfaction, until her accident put a stop to her manoeuvres, or rather changed her field of action. Finding, as she recovered, that she was being addressed as "Miss Stead," and that she was the object of much interest and attention, it seems to me—judging by what experience of human nature on its female side I have since acquired—not very remarkable that she preferred to keep up the delusion, golden silence being her main line of tactics. And, fair readers, do you think it very contrary to your experience of human nature on its male side, that an otherwise exceedingly acute young man should be the subject of a delusion of this particular kind?

The lady spoke very kindly to the girl, and guessing, I fancy, how matters stood, said some very graceful things to Adams. Subsequently, you will perhaps be glad to hear, she proved a very kind friend to him, and her influence was of no small assistance to him in his future professional advancement. She became, in fact, quite a mother to him, though not a mother-in-law.

I really do not know what befel the girl, except that at her own desire the lady obtained for her "a situation in the country, out of the way of temptation," and that she proved to be a faithful servant.

I am sorry to have to state that public interest in this case at St. Michael's somewhat rapidly declined after Mrs. Stead's visit, perhaps because, as the *Lancet* said, the interesting symptoms had all disappeared. But I said then, say now, and always will say, that it was, from all points of view, "a really good case." *Chambers' Journal*.

## PRISCILLA'S CHOICE.

### A COUNTRY IDYL.

There were four of us—four daughters, only think! With four sons, as papa said, something could be done; shipment, as he said, to India or the Colonies. Once set them down on the shore, "and there they were," which seemed undeniable. One of us, however, was considered 'lovely' a beauty if you will—Priscilla Lightbond. Our father was the Rev. J. Lightbond, rector of a Welsh parish, on £120 a year—for which, parish people and stipend, he had supreme contempt. Beauty, alas had no currency in the place. Every one married early, and married coarse Welsh girls, in fact, our Priscilla was not of the type the natives preferred. They liked the women you see in Teniers' pictures—Boors carousing. Boors they were, and they certainly caroused enough. Our parent's only firm and constant hope was in the stray English angler and tourist who came to see the lovely scenery and the rural inn we fortunately were near to. Our parent was always 'looking in at the inn,' to see, as he humorously put it, 'whether there was a rat in the trap; if there was, he invariably brought him up, not to dine, but to take tea. Then we all appeared, blushing and blooming, simple rustic maidens—the parson's daughters—Priscilla being always thrust forward as the choice candidate. The visitors generally went away, 'after a most agreeable evening,' and many minute and reciprocal engagements to meet again. They never were heard of more. This was invariably the case. But still my father persevered 'looking in at the inn' every day with an unflinching resolution, which, alas, if applied to his spiritual interests, would have made him a saint, and insured his welfare hereafter.

Never shall I forget the afternoon when he came rushing in breathless.

"They're coming to tea," he cried; "get everything ready! They'll be here in half an hour!"

"Who?" we all cried, save Priscilla, who from custom knew what was meant, and retired to her chamber.

It was the young and Honourable Mr. Pierrepont, well known as heir to a wealthy nobleman, who was, with his friend and tutor, Mr. Smallpage, on a reading and fishing tour. They were delighted to come; and when they saw Priscilla, would certainly continue to come.

"A most gay and elegant young man," said my father, "with all the easy flow of conversation which mixing gives. The tutor, a

heavy silent creature, was not inclined to come, and who will probably stay with his books."

Accordingly at eight o'clock we heard the the sounds of laughter at the window. We were all being ranged up; and Priscilla, our sister, a really beautiful country girl got up, as the phrase is, in a sort of rustic dress, was pronounced to be 'looking lovely.' We all kissed her by way of anticipatory congratulations, for we were of this buoyant temper, and in these ventures looked on our hopes as facts, alas, regardless of the lessons of experience! We heard voices, or rather a cheery voice outside. They were coming; and as the brigands of Abruzzi crouch down on hearing the step of the unconscious traveller, so we all fell into our places, and waited eagerly.

Our parent advanced to meet them, like an old friend. The Honourable Mr. Pierrepont was charming—at his ease at once—and rattled on eagerly; but it was not, on comparing notes later, that when his eye fell on Priscilla, he interrupted himself, and almost stopped.

"You saw how he was struck with her," said my mother.

"Mark my words, Julia," said our old maiden cousin, "he is perfectly gone!" giving the meaning to 'gone' that is associated with amatory matters.

"You all remind me," said Mr. Pierrepont, a little later round the tea-table, 'of the Vicar of Wakefield's family. Miss Olivia, as I always will call her, might have sat to poor Nolly Goldsmith.

Priscilla, blushed, and we all interchanged looks of delight. Excepting 'grim grondie,' as we at once christened Smallpage, the tutor, who was 'walking,' as the phrase is, into his tea and bread-and-butter. A heavy uninteresting creature about five-and-twenty, and looking forty. A silent shy creature, who had read himself half blind.

Mr. Pierrepont looked over at him, and smiled at us.

"You are thinking he'd do for Moses with his gross of spectacles, ha, ha!" (How we roared!) "Eh, Cockles! I saw that in Miss Olivia's face. I must tell you," he went on, "in these outings he is invariably Cockles and I am Whelks. We keep this up at the moors, at the hotels, at our studies, and you can't imagine the fun we have!"

"And are we to call you by these names?"

"Certainly. We always insist on it. But you'll find him a very hard cockle to open."

How we laughed and laughed at this wit, especially when my father added good-humouredly.

"And perhaps not so much in it when we do open it."

All the poor tutor could do was to look foolish, and give a sort of sheepish look, as if asking for protection, to Olivia. The jollity that set in then was all owing to the young nobleman, as he might be called. We had round games during which we roasted the tutor. The foolish Priscilla, to our disgust (she was always doing something of the kind), was the only one of the party who took his side, and murmured it was too bad. A most delightful evening was spent; and on going away they told us—Whelks rather than Cockles—that they were to remain a week or ten days; in fact, longer, Mr. Pierrepont said significantly, 'if they found they were liked in the place.'

"It will do," said my father, rubbing his hands with enjoyment; 'we never had so favourable a case. Everything conspires: that tutor is a mere deadhead. By the way, Priscilla, I am astonished at you—so childish!'

So were we all, and set upon her for her ridiculous philanthropy. He might do for the maiden cousin Miss Snaggs. But really to be wasting a moment's time on a being like that, a common grinder! Priscilla, thus properly reprimanded, was made to see her fault, and promised not to offend again.

With that such festivities set in! We had a picnic 'to the waterfall; picnic to the mountain, to the old castle, if the title 'picnic' could apply to the arrangement by which one person, our father, supplied all the viands. The process at each picnic consisted in artfully isolating, during the most romantic hour of the day, the future betrothed, to which the pair were not disinclined. Miss Snaggs lent her energies to the tutor, to which he was disinclined, but made feeble resistance, or none. The fare was good and substantial; the drink, sherry 'oup'; delicacies procured on mortgage, as it were, of our already terribly encumbered resources. But we were, as it were, gaming, and for high stakes, and certain to win. In her nightly examination before the full court, before going to bed, Priscilla confessed to strange deep-meaning utterances of love, not yet taking shape, but growing more distinct and formal on every occasion. The old generality of these was such that every one put a different meaning on them. He used to bewail the difficulties of his situation, without specifying either difficulties or situation. He of course alluded to marriage. His father, harsh cruel man, thought him too young, and wished to sacrifice his inclinations to a wealthy ugly woman with money. As for Cockles, he was a simple nuisance. His dull eyes were perpetually on 'our Olivia.' In deference to the pleasant humour of our noble friend (if he would permit us to call him so, which he did) we had rechristened her, and she was no longer 'Prissy,' but 'Livvy.' Even Miss Snaggs, by an exertion, lent herself to the artifice, and earned immortal honours by calling out, 'Where's the tea-caddy, Olivia?' correcting herself in a most natural, even testy, way, 'I mean Priscilla.' Whelks treated her with marked respect ever after. The odd part was that our agreeable friend never came without the nuisance, who would have been far more suitably engaged at his books or with his fishing-rod. But our friend said, very nicely, that he could not leave him to himself; that he was bound to look after him. However, we soon found a way; and when lawn-tennis was going on, or the betrothed were walking together in the garden, word being passed round that strangers or intruders should keep out of the way, he was placed with cousin Snaggs, with whom he soon grew very confidential. 'Feeling his way,' our mother called it.

Hopes culminated when one day a little incident occurred of deep significance. It was on the grass at the abbey, or mountain, where we were bivouacking, when a boy appeared bearing a small basket which he laid down beside Cockles and then went his way.

'Why, what's this? we all cried.  
We noted that the Honourable Mr. Pierpoint looked at him and it distrustfully. Jealousy, perhaps.

'What have you been doing?' he said tartly. 'Have you been buying a Jack-in-the-Box?

The other was opening it with much confusion. 'Twas champagne! He took out a bottle and set it before Olivia.

'I heard you say the other day you liked champagne,' he said, in his hand-dog way; so—

'Well, we never!' How we laughed! But Mr. Pierpoint most naturally resented it. So indelicate, he said to us. 'As if you could not have given us champagne if you thought fit!' (We indeed! But the 'if we thought fit' was a wholesome proviso.) How he chaffed his friend on the mode of offering the tribute.

'He'll next go and buy a big ham and set it down before Miss Olivia. Such a ridiculous thing; he can't afford it. I shall have to pay for it out of my allowance,' on which he uncorked it and did the honours of the bottle or bottles.

The charming Priscilla partook of it, and enjoyed it, poor child; it was the second time of her tasting it in her life. She had been so well schooled that she said,

'Why will you be so ridiculous, Mr. Cockles? I never said such a thing or didn't mean it if I had.'

So the lotus-eating went on for ten days or a fortnight. Still the indistinctness of the utterances went on.

'I want to have it in black and white,' said our father. 'It can't go on beyond this week. I am broke. I vow, Priscilla, you idiot, if you don't bring the man to speak there'll be a seizure or something disgraceful in the house.'

Priscilla was really doing her best; but it is a very hard task for a modest maiden; for, as in fishing, if you pull away the line too impatiently, you frighten the fish, whose suspicions are aroused. The poor girl was much troubled and badgered, and did make many rude and clumsy attempts, without profit. Could it be that the Honourable Mr. Pierpoint 'was a villain,' or, what was the same thing in our family, meant nothing?

At last it came to a day of enjoyment, when it was planned that an immense final effort should be made, all working together, to bring matters to a point. Just as we see some great railway-van imbedded in a newly-laid mass of broken stones, and which nothing can stir—when, by horses straining, driver flogging and shouting, every one lending a hand at the wheels or pushing behind, the whole moves slowly, and is dragged out triumphantly. In this way our guest, who might have been content to stay for ever in the rut of flirtation, was actually forced into motion. The carter—if I might so call her—was cousin Snaggs, who showed a recklessness, if not indecency, in her efforts. She repeatedly called attention to Priscilla's faded cheeks, and declared she was sure she was labouring under some secret attachment. She gave point, as it were, to all his general remarks.

'Indeed,' he said, 'any man, be he prince or peasant, could be happy with Miss Olivia—'

'O!' we all said, and smiled at each other. Olivia blushed.

'Except Cockles.' How we laughed! 'He's to marry a folio. His children will be all duodecimos.' Another laugh. 'No, no,' he went on; 'Miss Olivia must wait a little.'

'But,' said Miss Snaggs, in the shameless way alluded to, 'who is she to wait for? I think all that's unmeaning. If two people love each other, and the parents make no objection, why not speak out boldly? It's setting up a wall to knock your head against.'

We looked at cousin Snaggs with wonder and admiration. Never had her lips been touched with the fire of sagacious oratory.

'Well, what do you say, Mr. Pierpoint!' she pressed him. The wagon had to move.

'Well, I say,' he said, 'that if they love each other—'

'But she does,' said cousin Snaggs bluntly.

'Why, any peer or peasant—'

'Peasant—rubbish! What are you talking of?' said cousin Snaggs roughly, if not rudely.

'Well,' he said desperately, 'it is often nearer than people think: but there may be difficulties to smooth away.'

His look towards Olivia, or Priscilla, told the rest. We could not but be satisfied, and a grateful look rewarded cousin Snaggs. But we little knew what was in store for us.

Alas, Mr. Pierpoint had, on saying good-night, declared in an airy way that they must be 'packing up their traps' and going, as they were 'due' at another house, a communication that sent a cold chill over all hearts, though it was carried off with a smile. So did the Spartan boy-thief let the fox (was it?) gnaw away into his inside without a cry.

There was an awful tragic night after they had departed. Our parent declared he should bring the ruffian to account; he'd drag him through all the courts. Though with some inconsistency, he laid the whole blame on that 'dolt Priscilla,' who had 'let the fellow ride off on generalities without nailing him down to a single thing in black and white. We were up half the night with hysterics and ravings.

The following morning was Sunday; and my father, having declared 'the fellow should not leave the village alive,' went off to his duties.

Poor Priscilla could not appear at the church, and went to the garden. As she patrolled it passively, she was astounded at seeing Mr. Smallpage break his way through the hedge. She gave a cry.

'O Mr. Cockles,' she said, 'what did you do that for?

'I wanted to speak to you,' he said; 'for he watches me so. And we are going away.'

'I know,' she said pettishly; 'and it's a shame. What does it mean?'

'Don't mind him,' he said, 'it's only wasting your time. I could have told you all that at the beginning.'

'I don't understand you, sir,' Priscilla said haughtily. 'Don't speak to me in that free way.'

'I say again,' he repeated desperately, 'it's no good. It wouldn't do for you at all. He means nothing. He is not fit for you! It would be throwing yourself away. Now I—don't be angry—I am a very plain ordinary person, and I like you—love you, if you like.'

'Go—go away!' said Priscilla, ready to cry. 'Is this what it is all to end in? I don't want you at all.'

'And you are serious—don't want me! Surely you might get to like me.'

'Never!'

'And you refuse?'

'Certainly. I am very sorry; but it wouldn't do—'

'Nobly said,' came from some one behind her. Mr. Pierpoint stood listening. 'You are quite right, Miss Priscilla. As for you, Cockles, you won't hear the last of this. But we can't stop a moment. I have a telegram here. Bad news, Miss Priscilla, Lord William is taken ill, and I fear won't recover. I know you will excuse us. I can't stay a second; but we shall meet again.'

'But when?' faltered poor Priscilla.

'Soon, dear girl,' he whispered. 'How nobly you behaved! You really refused him? I shall be a free man by and by! Say it once more.'

Poor Priscilla, growing desperate, murmured, 'I do—I hate him! I would give up more than that for one I loved.'

'That's right, too. *An revoir*. Some day I will return,' and drew his friend away.

They disappeared. Priscilla's heart was fluttering. His words had hope, though he was leaving her. He had been afraid of his father naturally, and now would be his own master. 'He will return; I know it well.' It was now time that service should be at an end. She wished the family to return that she might tell them the good news. Here they were; but here was Mr. Lightbond rushing on in front.

'Where are they? They were here! What's become of them?'

'Yes,' said she, smiling; 'but they are gone.'

'Gone!'

'O, yes, papa, and you all listen—we clustered round—I've such a thing to tell you!'

'Never mind that folly. O fools, fools all—every one of us! Sure the other's the man, Cockles is Pierpoint! That young whippersnapper was only the tutor!'

'O-l-o!' shrieked Priscilla; 'and I refused him?'

'Who cares! Why, you're the biggest of all idiots!'

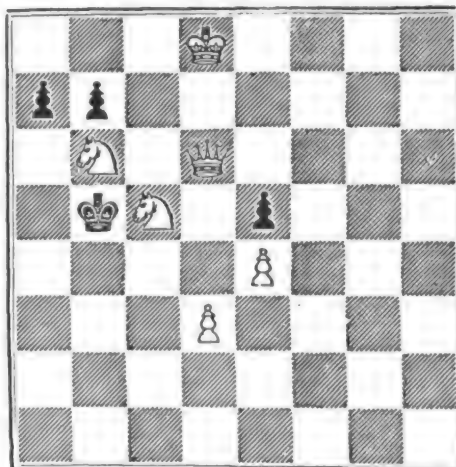

'No, no; I refused Cockles and repeated it before the other! Refused him with contempt!'

O despair and ruin!—*World*.

## "CHESS PLAYERS CHRONICLE,"

PRIZE PROBLEM FROM THE AMERICAN CHESS TOURNEY.

BLACK.

WHITE.

White to play and mate in 3 moves.

SOLUTION OF CHESS PROBLEM OF DEC. 4TH, BY AMATEURS.

White.

1.—Kt. to Q. 8th (ch.)

2.—Castle (giving ch.)

3.—B. to Q. B. 5.

2.—R. takes B. mate.

Black.

1.—K. to Q. 4th.

2.—B. interposes.

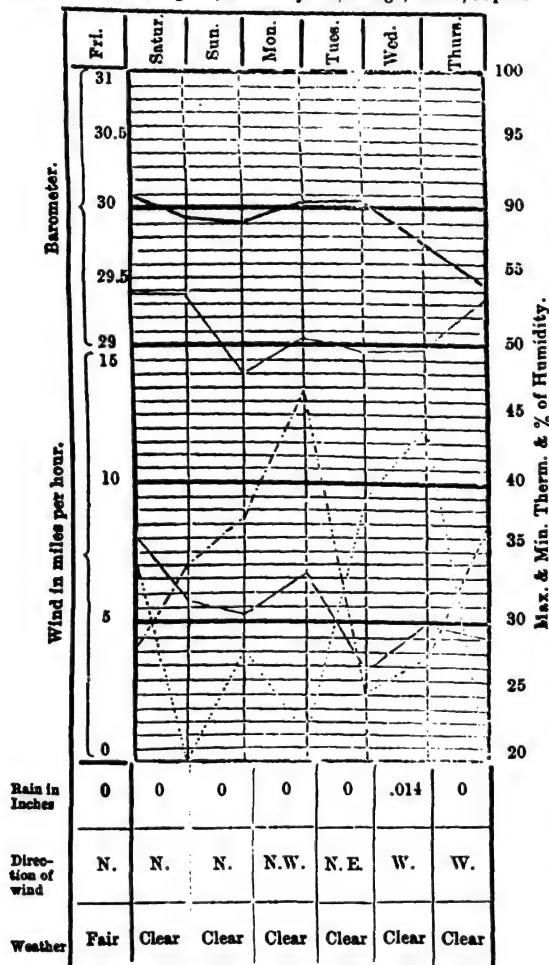

3.—Anything.

Correct solution received from T.

## METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, DECEMBER 3RD, 1880.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.

Light continuous line—max. &amp; min. thermometers.

.....represents velocity of wind.

.....percentage of humidity.

Max. velocity of wind 28.9 miles per hour on Thursday at 11 a.m.

The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer during the week was 30.116 inches on Friday, at 7 a.m., and the lowest was 29.371 inches on Thursday at 3 p.m., a very decided fall taking place during the last two days of the week. The highest temperature for the week was 63° 8 on Friday and the lowest was 26° 8 on Tuesday the maximum and minimum for the corresponding week of last year being 63° 4 and 34°, respectively. No rain fell during the week, the amount for the corresponding week of last year being 1.272 inches.

**SUGAR.**—About 18,000 piculs have changed hands, and holders are firmer at the close. Stock 53,000 piculs.

**SAIGON RICE.**—About 4,000 piculs have found buyers at quotations. Stock 28,000 piculs.

**KEROSENE.**—Four thousand cases have been sold at quotations, and sellers are somewhat more disposed to meet the market. Stock 446,000 cases.

Sugar:—Takao in bag ... per picul	\$4.40	Japan Rice ... per picul	\$3.00 to 3.35
Taiwanfoo in bag ... "	\$4.35	Japan Wheat ... "	\$2.20
Ching-pak and Ke-pak ... "	\$7.50 to \$8.50	Saigon Rice [cargo] ... "	\$1.85
China No. 4-5, Kungfun & Kook-fah ... "	\$6.00 to \$8.00	Kerosene Oil ... case	\$2.02

**EXPORTS.**

**SILK.**—During the past week the silk market has continued very quiet, but there has been little or no change in prices. Natives shew rather more desire to sell, and it is probable that ere long they may give way.

During the period under review rejections have exceeded sales by about 80 shipping bales.

Stock in Yokohama about 6,500 shipping bales. Total shipments to date 8,279 bales against 10,447 bales last season.

	Exchange 3/8½	Exchange 4/76

## THE GREATEST

# WONDER OF MODERN TIMES HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SEN SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

# SIMPLE, SAFE AND CERTAIN! HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of pear, and the demand became so great that I was obliged to lock up the small remaining stock." Sold by all Chemists and Medicine Vendors throughout the World May 17th, 1873.

## A FIELD FOR INVESTIGATION.

CONSIDERING how much attention has been devoted of late years to the study of ethnology, and especially the great interest which has been manifested in all that concerns Japan and its people, it is somewhat strange that so little is as yet known of the Ainos, aborigines now generally acknowledged to have contributed an important element to the formation of the mixed race inhabiting the Japan of the present. A few brief papers, scattered in the transactions of various learned societies, or in scientific journals, and generally containing information at second hand, or dealing with isolated questions of anthropology or philology, comprehend all of our knowledge upon this subject. That even the position of the Aino as regards the great racial divisions of the earth's inhabitants may not prove easy to settle, is suggested by the facts that they have already been variously described as Mongolian, Caucasian, and closely allied to the red Indian of America; as dolichocephalic, brachycephalic, and as presenting two distinct types, the one belonging to the former, the other to the latter of these classifications; and their color given as white, brown, yellow, and red. These grave discrepancies are however in all probability owing, not so much to any insuperable difficulties due to the organization of the race as a whole, as to the fact that scientists have attempted to assign the position of an entire people from the examination of single, or at most a very few specimens or individuals, or from the study of limited or incorrect vocabularies. The obstacles in the way of any complete investigation of the physical structure of the Ainos have so far been insurmountable, while their language is known only through lists of words picked up by voyagers, often on the border between the Aino country

and that occupied by the Siberian tribes, and so of doubtful purity, or retranslated from the attempts of the Japanese to render phonetically the sounds of a tongue which has no written form of its own.

The difficulties which have so long prevented any satisfactory examination of the Aino country and people were due partly to the utter contempt in which they are held by the Japanese—the latter being unable to conceive that anything worth knowing could be derived from such a source—but chiefly to the jealousy with which the government regarded any attempt on the part of foreigners to communicate with a tribe held in a semi-slavery closely analogous to the peonage of Spanish America. The former obstruction still exists, but as the Aino has for some years been placed by law in the position of a Japanese subject, with, at least in theory, all the rights and privileges thereto belonging, it must act with diminishing force. The latter obstacle, reluctance on the part of the government to allow communication with the Ainos, no longer stands in the way of ~~expressing~~ such intercourse with proper motives, but on the contrary there is reason to believe that the government will gladly afford facilities to any competent student.

Beyond the causes just alluded to as responsible for the paucity of our knowledge of the aborigines of Japan only the ordinary difficulties arising from lack of written records, want of direct oral communication, and a reverence for the dead somewhat remarkable in a people in other respects so rude, now interfere with the study of their history, manners, customs, and anatomical peculiarities.

The contempt in which the Ainos have been held by the Japanese is responsible for many current misstatements regarding them, such as that they have no religion beyond reverence for the bear, and that they are a people absolutely without tradition. So far from this being the case there are many evidences of deep religious feeling to be met with among the Ainos and we shall be surprised, if, upon thorough investigation, it is not found that the religion of the Japanese themselves has derived certain forms and symbols from the aboriginal cult. As regards traditions, it is true that when following up what appears to be a promising oral record of Aino history, the traveller but too often suddenly recognizes a garbled and mutilated but still familiar story, of Japanese origin, or finds a Japanese filibuster enacting the role of an aboriginal hero or demigod; but notwithstanding this influence of the conquerors upon the traditions of the conquered, the latter have beyond a doubt their own peculiar myths and folk-lore from which careful analysis will be able to eliminate all foreign elements.

Rude and barbarous as is the Aino of the present day, it is difficult to believe that the race has always been degraded as now. The influences of long oppression, and the drunkenness and disease which appear to attend upon the

footsteps of every inferior race in the presence of a superior, are no doubt responsible for the abject misery of the individual Aino, as well as for the rapid disappearance of the race. A tribe, which disputed step by step the advance of a people infinitely their superior in civilization and weapons, must have occupied a higher status than it does at present, when trembling before the lowest outcast of the conquering race. It is only in the chase that the Aino exhibits the courage and endurance that enabled his ancestors to contest every inch of territory. The great bear of Yezo, little inferior in strength and ferocity to the grizzly of America, it is a point of honour with the Aino hunter to meet and conquer in face to face conflict, a knife constituting their only weapon; and every Aino village can contribute its heroes of these battles, sometimes scarred and torn almost beyond the semblance of humanity.

As in many respects the implements of the Aino, in material and structure, but above all in ornamentation, are strikingly like those of the tribes of north-western America, though they have weapons and methods singularly ingenious and entirely peculiar to themselves, a comparison of the two peoples could not fail to yield valuable results; while if it be true, as is generally believed, that the ancestors of the Aino intermarried with the invading peoples from the south and west, the study of the existing race is indispensable to a full understanding of the customs and folk-lore of the Japanese. It requires no very thorough acquaintance with Aino life to detect in the customs of the Japanese many traces of aboriginal influence. The typical Japanese dwelling is but an improved and modified Aino hut, while every boat in Japan, in the stitch-like countersunk depression along its gunwale, exhibits a survival of the sennet sewn "shif" (sic) of the Aino, in which these depressions, now useless, served to save the fragile cords from chafing and rupture. We do not intend, however, at present to display our very limited knowledge of Aino customs, but only to call the attention of the many thoroughly competent scholars now engaged in the study of the history, literature and antiquities of Japan, to a very promising and as yet uncultivated field of labor, for when all is said, less is at present known of the people in question than of the tribes about the sources of the Nile; though the various problems concerning their proper place, philologically and ethnologically, their relationship to American or other races, and the influence they have existed upon the other elements of the Japanese people are certainly worthy of serious and thorough investigation.

#### JAPANESE SUITORS IN BRITISH COURTS.

IN connexion with the trouble that we lately experienced through the strike of our staff of native employes, we think it necessary to call attention to a regulation of Her Majesty's Court, by which it is possible that serious inconvenience, if not positive loss, may be inflicted on any foreigner at the suit of a Japanese subject, who to gratify personal spite, or may be to while away a quiet hour, may choose to commence proceedings against him. On Saturday last, the 11th instant, our manager appeared before the Acting Assistant Judge, to answer to the summonses taken out by nineteen Japanese, lately in our employ, to recover the wages due to them. It was admitted at the hearing by one and all of the complainants that they had struck work on the 2nd instant, and had not at any time applied to us for payment of their wages; and Mr. Blackwell proved that he was prepared to pay the amounts claimed before the usual pay day, but that no application was made to him before the summonses were served.

On this evidence the assistant judge gave judgment for the amount claimed, *without costs*. The result of judgment *without costs* is different in the case of a Japanese suitor from what it would be in the case of a suitor of any other nation: in the latter case the plaintiff, failing in his suit, or receiving judgment *without costs*, would have to bear the expense of the litigation he had so recklessly undertaken. In the case of a Japanese this is not so; by an arrangement which has been come to between H. M.'s Consulate and the judges of the Saibansho no court fees are charged in the case of native suitors. In the like manner no fees are charged to foreign suitors in the Saibansho. This reciprocity of treatment is at first sight equitable enough; but when carefully considered it will be found to bear hardly upon the British suitor. In the first place Her Majesty's Court does not recognize the agreement between Her Majesty's Consulate and the Saibansho as binding upon itself in all events. But out of deference to the agreement made by the Consulate, the court fees remain in abeyance pending the decision of the cause; and then, if judgment is rendered against the British defendant, he has to pay the court fees, while in no case can they be recovered from the Japanese plaintiff. Thus the deterrent cause that prevents a foreign suitor from opening a frivolous charge is wanting:—In *no case* can a Japanese be mulct in costs. The question of court fees applies to summary suits and cases involving large amounts alike, but in the latter class the rule will be harder still; as it has been held that Rule 253 of the general rules and orders of court, requiring a plaintiff "who is out of the jurisdiction of the particular court in which the suit is brought to deposit security for costs," does not apply to Japanese residing in the Kanagawa ken: nor do we know whether it will apply to any Japanese. So that even if costs were given against an unsuccessful plaintiff there would be very little chance of recovering them from him, even through the Saibansho. Again, an Englishman who wishes to bring a suit against a Japanese is *compelled* to forward his petition through his Consulate, and for this service has to pay a fee of *five dollars*. In no case, therefore, does the reciprocity of treatment as to costs work equally as between Japanese and British subjects. During the trial of our manager *ats* the nineteen Japanese, the following evidence was elicited from one of the plaintiffs on cross-examination:—

I did not apply for a summons through the Saibansho. I applied directly to the British Consulate. I had no difficulty whatever in obtaining the summons. It was granted by Mr. Ensley. Before the summons was issued I was not asked whether I had first applied to you for the amount claimed.

After this it seems to us that the whole question of costs in frivolous and vexatious suits requires reconsideration. There can be no reason why the Japanese courts should not charge court fees, and inflict costs upon unsuccessful and intimidating litigants. But until the question is so reconsidered, the proceedings provided by article VI. of the treaty of 1878 should be observed. The complaint should be made first to the Saibansho, and upon that Court certifying that there were good grounds for an action, application to defendant's consul could then be presented. The British Consular officials would then, according to their instructions, and in terms of the treaty be able, before commencing a suit, to use every endeavour to effect an amicable settlement. Had such been done in our case the money claimed would have been immediately paid into the Consulate, and we should have been saved the annoyance of attending Her Majesty's

Court. But no, nineteen men—belonging to a class by whom fabrication is apparently considered an accomplishment—apply for a summons against a foreigner—and without a demur—or even enquiry as to whether the amount claimed had been demanded—nineteen summonses, in duplicate, are immediately issued! And who pays for this? British taxpayers at home, assisted by the local yearly poll tax of five dollars per head! It will be admitted that this state of things is most unsatisfactory. What can be done to obviate it? We would suggest that Art. VI. of the treaty should be strictly observed in all cases where it is possible; but since Her Majesty's Court is open to all suitors of whatsoever nationality, then it should be the rule of the court that in cases where the plaintiff prefers to come to the court direct, instead of applying to his own authorities as provided by treaty, he should be regarded as a litigant of any other nationality, and be charged the usual court fees; and if the circumstances are proper to render it necessary—should be compelled to give security for costs.

We have thought it right to call attention to this subject in the interests of the community; we have no longer a personal stake in the matter, our troubles being over. By resisting the strike, and establishing a permanent lock-out, we have nipped in the bud a conspiracy that might have spread its tendrils far and wide among natives who live on the wages earned from the foreign community. We have suffered much inconvenience during the struggle, but rejoice in the result—notwithstanding, we cannot be sure when the unsatisfactory rule to which we have called attention may be the indirect cause of loss and annoyance to others, and on the next occasion it will probably be in a case involving a greater pecuniary stake than that in which we were concerned.

THE current number of the *Popular Science Review* contains an article by Professor Milne of Tokio, entitled "A large Crater." The crater in question is known as Asosan, and is situated near Kumamoto in Kiushiu. This volcano has, the writer says, probably been the most destructive of all Japanese volcanos; but at present, the activity is confined to an isolated peak in the centre of the crater. The description of this latter is as follows: "We found ourselves standing on the edge of what was nothing more or less than a deep pit, which, so far as we could see was nearly circular. The greater portion of the sides of this pit were perpendicular cliffs of rocks, which here and there, near the upper parts, showed the irregular, broken stratification, so characteristic of the sides of many craters. . . . Looking at this pit from the commanding position in which we stood, I estimated its width at seven miles; and it was not until we descended, and tried to walk across, that we recognized how far we had underrated its true dimensions. In the middle of the pit, and running up far above its sides, there is a large, irregular block of mountains, the central peak of which is always giving off large clouds of steam." As a matter of fact, the diameter of the crater was found to be from ten to fifteen miles; and the population of the villages within it is estimated at from fifteen to twenty thousand people. No longer since than 1874 the mountain was in violent eruption, causing damage to crops as well as some slight loss of life. Comparing the crater of Asosan with the other volcanic craters of the world celebrated for their size, we find that it stands first in this respect, and is also the most perfect in form of any large crater at present known. As Mr. Milne points out, Japan may, for the present at least, take a position in respect of great natural phenomena, equally prominent with America on account of its great waterfall, and India in virtue of its stupendous mountain heights.

The writer's speculation on the effect of these terrible volcanic phenomena on the character and religion of the Japanese are interesting, not so much for what they afford in the way of actual conclusions, but as supplying material for reflection. Buckle regarded the superstition of Spaniards and Italians as the result of these seismic phenomena, and Mr. Milne seems to think that similar causes in Japan must have had similar results, and puts the pertinent question: "To what, if not to this, are we to attribute the superstition,—as shown by constant pilgrimages,—connected with mountains in the Japanese mind?"

FROM the columns of the *Hiogo News* of the 15th instant, we reproduce the following editorial comments on the destruction by fire, near Shimonoseki, of the *Toyokuni-maru*:—"The ill-fated vessel was quite new, having been only recently launched from the works of Messrs. E. C. Kirby & Co., at Ono, and when the accident occurred was on a trip from Osaka to Shimonoseki. The owner and a large number of passengers were on board, and everything presaged a pleasant run until an alarm of fire was raised while the steamer was crossing the Idzumi-nada. Terrible confusion at once ensued, and as the conflagration was in the coal bunkers nothing could be done to extinguish it, the vessel being without pumps or any other appliance useful for such a purpose. It is hardly credible, but we are assured the steamer was so ill-provided that only three of the ordinary buckets used for washing decks could be found! The solitary boat was made fast over the position of the fire, and could not be cleared away, so that the wretched passengers were without any means of escape; not even life-buoys being part of the vessel's equipment. Owing to the heat below it was impossible to get at the engines to stop them, and the flames soon reaching the boilers, caused the steamer to be propelled through the water at terrific speed. Some of the crew managed to get forward, and let go an anchor in the hope that it would impede her progress through the water, but the effect was almost imperceptible. By this time the burning ship was only some twenty miles from land, and the *Tokio-maru* could be seen coming up to the assistance of those on board.

"It is certain that if at this time the *Toyokuni* could have been stopped, all or nearly all the people on board would have been saved. But the vessel sped on, the flames drove the unfortunate passengers aft, and they in the *Tokio-maru* could see them—men, women, and children—throwing themselves overboard to escape the more painful death inevitable by remaining in the burning ship. The excitement on the *Tokio-maru* was intense, and it must have been a fearful sight to witness these poor creatures perishing, and no effort possible to save them.

"At length—owing it is supposed to the intense heat injuring some portion of the machinery—the *Toyokuni* suddenly stopped, and the pursuing steamer was enabled to get close up; a boat was immediately lowered and rowed as near the burning ship as the flames would allow. Eighteen men were found to be hanging over the vessel's side clinging to ropes, and were taken on board the *Tokio-maru* with the exception of one—the purser—who insisted upon going to his native place in a small fishing-boat which came up just at that time. These eighteen were the sole survivors of eighty-two souls who a few hours previously were anticipating a speedy return to friends, relatives, parents, or children.

"This burning of the *Toyokuni-maru* is one of the most terrible catastrophes of the kind we recollect. Here is a new vessel, in calm weather, and within a few miles of land, lost with great sacrifice of life through the criminal negli-

gence of the Government authorities in allowing a ship to go to sea unprovided with the commonest appliances which experience has demonstrated to be absolutely necessary. This small steamer was over-crowded with sixty passengers, and a crew of twenty-two men. Yet she had only one paltry boat, which was so secured as to be useless when the time of need came, no force-pumps for extinguishing fire, no buckets, or life-buoys, in fact none of those appliances without which no vessel, and above all a passenger vessel, should be granted a certificate.

"The owner and captain of the *Toyokuni-maru* have both perished, therefore we will refrain from commenting upon their conduct, but we assert that this frightful calamity demands from the Government rigid inquiry, and exemplary punishment of the officials who permitted the steamer to go to sea in such a disgraceful condition."

WE have received a copy of an interesting little pamphlet entitled "Copyright in China" by Dr. Macgowan, printed at the *Celestial Empire* office. In these columns we have already described briefly the somewhat precarious nature of the rights of an author in the productions of his brain in Japan, and a few words on the same subject in China will not be without interest. The Penal Code, it seems contains no enactment on the subject of copyright. "Chinese law has never conceived it necessary to specify that particular form of robbery which consists in despoiling a scholar of the fruit of his toil, any more than to name the products of husbandmen and artisans as under the protection of law, all alike being regarded as property by natural right. Hence, those who infringe the rights of an author are liable to a punishment of one hundred blows and to three years deportation, if they print and sell his works without authority; but if the trespass has gone no further than printing, no copies having been sold, the punishment inflicted is only fifty blows, and forfeiture of the books and blocks. The offending publisher is arraigned and punished under that section of the code which takes cognisance of larcenies of a grave character and awards those penalties for seizing goods feloniously." This punishment would astonish the piratical publishers of Europe and America; and we learn that this law protects inventors and artists as well as authors. Furthermore, the right of conclusive publication by an author of his works is held in perpetuity by his heirs and assigns. In illustration of these statements, Dr. Macgowan quotes several instances in which the authorities enforce the rights of authors and their descendants. Incidentally, we get another trait of Chinese authorship. "It is not the custom with Chinese authors to make arrangements with publishers, that being undignified. They have their books cut and printed on their own premises, and then sell them to the trade, usually at twice the cost of publication. . . . The Chinese *literati* write professedly for fame, scorning the imputation of seeking gain as an incentive, and they will have no haggling with those who make a trade of literature." Notwithstanding the absence of papers and periodicals as mediums of advertising, the rapidity with which information concerning a new book is circulated throughout the Empire is said to be remarkable. Japan, we are sorry to find, has recently been printing, importing to China, and selling at half the original cost pirated copies of valuable Chinese works. A Chinese poet and artist "has lately published several hundred of his choice pictures, each of which is accompanied by stanzas. These volumes are the fruit of a life of toil, and there is some prospect of his literary harvest being blighted" by this piracy. The hope of the writer that Japan is about to issue a copyright law is, we fear, destined to disappointment. Indeed she can hardly be expected to do

this in view of the fact that one of the greatest and most wealthy of the nations of the west still persistently refuses to have anything to do with international copyright, despite pressure from without and within.

UNDER the heading of "Impeachment of the Chinese Ambassador" the *American Correspondence* of the 23rd October has the following curious article:—"When it was whispered, about a year ago, in diplomatic circles at St. Petersburg, that Chung How might be made to pay dearly for signing the treaty of Livadia without authority and contrary to the instructions given him by the Tsung Li Yamen, or Council of State, such fears were treated by some people with ridicule. It has since been shown that Chung How would have had his head cut off for disobedience of orders if the foreign Ambassadors at Peking had not interceded in his behalf. Now, a similar apprehension with regard to Chen Lan Pin, the Minister of the Celestial Empire to the United States, is felt by the Americans on account of their active interest in the Chinese immigration question, which occupied a very prominent position in the Presidential electoral campaign. From information received from Peking since the arrival of the new American Mission, we learn the nature of the strict orders given to Mr. Chen Lan Pin by the Tsung Li Yamen, and all who are familiar with that diplomatist's conduct observe with uneasiness that he has not condescended to follow his instructions. The Chinese Minister Plenipotentiary was positively forbidden, for instance, to employ any persons other than those belonging to the Legation; Mr. Chen Lan Pin has done just the contrary. He is so suspicious by nature, that he is afraid to trust the literary Chinamen who accompany him and, although there are interpreters attached to his Embassy, he has had the documents communicated by him to foreign Governments, as well as those received from them, translated by Americans, when he was in the United States, and by Frenchmen and Spaniards, when he was in Paris or Madrid. He even tries to impress upon those whom he fancies to be unfamiliar with Chinese diplomatic affairs, that the Tsung-li Yamen is nothing but a tea-party of stupid old bouzes and mandarins, while, as for himself, he is in direct correspondence with the Empress Regent. If that is so, Chen Lan Pin ought to display great skill in the performance of his mission, but he has done precisely the contrary, and has made himself the laughing-stock of American statesmen. The other day, for example, he asked to have an interview with ex-President General Grant. The latter replied that he would be glad to meet the Minister of the Celestial Empire, and that he would let him know when the interview could take place, whether at Grant's hotel or at the house of Chen Lan Pin. When the latter learned that he had arrived at New York, he made a rush for the hotel and of course had an audience of only two or three minutes in a room where he found himself mixed up with a lot of politicians who laughed heartily at the undiplomatic eagerness of the "pig-tail Ambassador," as they called him. In this instance, Mr. Chen Lan Pin lamentably failed to maintain his diplomatic dignity. But he tries to make a great show of doing something in the present extremely critical situation of the relations between China and the United States. In the second place, Mr. Chen Lan Pin has also disobeyed the orders of the Tsung Li Yamen in not going to Peru, where Chinese interests need watching over, although his diplomatic mission will close within the next six months. But he hopes to prolong it, for which reason, notwithstanding his parsimony, he is

laying in a stock of presents to send to high officials in China, in the hope that they will renew his powers. The probability is, on the contrary, that they will ask him why he stays, through stinginess, at New York in preference to Washington, where he ought to be giving dinners and receptions, and why, for the same cause, he does not go to Peru, where duty calls him. We refrain from adding to the above complaints expressed at Peking, the information in the possession of the *American Correspondence* with reference to the public and private conduct of Mr. Chen Lan Pin. We can only regret that he is pursuing the wrong course, at a time when the Chinese question has become one of great importance in the Republic, and when both the leading political parties agree in demanding the abrogation of the Burlingame treaty which permits Chinese immigration to the United States. Mr. Chen Lan Pin, instead of risking his head by disobeying the strict orders of the Tsung Li Yamen upon these two points, and by making himself ridiculous in Grant's ante-chamber, had better have followed the advice given him by a nephew of his, attached to the Legation and probably the ablest Chinese diplomatist in the Mission, and by Mr. Ho, the English-speaking interpreter or secretary who is familiar with the country. Space fails us to tell all we know (and our knowledge is complete and thorough) about the misdeeds of Mr. Chen Lan Pin, but we have said enough to make him see how necessary it is for him to comply more strictly with the orders of his superiors at Peking, who are more highly animated than he is with a desire to maintain friendly relations between China and the United States."

#### REVIEW.\*

IN the book under review we have a most important addition to the scanty means, which the student of the Japanese spoken language has as yet at his disposal; but before enlarging on its general merits we must be permitted to point out some details in which we consider the work faulty.

We find several objections to make to the English of the author. The very first lines of the preface run as follows:—"Recent English Grammarians are coming to drop Orthography and Prosody as properly belonging elsewhere"; and again on Page 1: "Instead of an alphabet, Japanese has a syllabary, two methods of arranging which obtain." These are instances of faulty or awkward construction, such as should least of all be found in a book purporting to teach "Etymology, the fellow of Syntax."

The author shows a most marked liking for apostrophes. *Don't* and *won't* are, of course, legitimate abbreviations; but *I'll*, *you'll*, *you're*, *I've*, *we've*, *you'd*, *sha'n't*, as the author constantly writes these words, and expressions like "The leg's off that table"; "this pencil's too soft"; "to-day's only the fifth"; "this bottle's too small", etc., etc. are not only uncalled for, but far too colloquial, in fact, vulgar. When, however, Mr. Imbrie writes *is n't*; *has n't*; *did n't*, then we hold, that such abbreviations are grammatically wrong. If these words are at all to be abbreviated, they must be written *isn't*, *hasn't*, *didn't*. One naturally exclaims, in the strain of the author: This're English's too bad, isn't?—considering that the book is a handbook of "Grammatical Etymology."

Of real faults in the Japanese, or of incorrect renderings, we find comparatively few. When "You'd have time enough if you'd get up earlier" is translated *motto hayaku o oki nas'tara*, *jūbun ni toki ga arimashō*, we must take exception to the word *toki* as the equivalent of "time" in the sense the latter word has here. The word to be used is *hima*, or the expression 'you would have time enough' might be rendered by *ma ni aimashō* or, *yoku ma ni aimashō*.

*Ka wo taitei nani wo tabete ikite iru mono darō*, is translated as "What do you suppose mosquitoes live on?" while it

means: "What do you suppose is the general (or main) food of mosquitoes?" The English sentence given by Mr. Imbrie would in Japanese be: *Taitei no ka wa nani wo etc. etc.*

"To get angry" may in Japanese be *hara ga tatsu*, the verb being intransitive, "to rise," and *hara* consequently in the nominative case; or it may be rendered by *hara wo lateru*, the verb being transitive, "to raise," and *hara* therefore in the accusative case. *Hara wo tatsu*, as found on pages 184 and 185 is neither grammatical, nor warranted by colloquial practice.

On page 85 we find the sentence *Anna sekkiyō wa kayette tame ni naranai*, translated as 'Such preaching as that does more harm than good.' The expression "*tame ni naru*" means, however, only 'to be effectual,' 'to have the desired effect,' therefore also 'to do good'; and the addition of the word *kayette* would, in the present case mean, 'contrary to expectation or intention.' Thus the sentence here referred to should be translated 'on the contrary, such preaching does no good;' or 'such preaching does no good, though intended to do good.' To the words 'more harm than' we find no equivalent in the sentence now before us. To express it the phrase should read: *Anna sekkiyō wa tami ni narudzu ni kayette gai ni naru*; the *kayette*, in this case, being almost superfluous.

*Ni-jū nichi* (on page 201), as the equivalent for the 22nd, is evidently a misprint for *ni-jū-ni nichi*. The same can hardly be said in the case of the sentence *Ki-wo tsuketai to kuwaremas yo*, which, on the same page, is translated as "You'll break it if you don't take care," while it means "you will be bitten if you do not take care." A reference to page 87, where "broken to pieces" is again translated by *kuwarete shimatta* shows, that the author really confounds the two words *kuwareru*, to be bitten, and *kuwarete*, to get broken.

In the first half of the book, *yō* (the contraction of *yoku*) is constantly written *yo*. Under 'Errors and Omissions' the author corrects the said word in five places, but it is still left, as it is, in several places, (for instance on pp 48, 86, 103); and the regular occurrence of this error in the first part of the book, and its total absence from the latter half, would lead one to think that the author really considered *yo* to be correct, until the first half of the book had been printed.

In some cases the English expressions are so chosen as to leave the reader in doubt of their meaning. Thus on page 133 we find the sentence 'Why do you suppose tortoise-shell cats are always female?' This may mean either of two things: firstly 'What reason have you to think, that tortoise-shell cats are always females'—implying, if anything, that the speaker doubts, whether such a peculiarity really exists with regard to the sex of the said kind of cats. Secondly, the sentence quoted may mean: 'What, in your opinion, is the reason why tortoise-shell cats are always females'—thereby admitting the fact, but enquiring as to its cause. The sentence, as given in the book, without any signs of punctuation, would at once be interpreted in the former way, the more so, as the circumstance referred to must seem most extraordinary except to those who know it to be a fact. The Japanese translation, however, clearly shows, that the latter interpretation is the correct one.

On page 83, we meet with the phrase 'This must be the third or the fourth.' Unless the student understands the accompanying Japanese translation—and that he must of course be supposed not to do—it is not at all likely that he should take 'this' as meaning 'to-day,' and 'the third or the fourth' as referring to the days of the month; and as the Japanese construction, when enumerating days, is entirely different from the enumeration of things generally, the meaning should have been more clearly indicated.

'A good cigar' is not explicitly rendered by '*ii tabako*,' and *ōku* in a sentence like *ano hito tachi no uchi ni yomikaki no dekinai mono ga ōku aru*, would generally be taken to mean 'most of.' 'Many,' as the book translates it, would be expressed by *daibu aru*.

'I thought Seikichi would probably be late' is given as the English translation of *Seikichi wa ma ni aumai to omotta*, but the author does not show us, that *ma ni aumai* means 'would be too late.' Merely 'being late' would in Japanese be expressed by the word *osoi*. Trivial as these remarks may appear, it is of great importance that particular care should be bestowed on such distinctions. Thus a student might easily, from the sentence just quoted, get the idea, that to be late, generally, is in

\* Handbook of English-Japanese Etymology, by William Imbrie, Tokio: Printed by R. Meiklejohn & Co., Yokohama, 1880.

Japanese *ma ni awanai*, and thereafter use this expression in cases where it would be entirely out of place.

'I bought it for five *bu* and sold it for six' is translated *Ichu yen ichi bu de katta ichi yen ni bu ni utta*. The word *Bu*, whether designating gold, silver or paper currency, was always the term applied to the fourth part of a *Riyō*. The modern *yen* is not divided into *Bu*, and a Japanese would never use the two words together, as in the sentence quoted. It should be *Ichu riyō ichi bu* and *Ichu riyō ni bu*.

*Shō-doku-hō*, the word given for disinfectant, is a compound of three words *Shō-doku-hō*, and cannot be divided as on page 61 *Shō-do-ku-hō*.

We must not omit to point out a few instances in which the author has either been grossly misled by his own teachers, or shows an almost unpardonable want of the spirit that should prompt one, whose aim it is to teach foreigners pure Japanese,—as opposed to the horrible jargon generally used by them. *Jinriki* for *Jinriki-sha* is incorrect, and but little better than the vulgar "*Ricky*." If the author had tried to find the most contemptuous and vulgar expression ever used to designate "foreigners," he could not have hit upon a better word, than the one he gives, viz *ketojin*—except it be its lengthier form, *Ketojin-baka*; and, mark you, this word he gives without in the slightest way indicating the nature of the expression. Imagine some foreigner, after learning the language from Mr. Imbrie's book, speaking about himself, to a Japanese, as a *Ketojin*! Another instance of surprising thoughtlessness meets us, where Mr. Imbrie translates "Can your dog sit up on his hindlegs and beg?" by *Kono inu wa chinchin ga dekimasu ka*.—"Chinchin" is not even Pidgeon Japanese, but Pidgeon English, and is fortunately completely unknown in Japan.

It is but fair to the author here to state, that in the above we believe to have almost exhausted the errors that are to be found in the book, and that, though some of them amount to serious blemishes, yet the book is one that should be welcome to all students of the spoken language. We have in Hepburn's and Satow's dictionaries, and in Aston's grammar all, that the ordinary student requires in those particular direction; but a language is not learnt from dry dictionaries and grammars alone. It is true, that we possess in Satow's *Kwaivua Hen* a most elegant and scholarly series of lessons in Japanese, but too difficult for those who, without making a special study of the language still desire to gain a sufficient knowledge thereof to get along in every-day life,—and this purpose not one of the several other phrase books that exist, fulfills to such an extent as Mr. Imbrie's. Its advantage lies in the blending of grammar with instances of its application. We believe the work would have been yet more useful, had it been arranged on the principal of *progressive* lessons, illustrating the various grammatical rules, but not necessarily in the order they follow in a strictly grammatical work, but as the student, in his gradual progress, requires to become acquainted with new rules. As it is, however, Mr. Imbrie's book must be recommended to a beginner, as teaching him easy, yet correct Japanese; and with its indexes it forms a valuable book of reference for the more advanced student. We should think anybody could master the book in a year's time, and that, after acquiring its contents, one would speak Japanese fairly well,—in any case better than forty nine out of fifty foreigners can speak it at present.

That the title of the book is a decided misnomer does not, of course, detract from its merits as a Handbook of Japanese Grammar, and its practical application.

W. B.

#### MY RESIDENCE IN LONDON.

By M. S. NAGASAKI.

ONE who is favorably impressed with the country where he resides, not only by the grandeur and magnitude of its appearance, but additionally from his experience in society and from the friendships he has formed, cannot but recall its memory, by a magical sway, and this is why I now review what things have most attracted my attention and impressed me during my residence in London.

London is not only the capital of the British Empire, but practically is a true centre of the world; in fact products of every nation are accumulated in it and distributed for various purposes. Every man of note can be seen in London society. In the season, the aristocracy, political men, literary men,

and devotees of the fine arts, persons of every profession and every grade of the people, pour in from all quarters of the world, and every political movement can be heard, either in drawing-room conversations or at debates in the Houses; not a single thing worthy of note passes without discussion in London. The completeness and facility of obtaining information is somewhat marvellous, and so much so, that it helps to fulfil one's ambition and object in life.

London is wonderful in the activity and power which it displays in the general greatness of its civilization: such a combined city of intellectuality, refinement and wealth, is rarely to be found in any part of the earth.

My return to London society was somewhat of a favorable character; it was achieved with good introductions and some steady friends, who always shewed me much attention and kindness. In 1877, I was first presented to Her Majesty, the Queen, by His Excellency the Minister Wooyeno, at a court held at Buckingham Palace; the Queen received the Corps Diplomatique, in a gracious manner, and with a serious dignity, which added much grace to her deportment. At the state concerts and balls, given by Her Majesty during the season, of late years, she has never appeared in person, but is always represented by His Royal Highness the Prince of Wales, and other Royal personages. English Royalty and aristocracy are true to their position, and finished grace and accomplishments always adorn their presence. The state balls and concerts at Buckingham Palace are truly imposing and brilliant in their character, though performed with solemn formality. The Royal personages appear with stately form and inherent dignity, yet with affability to their invited foreign guests. The Corps Diplomatique are placed opposite to the English Peerage, while the Royal family sits in the centre. The finest jewels and the most beautiful costumes are worn, appropriate to the occasion; persons sparkling with insignia and orders move and mingle with each other and form a picturesque sight, and is one of the most lustrous assemblies which has ever inspired my respect. The social organisation in England is pre-eminently advanced, they have not overthrown root and branch, nor struggled between aristocracy and democracy, to raise the one by debasing the other, as has so often occurred in French society. They, peculiarly fortunate, have acted concurrently with a view to liberty and with a resolve to participate in their own government. The English aristocracy are ruling and governing the general interests of the country, under the preponderating influence of the people, they are closely united and animated by the same spirit for the defence and advancement of their common freedom, and keep the balance of power equipoised, so as to maintain social order and rank. This combination produces a social force and natural influence and their co-existence constitutes a great Empire.

London society is well regulated, there is a social code which governs our actions and proceedings and makes social intercourse pleasant and agreeable. The social institutions for amusements are notably, music, dancing, drama and dinner, although there are various forms of entertainment besides. Receptions and parties, carried to a grand scale and perfection, and much taste is displayed in arranging and decorating the rooms. Flowers are always in profusion at the entrance and the drawing-room, which casts a delightful air, mingling with the social atmosphere, adorns the whole evening. The refreshment rooms are generally provided with every description of delicacy, and besides guests being well waited on there, they become sometimes resorts for resting and conversation. The salons of the *élite* of London society are always adorned with intellectual grandeur and social refinement, and the topics of conversation, often touched upon, are the questions of the day questions—which inspire me with real interest. In certain society, a passing conversation is scarcely less important than the arguments which develop themselves in a ministerial tête-à-tête, in fact, my experience coincides with Mr. Guizot's remarks. Here I will quote his words. "The journal and the drawing-room, are the only two channels, through which a foreign minister can in London ascertain facts and indices, and estimate the intention or foresee the resolution of the Cabinet." Such being the case, a few words of conversation often suffice to reveal the general tendency of disposition and ideas.

Lady Waldegrave was a fascinating and clever woman. Her receptions and balls were always numerously attended by foreign representatives and the aristocracy of the land, and fashionable circles. Among the brilliant

assemblies I often met with those persons whose opinions and remarks are highly important to the questions of the day. I have always been desirous to exchange a few words with them, as I can then form my opinion and imagine the temper of a nation.

Her house was tastefully decorated and beautifully arranged and the scene was particularly bright and animated, none of her guests leave the house without expressing a charm and admiration.

Lady Waldegrave was known to every person, and every one in society knew her, and the popularity she acquired by her social tact and discernment is beyond dispute. She exercised her power in the fashionable world, in fact she was one of the leaders of London society. We extremely regretted her lamented death last year. After her departure from the society of life, there are four ladies left to take a foremost part and lend London society. Lady Salisbury, and Lady Derby on the Conservative side; Lady Granville and Lady Stanhope on the Liberal side. The Marchioness of Salisbury's receptions and balls are as grand as can be found at any nobleman's house in Europe at her residence in Arlington Street. It is a large private mansion, furnished with a rare quality of ornaments; the ceilings are all painted, to my view, somewhat after the Italian fashion. Her guests are always charmed with the excellent and artistic taste which displays itself in the drawing-rooms; in fact she is noted for it. In 1878 there was a grave responsibility imposed upon the English government as to what course they should pursue in the settlement of the Eastern complication, the Turks remaining as they were in a hopeless and defenceless state, while the victorious army of Russia was advancing rapidly towards Constantinople. One step onward might have caused a catastrophe between England and Russia, while again one step backward might have brought about a great calamity to the British prestige and honour, not only in south-western Europe, but also in the East, which would greatly affect her political and commercial relations with the world. Policy then comprised several views, one maintaining the independence of the Ottoman Empire, the other British prestige and interests abroad. While the government were boldly following this view the Earl of Carnarvon resigned the office of Colonial Secretary, on the ground that he disagreed with the measure which the cabinet had taken, and his place was filled by Rt. Hon. Hicks Beach; subsequently the Earl of Derby resigned the Secretaryship of Foreign Affairs; agreeing as to the ends in view, but not as to the means, his place being taken by the Marquis of Salisbury. That moment was most critical for the national union and conjoint action, in defence of her foreign policy. Owing however to singularly good management, the affairs of the state turned satisfactory, and the Eastern complication became once more settled and the general peace of Europe was established by virtue of the Berlin Congress. The Earl of Beaconsfield overcame the difficulty by means of diplomacy, and his return to England was one of "peace with honour." After the Marquis of Salisbury became the head of foreign affairs, Lady Salisbury gave her receptions at the Foreign Office. No place in London has such a wide and commanding staircase as the Foreign Office. The grand stair-case and the reception rooms were beautifully adorned by a profusion of blooming plants and flowers, all arranged with remarkable skill and taste. In the corridors music was played by a band of the Royal Artillery; in the centre of the grand stair-case, the distinguished guests of the Marchioness were ranged, ladies sparkling like the stars, with diamonds, pearls and other precious jewellery, and a sprinkling of gentlemen wearing insignia and orders, these moved slowly upwards and contrasted with fresh green and delicate flowers. It was an exquisite sight and the most imposing appearance. At the entrance to the reception-room Lady Salisbury stood in a stately manner, and received all the guests with her usual grace and courtesy. The gathering at the Foreign Office is as a rule a particularly brilliant and animating scene; often English and Foreign Royalty are mingled there, the Corps Diplomatique, English dignitaries and general company fall into one party, and mingling with each other, shew society in its most delightful aspect. Among those foreign representatives, who have not only obtained reputation in the diplomatic capacity, but who have also established considerable popularity in society by their personal qualifications and thorough knowledge of it, are many who shine everywhere and attract much attention from all. Through their

personal relations in society, they acquire direct means of securing public sympathy and inspiring public confidence, which is of essential importance to facilitate the general transactions of state affairs. A diplomatic minister can acquire two distinct influences, that is to say official and personal; the former bestowed by the State which he represents, comprising the social position standing of the legation, power of entertainment and general *entourage* the latter obtained by his personal qualifications and accomplishments, by which he ensures respect and esteem in general circles. Such a diplomatist would produce a good effect in every way and give general advantage to his country. Baron de Bunsen, the former Prussian Minister in London, is one instance and in the present day, Count Munster the German Ambassador, and Musurus Pasha, the Turkish Ambassador, may be farther reckoned, as they possess a high degree of popularity and exercise a great influence in society as diplomatists and men of reliance.

In the present state of the world the true interests of every power are best consulted by the constant employment of accredited agents in every foreign country. No part of the public money is employed to better advantage than to maintain such agents in a proper state of efficiency, their purpose and utility are not only essential to the despatch of international business and in concluding treaties and alliances, but it should further be their special attention to be masters of every important detail in the foreign or domestic relations of the country in which they reside, and they should diligently endeavour to acquire such knowledge as may enable them to regulate the mutual intercourse of the State on a better and more permanent basis, so as to promote the relative importance and preserve the general peace, additionally remembering, that the world is apt to estimate a legation like an individual—estimating it at the value it places on itself. Lady Derby gave her receptions at her town residence in St. James's Square, it is a large and lofty house, situated in an aristocratic quarter. The salons are very airy and handsomely decorated, and the house itself is well fitted for the crowded London gathering. Lady Derby possesses inherent grace and dignity and receives all her guests with the attractive manner and that world-known bow, which so truly adorns her. No country in the world, probably, can boast of an aristocracy equal to the English, whose calm and resolute bearing are so unsurpassed, whose manners are so majestic and courteous, and whose capacity to charm is so rare.

Lady Granville is tall and stately in form and a magnificent blonde, with clear straight brows and lovely brown hair; in her one can see a true model of English beauty and aristocracy. She gives her receptions at her residence in Carlton House Terrace, located in as airy a place as can be found in the best parts of London, and she does the honours of the drawing-room with her customary finished ease and grace.

The Baroness Burdett Coutts is a rich and philanthropic lady. During the time of the Russo-Turkish war, she was in the front to send every need and requirement to Turkey for the purpose of support to those wretched women and children who were suffering from the war, without regarding race or religion, but merely for humanity's sake: no doubt her noble undertaking saved thousands from destruction; truly the Turks owe a debt of gratitude for her benevolence and generosity. Knowing her many acts of nobleness and greatness, for any cause which is a good one, it interested me greatly to be invited to her receptions, and certainly I found in her house an atmosphere of philanthropy in the way she entertained the foreign representatives as well as the general company, which truly lent a charm to the assembly. She possesses excellent qualities and a character which forms true womanhood, and which is worthy of record in the biography of the nineteenth century. In August, 1878, I went to Standish House, Stonehouse, Gloucestershire, by invitation of Mrs. Polter, her house faces a field, looking over the river Severn, having a pretty view all around it. The grounds were beautifully laid out, exotics, plants and flowers of all kinds, well cultivated and in profusion everywhere. Mr. Polter is a man of intellect and culture, his conversation often touched upon European politics and the lives of living statesmen; he frequently reviewed Count Andrassy's, with whom he was acquainted: these things naturally and highly interested me and I invariably listened attentively to them. Mrs. Polter was educated in France and possessed considerable knowledge

about continental social life. Her understanding moreover enables her to entertain a large interest in the affairs of the world generally. Her daughters are brought up full of intellectual development, and they are educated beyond the ordinary way, in fact they have a latitude of thought and opinion which is not a characteristic in most Englishwomen, neither indeed are their minds chiselled exactly in the English fashion, but somehow modified from their large acquirements and wide research. They are indeed very interesting, as well as pleasing, and ready to enter into any topic of conversation, which truly makes their society more charming. There were several visitors, beside me, all of them very pleasant and agreeable people. During my stay the Misses Potter had a garden party. The assembly met together in the open air, where the grass was as smooth as a green velvet carpet, and shaded by tall trees. The chief amusement was playing lawn tennis, the now fashionable game, while some portion of the assembly promenaded the lovely shaded terrace. The scene was remarkably calm and undisturbed, except by an occasional summer breeze which seemed as if it were only sent for the purpose of refreshing the company; it was truly a day of enjoyment and pleasure. Standish House is adorned with an atmosphere of hospitality and intellectuality, and one cannot quit it without the retrospect of the pleasing period spent there to linger around the future. From there I went to Whitestaunton Manor in Somersetshire, to pay a visit to Mrs. Elton, who is a very kind and pleasing lady. Mr. Elton is a man of wide culture and a distinguished barrister. They are people who have travelled a great deal on the continent, consequently their general topics of conversation are beyond the ordinary, being topics indeed truly interesting and instructive. The house is very old, it was once a monastery. An artificial pond and large trunks of trees, over-run with ivy and ferns, are in the front of the house; on one side a beautiful field, covered with soft green grass, where sheep occasionally appear innocently feeding, on the other side, is a lovely garden interspersed with various flowers. I have noticed many oriental species, undoubtedly imported from distant countries, whence the wind often sends a balmy and delightful odour through the windows of the drawing-room perfuming the whole space. Mrs. Elton is highly musical, and her friend, Miss Tinsling, on a visit, was also proficient in that delightful accomplishment, so the evenings passed agreeably, the soul being now charmed with the concord of music and intellectual conversation then refreshing the mind. One day I drove with Mr. and Mrs. Elton to Ford Abbey to see the old building, and afterwards to visit Viscount Bridport, who is a grandson of England's famous Nelson; Lady Bridport received us with much courtesy and kindness. When the honourable Misses Hood came into the drawing-room, they remarked they knew me by sight, and I at once recognized them having frequently met them in London society. This agreeable introduction to the conversation rendered my visit additionally pleasant. They have large grounds, beautifully laid out on one side of the garden, a fine slope covered with smooth grass, diverges towards the artificial river. The running water flowing gently on, as if its calm and peace had never been disturbed. On each bank large trees, girt with ivy and fern tastefully and skillfully arranged, rear their heads. On the other side, a long path, with beds of flowers on either side, and arched portals, extended up to a huge glass-house, in which were all kinds of delicate plants and flowers in profusion, and cultivated to perfection. Lord and Lady Bridport were kind enough to take us round to see the gardens and, afterwards, Lady Bridport shewed us the magnificent hall and diningroom, where their august sovereign's and illustrious ancestor's pictures hung. Among them the expression of Lord Nelson particularly attracted my attention, instantly recalling to mind his courage and his daring, so dwelt on in history, which sheds a lustre on its pages.

The drawing-room commands a full view of the garden. The surrounding atmosphere is filled with fragrance, and a place so charming and a scene so exquisite leads one to imagine that one is in fairy land. One day Mrs. Elton formed a small picnic party and went to a place called "Castle Neroche," an old battle field. Few traces, however, remain of it. The line of walls and moats may be followed by the formation of the earth, which is now entirely covered with grass. The place commands a beautiful view, Dorsetshire being perceptible in the front and Devonshire on the

right, on a clear day. I enjoyed the scenery very much, it was one of the finest views I have ever seen, travelling in that part of England. The picnic was very friendly, the whole party doing their best to amuse each other; some sang and others read aloud, or did something suitable to their capacity. Everything was very enjoyable and we had truly a day's pleasure. Mrs. Elton is most sociable, she entertains a great deal. While I was there she had, almost every day, a party to lunch or dinner, and sometimes a garden party. Among the gatherings I found several acquaintances whom I met at London soirées; consequently our conversation verged on mutually agreeable topics, which alike acquainted and interested each of us and truly added to my pleasure in being with them; all the parties were more pleasurable than ceremonious.

Before I left Whitestaunton, Mr. and Mrs. Elton proposed an excursion to see the North of Devonshire. The party consisted of Mr. and Mrs. Elton, Miss Tinsling, a lady who was visiting there, and myself. At first we drove from Whitestaunton to Taunton, about 15 miles, where we stopped a few minutes to see St. Mary's church. As its architecture is well known we did not stay there long enough to enable me to describe the building fully, but it impressed us with its magnificence and beauty. From there we journeyed by the train, seeing Dunster Castle on the left and having a pretty sea-coast view on the right, we then arrived at Minehead; from this place we drove again through Porlock village, where we stopped at a country inn to take luncheon.

Porlock village has a fine view around, there is a long path with a row of trees on either side extending the whole length of the bank and the branches, meeting at the top, form one continuous arch through which beautiful avenue we drove, and passing villages secluded in valleys, till at last we came up to Exmoor, on the coast, a place girt by hills of varying height, commanding wild and expansive views, where one could see deer appearing here and there in the distance. We drove over these hills at sunset and enjoyed the beautiful view just mentioned. The top of some of the hills were enveloped in clouds, the open sea was on the right. Altogether the drive was charming, I enjoyed it and the scenery also; we drove down to Lynmouth, a small village developing into a watering place, during the summer months; we rested at the Lyndal Hotel, located on the side of the river and having a beautiful dense forest on the left and a good view of the sea in the front. Mr. Elton being well acquainted with the neighbourhood conducted us to all the places which were noted for their scenery; we had dinner at the table-d'hôte, not a large room, only accommodating about twenty-five or thirty persons. In the evening we went to the sea-coast and sat for a while watching the pale moon, which beamed on the sea and the waves which dashed against the rocks; it was indeed a pretty view, and we were all well pleased with the beauty of nature. Next day we walked up to Lynton, about a mile distant and from there we drove past a village of rocks, passing also Lee Bay, where we stopped a few minutes to observe the beautiful rocky cliffs; then on through Watermouth, noting Watermouth Castle on the left and still keeping the sparkling ocean on the right. We got to Ilfracombe about one o'clock in the afternoon, where we stayed at the Royal Britannia Hotel, the Ilfracombe Hotel being full. Then we promenaded along the sea coast, another picturesque view: there is an excellent pier at Ilfracombe, which town in fact has lately become one of the most fashionable watering places on the western coast. Then we drove to Woolasome sands where we alighted and rode on donkeys to see the sea-coast and got back to the Hotel just before dinner time. In the evening we had a little music and retired. Next day we took the train to Exeter, where we stopped about three hours, sight seeing. After lunch we visited the Cathedral, fortunately dropping just in time for afternoon service, so we heard the most exquisite music, which was truly soothing to the weary souls of us travellers. The Cathedral is a large magnificent edifice, and surmounted by handsome Anglo-Norman towers. From this place we drove through Flinton, where we changed carriage and horses and started again for home, arriving safely at Whitestaunton Manor towards evening. Thus through the great kindness of Mr. Elton I have seen much of those parts of Somersetshire and Devonshire, which are celebrated for their scenery and beauty, and by travelling with him I have learned a great deal of the English life, which knowledge I highly value; words seem to me almost powerless to express the gratitude which I feel for

Mr. and Mrs. Elton's invariable kindness, and the attention which they have shewn me during my visit to their country seat and also during the whole period when I was in London. I cannot but think of their estimable society and friendship, and I shall remember them with unutterable pleasure when I am far away.

(To be continued.)

#### CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions or for the deductions they may choose to draw therefrom.]

##### TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In common, probably, with many of your Japanese readers, I have read with great interest the account of "Wonderful Performances of the Indian Fakirs" in your issue of Dec. 13th. During a short residence in India I heard so many absurd stories of this kind, told by *eye witnesses*, that great incredulity possesses me when I hear of them now. I used to hear of strange immurements of Llamas in Bhootan and at last had access to one of them. He was confined in a little wooden cell, not without food, for that was *miraculously* supplied to him through a small hole by a boy, whom I found out and conversed with. He was very dirty and gave as his reason a very simple one. He was a student and wishing to go into 'orders,' had been assigned a certain task. His door had been sealed by his examiner and he was to be 'out of the world' till his task was committed to memory. I don't think it would have taken a western student, with good ventilation and gymnastic exercise, many days to commit, but he expected to be some months over it and I believe spent most of the time in sleep. The natives living beside him seemed to have very marvellous ideas about the affair.

I shall never forget the famous Indian mango tree trick, which I saw in Ceylon. A mango seed was buried. In a little time a bud appeared, and then a branch. It had neither fruit nor flowers. The leaves had been folded up flatly and they were powdered with soil. European bystanders afterwards referred to the trick in terms which showed that the plant had been fruitful in their imagination at least. This world has of late become so dreadfully commonplace that people insist upon filling it with imagined wonders.

Now, according to well-known biological principles, an animal body may remain in a state of what is popularly called suspended animation. Human beings remaining in this state for a short time are said to be in a state of catalepsy. This may be very complete and cases are known to have taken place of people being buried alive whilst in this state. For example, a German lady once returned to her family from the tomb, and had children afterwards.

In such a state the organs are entire but are inactive—like a watch which stops while the spring is not entirely unwound. No one in a state of catalepsy, who had received a severe wound in an important organ, say by a stab from a lance in the heart at the hands of an expert, could possibly recover by natural means. Were his body to recover its physiological activity, this would indeed be a miraculous restoration from the dead.

It is unfortunate that the narrative should hang upon "notes" from "an almost unique copy printed for private circulation." I don't know any reason for questioning the "known veracity" of the author, but his sagacity may very safely be doubted. Why reserve such an important communication for private circulation, and why should the copy be "almost unique"? The story does not hold well together. We are told that the old rogue was buried in a garden and that barley was sown over the spot. We then hear that he was confined in a capacious box, placed in a capacious cell in the floor of a room within a building which seems to have been large, from its Hindu epithet *barra*. That is not what is usually meant by being buried. This second edition is taken "from an equally rare source" and was published in 1837! In the one case 40 days is the limit assigned. In the other six weeks is allowed.

It may be all very well to take the testimony of such gallant officers and gentlemen as I doubt not the authors of these two diverse but marvellous tales may be, but the evidence is worthless, and though something unusual in the experience of these

gentlemen may probably have happened, it is astonishing that they did not ask the medical gentleman whom they mention to give a certificate of the facts. It would not have cost more than a guinea.

Yours &c.,

MEDICUS.

Tokio, December 15th, 1880.

#### REUTER'S TELEGRAMS.

LONDON, 13th December, 1880.

The Porte has sent a note to its Representatives abroad, stating that unless Greece accepts the proposals made in October, a rupture of diplomatic relations is inevitable.

The Greek Chamber of Deputies has voted the bill for a war loan.

LONDON, 16th December, 1880.

The Cabinet has decided to introduce a bill for the suspension of the Habeas Corpus Act in Ireland, combined with remedial measures.

United States.—The House of Representatives has voted resolutions sympathizing with the Irish.

[SUPPLIED TO THE "HONGKONG DAILY PRESS."]

London, December 1st.

Parliament is summoned to meet for the despatch of business on the 6th January.

The British Government has made representations to Russia relative to her attitude in Kurdistan.

The Greek Government has rejected the friendly counsels of the Great Powers to suspend her armaments, but it is stated that the Porte will solicit their mediation.

London, December 4th.

The negotiations regarding Kuldja have failed.

DO-YO-BI.

#### NOTES OF THE WEEK.

The European mails arrived here by the P. & O. steamer *Malacca* on Sunday last, and the French mails came to hand by the M. M. steamer *Volga*, on the 16th instant. The same company's steamer *Menzaleh* left on Sunday the 12th, with the homeward mail up to that date, while those of the current week were taken by the P. & O. steamer *Malacca*, which left at daylight this morning.

The *Lady Aberdour* left Newcastle, N.S.W. on the 14th October, and the *Royal Tar* on the 1st ultimo, both for Yokohama direct, with cargoes of coals.

Communication with Europe and beyond via Siberia is still interrupted.

We notice in the list of passengers who arrived by the *Tokio Maru*, the well-known names of Sir Samuel and Lady Baker.

On dit in political circles in the capital, that Mr. Sakurada, Secretary for Foreign Affairs, is likely to be the successor of H. E. Sameshima, deceased, as Minister to France. We believe that Mr. Sakurada had an official interview with General Oyama, as to the appointment, on Tuesday last.

We beg to call the attention of those concerned to the condition of the ruins of the late fire in Main Street. The tall chimneys and walls are in a most unsafe condition and a typhoon, or even sudden gust of wind, will probably lead to some disastrous accident. As it is, many people are afraid to pass the place, and to ladies driving it is naturally a source of fear, and consequently is avoided at much inconvenience.

We have been informed that the following gentlemen have undertaken to endeavour to arrange for the lighting of the 100 gas lamp-posts which stand in the streets of the Foreign Settlement:—Messrs. Brooke, Conil, Gay, Van de Pot, Von Fischer, Wilkin, and Wolff. They have appointed Mr. J. Haffenden to canvass occupiers of houses and compounds, with a view of ascertaining if a voluntary tax assessment can be arranged, as was done before.

Our Tokio correspondent informs us that on Sunday last His Excellency Inouye, Minister for Foreign Affairs, gave a grand banquet at the Enroikwan, in honour of the Chinese Minister to Japan. A large number of guests were present to enjoy the festivities; among others may be noted Prime Ministers Sanjo and Iwakura, the Privy Councillors, quite a number of European ladies, and the Representatives of foreign countries resident in the capital. As the guests arrived they were received by H. E. and Madame Inouye at the entrance of the building. During the entertainment a band played a selection of music, and it was midnight before the party dispersed. A native contemporary, noticing the reunion, naively remarks, "that on the 20th instant, the Prime Ministers and Privy Councillors purpose *entertaining themselves*, in the same building."

The latest thing in strikes is one organised by the cargo boatmen. This morning, when the various landing and shipping agents went to the hatoba to superintend their work, they found it impossible to obtain boats or men, in fact most of the boats had been removed from the hatoba to Kanagawa, and it was announced that a strike for a higher scale of pay had been agreed upon.

Considering the serious harm to shipping, both native and foreign, which this affair is likely to inflict, we think that a little pressure might duly be exercised by the authorities. At the time we write, it is almost impossible to ship or discharge cargo.

Last night the premises at No. 31, occupied by Mr. Curtis, were burglariously entered, and several hams, pieces of bacon, etc., were stolen.

The concert announced for the benefit of Christ Church took place last Thursday night in the Gaiety Theatre when, in spite of the high price of admission, there was a numerous audience. Indeed the "three dollar" question has been the principal theme of discussion in the community during the last week; party feeling ran high; the Guelphs and Ghibelines contended manfully; and we were almost threatened with an "O. P." riot. Eventually the Church Committee gave way in part and issued a certain number of tickets at the old price of "two dollars," although we fear, without conciliating all the grumblers.

The chief feature in last night's programme was the performance of Romberg's fine music to Schiller's noble poem "The Bell." We believe that this is the first time any work of such magnitude has been undertaken here, and as we learn that the newly reorganised Society has prepared the entire work in the short space of one month, we cannot too highly praise the energy and perseverance of all concerned. The libretto contains really but one principal character (the Master Bell-founder)

which was admirably sustained by Mr. de Bavier throughout. The remaining solos were undertaken by members of the society who sang from their places in the chorus, and it should be specially mentioned that the tenor part was taken at a few hour's notice by one of the members in place of the original soloist who was at the last prevented from appearing. The chorus—es one and all went with marvellous precision and evinced an amount of careful painstaking work which if thoroughly followed up will make the Society equal to any chorus-work which may come before it. We should especially notice the opening chorus "Good Master:" the deeply-wailing "Hark the tower's deep-toned bell" with its exquisite Recited Aria "Lo! it is the wife;" the jovial soul-inspiring "Thousands when in union joined," and the glorious shout of joy which ushered in the finale "There enthroned may it oft be pealing." Among the solo and concerted pieces we should notice the song for Soprano "Wearied now with toil of day;" the beautiful pathetic air "All these tender ties are broken," and the fine quartett with chorus "Peace sweet concord." Time will not allow us to enumerate all the gems of this fine work; we can only hope that the Society will repeat it at an early date and give us the pleasure of hearing them once again.

The second part consisted of a miscellaneous selection opening with a short sonata by Mozart for Piano and Violin, the second movement being to our idea the most entertaining, as in the first Allegro the violin seemed very weak and at times inaudible. A fine rendering, by a lady, of Mattei's well known "Non è ver?" brought down thunders of applause and the second verse had to be repeated. The choir followed with two part songs—Rossini's Carnovale earning another well merited encore. Altogether the performance was a great success, and we hope the Society will soon be giving us another musical evening.

The Annual General Meeting of the Amateur Athletic Association was advertised to be held last Monday evening, but at the hour appointed the number of members who attended was insufficient to form a quorum, so that nothing could be done. It was proposed by a member, however, that an adjourned meeting should be held on Thursday next, the 16th instant, when a proposition should be submitted to dissolve the Association and offer the property to the Cricket Club. This was agreed upon and the meeting adjourned.

While regretting the decline of any Association connected with athletics, we cannot help thinking that the proposal to be brought forward next Thursday, is one of particular common sense. Yokohama is too small to admit of the continued existence a number of separate Clubs, and it would be far better to follow the example, so successfully set forth in Kobe, and amalgamate as far as possible. By doing this more numerous entries, implying better contested sports, are sure to ensue.

At the adjourned meeting of the Amateur Athletic Association a very limited number of members attended. The report and accounts were taken as read on the proposition of a member, and it was then proposed by Mr. Watson, that the club should be dissolved and the property and general effects should be offered to the Cricket Club, and that in the event of that club not accepting them, they should be sold and the amount realized, together with the balance in hand, should be handed over to the General Hospital. Mr. Stanley Cope seconded the proposition, which was carried unanimously, and the club was dissolved.

The following has been forwarded to us for publication:—

"The children of all nationalities,—regardless of sect,—will receive tickets for the Christmas treat at the Union Church, and it will be the fault of the parents or guardians if any child does not receive a ticket.

"Young children must be accompanied either by a foreign lady or gentleman.

"Tickets can be had on application to Mr. N. McLeod, No. 28, Main Street, on receipt of the children's names and ages, so that suitable prizes may be provided for them."

As will be seen by reference to our advertising columns a new and pleasant beverage has been introduced into Yokohama. From testimonials written by numerous medical practitioners, it appears that in Zoedone is to be found a complete solution

of the problem which has long exercised the minds of the medical profession, viz., the discovery of a beverage which shall assuage thirst, restore nervous waste, and, while being palatable, be also non-alcoholic. It is the firm conviction of a number the profession that it will meet all the requirements of those who wish to restore their nervous systems without impairing their livers.

Mr. Snow's otter-schooner the *Otome*, returned on the 13th from her second trip this season. She left this port on the 6th ultimo, and despite the cold and continuous snowstorms, which for days rendered any hunting impossible, she has had, on the whole, fair success. Leaving her cruising ground, the L<sup>a</sup> Pérouse Straits, on the 1st instant, she shaped her course for Yokohama, experiencing throughout the passage tolerably strong N.W. gales and bad weather generally. She has been lying outside the bay for the last two days on account of foggy weather. Altogether the *Otome* has been lucky as she brings back between five and six hundred seal skins.

A short time since we announced the intended visit to this port, at an early date, of Signora Carlotta Patti's Concert Troupe. It appears, however, that it will be some time before the Company make their *début* in Yokohama, as by last advices we find that they did not leave for Calcutta until the 21st ultimo. The *Straits Times*, referring to the Signora's reception in Batavia, says:—"Signora Patti, we are informed, received a perfect ovation from the Batavian public, and the opening concert there was given under the special patronage of the Governor-General. At the conclusion of the first concert the people were so enthusiastic that the Administration of the Theatre and all the audience went in a torchlight procession to the Hotel de Nederlanden, where the fair cantatrice was staying, and serenaded her with the military band, and music, bouquets, speeches and champagne were the order of the evening. The same enthusiasm was displayed at the conclusion of the second and third concerts. The Theatrical Administration of Batavia further showed its appreciation of the Signora's talent by accompanying her on board of the *Bromo* with music. During the Signora's stay at Batavia she was always invited by the *élite* to soirées, balls, dinners, &c. On the morning of the 15th she was specially invited by the Governor-General to a *matinée* at the vice-regal palace at Buitenzorg."

In H. B. M.'s Court yesterday, a Mussulman named Mahomed Assam was summoned for debt by a Japanese. Defendant urged that he was at present unable to pay up the full amount, but offered to pay 20 yen down, and the remainder by monthly instalments of five yen. The plaintiff, however, would not accept this arrangement and judgment for the full amount was awarded. His Honor remarking, however, that it would amount to the same thing, as the defendant would no doubt be brought before him again for not having obeyed the judgment, in which case he would have to show how much he could afford to pay per month.

Referring to a telegram which we republish from the columns of the *Hongkong Daily Press*, that journal remarks:—"In one brief line Reuter makes a most important announcement, if authoritative. 'The negotiations regarding Kuldja have failed,' we are told. The *Agence Russe* must, if this be correct, have been decidedly premature in its anticipations of a favourable termination of the negotiations. The full significance of the telegram will at once be apparent to our readers. It is hardly likely that Russia will consent to again reopen the question, but an ultimatum will now, in all probability, be despatched to Peking, on the acceptance or rejection of which will depend the maintenance of peace. It is impossible, of course, for us to pretend to say which party is to blame for the untoward result of the negotiations; probably both. We have always believed, however, that Russia wished to fight, if not embarrassed in Europe. The occupation of Dulcigno by the Montenegrins and the peaceable dispersal of that force the Naval Demonstration, has left Russia free to conduct other schemes for her aggrandisement, and may have influenced the turn affairs have taken with regard to the Kuldja dispute. It is idle to talk about the foreign policy of Russia being governed

by any but selfish considerations, and there is no doubt that, given the strict neutrality of other foreign Powers, she has a good opportunity for wresting from China great territorial and trading concessions. There may be time yet for the Chinese Government to avert the contest by accepting Russian dictation, but that would prove a very bitter pill for Manchu pride, and more than they could swallow, we are afraid. They may require thrashing before they will be able to take the medicine."

Affairs are apparently coming to a crisis, for according to the *Hiogo News* of the 13th instant, that journal appears to have received some intimation of serious complications in the near future. Our contemporary writes:—"We are informed upon what we have reason to believe is reliable authority, that the Chinese Government has decided not to submit to exorbitant demands on the part of Russia. If the Czar insists upon an enormous indemnity and large sacrifices of territory, Chinese pride will not allow a peaceful settlement. The ultimate result can hardly admit of a doubt, although the task before the Russian commanders in the event of hostilities is no ordinary one. The great difficulty will consist in obtaining supplies for the army operating on the north-west of China. This force must move over immense distances and the stores will require to be collected on new bases. For instance, the military base of the Khanate forces (Khiva, Khokkand, &c.) was Orenburg; now the bases are Khokkand in one direction, Irkutsk in another, and Vladivostok in a third. These places must therefore be prepared at great expense, to meet all drafts for men, stores, supplies, ammunition, &c., for the armies which will be hurled against the tottering power of China. The Russian fleet does not contain vessels of a sufficiently light draught of water to act on the Peiho, Peltang, or on Chibli. Newchang will be exposed, but then that port is remote from any military objective. The fleet will probably be principally used on the Yangtze, for the performances of the vessels hitherto, shew them to be incapable of maintaining such a blockade of the China ports as western nations would recognize.

"The attitude of Japan will become of great importance. Suppose the Government adopts a strict neutrality, and refuses the shelter of Nagasaki and coaling facilities for the fleet, the Russians will undoubtedly find themselves seriously hampered, if hostilities continue for any length of time. A contrary policy, which it can hardly be anticipated will be followed as against a friendly nation, would enormously facilitate the Czar's operations. Whether Japan in such case will receive adequate compensation for her assistance, a review of Russian policy towards friends and allies renders very doubtful indeed. Corea a Russian possession, and therefore a continual menace to Japan, would be anything but agreeable to the Government at Tokio."

We read in the *Rising Sun and Nagasaki Express* that the property of the Netherlands Trading Society, No. 5, Bund, consisting of a dwelling house and a large stone godown, was disposed of by public auction after a spirited bidding, to the Catholic Mission, for the sum of \$2,200.

The same paper also states that the Russian cruiser *Europa*, bearing the flag of Admiral Lemosky arrived from Vladivostok on December 6th and the *Djigit* left on the 8th instant bound to Kobe, where she will probably spend the winter. The *Iron Duke* left the following day under instructions to proceed to Rugged Island, from whence she will go to Hongkong. The *Strelack*, *Rosboinick*, *Plastoun* and *Africa*, have arrived from Vladivostok, the two former on Thursday and two latter yesterday. The *Africa* carries the flag of Admiral Stackelberg. The *Minin* is expected, and the British sloop *Albatross* is also shortly expected from Chefoo. Men-of-war in harbour: Russian—*Europa*, *Africa*, *Strelack*, *Plastoun*, *Rosboinick*, *Gornostai*, and *Nerpa*.

In reply to a paragraph which appeared in the columns of the *Japan Herald* a short time since, commenting on the occupation of Inasa by the Russian Government, a correspondent in the columns of the *Rising Sun and Nagasaki Express*, signing himself "Honto," thus explains what he assumes to be the true position of affairs. He writes "I was

surprised to find, in your last week's issue, an article of the "Russophobia" style, reprinted from the *Japan Herald*, which is greatly calculated to mislead the public, as it is entirely at variance with the facts,—of which the writer must have been entirely ignorant. A stranger, on reading the article, would conclude at once that the Russians were in forcible possession of a whole village, when really they have but a small plot of ground,—measuring less than an acre,—on the beach at Inasa, for which they pay rent at the usual high rate to the Japanese, and on which they have erected a few buildings, consisting of a bath-house, a shed for repairing and painting boats, etc., and (lately) an hospital, which are made use of by the officers and crews of the various vessels during their stay here. No other property, of any kind, is held or owned by either Russian or any other foreigners there, and no Russian has a residence or place of business outside of their lot at all.

"Many native shops and hotels are to be found in the village adjoining, to the no small benefit of the inhabitants, from the amount of hard cash spent there by the Russians, who, having no storehouse or coal depot here, are compelled to buy all their supplies in the place. The Imperial Japanese Dry Dock, Patent Slip, and Engine Works at Akunoura are continually at work repairing the vessels, one or more of which may be almost always found here, and I am sure the Japanese have more sense than to wish to drive away the Russians, who (to judge from the amount of business they give) are their best customers. In fact Nagasaki could ill spare the hard Mexicans left here by these best of paymasters.

"No doubt this place is found to be a convenient one to repair and refit at, but the benefits are certainly more to the Japanese, than to the Russians, who could get the same accommodation at any port in the world (where it existed) in time of peace, and is no more than would be accorded to the war vessels of any other nation, if they paid for it.

"The 'jealous distrust' and 'periodical notices to quit,' mentioned in the article in question, have no existence—except in the fertile brain of the writer, who seems to have been actuated by feelings of malice, as well as ignorance.

"In the interest of 'fair play' I trust you will pardon me for encroaching so much on your valuable space."

From our Shanghai exchanges we learn that the shipment of troops for the north of China still continues, and up to the present time there is no sign of relaxation in the preparations for war. On the contrary, everything in the nature of the defence of the country against attacks on the sea-board of China, is being pushed forward with ceaseless energy.

"Our advices from the north" (writes the *Celestial Empire*) "by the *Sin Nanxing*, which arrived from Tientsin on the 1st instant, speak of the general conviction that war with Russia is quite inevitable, and will commence in the spring. There is no news about General 'Tso Tsung Tang, and there seems to be much uncertainty as to his movements and present whereabouts. The *Sin Nanxing* had a narrow escape from being hemmed in by the ice, having had to ram repeatedly to cut her way through the frozen waters."

Winter has set in very early this year at Shanghai. On Sunday, the 28th ultimo, snow fell in the settlements, and the same night the thermometer went down to 28°. Many of the creeks and ponds were frozen over. The highest temperature during the day was 40°, and on the following Monday morning the snow on the trees was frozen.

The *Hongkong Daily Press*, taking as its text the announcement in a paragraph contained in the *Japan Gazette*, that the Chinese Government have definitely refused to formally recognize the Loochoos as part of the Japanese Empire, further adds . . . . "Now it might naturally have been thought that the Authorities at Peking would have been willing to secure the good will of Japan by the slight concession involved in the abandonment of a claim which can only irritate Japan and do China no good if enforced. The Chinese Government should either have resisted the annexation of the Loochoos at the time, or else they should now quietly acquiesce in accomplished events. The conduct of China all through in connection with this Loochooan affair has been singularly in-

consistent and childish. In the first place she paid Japan an indemnity to cover the expenses of the expedition to Formosa to punish the aborigines for outrage committed on Loochooan mariners, thus inferentially recognising those islanders as Japanese subjects; and subsequently she looked calmly on while the Japanese Government removed the Loochooan prince and converted the islands into a *ken*, or province, of the Japanese Empire. Grumbings not loud but deep were certainly heard from Peking that Loochoo had for centuries paid tribute to the Dragon Throne, and that it would be expected still. The Japanese Government of course forbade the payment of this tribute. They had undertaken a little war for the benefit of Loochoo, and they were not disposed to allow the islanders the liberty, any longer, of serving two masters. The fact that the Chinese Government, even when involved in serious difficulties with a great European Power, will not budge from their position on this Loochooan question which is of no importance to them, shows how obstinately they cling to any tradition of ascendancy over remote and insignificant countries. Indeed, the Peking Government have shown a disposition of late to exact homage from countries which have long since discontinued the payment of tribute to the Son of Heaven, as he is arrogantly styled. Even distant Nepal has not been exempt from these revived claims, while Siam and Burmah have both been requested to bring their offerings to Peking. The refusal to waive their claim to the suzerainty of the Loochoo Islands is of a piece with the pretensions lately asserted by the Chinese Government, and consistent with the stubborn folly which prompted them to reject the Treaty of Livadia, an act which has given Russia an excellent excuse for increasing her demands. The rejection of the Japanese demand was certainly as impolitic as it was unreasonable, since its concession would have converted Japan from a suspicious neighbour into a friendly ally and well-wisher."

The scheme for the excavation of a ship canal across the Isthmus of Panama is apparently making steady progress. By the latest accounts from Paris we find the capital of the Company will be 300,000,000 francs, divided into 600,000 shares of 500 francs each, 10,000 shares being reserved by the statutes for the civil company of original concessionaires, for the concession contributed by that company. Five hundred and ninety thousand shares remain for public subscription. The issue will be made at par, 25 francs being paid at the subscription, 100 on the allotment, and the rest as required. The total cost is estimated at 600,000,000 francs. The sum necessary for completing the canal over and above the capital will be raised by the issue of obligations. Five per cent interest will be paid on the shares during the execution of the work. Of the net profit 80 per cent is allotted to shareholders by the terms of the concession. De Lesseps states that contractors have sent in their estimates, according to which the construction of the canal will not cost 500,000,000 francs. It is provided, by a memorandum signed July 7th, 1880, that a special American committee, sitting in New York, shall represent the interests of the company in the United States. All that relates to the observance of neutrality of the canal is settled by the law of concession of the Republic of Columbia.

In a late number of the *China Overland Trade Report* appears a very interesting review on the advance, and financial success attained by Local Companies during the years 1879-80. Our contemporary writes:—It is very gratifying to Hongkong and China investors to look back upon the past two years, and see what real progress the various local companies have made, and also to know that this progress is genuine, and not the result of speculation. Since the big gamble of 1878, almost all shares sold have passed into the hands of *bona fide* investors, and it appears impossible that the state of things we then had to chronicle can be repeated in our time. The heartburnings and disappointments of 1878 have given place to the satisfaction and content of 1880, and the improvement effected during the period under review can hardly be overestimated. A few words about the various companies may be interesting to our readers.

"Hongkong and Shanghai Banking Corporation.—The wise

man truly said, "wisdom's ways are ways of pleasantness and all her paths are peace." This may be applied to our principal local company with full effect. The Bank now occupies a most commanding position in the China trade, and appears to be content with minding its own legitimate business, and avoiding the sins of its youth. Half-year after half-year the directors come before the shareholders with satisfactory reports, and on every occasion during the past five years a substantial addition has been made to the reserve fund. We believe it is in contemplation to gradually augment the reserve until, like many of the first rate Banks at home, it equals half the amount of the paid-up capital. There cannot be any question about the entire wisdom of the policy pursued, and no other course would have placed the Bank in its present position.

"The Marine Insurance Companies have all done, and are doing, remarkably well. We have had very severe and unexpected losses of late, but they are all in the fair way of business, and if they did not happen from time to time the occupation of the Companies would be gone. The Marine Insurance Companies were the first to demonstrate that the China trade could, by adopting the mutual principle, retain the profits on sea risks in the trade, and for this they demand our gratitude. Many a wry face over tea and silk losses has been gladdened by the appearance of the grateful bonus from the Insurance Company. It would be interesting to estimate the profits to China shareholders, derived from the local Marine Companies, and perhaps some of our readers with more time and curiosity than we can boast of may make the calculation.

"The Fire Insurance Companies have triumphed over the prejudices that existed in the earlier days of the Chinese trade. We remember the great fire at Yokohama some ten years ago and subsequent panic among the directors and shareholders of the China Fire Company at Shanghai, and it may be recollected by some old residents how that unfortunate company was talked to death by its own shareholders and directors. The same enterprising managers of the Hongkong Fire Company seized the opportunity and reconstructed their company upon its present basis, with the result we all know. The China Fire Insurance Company was subsequently started in Hongkong and its career has been eminently satisfactory.

"The China Sugar Refining Company.—This industry promises to be a great source of wealth to Hongkong, and so it ought to be, considering the many advantages the island affords. Good water in abundance, cheap labour, cheap coal, a plentiful supply of the raw material at hand, and finally a large consuming market for the finished article. It will be remembered how unfortunate the first attempts at introducing the industry were, and even yet there are some sad recollections of the "Indo-China;" but from the first there could be no doubt about it, the Sugar industry in Hongkong ought to thrive. By none was this fact more thoroughly appreciated than by the East Point firm, and under their auspices the present Company promises to be one of the greatest successes ever achieved in China. It was a master stroke to solidify all the Sugar interests by purchasing concerns that otherwise might have been dangerous rivals, and all connected with the Refining Company are to be congratulated on the existing position of its affairs.

"The Hongkong, Canton, and Macao Steam-boat Company.—This Company received a new lease of life when the friendly arrangement with the opposition came into effect. The directors of both Companies have shown their wisdom in not raising freights or fares unduly, and also in fully supplying the wants of the line, and thus leaving no room temptingly open for an opposition. The trade between Hongkong and Canton is a splendid one, and as things look at present the above Company has a brilliant future before it.

"The Dock Companies ought to follow the lead of the Steam-boat Company and come to terms with each other. It is simply ridiculous that a Dock Company should be other than a splendid success in a port like Hongkong, where so much work (which ought to be of a remunerative character) is to be done. Opposition may please a few, but it injures the many. We are far from advocating a high scale of charges, but if ten per cent. were added to the present scale Hongkong would still be one of the cheapest places in the world to get work done and the

shareholders would get what they are entitled to, a fair return for their money.

"We hope that when we next devote a column to the local companies we will be able to report upon them as favourably as we are enabled to on the present occasion. Hongkong may well be proud of the local companies, and we commend to one and all of them the trite adage, 'stick together and help one another.'"

The following is a translation from the *Shokio Shimpō*, taken from the columns of the *Hiogo News* :—

"COTTON YARN :—There have been few arrivals of Awaji cotton yarn, and stocks are accordingly light. No transactions of importance have taken place, and quotations remain steady.

"WAX :—Holders of raw are anxious to effect sales, but purchasers are keeping back for a fall in prices, which they expect the necessities of holders will compel them to grant towards the end of the year.

"RAW COTTON :—Owing to the scarcity of money large quantities are being forced upon the market, and prices are therefore going down. The farmers do not much like selling at present quotations, but the necessities of many leave no alternative, as the land-tax will shortly fall due. Dealers are not eager to buy, expecting a further decrease in price, and alterations in the market may be looked for.

"FABRICS :—Black Cotton Velvets are dear, in consequence of the small quantity in stock. Turkey red Cambrics are firm at former quotations, and are saleable, although heavy stocks are held. Mousselines de Line (Crapes) have a downward tendency. Mousselines de Line (Itajime) is held in small quantity and fetches full prices. Victoria Lawn is unsaleable, being unsuitable for winter wear. Grey Shirtings are largely held, but few sales are effected, owing to the high rate of exchange. The stock of Cotton Satins is light.

"In consequence of the land-tax being shortly payable, the farmers are beginning to send the rice of both the old and new crop to market. Purchasers are holding off and quotations are going down. Business in this cereal may be said to be at a standstill at present.

"IRON :—Native Iron has a downward tendency. Holders are not anxious to sell, and there are but few buyers. Transactions have therefore been inconsiderable. Foreign Iron is firm, but unsaleable at quotations. We anticipate a change shortly.

"KEROSENE OIL :—No change to report. Stocks in Kobe are heavy, and sales are taking place.

"MONEY MARKET :—Interest has fallen to seven mon, and the market may be considered restored. The improvement is said to be caused by the payment of the interest on the Government bonds, and the redemption of a number of these obligations. In addition to which the merchants are getting rid of their goods, and thus decreasing the sums on which they were paying interest.

"KOBE :—There has been no change worthy of mention in the export trade. Goods most saleable at present are crude camphor, tobacco, rags, awabi shells, and bamboo ware. The fall in the value of dollars has made foreigners disinclined to purchase at present; they appear to be waiting for a rise in specie. Camphor is quoted at 33 yen per picul, tobacco (Owari) 10.50 yen, rags 1.50 yen to 3.50, shells 3.00 yen to 12.00 per picul, refined wax 26 yen. Imported goods are selling in small quantities, and prices generally have a downward tendency. The foreign merchants are requiring purchasers to take delivery of goods already contracted for, as the end of the year is approaching. Money is scarce, but daily interest has fallen to six or seven mon."

In their commercial report, dated the 27th November, Messrs Behre & Co. thus remark on the Saigon rice market :—"The business done during the month has been a very small one, in the beginning on account of the scarcity of old grain already recorded in our last circular, and latterly consequent upon discouraging reports from all consuming markets, especially from Java. While the old crop may be considered exhausted, new rice has begun to come to market by small lots, daily increasing, and dealers under the circumstances have already considerably lowered their pretensions, especially for forward delivery. As

yet, however, prices do not admit of business, small shipments to Singapore excepted, and apparently we may look forward to a further decline. Quotations are:—Best average quality of the season, 10 to 15 per cent. paddy, for immediate delivery, \$1.69 per picul in gunnies, including duty=5/7½ per cwt. f.o.b. Best average quality of the season, 10 to 15 per cent. paddy, for delivery in a fortnight, \$1.62 per picul in gunnies, including duty=5/5 per cwt. f.o.b. Best average quality of the season, 15 per cent. paddy, for delivery in two months, \$1.53 per picul in gunnies, including duty=5/1 per cwt. f.o.b. Mill dressed white No. 1 round, \$2.55 per picul in gunnies, including duty=8/9 per cwt. f.o.b. Mill dressed white No. 2 round, \$2.22 per picul in gunnies, including duty=7/4½ per cwt. f.o.b."

The *Rooski Courier*, received from Moscow by the *London Globe* on the 29th October, contains the following news from Kuldja:—"The Chinese continue to arrive at the frontier camps from the interior, and the conscription among the Calmucks and Kirghiz proceeds without ceasing. The headquarters are established at Djinkho, not far from the Russian border. The Russian troops have been dispersed among the various towns of the province of Kuldja, hostilities not being considered imminent, in spite of the continuance of the Chinese war preparations. The troops do not like the idea of remaining inactive for a prolonged period in Kuldja. It seems probable that they will be kept in winter quarters in towns until the spring, when they will be removed to the frontier again to resist the Chinese invasion. The Chinese commander-in-chief is stated to have said at a review that he meant to march against Kuldja from Djinkho as soon as his plans were complete; once he crossed the border, he would enter Kuldja dead or alive. An alarmist spirit prevails in Russian military circles, but the report of the Russian consul Shismareff, at Kashgar, is understood to be reassuring. The Government has liberated the Chinese convoy seized the other day near Fort Bakhta for violating Russian territory."

Mr. Labouchere, writing in *Truth*, says:—"I see in the newspapers that an important Chinese functionary is about to visit several countries to arrange details respecting the advent of coolies. I would suggest to this Oriental to pay us a visit, and forthwith to take measures to send over to us a few thousands of his countrymen as domestic servants. As it is, it is almost impossible to procure good ones."

From the *Royal Geographical Society's Proceedings*, we republish the following:—"Some interesting information regarding Maucka Cove, on the west coast of this island, has been recently communicated to the Hydrographical Office by Mr. G. C. Anderson, commanding the steamship *Appin*. Maucka Cove (lat. 47° 3' N., long. 142° 6' E.) is the headquarters of a company which has acquired from the Russian Government the right to collect along the sea-coast, seaweed, bêche-de-mer, fish, &c., for a period of ten years. The Cove is about two cables in length east and west, by one cable in breadth, and is said to be the safest anchorage in this part of the island. The population consists of three Europeans, a small guard of seven Russian soldiers, and about 700 coolies, consisting of Ainos, Koreans, and Chinese. The Ainos are praised as excellent hunters and as a quiet, goodnatured, hard race. The climate is fine but cold, the summer temperature not exceeding 60 degrees Fahrenheit, and falling at times to 24 degrees below zero in winter. Fine weather prevails from May to the autumnal equinox, when it breaks up. In June and July dense fogs prevail, with occasional strong east and south-east winds, which bring rain from the hills; during these months there is often a clear belt along the coast, free from fogs, extending four or five miles off shore. There is an abundance of fine timber in the valleys—yellow pine, cedar, spruce, ash, oak, and spars of any size can be obtained. Coal crops out at out a mile inland from the Cove, and indications of iron have also been noticed. Bears, hares, grouse, and, in winter, sables and fine foxes are plentiful, and fish—herring, cod, salmon, trout, and flounders—is abundant. Communication with the east coast of the island is kept up by means of dog-sledges, which the Ainos are expert in driving. There are about a dozen trading-stations on

the west coasts, south of Maucka Cove, each of which has its mountain stream and settlement of Koreans and Ainos, who work for European traders."

The following were the current rates of freight for vessels on the berth at home on the departure of the last mail, October 29th:—Per Conference steamer.—To Hongkong, £1 10s. weight, and £2 measurement: to Shanghai £1 10s. weight, and £2 measurement: to Hankow or Nagasaki, £2 0s. weight, and £2 10s. measurement; and to Yokohama, £1 15s. weight, and £2 5s. measurement. For China and Japan Shippers' Association:—To China, £1 15s. weight or measurement; to Yokohama, £1 15s. weight, £1 17s. 6d. measurement; to Hiogo, £1 15s. weight, £1 17s. 6d. measurement. Per sailing vessels.—To Hongkong, £1 7s. 6d. weight, £1 5s. measurement; to Shanghai, £1 7s. 6d. weight, £1 measurement; and to Yokohama, £1 12s. 6d. weight and £1 5s. measurement. The current quotations for coal were as follows:—From Wear or Tyne, per keel.—To Hongkong, £25; to Shanghai, £31; to Bangkok, £24; to Yokohama, £26. From Newport, Cardiff, or Swansea, per ton.—To Yokohama, 27s.; to Shanghai, 28s.; to Hongkong, 24s. From Birkenhead, per ton.—To Hongkong, 22s.; to Shanghai, 26s.

In an American paper we find the following account of a steamboat of novel construction which has just been finished at San Francisco. She is destined to ply between that city and the Eel River Valley. The requirement was that of a staunch sea-boat, which would yet be of light draught, so as to cross the river-bar. The vessel will register 260 tons, and when loaded with 300 tons she will draw only 7 feet of water. She is flat-bottomed, but has a tapering bow and stem, and graceful lines. The chief peculiarity consists in the arrangement of the two propellers. Instead of projecting from either quarter on either side of a single rudder there are two rudders, and each propeller is arranged with respect to its corresponding rudder, just as if there were only one propeller. There are, in reality, three keels, the centre one curving up at the stem, following the line of the vessel. Those on either side are 12 feet or 15 feet apart, and run right out beneath the stern, where there are two stern posts, and two rudders. The wide space between the propeller-keels gives free access to the water, so that each propeller will act as well as if alone. The pitch of the blades is set opposite. One may be backed while the other moves ahead, and the boat can thus be turned in her own length. The two keels under the stern will serve to protect the propeller if the boat grounds.

According to the *Economist*, "A congress is now sitting in Paris with the object of creating an international parcels Union. It is presided over by M. Cochery, the French Director of Posts and Telegraphs. The discussion in the congress opened on a proposal to charge a uniform rate for all parcels weighing not more than three pounds, which would be the maximum weight accepted, and the charge suggested was 50 centimes for each of the countries through which the parcel would pass in transit. Such a service would be a great convenience to trade, but it presents many practical difficulties. The French railway companies are bound to carry the mails free of charge, but they would not consent to add a gratuitous parcels service for the State in place of their own present service, and if the charge of 50 centimes were divided between the State and one or more railway companies, the share of each would be so small as to be scarcely remunerative. The French Government at present imposes a stamp of 36 centimes on the *recipissé* or carriage letter which accompanies each parcel, and in addition a statistical tax of 10 centimes at the frontier, which would necessarily have to be abandoned, or nothing would be left for the carriage, but the surplus in the revenue would permit that sacrifice even if extended to all inland parcels, on which the tax could not consistently be maintained after it was abolished for foreign parcels. The congress has provisionally adopted the proposed rate of 50 centimes, but has left open the question of permitting a delivery charge at destination. The maximum weight has been raised from six to ten pounds."

## ECCLESIASTIC AND MISSIONARY NOTES.

CONVENTION OF NATIVE CHRISTIANS.—Mr. Atkinson writing from Kobe, July 27, says:—

One fresh item of news is the fact that at the July communion eight adults were baptized and received into the church at Imabari, Shikoku. Mr. Ise was in Kobe recently, and said that his congregation now numbers a couple of hundred. He is very much encouraged.

Another item is concerning the second general convention of the native Protestant Christians of Japan. The first was held two years ago in Tokio. The second was to have been in Osaka last year, but was postponed because of cholera. It was decided at the meeting that the convention be held once in three years, rather than every year. The next meeting is appointed for Yokohama.

The Episcopalians were not officially represented in the convention. When the meeting was in Tokio, I am told, Dr. Williams, the American Episcopal Bishop, forbade the converts of his church to attend.

Most of the meetings were held in the girls' school building connected with our mission. The number of representatives from Tokio and elsewhere was not large, because of the expense. The meetings were, however, very pleasant and eminently profitable. The usual audience was about three hundred. The meetings were all conducted by the Japanese. Only one foreigner—myself—took any part in the addresses, and he did so because the one to speak on the particular subject had not come; hence, at a little later than the eleventh hour, he was asked to speak on the subject of Family Government.

The addresses had all been carefully prepared before the meeting, and hence were not wandering harangues. I cannot remember all the subjects discussed; but 'Evangelizing Work,' 'The Style of Language to be used in Preaching and in Writing,' 'Christian Fellowship and Unity,' 'Education of Girls,' 'Family Government,' were of the number. One of the speakers on evangelizing work laid considerable emphasis on the supposed fact that the conflict of Christianity in Japan is not to be with Shintoism, Buddhism, Confucianism, but with the atheistic evolutionism and infidelity of Europe and America, such as are now taking root in the minds of the educated in the land. Hence, while emphasizing thorough study of the Scriptures, he laid great weight on the importance of all preachers of the gospel being well up in scientific knowledge.

Half of one day was largely occupied in providing a committee to present a petition to government asking for liberty to bury the Christian dead with Christian rites, without let or hindrance from the Buddhist priests, who now have the monopoly of burying the dead. In the open ports there is no difficulty, but in the interior the priests are in many places less accommodating. They can perform all their rites over the Christian dead, if they choose to do so. Many are intimidated by the priests by the threat that they will leave them unburied if they adopt Christianity. The convention voted to petition government on the matter, and appointed a committee to prepare and present the petition. Nothing can be predicated concerning the result.—*Missionary Herald.*

THE FERMENT IN JAPAN.—The report of the Kobe station for the past year dwells upon the restless activity which characterizes the whole population at the present time.

The nation is living in a great ferment. Intellectual activity is yearly on the increase. Frequent change in almost every matter is the rule. As some say, 'there is nothing fixed in Japan but change.' The advocates of people's rights and popular representation in the councils of the nation are active and indefatigable in their endeavors to carry their point. Their missionaries are to be found in almost every city and town in the empire. A petition just presented by them to the throne has been rejected. This will but tend to increase their activity and energy. Few, if any, of the leaders care one iota for Christianity, though many of them possess Christian books, and know something of what Christianity is. They care but little about the people becoming right or righteous; they want 'rights,' powers, influence in the governing of the land. They do not intend to cease from their activity until they have accomplished their object. They raise money; they send out lecturers, publish newspapers and books; organize societies; hold general assemblies, and exercise all their ingenuity and strength in devising schemes for the furtherance and carrying out of their object.

As we contemplate their earnestness and activity, the conviction grows strong in our souls that we must not be one whit behind them in fertility of resource, in activity and energy, in carrying on our nobler and holier work. The Kobe station is ambitious to have at the earliest possible day a preacher, a colporteur-evangelist, and a Bible-woman, in every city and town in all the length and breadth of its field. The time to set these agencies to work is now. One of Tom Paine's infidel works has been translated into the language, and other infidel, materialistic, and atheistic works are finding their way into the land through books, newspapers, and travellers returning from America and Europe. Our warfare is to be against heathenism and American and European infidelity combined. We need to

occupy the ground at the earliest possible moment with forces adequate to the needs. Ten years of work now will be worth fifty by and by. This will take money, and more money than the Japanese Christians have in their possession; but we believe that our God has treasures laid up in America as well as in Japan; that He from ancient times has prepared for this need, even as he stored up the coal in the earth long ages ago for use at the present day.

Our prayer is that wisdom and grace and energy may be given to us, as a station, to do that which God and the American churches would have us to do.—*Idem.*

SIR RICHARD TEMPLE is known throughout Great Britain and the East as a statesman who has had much to do with the government of India, having been recently Governor of the Bombay Presidency. He has, within a few months, made several addresses in various parts of England, on missions in the East. In one of these addresses, at Birmingham, June 22, before an auxiliary of the Church Missionary Society, he dwelt upon the substantial progress in the work of Christianizing India, upon the good character of the converts, and the fidelity and ability of the missionaries. After referring to the testimony of eminent officials who could speak for all parts of India, such men as Lord Lawrence, Sir Bartle Frere, Lord Napier, Sir Donald McLeod, and others who have spoken in the most emphatic terms of the good work done by the missionaries, he gave his own testimony concerning facts that had fallen under his personal observation. In addressing the constituents of the Church Missionary Society, he naturally mentioned those who were laboring in connection with that organization, but his evidence includes the missionaries of all Boards. We have room for only a portion of this valuable address:—

"I have so far been speaking of the evidence of others. I will now give you my own testimony. I will first tell you the extent of my personal knowledge. I have governed 105 millions of the inhabitants of India, and I have been concerned with 85 millions more in my official capacity. I do not say this as something to boast of, but merely state a fact,—an accident if you will,—for I went where I was ordered, and did what I was told. I have had official connection with 190 millions out of the 200 millions of British India. The odd ten millions belong to the provinces of Oude, with which I have had no official connection. I have thus had acquaintance with, or have been authentically informed regarding, nearly all the missionaries of all the societies laboring in India within the last thirty years, from the banks of the Irrawaddy in Burmah, to Peshawar on the Afghan frontier, and Kurrachee, near the mouth of the Indus, from Cashmere in the Himalayas to the southern peninsula near Cape Comorin; and among those missionaries I will mention the names of W. Smith and Leupolt, in the Northwest Provinces; Welland, Weitbrecht, and Stuart, in Bengal; Clark and P'ander in the Punjab, Squires in Bombay, Bishops Sargent and Caldwell in Tinnevely, Bishop Speechly in Travancore, and last, but by no means least, Bishop French of Lahore.

"And what is my testimony regarding these men? They are most efficient as pastors of their native flocks, and as evangelists in preaching in cities and villages, from one end of India to the other. In the work of converting the heathen to the knowledge and practice of the Christian religion, they show great learning in all that relates to the native religions and to the caste system. They often evince appreciative thought in dealing with educated natives. As schoolmasters in their numerous educational institutions they are most able and effective; and although the educational establishments of the state in India are highly organized, the missionaries are esteemed, on the whole, to be the best class of schoolmasters in India. Again, in Oriental literature they are distinguished as scholars and authors and lexicographers, and have done much to spread the fame of British culture among the nations of the East. In all cases of oppression—and despite the general excellence of our rule in India, such cases do sometimes arise—they are found to be the friends of the oppressed; whenever native rights are infringed or threatened, they always stand forth as vindicators of the injured ones, and as advocates of the voiceless millions; and so they exert a salutary influence on the servants of government. In my official capacity I always listened with deference to their representations on all matters pertaining to the welfare of the natives. They are, moreover, most useful by their writings, speeches, and preaching, in enlightening and forming public opinion in India. They are, too, the active and energetic friends of the native in all times of danger and emergency. When pestilence, the unseen enemy, is abroad,—when famine has smitten down millions,—they have been ever present as ministering angels. They have themselves helped the suffering, and have encouraged those who organized the administration of relief. The excellence and purity of their lives shed a blessed light on the neighborhood wherever they dwell. Their wives, daughters, and sisters are zealous in co-operation, are foremost in promoting all beneficent works, and are the fair harbinger of enlightenment and of civilization. Although, of the missionaries, many are men of great talent, which would have won them distinction in the walks of secular life, they are nevertheless found living on the barest

modicum of salary on which an educated man can subsist, without hope of honor or of further reward. They do this from loyalty to the Master whom they serve, and love for that society which you support. They have to bear all, and more than all, the ordinary trials incident to foreign service. They do not proceed to England on furlough, unless forced by sickness, and they have no pension to look forward to until they are placed on the list of the sick and disabled. Often there has been mortality among them, and no men have shown better to the heathen and to their English brethren how a Christian ought to die. And what is its result? It conduces to our national fame, and adds stability to the British rule in India. The natives are too apt to think of us as incited by national aggrandizement, by political extension, by diplomatic success, by military ambition. These adverse thoughts of theirs are no doubt mitigated by the justice of our laws, by our State education, by the spread of our medical science, by our sanitary arrangements, and, above all, by our efforts to mitigate or avert famine. But, beyond all these, I am bound to mention the effects of the example of the life and of the conduct of the Christian missionaries."—*Idem*.

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

##### COURT, POLITICAL AND OFFICIAL.

On Sunday last, according to a native contemporary, the three Prime Ministers gave an official banquet at the Enriokwan, to all the local governors who have recently arrived in Tokio.

The *Mainichi Shinbun* states that the 10th instant, being the 7th day after the death of the late Mr. Sameshima, Minister to France, his younger brother Mr. Takenosuke, now living at Shiba, invited the Privy Councillors, Senators and other Officials, and the Foreign Representatives to his residence. The usual religious ceremony was performed, followed by an entertainment.

According to the *Nichi Nichi Shinbun* it was formerly rumoured that the Local Governors' assembly would be held in January next, but there is now no chance of this happening.

A theatrical performance is to be given at the Awoyama palace, about the 25th or 26th instant, in connection with the termination of the present year.

We notice in another paper that Mr. Ishie, Superintendent of the Board of Construction and Secretary for Home Affairs, left for the new agricultural farm of Inawashiro, in the Fukushima prefecture, Monday. He will also inspect the construction of the Nobiru harbour, and of the roads and bridges in the Yamagata prefecture on his way back, and afterwards will return to the capital.

"An official belonging to the United States Legation," says the *Mainichi Shinbun*, "visited the branch office of the Colonization Department, on the 10th instant desiring to have an interview with His Excellency General Kuroda, Chief of the Department, but as the latter was absent from his office at a meeting of Cabinet, the official visited the General's private residence at 4 p.m. where a long interview was held."

The new penal code is to be put in force, according to a native paper, between January and July next. Positions for the new courts are to be selected very early next year, for which purpose a committee is shortly to be appointed.

The *Mainichi Shinbun* states that His Majesty, acceding to the request of His Excellency Junior Prime Minister Iwakura, will visit the Fukiage Park next Sunday, on the occasion of some horse races, conducted by the nobility, being held.

The *Nichi Nichi Shinbun* says that His Imperial Highness Prince Arisugawa Takehito (the younger) accompanied by the young Princess to whom he was recently married, visited the palace at 10 a.m. on Monday last, when they were presented in audience with their Majesty the Emperor and the Empress, and were entertained at tiffin. Later on the Prince and the Princess went to the Awoyama palace, where they were received by Her Majesty the Empress Dowager.

We read in the *Mainichi Shinbun* that His Excellency Junior Prime Minister, Iwakura has excused himself from attending the meetings of the Cabinet, since Monday last, on the plea of ill-health.

His Excellency Yoshii, Assistant Minister of Public Works, left Osaka for Kioto on the 8th instant, and will return to Tokio overland.

The *Nichi Nichi Shinbun* says that Their Majesties the Emperor and the Empress will shortly visit His Imperial Highness Prince Arisugawa, at his own residence.

Her Majesty the Empress intends to visit the Female Normal school, in a few days.

The same authority says that it has been privately decided that the construction of the new Imperial Palace is to be commenced in the middle of February next. The carpenters are to be summoned from different cities and prefectures, and between five hundred and one thousand men are to be employed daily.

A native journal says that it is currently rumoured that His Excellency General Ida, Envoy Extraordinary and Minister Plenipotentiary at the Court of Vienna is to be temporarily recalled early next year.

We notice in the same paper that Mr. Murota, the Japanese Vice Consul in San Francisco, is shortly to return home.

We learn from the *Hochi Shinbun* that the Chinese Minister intends to entertain the newly arrived French Minister, at the Seiyoken Hotel, in the Uyeno Park, on Saturday next.

The *Mainichi Shinbun* is responsible for the following:—"When His Excellency Junior Prime Minister Iwakura was passing along Akasaka in a carriage two or three days ago as usual, a man dressed in *haori* (a Japanese overcoat) and *hakama* (loose skirts) came running along and in spite of the driver's attempts to stop him succeeded in approaching the carriage, into which he threw a paper, and then made good his escape. We wonder what could have been the nature of the document."

The *Choya Shinbun* publishes a rumour that the number of officials who are to be dismissed from their offices, on account of the new economy in Government Departments, has been fixed at fifteen hundred, and they will be discharged next month.

The same paper says that when the Police Bureau hereafter undertake any new buildings which cost under a hundred yen, they are to employ the prisoners under sentence of penal servitude to do the work.

The *Nichi Nichi Shinbun* says that the Governors of cities and prefectures who are now in Tokio, held a meeting in the Home Department, on Thursday last.

The *Choya Shinbun* says that His Excellency Nagaoka, Envoy Extraordinary and Minister Plenipotentiary for Japan, was presented in audience with His Majesty the King of Belgium on the afternoon of the 13th of October last, on which occasion he presented his credentials from the Japanese Emperor.

##### NAVAL AND MILITARY.

We notice in a local paper that Admiral Nakamura, the new Administrator of the Eastern Admiralty office, paid an official visit to the German corvette *Vinceta* on the 10th instant.

A native paper says that the Military Code will be issued about the 25th or 26th instant.

A Military inspection of the troops stationed at the different garrisons in the country is to be completed in course of the present month, after which the Commanding Officers of all the garrisons are to be summoned to the War Department.

The *Mainichi Shinbun* states that the three Military Inspectors, Generals Tani, Miyoshi, and Miura, who recently visited the various garrisons on tours of inspection, have returned and are shortly to be presented in audience with His Majesty the Emperor, in order to report to him the state of the different garrisons.

The *Nichi Nichi Shinbun* states that the Pilot Bureau of the Naval Department is about to take soundings and make a survey of the sea round Hakodate.

Another paper states that the construction of the new forts at Kaonsaki, in the province of Sagami, is shortly to be commenced, and a detachment of artillery is consequently to be stationed in the Kamoi village.

We notice in the *Mainichi Shinbun* that His Majesty leaving the Palace at 9.30 A.M. the day before yesterday, visited the Fukiage park and witnessed some field manoeuvres of troops belonging to the Imperial Guard.

His Majesty will visit the Military Academy at Ichigaya on the 24th instant, to attend the ceremonial distribution of diplomas to those cadets who have passed their final examination.

#### INDUSTRIES, TRADE AND FINANCE.

The *Nichi Nichi Shinbun* writes as follows:—"As we have mentioned before, the Italian carton merchants all left for home by the mail steamer of the 8th instant. The steamer took 180,495 cards, and when this number is added to that already exported (which amounts to 284,914 cards) the total will be 465,409. Moreover, a number of cards were exported direct by the Japanese, although they make a trifling amount when compared with the rest.

The same paper writes:—"Since the Northern Shipping Company has been established, the harbour town of Fushiki, in the province of Echizen, is gradually becoming more and more prosperous, and many of the Kanazawa merchants intend removing to the said place before winter. Kanazawa was once a prosperous castle-town, the seat of residence of Prince Maida, who had an annual revenue of one million koku, at the time of the feudal system. It was so well to do that it attracted the wealth of all the three provinces of Kaga, Noto, and Etchimo; now, however, Fushiki has become the commercial centre of these three provinces, and it is therefore probably wise for the experienced traders of Kanazawa to remove thereto."

Another native paper states that the Storrum Company of Kobe have exported direct 13,000 hand punkahs, 38,000 fans, and 8,000 umbrellas to New York.

In the Okinawa prefecture (Loochoo), an Industrial Company is to be established at Naffa, according to a native paper, and two members of the committee for industrial purposes are to be stationed on each of the thirty seven islands composing the said prefecture. A great meeting is to be held twice a year at the head office of the said company, for the purpose encouraging industries, to conduct commercial transactions with Kobe, Osaka, Nagasaki, Bakuwan (Shimonoseki), Hakata, Kagoshima, &c."

The *Kobe Shimpō* states as follows:—"In consequence of the scarcity of paper money in Osaka, all the bankers in that city entered into an agreement, on the 4th instant, not to lend paper money even on the security of specie. Consequently the holders of specie were put to great difficulties, and have sent their specie to the Specie Bank in Kobe, from which they borrow paper money in return."

The *Hochi Shinbun* writes:—"The works at the Kamaishi iron mine are gradually being put in working order, and refined iron of four different kinds, has been sent to the Agricultural Bureau. On being remelted its quality was found to be as good as that of imported iron, and very suitable for making machinery and tools. 25,000 kwanme of this article has been just ordered. Heretofore, almost all the Iron Works used to import iron from England, but it is a matter of much congratulation that they can in future depend upon native produce."

The *Akebono Shinbun* says that owing to the dry weather in the province of Yamato the rice harvest is very bad, and is greatly below that of past years. In most successful places, two koku and five to of rice can scarcely be raised per tan, and in worse places barely one koku per tan can be obtained.

The *Choya Shinbun* is responsible for the following:—"The Asakawa copper mine, in the prefecture of Akita, which was in the possession of the Ono Company in the year 1874, and was handed over to the Public Works Department by the Finance Department since the bankruptcy of the said Company, was afterwards sold to Sagawa Yasugori, a resident, who contrived to carry on the work with only three hundred men, with the greatest success. Good seams have been discovered and the mine has become so flourishing that more than 2,600 men are now engaged at work, and it is now considered to be one of the best mines in the whole country."

Writing on the carton trade, the *Mainichi Shinbun* says:—"As our merchants have been directing their most careful attention toward the carton trade, it has been unexpectedly prosperous this year. At first, a large number of cards were

exported, at the rate between \$2.00 and \$1.80 or \$1.90 per card. Later it declined slightly to about \$1.00 and \$1.25, after which a further fall occurred, rates being about \$1.00 and \$0.80 per card. The stock at present unsold is said to be about one-sixth of the cards brought into Yokohama. The price does not however fall much, notwithstanding the close of the carton trade; this is owing to the diligent labour of our merchants. On the other hand, the foreign merchants intend to export by the last ship of the season and are buying cards at prices between 30 and 40 cents. At any rate, our merchants have succeeded on the whole this year, and it is a matter of great congratulation that of our wholesale dealers not a single one has had to close or discontinue business, or to run away as has frequently happened before. The following is an accurate return of the export of cartons for the last seventeen years, commencing from 1864.

Year.	Number.	Year.	Number.
1864.....	450,000 cards.	1873.....	1,450,000 cards.
1865.....	3,000,000 "	1874.....	1,300,000 "
1866.....	1,500,000 "	1875.....	1,750,000 "
1867.....	950,000 "	1876.....	1,060,000 "
1868.....	2,400,000 "	1877.....	1,160,000 "
1869.....	1,400,000 "	1878.....	920,000 "
1870.....	1,300,000 "	1879.....	810,000 "
1871.....	1,350,000 "	1880 <sup>a</sup> .....	520,000 "
1872.....	1,250,000 "	<sup>a</sup> Up to the 15th of December."	

#### MISCELLANEOUS.

The *Mainichi Shinbun* says that a new political lecturing association has been formed in Yokohama, under the name of the Kenyu-sha. Over one hundred members have been enrolled, and on the 8th instant, its organization received official recognition from the police authorities. The society held its first meeting on Monday, last at the Sagamiya Restaurant, in Hagoromo-cho.

The *Hochi Shinbun* informs us that the Sydney Government recently sent gold, silver, and copper medals to the Japanese Government, for distribution among the successful competitors from Japan who took part in the exhibition.

A native journal states that a fire broke out at Kushincho, Osaka, on the night of the 9th instant, and destroyed over 150 houses. The fire was extinguished after burning about four hours.

One of the native journals informs its readers that a very large wrestling match will take place at Riogoku; the contest commences on the 2nd proximo.

The same paper announces that the Shintomiza Theatre will be re-opened on the 7th of next month.

We see that, according to the *Hochi Shinbun*, the medals to be awarded to successful competitors at the next National Exhibition, to be held in 1881, will be made of silver and gold. Those awarded at the time of the Exhibition of 1877, were only copper.

Mr. Nakamura, the editor of the *Kiochiu Shimpō*, has been imprisoned for seven months and fined one hundred yen for having written libellously against the Cabinet.

The *Mainichi Shinbun* writes as follows:—"A lecture was held recently by the Senyusha society at Tounomachi, in the town of Karatsu in the Nagasaki prefecture, and attended by about two or three thousand people. When one of the lecturers, in the course of his remarks said "Privy Councillor Okubo" the policemen in attendance rose and said "the speech of this lecturer, being injurious to the peace of the country must be stopped at once." A warm discussion was commenced between the lecturer and the police. The latter being unable to give specific reasons retired from the meeting without taking farther steps, but shortly returned with six or seven constables, and shouted loudly from outside, "stop the lecture at once!" Many of the audience came out from the place in great confusion and seized the policemen, and took away their lanterns and knocked down the officers, abusing them roundly. The police made good their retreat, and those who had assaulted them called out "If the police return we will drive them off again: we will mount guard now, so continue the lecture at once: if it is in violation of the Public Meeting Regulations, we will take our punishment." Great excitement prevailed for some time, but the meeting eventually dispersed quietly.

The streets between the Yorozyo-bashi (Megane-bashi) and Hirokoji, Ueno, Tokio, are, as we notice in a native paper, to be lighted with gas on and after the 31st instant.

Mr. Ikeda, the editor of the *Shichi-shichi Zappo* (a weekly periodical published in Kobe under the auspices of a Christian society) has been imprisoned for two months and fined 20 yen for having libelled both the policy and the laws of the Government. Mr. Fukui, the proprietor and publisher of the above mentioned periodical, received the same sentence.

A competitive exhibition of timber from all parts of the country is to be held in the office of the Board of the Forests and Woods Department next year.

The *Hochi Shinbun* publishes the following paragraph: "A stout looking man, dressed like a *shizoku*, was found concealing himself in a dark place on the premises of His Excellency Privy Councillor Okuma sometime after 12 o'clock on Tuesday night; he was at once arrested, and handed over to the police, who took him to the Third Section of the Police Department, where he is now awaiting trial. Judging from his general appearance and apparel he could not have been a robber. If he was an applicant for the establishment of a National Assembly, there was no necessity to act in such a secret manner. Is it likely that he wished to assassinate one of the servants?"

The same paper states that the port of Niigata was visited by a severe whirlwind at about 6 p.m. on the 5th instant, which lasted for two hours, commencing from the N. W. Many residents in the town have suffered damage, amongst whom, Kojima Jiroshichi, of Inarimachi, had his dwelling house and warehouse blown down, but fortunately, with the exception of a little child being injured, no one was hurt.

The "Land and Sea Transportation Company" at Tsuruga in Echizen, having subscribed the sum of ten thousand yen towards the expenses for the construction of a road leading from Tsuruga harbour to Shiotsu-hama mura, in O-omi, were rewarded on the 7th instant with three silver cups, by the authorities.

#### AUTUMN LEAVES.

(From the Japanese of Satomi.)

O Spring-time sweet with breath of balm,  
And bright with skies of golden calm,  
Thou'rt wondrous fair, and yet in grace,  
The summer holds an equal place,  
With flowers uplifting everywhere  
Their full-blown beauty to the air,  
With thick'ning leafage glossy-green,  
Flecked with the sunbeam's vivid sheen,—

But in the summer's pathway soon,  
Behold the clear-orbed Autumn moon  
With glorious over-flow of light—  
Then soft the winter's drifted white  
Comes when the rustling groves are sear,  
To round the beauty of the year.  
Each season brings its garnered sweets  
To ev'ry human heart that beats.

But rising 'mid these changeeful scenes,  
Before my vision intervenes  
Great hills on greater hills upreared,  
Round which the crystal heavens are sphered.  
They spread their folds of rich brocade,  
In autumn sun to bleach and fade,  
While mingled colors flame beneath  
And vie in splendor o'er the heath,—  
Each glowing tint doth seem to cry—  
"Lean down and look at me, O sky!"

The slender sapling, giant tall,  
Each hath its beauty great or small;  
And if from light of amethyst,  
A sudden cloud distil its mist  
Fretted with sunbeam's sudden light,  
And sift thro' meshes dark and bright,  
Of boughs that twine and intertwine,  
Then all alike, transfigured, shine;  
And all the fairer seem to me,  
The rainy fringes on each tree.

In vain endeavor to be seen,  
The changeless Pine its needles green,  
Thrusts mid the wealth of Maple leaves,  
Buried in brightness, it receives.  
Where cedars stand in stately grace,  
The emerald dusk is changed apace,  
And, 'twixt the skyward climbing stems,  
Glitters like many-tinted gems;  
While yonder leafage leaning low,  
Has dyed the river's rippling flow,—

And thus its curving edges seem—  
With rim of scarlet lights a-gleam,  
And where its darkling eddies gleam,  
It whirls in rings of ruddy foam;  
And lo! down-leaping thro' the day,  
The cataract turns its wreath of spray  
From snowy pearls to jewels red,  
Lit by the flaming leaves o'erhead.  
Yea, all the scene o'er hill and lee  
And tinted waters winding free,  
Seems fairest of the scenes that be!

F. B. H.

Tokio, 13th December, 1880.

#### PARIS LETTER.

PARIS, October 23rd, 1880.

The Government is plucking up heart of grace: it is resolved to show no quarter either to Communists or Pornographers. Felix Pyat was one of the bright particular, but shooting, stars of the Commune, who acted upon two dodges, to set dopes to rebel, and to flee himself for safety when the fighting became dangerously near. Amnestied, but hardened in political iniquity.

ty, the first act Pyat indulged in on entering Paris as a white-washed citizen, was to found a journal, the *Commune*, and to bespatter all those who struggled to secure the amnesty. Gambetta was his Turk's head. But he had a quarrel of nearly seventy years standing with kings, popes, and kaisers, so he ruled, it was lawful to pot at these, whenever any self-imagined Brutus, Harmodius, or Aristogiton had the chance. To rid the world of monarchs, or even republican chiefs who took too much upon themselves, was not only equivalent to the twelve labors of Hercules, but merited a niche in the Pantheon by a grateful country. It is thus that Pyat organised a half-penny subscription to present the convict Berezowski with a double-barrelled pistol of honor, for missing those men of mark—Napoleon III. and the present Czar. The Court has condemned Pyat to two years imprisonment and a fine of 1,000 fr. for his atrocious doctrine of "killing, no murder." The offence is more important in this respect, that it will re-act on the press-bill, in process of being manufactured into law. Pyat addressed a meeting of his friends on his martyrdom: his hair and beard are long and white: his eyes, restless and avoiding a steady exchange of looks; his expression, is that of melancholy and disappointment: his delivery is slow and cadaverous. About 1,500 persons, including women and children applauded his minute gun sentences, but no one displayed the slightest desire to prevent his going to prison. Over his head was the red flag, and suspended from a lustre, the chain worn by a communist in New Caledonia, and decorated with laurel leaves. Another orator, Gauthier, asserted France was only an annexe of Prussia and Russia; that a man once in possession of a musket, was guaranteed bread and liberty: that French youths were enrolled simply to be converted into barrack manure, and that kings deserved nothing more than the hospitality of a coffin. "Restore the commune," he exclaimed, "and in ten years there will not be a king in Europe"; indeed he might add, nor anything else. Children were then presented to shake hands with Pyat, before his disappearance for two years. *Requiescat in pace.*

The dispute between the State and the Church is no longer narrowed to the application of the Decrees, and the dispersion of the unauthorized religious orders. France, not the Republic, finds itself at grips with the spiritual powers, who resolutely refuse to obey the law. Instead of demanding permission to continue to exist, and that would not have been refused, save for the staff, the Jesuits—a militia at once political and aggressive,—the orders banded themselves to resist the authorities, to oppose the law, and so enter into antagonism with the constitution. No where does the nation display sympathy with such an attitude; on the contrary the population looks on with indifference, and approves the conduct of the government. There are episcopal appeals against the execution of the law, but not a pastoral, recommending the unauthorized corporations to bow to the Majesty of the Code. Bishops have shown the lamentable spectacle of excommunicating officials for doing their duty: they make common cause with the monks in open resistance, and the Capuchin and other orders are building up the entrance doors to their monasteries, after laying in provisions for a siege against the summons to disperse. There is something significant in the silence and the abstention of the masses of opinion in the quarrel, though no mistake, but that opinion is for the supremacy of the civil power. Another sign of the times is, that the first act of the Chamber of Deputies on reassembling, will be to decide whether the representatives for a department shall be elected *en bloc*, as hitherto, and known as the *system scrutin de liste*, or continue as at present, to divide a department into several districts, allocating one or more deputies to each, and so giving minorities and local bigwigs a chance. This point decided, the dissolution of the Chamber will follow in the course of five months, and it is at the ballot box, that the question of separation of Church and State must and will be settled. If a majority be returned, pledged not to vote the annual budget, 52 fr. millions, for the clergy, such will be done.

There are only two systems of government possible, that based on the sovereignty of the people, and next, the right divine of kings to govern wrong. The Bonapartists claim the mongrel, illogical system of combining both, hence why they

are a miserable wreck, holding public meetings to abuse, cudgel and bite each other, to call upon Prince Napoleon to abdicate his rights in favor of his sons, and who repays the impertinence with contempt and a snub. The radicals pursue their campaign for France abdicating her diplomatic standing in Europe, to retire under a tent, and surround the latter with a Chinese wall.

The first act of the great de Cissey scandal closed by that general and ex-war minister being deprived of his command of a Corps d'armée and placed on the retired list by the Minister of War, for a violation of discipline

The general has been roundly accused of conniving at these grave offences, and though invited to take an action to exculpate himself declines to do so. Not so the "Baroness:" she has arrived in Paris, and has instituted proceedings against her husband, for slander; against de Cissey, for throwing her overboard; and against certain journals, for defamation; she does not deny the soft impeachment of being a mistress, but to be in the pay of Germany—she, a native of Bavaria, though French by her marriage, is too much. She will come into court, and seeking justice, must have all her own past exhumed: she will have to explain, how, very poor before having the run of the documents of the War office, she became so suddenly rich, as to keep up a palatial residence, and to invest out of her "savings," a sum of 300,000 francs to purchase landed property; she will produce de Cissey's letters and notes from persons in high latitudes, and compel Marshal MacMahon to explain, why he called upon de Cissey to resign as Minister of War in 1876. The woman does not care how deeply she covers herself with mud—for those that are down need fear no fall, and she aims to bespatter right and left. She may count upon a full success. A court martial sitting with closed doors, is impossible now; the "Baroness" sets fire to the four corners of the terrible scandal: all that will burn will be burnt—for she so desires. She is renowned for her beautiful set of teeth—she is about demonstrating that she cannot be surpassed in their use. Her great wealth is invested in English stocks and American securities; as she has fallen out with Prussian and Russian diplomatists, she may administer to these during the trial, the pat of a tigress.

The aristocracy do not appear to be fortunate before the Criminal Courts: thus the Comte de Civry, who claims to be the illegitimate grandson of Geneva-Diamonds-Brunswick, has not succeeded on appeal, to be cleared of the charge of swindling his landlady. He has been sentenced to two months imprisonment and 1,000 francs fine—a reduction merely of his punishment. The "Duchess of Hamilton," has also had her condemnation reduced from 5 to 2 years imprisonment, and a fine of 50 francs—not a great deal, but much for an empty purse. Her real name is Mary Horsefall: she is the daughter of a Boulogne school-master and was married to a cobbler: she assumed the name of Hamilton, and forging a cheque in the duke's name was sentenced to seven years imprisonment at Maidstone; regaining her liberty, she set up in Paris as a Duchess, gave, in several first class hotels, superb dinner parties, defrauded tradesmen right and left, and whacked her servants when they demanded not their wages, but the cash loaned her. And all this on the strength of a return third-class ticket to London. Debtors must remember for their consolation, that where there is nothing, the King loses his rights.

Gloves have a strange eventful history; in the third century, a glutton named Pithyllus, never dined without gloves; this enabled him to seize before his fellow guests the hot meats with rapidity, and to prevent his tongue from being burned, he had it encased in a leather sheath. The origin of gloves is uncertain; however, in the eleventh century the nobles wore gloves highly ornamented with cameos, rubies, pearls and emeralds: the dignitaries of the Venetian republic wore gloves heavily embroidered with gold and pearls. Charlemagne was as famous for his splendid gloves as for his walnut wine; later, Italy and Spain introduced the fashion of wearing gloves, with subjects painted thereon like fans; in the 16th and following century, sovereigns accepted presents of gloves, which was more pacific, than picking one up when thrown down; Anne of Austria, whose lily white hand was celebrated, and caused Buckingham to fall madly in love with it, had a special messenger to go to Spain

and have her gloves specially manufactured. During the reign of Elizabeth, English gloves, woven in rose leaf patterns, were celebrated: they were manufactured in Rome by Frangipane, who, with another maker, Maddalena, exported them, perfumed.

Yachtsmen will have a great treat at the International regatta at Algiers; besides balls, races, dinners, etc., the officers are organising an extensive hunting excursion of lions; three tribes of Arabs are already employed driving in the kings and queens of the forests. Sportsmen have only to make their wills, and invoke the protection of H. Hubert.

Dennery, the first of contemporary dramatists, the successful author of the *Tro Orphans*, and his latest, now in course of representation—*Diana*, had, when to fame unknown, a play returned to him by a manager, to effect some changes. He returned the corrected sheets dedicated, "to M. X—, the expurger of wit," and had the original accepted, and brought out triumphantly, elsewhere.

M. Grévy has now a famous victory: he has beaten M. Bethmont at Chess: he is superior to Prince Gortschakoff at billiards, and can knock over more rabbits than Meissonier.

A drowned man has been picked out of the Seine; round his neck was a bottle of rum; attached to his feet a travelling bag, and from his coat breast button a purse, to "pay his funeral in this, and his way in the other world. "Crime or suicide?"

#### ITEMS FROM THE NATIVE PAPERS.

A return recently furnished to the Government shews that there are 45,830 temples belonging to the same sect of the Buddhist religion as the East and West Honganji at Kioto.

Mr. Tatenō, governor of Osaka Fu, leaves Yokohama for Osaka on the 13th instant.

According to a recent return, the population of the city of Osaka and the seven districts comprised in the Fu, numbers 620,471.

There has been a great increase lately in the number of cases tried at the Osaka Joto Saibansho. An average of twenty fresh suits are entered daily.

The naval officers entrusted with the survey of the coast of Corea have returned to Japan.

In a certain prefecture lying to the south of Osaka (query, Sakai?) the District Assembly was held recently. At 6 p.m., on the 30th ultimo, the district officer ordered the members to attend at his office at once. They obeyed, and he then informed them, in a peremptory manner, that it was not proper for the decisions of the Assembly to be delayed by long discussions, and therefore they must settle the matters submitted to them that evening, and in that office. The president replied it was not legal to discuss measures in the office, but that they would deal with them as quickly as possible. The district officer insisted that the members must make up their minds at once. The president then inquired if resolutions passed hurriedly and without due consideration would be legal. The officer replied in the affirmative, and his instructions were then complied with. This is indeed a strange kind of Assembly.

Agents for the sale of postage stamps have hitherto received a remuneration of one yen for every ten yen's worth of stamps disposed of. After the end of the current year they will only be allowed the same sum on the sale of stamps valued at eleven yen.

It is rumoured that the Osaka Fucho will forbid the opening of any more establishments for practice of the *moza* treatment.

The following report has been received respecting the rice market at Dojima. There are large stocks of old rice and, although the farmers were not anxious to sell, some transactions took place between the merchants themselves. This brought down quotations and great quantities of the grain came to market. On the 7th instant, prices fell to 10.80 yen per koku, but there were few purchasers. It appears as if quotations must decline, which is joyful news for all poor people.

When the Public Meeting Regulations were issued, the Aikokusha Society applied for permission to continue its operations under the new laws, but was refused by the Osaka Fucho. On making inquiry as to the cause, the members were informed that some of them belonged to

other societies, and persons were not permitted to join several associations.

No snow has yet been seen at Osaka: young bamboo sprouts are for sale in the market at Temma.

The fine grove of pine trees on the bank of the Kidosu-gawa, which is quite as picturesque as that of Miwo, has been much injured by fastening vessels to the trees. Many of the pines have died and the Fucho has prohibited the practice in future.

His Majesty the Emperor has inspected the site of the new Imperial Place, and ordered the work to be proceeded with. In consequence, some officers of the Public Works Department have visited Kioto to examine the old palace, in order to be able to prepare plans for the building in Kioto.

The estimated cost of the Osaka police force for next year is 83,332 yen. It is anticipated that 2,000 yen will be required for gratuities to those constables whose terms of service expire during 1881.

It has been determined to rebuild the Tachiuribori bridge at Osaka. As the neighborhood is very busy during the new year festival, the people have petitioned that the work be postponed, because, if the bridge is closed at that time, they will suffer great loss.

Information has reached us that business in foreign goods is at a standstill in Yokohama. This is accounted for by the high rates of exchange ruling, and foreign merchants' godowns are full of imported goods which they are unable to dispose of.

A friendly society has been formed by the Japanese compositors employed on the foreign journals published in Yokohama. The ostensible object is to provide a fund for the relief of members who may fall into ill-health, or be out of work (?). The first meeting, held on the 7th instant, elected a president, secretary, and other necessary officials. About forty-two members were enrolled on the occasion, and a committee—representing all offices—was appointed to prepare draft regulations, which will be submitted to a full meeting on the 16th instant. It is proposed to make the fees payable by the members proportioned to their wages, and to deposit the fund in the Post-Office Savings Bank. Applications for assistance must contain full particulars of the applicant's circumstances, and be sent in to the president or vice president; they will then be dealt with by the members at an ordinary meeting when the amount to be paid will be decided. General meetings will be held in April and November, when new officers will be elected, and any proposed alterations in the rules considered.—*Hiogo News* Translation.

#### THE JAPANESE PRESS.

##### THE EXPECTED ARRIVAL OF ADMIRAL LESSOFKY.

(Translated from the *Sei Dan*). \*

EVERYONE is aware that the Russian Admiral Lessofsky is daily expected to arrive at Yokohama, and it is believed that the object of his visit is to ascertain what policy Japan will adopt in the event of war breaking out between Russia and China. Diplomatic affairs, however, are always kept secret, so who can say whether this report be true or not? We do not know ourselves, but will nevertheless offer a few remarks on the subject.

We consider that the rumour cannot be altogether unfounded, because, in the event of war breaking out, the attitude assumed by Japan would greatly affect both Russia and China. It is only natural therefore that Russia should be desirous to ascertain as early as possible what our policy would be and although the Admiral's visit may not really be in connection with this point, yet it is a question that must crop up, and we do not think we are wrong in commenting upon it on the present occasion.

When it is asked what would be the policy of Japan in the event we have suggested as likely to occur, the answer is that it would be one of neutralization. In the course of time, and according to the magnitude of the struggle between the two countries, we might ally ourselves with Russian and attack China, or *vice versa*; at present, however,

\* This article is written in reply to one in the *Choya Shinbun*, which we published last week.

such a step would not suit our policy, and we must observe neutrality. But as there are different kinds of neutrality, each of which has its special advantages or disadvantages, the question now arises, which neutrality is Japan to observe? This is the subject we wish to discuss in the present article.

Strict neutrality means that when two countries go to war, a third country shall assist neither of them in any way; liberal neutrality, however, allows the third country to supply either of them, impartially, with provisions or arms. It seems probable that our country, whichever neutrality she resolves upon, will first of all make treaties with the two countries, stating her intentions, before the war breaks out. The explanations of neutrality which we have just given are merely sketches, and we do not wish them to be accepted as hard and fast definitions; if, however, we argue which of the two would be most fitting to our present circumstances, we shall then be able to see what kind of treaties Japan should make with Russia and China.

A country observing strict neutrality has to remain completely aloof from the seat of war, and must not supply either belligerent with provisions, or allow their men-of-war to anchor in her harbours: there is consequently greater risk of such neutrality involving the country in war than is likely if liberal neutrality be observed, as the former tends to make both the countries at war her own enemy. If Japan declares strict neutrality, she will have to make preparations for preventing the sale of provisions and the anchoring of men-of-war belonging either to Russia or China in her ports. In order to do this effectually we shall have to purchase a number of men-of-war, but as the finances of the Government are at present in great difficulties, how could we maintain such a state of affairs for any length of time? Having been unable to purchase enough men-of-war to defend ourselves adequately, we were unable to punish the German ship *Hesperia*, when some time ago she violated the quarantine regulations; how then can we hope to be able to enforce the requirements of strict neutrality? It is a truism that "an unarmed man cannot remain independent for long." Moreover, we should have to prohibit the export of our coal, timber and similar material, if for sale to either Russia or China; what a sad loss would not this be to our commerce.

On the other hand, if we observe liberal neutrality and allow these two countries to purchase provisions and stores from us, our commerce would, in the first place, receive great benefit: secondly, the neutrality we suggest is more easy and advantageous in many respects, as we do not forbid the sale of provisions or the anchorage of ships belonging to the belligerents, as we should have to do under strict neutrality. It may be urged, however, that liberal neutrality may give grounds some day for a breach of pacific relations with ourselves, as if we do not make war against Russia, we are certain to incur the illwill of China. To this we reply, that if the relative power of the two countries be compared, the advantage is decidedly on the side of Russia. If Japan declares a policy of liberal neutrality, allowing each country to obtain provisions and stores, Russia will be the greater gainer, as in Vladivostok and Saghalien the climate is too cold to grow grain and it is consequently far more advantageous for Russia to obtain it from Japan. This being the case, she would undoubtedly like to see us declare a liberal neutrality, and would afterwards never attack us, while China, even though she felt displeased, is not likely to do so either, being fully occupied with her intention to attack Russia, so that we may dismiss as frivolous the statement that a policy of liberal neutrality is fraught with danger to the country.

In short, when the anticipated rupture takes place, Japan will declare a liberal neutrality, because strict neutrality is a matter that we can only talk about and not enforce, and any efforts to do so would do no good. Liberal neutrality, however, can be carried out with great ease, and will also prove decidedly advantageous.

#### LAW REPORTS.

##### IN H. B. M.'s COURT FOR JAPAN.

Before MARTIN DOHMEN, Esq., Acting Assistant Judge.

Saturday, December 11th, 1880.

KOGA GENJIRO and eighteen others vs. A. H. BLACKWELL.

The plaintiffs each sued for their wages for last month,

having been employed at the *Japan Mail* office, of which defendant is manager, as compositors, pressmen, paper coolies, and office boys.

Defendant did not dispute the claims. He stated that he had been prepared to pay the amounts claimed since the 2nd instant, but none of the plaintiffs had made application to obtain the sums sued for. The only way he could have avoided payment would have been by bringing a cross action against the plaintiffs, in the Saibansho, for breach of contract; but he had neither the time or the inclination to undertake such an onerous task. However, he was prepared to swear that application for payment had not been made even in one instance.

Koga Genjiro, cautioned:—I was a compositor in the *Japan Mail*. I claim 19 yen for wages from the 1st to the 30th ult. I made no application for my money because I was afraid to do so.

Cross-examined by defendant:—I have not seen or had any conversation with you since I was ejected from the boy's room on the morning of December 2nd. I did not apply for a summons through the Saibansho. I applied directly to the British Consulate. I had no difficulty whatever in obtaining the summons. It was granted by Mr. Ensley. Before the summons was issued I was not asked whether I had first applied to you for the amount claimed.

Defendant again said he admitted that the money was due, but application for payment had not been made by the plaintiff. As he had received 19 summons—which were \$3 each—the costs were a serious consideration, and by law no person could recover costs in a civil suit for money unless he had first made application for payment of his claim before taking out a summons. As for plaintiff's plea of being "afraid," it was absurd. It was unreasonable to suppose for a moment that a man who had threatened to do all sorts of desperate things in general, and to prevent the issue of the *Japan Mail* in particular, should be "afraid" to apply for his monthly wages.

His Honour gave judgment for plaintiff without costs, but told him that he had no business to take out a summons before applying for payment, and that his plea that he was afraid to apply to defendant for his wages was all nonsense.

The other plaintiffs were then called in and examined, and all declared that they had made no application for payment of their wages before summoning defendant.

His Honour gave judgment for the various sums claimed, without costs, and severely reprimanded plaintiffs for wasting the time of the Court, as there had been no occasion whatever to summon the defendant. If ever plaintiffs acted in a similar way to the Court again, they would have to pay costs.

##### IN H. B. M.'s COURT FOR JAPAN.

Before R. T. RENNIE, Esq., Judge.

Monday, the 13th day of December, 1880.

In re W. H. TALBOT; in re J. R. ANGLIN.

His Honour to-day delivered the following:—

#### JUDGEMENT.

Since the defendants were last brought before me, I have carefully considered the points raised by the objection of their counsel to the jurisdiction of this Court. Their contention is that neither the Supreme Court for China and Japan, nor this Court, have any power of punishment for contempts of Court, save and except those specially conferred upon them by section 155 of the Order in Council, 1865, and their argument is that those powers being analogous to those vested in County Courts by section 113 of the statutes creating those Courts; the case of the Queen vs. Lefroy, L. R. VIII. 2 B. 134, is exactly in point, and must govern my decision in the present instance. In the Queen vs. Lefroy it was held that the Judge of a County Court in England had no power of punishment for contempt other than that vested in him specially by section 113 of the County Courts Acts. I have read the judgments in the case attentively, and find that while there are many passages in them which, if taken alone, would seem to apply directly to the jurisdiction of this Court, there are many others which render it more than doubtful to my mind whether the eminent judges who sat in that case intended their observations to apply to the jurisdiction of such Courts of Record as the Supreme Court for China and Japan and this Court. The Lord Chief Justice speaks of "County

Courts and *similar* inferior Courts," and both the other judges seem to allude only to inferior Courts of Record. The Lord Chief Justice says, "No case can be found in which such a power, i.e., a power of punishing for contempts committed out of Court, has ever been exercised by an inferior Court of Record." But it is clear that his Lordship did not mean to include in the category of inferior Courts of Record the Supreme Courts of Colonies, for many cases were cited in the argument before him, in which the authority of colonial Courts to punish contempt committed out of Court, both by fine and imprisonment, had been duly upheld. Indeed in one of these cases,—*McDermott vs. Beaumont*,—L. R. 2 P. C. 341, Lord Chelmsford, in delivering the judgment of the Privy Council, said, "Not a single case is to be found where there has been a committal by one of the Colonial Courts for contempt when it appeared clearly upon the face of the order that the party had committed a contempt, that he had been duly summoned, and that the punishment awarded for the contempt was an appropriate one in which the committee (of the Privy Council) has ever entertained appeal of this description."

It appears to me therefore, as I pointed out to defendants' counsel at the last sitting, to be necessary for them to show that this Court and the Supreme Court for China and Japan are inferior Courts of Record, before they can successfully contend that the case of the *Queen vs. Lefroy* governs the present one.

I fail to see that they have done so. They brought no authorities, and very little argument to bear on the point, and seeing that these two Courts (the Provincial Courts are on a different footing), are duly constituted under Orders in Council, are vested with most ample jurisdiction over the persons and property of British subjects in China and Japan—are empowered to try capital cases and to sit in appellate Courts, I certainly am most strongly inclined to hold, in the absence of any authority to the contrary, that they are superior Courts of Record, having inherent to them, as such, equal powers of punishing for contempt to those which the superior Courts of colonies (most of which are also constituted under Orders in Council) duly exercise. Defendants' counsel, however, argue further on the authority of the *Queen vs. Lefroy* that even if these courts be superior Courts of Record—having inherent to them the power of punishment for contempt—the fact of their being vested by section 155 of the Order in Council with special and limited powers for the punishment of certain classes of contempt would impliedly limit their jurisdiction in all cases of contempt. In answer to that argument we have the opinion of Mr. Justice Quain in the same case, who says, "I should doubt whether, if such a power did exist, it could be taken away except by express words," and it appears to me that the dicta of the Lord Chief Justice, upon which Mr. Lowder laid stress, must be taken as having application to inferior courts (not having such powers inherent to them) only.

On the whole then I am clearly of opinion that I should be wrong in holding that the objection to the jurisdiction had been sustained, but

Considering that the point raised affects the jurisdiction of the Supreme Court of China and Japan equally with that of this court, that it is doubtful to my mind whether if I assume jurisdiction in this matter my decision could be reviewed by the Supreme Court (in all ordinary matters the first Court of appeal from my judgments) and that the question would be more properly decided in the first instance by the Supreme Court itself;

Considering also that the power of punishing for contempt out of Court is one which should only be exercised in cases of urgent necessity; that no such urgent necessity appears to me to exist in the present instance, and that there are other and efficient means of proceeding against persons who may libel the judges or officers of this Court I shall discharge the Rule.

In doing so I consider it my duty to say that I have read the publication in respect of which these proceedings have been initiated, that I consider the comments upon the conduct and character of the Acting Assistant Judge of this Court made by the anonymous writer signing himself "British Subject" to be of a most improper and offensive description, that some of the statements made by him are, as I have every reason to believe, wholly untrue, whilst others betray the writer's utter ignorance of

English Law and the rules and procedure of this Court. I think the Acting Assistant Judge might well have afforded to despise such utterances, but I must express my surprise and regret that the publishers of a respectable British Journal should have allowed such an effusion to appear in its columns. The Rule is discharged.

The Court then adjourned.

## THE CRACK SHOT.

*Adapted from the Russian of Pouchkine.*

### I.

#### IN COUNTRY QUARTERS.

The mir of Piodorskow, in the Government of Suwalki, is a dull hole. We lay there. A monotonous life of it we led, about as full of emotion as that of a tortoise in a state of hybernation. This was the daily routine: morning, drill and the riding school; midday, dinner at the commandant's or the Jewish restaurant; evening, punch and card playing. There was not a house in the place worth visiting, nor a girl worth falling in love with. We passed our abundant leisure in going from Paul to Peter, and back again—the same perpetual round and in criticising the buttons on each other's uniforms.

Nevertheless, there was just one in our little society who was not a military man. He might be about five-and-thirty years old, consequently we "young fellows" looked upon him with something akin to veneration. His experience gave him an ascendancy over us; and his taciturnity, his haughty bearing, and the sarcastic manner in which he spoke, added to the impression and strengthened the superiority of age. It was often a puzzle to me what mysterious destiny overshadowed him. He appeared to be Russian, but he had a foreign name. He had formerly served in a Hussar regiment and had even built himself up some reputation in it; but he handed in his papers abruptly one morning, nobody could tell why, and he established himself in this miserable village, where he lived very roughly, but managed all the same to spend a great deal of money. He took his airings on foot, wrapped in a seedy black paletot; and, for all that, he kept open house for every officer in our regiment. To tell the truth, his dinners were not luxurious, nor was the cook a *cordon bleu*. We usually had two or three plain dishes served up by a discharged soldier. But his champagne was of a first-rate brand, and was sent round in bucketfuls. I have no pity for the man who cannot wash down a bad meal with good wine. Nobody knew what was his fortune, or whether he was married or single, and nobody cared to ask him. He looked too stern to stand interrogatory of that type. He had a tolerably large library, particularly strong in military books and in romances, which he freely lent and never asked back. On the other hand, he never thought of returning a book once lent to him. His absorbing occupation—it was more than pastime—was pistol-practice. The walls of his dining-room, riddled with bullet-holes, looked like a honey-comb. A splendid collection of pistols, of every age and make, was the one vanity of the wretched creature he called his mansion. The dexterity he had acquired by his practice was something incredible; if he laid a bet that he would knock the tail off a foraging-cap with a shot, I do not think there was a fellow in the regiment who would have hesitated to put that foraging cap on his head. Sometimes among us the conversation turned upon duelling. Silvio (with your permission, that is how I mean to call him) never took part in it. If he were asked had he ever been out, he dryly answered "Yes," but entered into no details, and it was easy to perceive that the question did not gratify him. We came to the conclusion that some victim of his terrible skill had left a burden on his conscience. None of us for a moment had the slightest suspicion that there was any element of feebleness in his composition. There are men whose exterior is enough to scout suppositions of the kind. He was one of them. Notwithstanding, an event which unexpectedly turned up, singularly astonished all of us.

One day a dozen of us, officers, dined at Silvio's. We drank as it was the custom, that is to say, too much. As soon as dinner was over, we asked the master of the house to make a bank at faro. After refusing for a long time, for he very seldom played, he called for the cards, placed fifty ducats before him on the table, and sat down to cut. We made a ring around him, and the play began. When he played, it was Silvio's habit to preserve an absolute silence; he never made any objections and never gave any explanations. If a punter won or lost, he paid him exactly what was coming to him, or marked down to his own credit what he had gained. We all knew his peculiarity, and we let him arrange the matter after his own fashion; but there was with us on that occasion an officer newly joined, who, in a moment of distraction, made a false double. Silvio took up the chalk and made his mark in his usual manner. The officer, persuaded that there was a mistake, expostulated. Silvio, never breaking silence continued to cut. The officer, losing patience, took the brush and rubbed out what he thought to be the wrong mark. Silvio quietly took the chalk and made the mark again. Upon this, the officer, heated by the wine, the play, and the laughter of his comrades took serious offence, and seizing a copper chandelier in his fury, hurled it at the head of Silvio, who, by a rapid duck just contrived to avoid being struck. There was a fearful row. Silvio started up pale with anger, and, with fire in his eyes, he said:

"My good sir, have the kindness to leave the room; and thank your God that this has passed under my roof."

Not one of us had the slightest doubt as to what would be the sequel of the affair. We already looked upon our new comrade as a dead

man. The officer left, saying he was ready to give satisfaction to the banker as soon as it suited his convenience. The gambling continued for a few minutes more, but as we saw that the master of the house paid no further interest to the play, we left one by one, and as we strolled back to our quarters we chatted on the vacancy we were about to have in the regiment.

The following day, in the riding-school, we were asking if the Lieutenant were dead or merely wounded, when who should walk in but himself. We plied him with questions. He simply answered that he had not heard from Silvio. We were astonished. We went to visit Silvio; we came upon him in his court-yard sending bullets into an ace of hearts nailed to a door. He received us in his usual way, and never said a word about the transaction of the night before. Three days passed, and the lieutenant still lived. No message had come. We began to ask one another in amazement. "Is it possible that Silvio won't fight?" Silvio did not fight. He was satisfied with a very lame explanation, and all was over.

This magnanimity did him a lot of harm among us young fellows. Want of hardihood is the fault that youth pardons the least. Courage is the greatest of all merits, the excuse for every blemish. Nevertheless, by little and little all was forgotten, and Silvio resumed his former influence in our circle.

I alone found it hard to reconcile myself to him. Thanks to a romantic imagination, I had grown more attached than any of my friends to this man, whose life was such an enigma. I had made of him the hero of a mysterious drama. He had a preference for me—at least, I was the only one with whom he abandoned his harshness of tone and cynicism of language, and conversed on different subjects with ease and sometimes with a very happy grace. Since that unfortunate evening the thought that his honor was soiled—that there was a blot on his escutcheon—and that, of his own free will, he had declined to wipe it out, tormented me without ceasing, and drove away my self-possession when I was in his society. I was no longer on the same terms with him. I made it a matter of conscience to watch his every movement. Silvio had too much penetration not to perceive what I was doing, and to guess the motive of my conduct. He appeared more hurt than vexed at it. Twice I thought I could detect a desire on his part to come to an explanation with me, but I avoided him and Silvio did not press the matter. From that time I only saw him in company with my comrades. Our cosy intimate chats were dropped.

The lucky dwellers in the capital, tossed about by distracting pleasures, are ignorant of many sensations familiar to those who live in remote villages or small towns; for example the waiting for the mail-day. On Tuesdays and Fridays the Post Office of our regiment was full of officers. One expected money, another letters, a third newspapers. Ordinarily, the packets were unsealed upon the spot; news was passed from mouth to mouth, and the scene in the office was of the most animated description. Silvio's letters were addressed to him at our quarters, and he came to look for them with the rest of us. One day he was handed a letter, he broke the seal with great eagerness. As he ran over its contents his eyes positively burned with a strange fire.

"Gentlemen," exclaimed Silvio, "urgent affairs compel me to leave immediately. As I shall be on the road to-night I hope you won't refuse to dine with me for the last time. I count upon you," he added turning to me. "I wish you particularly to come."

Thereupon he retired hastily, and after we had all agreed to make a rendezvous at his place, we separated each his own way.

I got to Silvio's at the appointed hour and found every officer off duty there. His luggage was already packed up. Nothing was to be seen on the naked walls but the net-work of bullet-marks. We sat down. Our host was in the best of humors, and his high spirits soon spread to the company. Corks popped brisk as skirmishing fire; the beady froth mounted in the glasses which were filled and emptied without interruption. We grew tender-hearted—maudlin, if you like—and wished godspeed, safe journey, joy, and all kinds of prosperity to our departing host.

It was late when we quitted the festive board. When we were looking for our caps, Silvio bade each of us adieu: but he caught me by the hand and held me as I was on the point of going out.

"Stay," he said, in an undertone. "I want to have a few words with you."

I stopped behind.

## II.

### SILVIO'S EXPLANATION.

The others had departed, and we were left alone, seated face to face, smoking our pipes in silence. Silvio had a careworn air. There was not the slightest trace on his features of his convulsive gaiety. His sinister pallor, his blazing eyes, the long curls of smoke which he puffed from his mouth gave him the aspect of a veritable demon. At the end of a few minutes he broke the silence.

"It is possible," he said to me, "that we may never see each other again. Before separating, I wish to have a few words with you. You may have remarked that I care a little for you, and I feel that it would cost me a pang to leave you with an unfavorable opinion of me."

He paused to knock the ashes off the top of his pipe. I said nothing, but turned my gaze to the floor and waited.

"It must have appeared singular to you," he continued, "that I did not exact fuller satisfaction from that drunken fool of a Lieutenant. You will agree that, having the choice of weapons, the idiot's life was in my power, and that I ran no very great risk. I might speak of my moderation as generosity; but I do not wish to lie. If I could have administered a correction to the fellow, without hazarding my life, mark me, without hazarding it in the least—he would not have got out of my clutches so easily."

I looked at Silvio with surprise. An avowal like this mystified and pained me. He resumed:

"Unfortunately, I have not the right to expose myself to death.

Six years ago I got a box on the ear, and my enemy is still living."

My curiosity was vividly stirred.

"And you did not fight him?" I demanded: "Assuredly, some extraordinary circumstances must have prevented the affair from coming off."

"I did fight him," said Silvio quietly, "and here is a souvenir of our meeting."

He rose and drew from a box a cap of red cloth with a gold stripe and band—a cap of the make of those worn in cavalry undress, such as the French call *bonnet de police*. He put it on his head. It was penetrated by a bullet about an inch above the temple.

"You know," said Silvio, "That I served in the Hussars. You can see the sort of man I am, a trifle overbearing. I have the habit of command; to dominate is an instinct of my nature. In my earlier days it was a passion with me. I was the greatest roysterer and rowdy in the army. All bragged then about getting drunk. I put under the table the famous B mentioned in the song by D D, that used to be sung at the mess of the Preobrajenski Guards. Every day there were duels in our corps; every day I played my part as second or principle. My comrades venerated me; the superior officers, who changed every month, regarded me as a scourge that they could not get rid of. For my own part, I pursued my career of glory tranquilly or rather tumultuously, until they sent to the regiment a rich young fellow who belonged to a distinguished family. I shall not tell you his name. Never did I meet a luckier dog; his luck was almost insolent. Picture to yourself youth, wit, a fine figure, sprightly spirits, bravery, reckless of danger, an honored name, as much money as he wished, and more than he could ever possibly spend, and now try and bring before your mind the effect that his arrival produced among us. I was nowhere. My sceptre was broken. At the outset, dazzled by my reputation, he sought to make me his friend. But I received his advances coldly, and he paid me off in my own coin. Without appearing in the least mortified he left me to my self. I conceived a mortal grudge against him. His success in the regiment and among the petticoats drove me to desperation. I swore I'd pick a quarrel with him. To my epigrams he retorted with epigrams that always struck me as more piquant and original than mine, and which, I must admit, in my case, were much more lively. He jested; I hated; that made the difference. At last, one day, at a ball at a Polish landed proprietor's, seeing that he was the object of attention from several ladies, especially from the mistresses of the house, with whom I had been a pet, I went over to him and whispered some gross and stupid impertinence. He burst into a passion and gave me a box on the ear. We flew to our sabres, the ladies fainted, the guests parted us, and, on the spot, we quitted the chateau to make our preparations for mortal combat."

"Day was breaking. I was at the trysting-ground with my three witnesses, waiting my adversary with a mad impatience. The Summer's sun rose, and the heat already began to grill us. I saw him in the distance. He was on foot, in his shirt sleeves, carrying his jacket over his sabre hilt, and accompanied by a single second. We set out to meet them. As he came nearer to me, I could perceive that in one hand he held his cap, which was full of cherries. Our seconds placed us at twelve paces apart. It was my privilege to fire first, but passion and hatred got so much the better of me that I was afraid I should not be able to keep my wrist steady. In order to gain time to cool down I conceded first fire to him. He refused it. We then determined to settle it by drawing lots. He won, this eternally spoiled child of fortune. He pulled trigger and pierced my *bonnet de police*. It was my turn now. At last I had his life in my grasp. I scrutinized him with a fierce avidity, trying to catch, in the expression of his features, at the least a shade of emotion. No! There he was, under cover of my pistol, and not a twitch in brows or lips, not the symptom of a change of color in his cheeks. He was quietly picking the ripest cherries out of his cap and blowing the stones from his mouth, like a schoolboy, until they almost fell at my feet. This cold-blooded composure made me feel like a devil."

"What is to be gained," said I to myself "by taking this man's life, seeing that he sets such small store by it?"

"An atrocious idea shot across my brain. I let down the hammer of my pistol."

"It seems," said I, "that you're hardly in a mood to die at present. You prefer to breakfast. Take it easy; I have no wish to disturb you."

"Don't mix yourself up in my concerns," he answered, "but take the trouble of firing, pray. For the matter of that, do as you please. You have always that pistol-shot to your credit; and I shall be at your service whenever you wish to discharge it." I left with my friends, to whom I said that I did not intend to effect the exchange of shots for the moment. And thus the affair terminated.

"I sent in my resignation, and withdrew to this village. Not a day has passed since then that I have not dreamed of revenge. Now the hour has come!"

Silvio drew from his pocket the letter he had received in the morning and gave it to me to read. Somebody—his lawyer presumably—wrote to him from Moscow that the "person in question" was on the eve of marrying a young and beautiful lady.

"You divine," said Silvio, "who is the 'person in question.' I am starting for Moscow. We'll see if he'll face death in the middle of a wedding with the same composure that he did in front of a pound of cherries!"

At these words he rose, threw his cap on the floor, and began striding to and fro like a tiger in a cage. I had listened to him, outwardly impassive, but racked by a thousand sentiments.

A servant, entering, announced that the horses had arrived. Silvio shook me warmly by the hand, and we embraced. He jumped into a calèche, in which there were two boxes, the one containing his collection of pistols, the other his luggage. We said adieu once more, and the horses went off at a canter.

## III.

## THE PERSON IN QUESTION.

Several years passed, when family affairs obliged me to exile myself in a wretched petty hamlet on the Volos'a Soljaritzki. Busy though I was with my property I could not help sighing when I thought of the noisy life, gay and careless, I had led up to that period. In Podjaritzki one did not exist even: one vegetated. The greatest trouble I had was to accustom myself to pass the evenings of Spring and Winter in complete solitude. Until dinner-hour I succeeded in killing time more or less effectually by talking to the starosta, superintending my workmen, inspecting new buildings, and overlooking improvements. But as soon as dusk came on I was at a perfect loss to know what to do with myself. I could almost repeat by rote the few books I had unearthed in the drawers and in the cockloft. I made my house-keeper, Kililovna, tell me, over and over again, all the old country tales she recollected. The songs of the peasant girls made me melancholy. I took to drinking, but that gave me the headache. Yes, I will own it; for an instant I was afraid I should become a drunkard though pure spite, the worst of all drunkards, as my own district afforded me only too many proofs. As near neighbors there were but two or three of these distinguished toppers, whose conversation consisted principally of yawns and hiccoughs. Solitude was a lesser evil than their companionship. At last I made up my mind to get to bed as early as possible and to dine as late as possible; so that I solved the problem of shortening the evenings and prolonged the days, and I found the plan the best of any.

Four versts from my place was a very fine domain belonging to the Countess B—; but there was nobody there save her steward. The Countess had resided in her chateau but once—the first year of her wedded life; and then she would not remain beyond a month. One day, during the second Spring on my hermit's existence, I was told that the Countess meant to pass the Summer with her husband in the chateau. The report was correct. They took up their quarters there in the beginning of June.

The arrival of a rich neighbor is an event in rural life. The landed proprietor and their people speak of it for two months beforehand, and three years afterward. As for myself, I candidly avow that the announcement of the coming of a young and handsome lady neighbor threw me into considerable agitation. I was dying of impatience to see her; and the first Sunday after their arrival I set out after dinner for the chateau, to present my homage to Madame Comtesse in the character of her nearest neighbor and very humble servant.

A lackey ushered me into the Count's study and went to acquaint his master with my visit. This study was spacious and furnished in a very rich style. Along the walls were ranged massive presses full of books, and on the top of each a bust in bronze. Over the marble chimney-piece there was an immense mirror. The floor was hidden by a green cloth, upon which were spread Persian carpets. I had been divorced from comfort so long in my den, that I was overcome at the spectacle; all this sumptuousness was positively realized with timidity, and waited for the Count very much in the frame of a petitioner from the provinces who has obtained audience of some powerful Minister, and sits in an antechamber. The door opened and gave admission to a young man about 30, of a charming countenance. He received me in the frankest and most amiable manner. I made an effort to recover my calmness, and was commencing my compliments as a neighbor, when he anticipated me by gracefully telling me that I should be always welcome to his house while he was there. We seated ourselves. The conversation, full of naturalness and affability, soon soothed my savage timidity, and I began to feel in my ordinary groove, when suddenly the Countess appeared and threw me into an embarrassment greater than before. She was truly a beauty. The Count presented me. I endeavored to assume a free and easy manner, but the more I tried the more awkward I became. My hosts, in order to give me an opportunity to collect myself and get accustomed to my new acquaintances, began chatting to one another, as if to show me they treated me without ceremony as an estimable neighbor. Meantime, I walked about the study, looking at the books and pictures. I am not much of a connoisseur as far as pictures go, but there was one which rivetted my attention. It was a sketch of a valley in Switzerland; but it was not the merit of the landscape which struck me most. I remarked that the canvas was pierced by two bullets, one evidently aimed at the other.

"Ha! that was something like a shot," I cried, turning toward the Count.

"Yes," he said; rather a singular shot. Are you a good hand at the pistol?" he continued.

"Well, yes—so-so," I answered, delighted at the chance of speaking on a subject I was not wholly ignorant of. "At thirty paces I warrant myself never to miss a card, always provided I know the pistols."

"Really!" said the Countess, with an air of profound interest. Then, addressing her husband, she added: "And you, dearest—do you think you could hit a card at 30 paces?"

"We shall see," replied the Count. "I used not to be a bad shot in my day, but it is four years since I had my pistol in my hand."

"In that case, Count, I don't mind, betting that, even at 20 paces, you're not able to hit the spot. The pistol insists on constant practice. I know by experience. In my regiment I passed for one of the best marksmen. It happened once that I was a month without taking up a pistol; mine was at the armorer's. We went out for target practice. What do you think came to pass, Count? I missed a bottle at five and twenty paces four consecutive times. We had a squadron-leader in ours—a jolly fellow, but a terrible joker. 'Phew! comrade,' he said, 'you're altogether too sober. You have too much respect for the bottles.' Believe me, Count, if you don't practice you must rust. The best shot I ever met kept

his hand in by firing his pistol every day, if it was only three shots before dinner. He would as soon fail to have his three shots as to take his nip of brandy before soup."

The Count and Countess seemed to take pleasure in hearing me rattle on thus.

"And what sort of shots used he to make?" demanded the Count. "What sort? Wait till you hear. Suppose he saw a fly creeping on the wall. You laugh, Countess? I swear to you it's true. 'Eh, Kouska, a pistol,' Kouska brought him a loaded pistol. Ping! There was the fly flattened upon the wall."

"What skill?" exclaimed the Count. "What was your man's name?"

"Silvio, Count."

"Silvio!" exclaimed the Count, springing to his feet. "You knew Silvio!"

"Did I know him? We were the best of friends. He used to mix with our corps as if he were one of ourselves. But it is a good five years since I heard any tidings of him. So, as it appears, he had the honor to be known to you, Count."

"Yes, known, very well known."

"I wonder did he ever tell you a curious story of an adventure that occurred to him once? A story of about a box in the ear he got one evening from an animal."

"Did he not tell you the name of the animal?"

"No he never mentioned it. Pardon, Count," I cried, suspecting the fact, "I was not aware. Am I right in thinking it was you?"

"I am the person in question," answered the Count, confused in his turn; "and the hole in that picture is a souvenir of our last interview."

"For the love of God, dear, don't speak of it," cried the Countess. "It makes me shudder still."

"No," said the Count. "I must tell the story to this gentleman. He knows I had the misfortune to offend his friend. It is only right he should learn how his friend avenged himself."

The Count motioned me to an arm-chair, and I listened with the liveliest curiosity to the following recital:

## IV.

## THE COUNT'S STORY.

"Five years ago I got married. I spent the honeymoon here, in this chateau. To this old building are attached recollections of the happiest hours of my life, and likewise of one of the most fearful and afflicting."

"One evening we went out riding. My wife's horse began to shy and rear; she was somewhat alarmed, and dismounted asking me to lead him home by the bridle, while she regained the chateau on foot. At the gate I found a post-calcèche. I was informed there was a strange gentleman in my study, who had refused to give his name, but said he wanted to see me on very serious private business. I came into this very room, and in the twilight I could distinguish a man, dust-covered and with a long beard, standing before the chimney. I went up to him, vainly jogging my memory as to where I had seen the face before:

"You do not recognize me, Count?" he said, in a tremulous voice.

"Silvio!" I cried; and I confess I could almost believe I felt my hairs standing erect on my head.

"Precisely," he added, "and it is my turn to fire. I have come to discharge my debt. Are you ready?"

"I could see a pistol peeping from his side-pocket. I stepped twelve paces, and I stood there, in that corner praying him to make haste, and fire before my wife came back. He was in no hurry, he said; and he asked for lights. They brought him some wax-candles."

"I shut the door, ordered the servants to let nobody enter and again I called on him to fire. He raised his pistol and took aim at me. . . . I counted the seconds. . . . I thought of her. . . . This lasted one awful minute. Silvio lowered his weapon."

"I am very much annoyed," he said, "that my pistol is not charged with—cherry-stones. . . . A bullet is hard. But I have another idea. This business is more like a murder than a duel. I am not accustomed to pull trigger on an unarmed man. Let us begin it all over again, and draw lots for the first fire."

"My head turned. At first I imagine I refused, but finally we loaded another pistol. We rolled two scraps of paper and he put them into the very cap he had worn when I sent a bullet whizzing through it. I dipped into the cap, and I drew the paper marked number one."

"You have the devil's luck, Count!" he said, with a grin I shall never forget.

"I cannot understand what power took possession of me, or how he succeeded in constraining me; but I did fire, and my bullet lodged in that picture."

The Count pointed with his finger to the canvas traversed by the pistol-shot. His face was red as hot iron. The Countess was whiter than her lace handkerchief. As for me, I could hardly suppress a cry.

"I had fired my shot, therefore," pursued the Count, "and thanks be to God, I had missed. . . . Then Silvio—how demoniac a visage he had at that moment!—deliberately adjusted his weapon, and levelled the deadly barrel straight between my eyes. Suddenly the door flew open. Macha burst into the room and clasped herself around my neck. Her presence restored me to firmness."

"My dear," I said, "can you not see that we are joking? What a tremor you are in! Go, go, drink a glass of water and return, and I will introduce you to an old friend and comrade."

Macha mistrusted me.

"Tell me, is this that my husband says true?" she implored of the terrible Silvio. "Is it true that you are joking?"

"He is always joking, Countess," replied Silvio. "Once, out of pure jest he gave me a box on the ear; out of pure jest he planted a bullet in my cap; out of pure jest a while ago he missed me with his pistol. Now it is my turn to have a little laugh."

"At these words he covered me anew under the eyes of my wife. Macha fell at his feet.

"Rise, Macha! Are you not ashamed of yourself?" I shouted with rage. "And you, sir, do you wish to drive an unfortunate woman delirious? Will you fire? yes or not?"

"I do not care to, now, thank you. I am satisfied. I have enjoyed your suffering and your weakness. I have compelled you to fire upon me. You will recollect. I leave you to your conscience!"

"He made a step toward the door, and, halting at the threshold, he threw a quick glance at the perforated picture, and, almost without troubling to take aim he fired, doubled my bullet, and walked out. My wife swooned. My domestic did not dare to bar his passage, but retreated before him, appalled. He reached the entrance-steps, called his postillion, and before I had time to recover my presence of mind, he had disappeared."

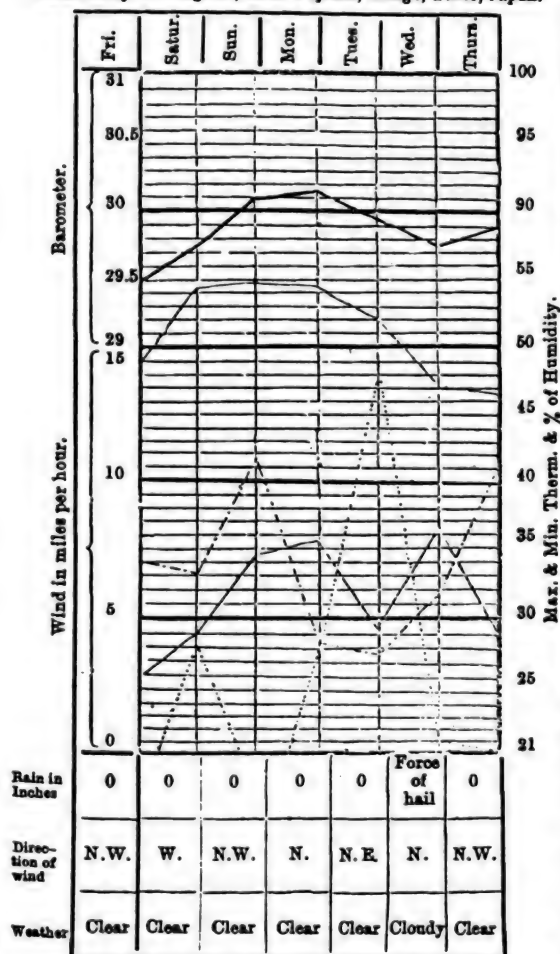

The count had told his story.

Thus I learned the end of an episode, the opening of which had puzzled me. I never saw the hero of it again. They say that Silvio joined the insurrection of Alexandre Ypsilanti, and was slain at the head of a band of partisans at the disaster of Skouliani.

### METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, DECEMBER 10TH, 1880.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokio, Japan.

### REMARKS.

Heavy line represents barometer.

Light continuous line—max. & min. thermometers.

.....represents velocity of wind.

.....percentage of humidity.

Max. velocity of wind 43.8 miles per hour on Thursday at 2 p.m.

The barometer is reduced to the freezing point and to the level of the sea.

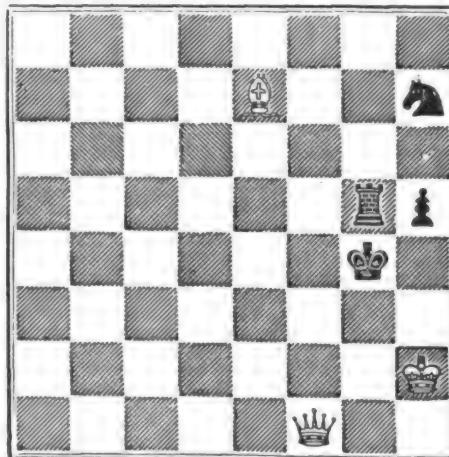

The highest reading of the barometer for the week was 30.223 inches on Monday, at 7 a.m., and the lowest was 29.476 inches on Friday at 2 p.m. The highest temperature during the week was 54°.7 on Sunday and the lowest was 26°.3 on Friday, the maximum and minimum for the corresponding week of last year being 58°.3 and 34°.5 respectively. The temperature has ranged considerably lower during the winter thus far than during the corresponding weeks of last year. Up to this time in 1879, the temperature had reached the freezing point only once, and then barely touching it. An unusually low per cent age of humidity will be noticed during most of the past week. No rain fell, but a trace of snow was observed on Wednesday. The rain for the corresponding week of last year was .920 inches.

### CHESS PROBLEM,

By S. Lord.

For American Chess-nuts.

### SHIPPING INTELLIGENCE.

#### INWARDS.

- Dec. 12, British steamer *Malacca*, Seaton, 1,709, from Hongkong via Nagasaki, Mails and General, to P. & O. Co.  
 Dec. 13, American schooner *Otome*, Hardy, 72, from the Kurile islands, seal pelts, to H. Snow.  
 Dec. 14, British steamer *Harter*, Grandin, 1,196, from London via Hongkong, General, to Smith, Baker & Co.  
 Dec. 14, British sloop *Abatross*, Captain Errington, 894 tons, 4 guns, from Chefoo.  
 Dec. 15, Russian cruiser *Africa*, Captain Aleksoff, from Nagasaki.  
 Dec. 15, Japanese steamer *Tokai Maru*, Hogg, 652, from Kobe, General, to M. B. Co.  
 Dec. 15, Japanese steamer *Kokonoye Maru*, Dithlefsen, 1,133, from Hakodate, Mails and General, to M. B. Co.  
 Dec. 15, Japanese steamer *Tokio Maru*, Swain, 1,146, from Shanghai and ports, Mails and General, to M. B. Co.  
 Dec. 16, British steamer *Ulysses*, Thompson, 1,369, from London via Hongkong, General, to Butterfield & Swire.  
 Dec. 16, French steamer *Volga*, Guirand, 1,502, from Hongkong, Mails and General, to M. M. Co.  
 Dec. 17, British barque *Zoila*, Peregrine, 953, from New York, May 23rd, Kerosene and General, to J. D. Carroll & Co.  
 Dec. 17, British barque *Boston Vale*, Buckingham, 411, from Liverpool, General, to Hudson & Co.  
 Dec. 18, Japanese steamer *Wakanoura Maru*, Christensen, 1,343, from Kobe, Mails and General, to M. B. Co.

#### PASSENGERS.

Per British steamer *Malacca*, from Hongkong:—Miss Caspare, Rev. C. F. Warren, Mr. B. H. Pratt: one European and 15 Japanese.  
 Per French steamer *Menzeleh*, for Hongkong:—Mrs. Denison, Mrs. Lockyer and child, Mr. and Mrs. Cattenburch, two children and servant, Mr. and Mrs. J. Vickhai, two children and two servants, Messrs. A. Vickhai, Biffi, Mazzocchi, Savio, Mourer, H. Riccke, F. Kerner, Cheynet, Sietet, Magliardi, F. Di Mare, Domerque, Moretti, Amati, Saccone, Fernandez and seven Japanese in cabin.  
 Per Japanese steamer *Tokio Maru* from Shanghai, and ports: Sir Samuel and Lady Baker, Le Chevalier de Elenenada, Dr. H. M. Perkins, Rev. L. Gulick, Messrs. Pritchard, J. Johnson, R. N. G. Martin, A. D. Kleinwoort, and 30 Japanese in the cabin; 2 Europeans, 7 Chinese, and 313 Japanese in the steerage.

Per British steamer *Ulysses*, from London, via Hongkong:—Mrs. Masfen, 2 children and nurse.  
 Per French steamer *Volga* from Hongkong:—Mr. and Mrs. Bull, Mr. Luccini Cléophas, one Chinese and three Japanese in the steerage.  
 Per Japanese steamer *Wakanoura Maru* from Kobe:—Messrs. Strauss and Peire (both I. R. N.) in cabin; and 61 Japanese in the steerage.

## OUTWARDS.

Dec. 12, French steamer *Mexaleh*, Homery, 1,273, for Hongkong, Mails and General, despatched by M. M. Co.  
 Dec. 13, Japanese steamer *Kumamoto Maru*, Drummond, 1,240, for Hakodate, Mails and General, despatched by M. B. Co.  
 Dec. 13, Japanese steamer *Wakanoura Maru*, Christensen, 1,300, for Kobe, Mails and General, despatched by M. B. Co.  
 Dec. 14, German brig *Maid Maria*, Brinckmeier, 298, for Nagasaki, Ballast, despatched by P. Bohm.  
 Dec. 14, Japanese steamer *Shinagawa Maru*, Frahm, 908, for Fushiki, Ballast, despatched by M. B. Co.  
 Dec. 14, British steamer *Devonshire*, MacGachen, 1,513, for Amoy, General, despatched by Mourilyan, Heimann & Co.  
 Dec. 14, Japanese barque *Sumanoura Maru*, Speigethal, 924, for Nagasaki, Ballast, despatched by M. B. Co.  
 Dec. 15, Japanese steamer *Hiroshima Maru*, Haswell, 1,200, for Shanghai and ports, Mails and General, despatched by M. B. Co.  
 Dec. 18, British steamer *Malacca*, Seaton, 5,709, for Hongkong, Mails and General, despatched by P. & O. Co.

## PASSENGERS.

Per Japanese steamer *Hiroshima Maru*, for Shanghai and ports: Mr. and Mrs. Stout and two children, Rev. G. L. Mason, wife and infant, Mr. and Mrs. Field, Mrs. Deeb Unqua and child, Miss L. Vincent, Miss A. Kirby, Miss Jones, Mrs. Yamada, Rev. C. W. Mateer and wife, Rev. C. L. Warren, Messrs. A. Bertrand, J. G. Walsh, Fukusawa, Taki, A. Cheyne, H. R. Hill, Kamigawa, Ohida, Kagima, Tawara, Mori, Ofai, Muramatsu, Sang Kee, Crabbe, E. C. Kirby, Koohiba, Tatawa, C. W. Reyniers, Kanda, Kuramatsu, Orita, Lt. Mahan, and Chaplain Crawford.  
 Per British steamer *Malacca* for Hongkong:—Rev. and Mrs. Piper, three children and servant, and Lieut. G. Drury in cabin: 18 Chinese in the steerage.

## CARGOES.

Per French steamer *Mexaleh* for Hongkong:—  
 Silk, for France ... .. 1,075 bales.  
 " " London ... .. 45 " "  
 Total ... .. 1,120 bales.  
 Per Japanese steamer *Hiroshima Maru* for Shanghai and ports:—  
 Treasure ... .. \$16,000  
 Per Japanese steamer *Tokio Maru*, from Shanghai and ports:—  
 Treasure ... .. \$ 40,097.54  
 Per British steamer *Malacca* for Hongkong:—  
 Silk for London ... .. 141 bales.  
 Per French steamer *Volga* from Hongkong:—  
 General from London ... .. 2,135 packages.  
 " " Marseille ... .. 758 "  
 " " Hongkong ... .. 521 "

## REPORTS.

The British steamer *Harter* reports:—Left Hongkong on the 7th December at 4 p.m., had strong monsoon and heavy sea on the China coast, thence fresh N.-westerly winds and fine weather to port; arrived at 7 p.m., 14th Dec.  
 The Japanese steamer *Tokio Maru* reports:—Left Shanghai on December 8th. Fresh N. W. winds increasing to a hard gale from N.W. with high beam sea. Ship labouring and straining very much, taking a great deal of water on deck. Blowing very hard with heavy hail and snow squalls; during the gale had our guards and paddle boxes broken up, and were hove to for seven hours. Arrived at Nagasaki on the 11th at 2 a.m. Left Nagasaki on the 12th at midnight. Arrived at Shimonoseki at 3 p.m. on the 12th. Left Shimonoseki at 4.45 p.m. on the 12th, and at 5.20 p.m. sighted a ship on fire: steamed up to her and got within a short distance of the burning ship; at 6.10 lowered a boat and went to the burning vessel; found her to be the Japanese steam ship *Tsuyokuni Maru*, 87 tons, from Osaka to Nakatsu, with 60 passengers and 22 of a crew. We took 12 of the crew and 4 passengers out of a fishing boat lying close by the burning steamer, and two men refused to leave the fishing boat; then we brought the Captain of the steamer on board of the *Tokio Maru* in our own boat at 7.10 p.m., when our boat was close to the burning steamer her fore and main masts went overboard. The survivors were properly attended to on board of the *Tokio Maru*. They say the fire originated in the coal bunkers. Out of 82 lives, 16 were saved on board S.S. *Tokio Maru*, 2 men refused to leave the fishing boat; 64 lives lost, of which there were 10 women. Arrived at Kobe, at 4 p.m., 14th December. Fresh N. W. breeze and clear weather. Arrived at Yokohama 16th December, 3 a.m.  
 The British steamer *Ulysses* reports:—Left Hongkong on the 8th instant. Experienced strong N.E. monsoon first three days afterwards to 15th variable winds and fine weather. Thence to port strong westerly winds with fine weather. Arrived at Yokohama on the 16th at 8.10 a.m.  
 The Japanese steamer *Wakanoura Maru* reports:—Left Kobe at 6.30 p.m. on the 16th, fine N. W. winds and weather all the way; arrived at 4.30 this morning.

## SHIPPING.

**SHIPPING.**—The s.s. *Harter* and *Ulysses* have arrived and are loading, respectively, for New York and London. The s.s. *Radnorshire* is also advertised for the latter destination. The *Zoila* and *Buxton Vale* are in from long voyages, and with the *L. F. Hersey*, *Fontenay* and *Polynesian* represent our disengaged tonnage.

## NEW ADVERTISEMENTS.

## NOTICE TO MARINERS.

No. 127.

## CHINA SEA.

## SWATOW DISTRICT.

## BREAKER POINT LIGHT-HOUSE.

NOTICE IS HEREBY GIVEN that the Light on Breaker Point was exhibited for the first time at sunset on the 8th December, 1880.

The illuminating apparatus is a First Order Dioptric Occulting Light alternately showing for *eight seconds* and suddenly disappearing for *two seconds*. It shows *white* from S. 55° W. round by W. to N. 53° E., and *red* in shore of both these bearings as far as the land. The bearings are magnetic and taken from seawards.

The light is elevated 152½ feet above the level of the sea, and in clear weather it should be visible at a distance of 19 nautical miles.

The tower is round, of iron, 91 feet high, with a total height from its base to the lantern vane of 120 feet.

The tower is painted in black and white horizontal bands, and the dwellings and boundary wall white.

Approximate position—Latitude.....N. 22° 56' 30".

Longitude....E. 116° 28' 10".

By order of the Inspector General of Customs.

THE GREATEST

WONDER OF MODERN TIMES  
HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakery that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!  
HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of pear, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World May 17th, 1873.

"HIGHEST AWARD & PRIZE MEDAL PHILADELPHIA  
EXHIBITION, 1876."

## MISCELLANEOUS.

**BUGS, FLEAS, MOTHS, BEETLES,**

and all other insects are destroyed by

**KEATING'S INSECT POWDER,**

which is quite harmless to Domestic Animals.

In exterminating Beetles the success of this Powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application.

Ask for and be sure to obtain "KEATING'S POWDER," as Imitations are Noxious, and fail in giving satisfaction.

SOLD BY ALL CHEMISTS IN BOTTLES, 1/- & 2/6 each.

**KEATING'S WORM TABLETS,**

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL** or **THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for Children.

## TESTIMONIAL.

Medical Hall, Guildersome, Nov. 28th, 1876.

MR. KEATING,

Dear Sir,—I think it nothing but my duty to inform you of the immense sale I have for your Worm Tablets, which I may justly say is enormous, and in every case gives the greatest satisfaction. I have now in stock two bottles containing the Round Worms brought me during the last few days by customers, one Worm 40 yards long. I dare not be without the remedy.—Yours respectfully,

M. A. WALKER.

SOLD IN BOTTLES, BY ALL CHEMISTS AND DRUGGISTS.

Proprietor—**THOMAS KEATING, London.**

**REWARD AND CAUTION.**—Whereas fraudulent imitations of this unsurpassed remedy have been sold, I hereby request anyone knowing of the vendor of the same to communicate with me, on conviction of the offender a liberal reward will be paid.

## LOCAL BILLS DISCOUNTED.

Credits granted on approved Securities, and every description of Banking and Exchange business transacted.

Drafts granted on the Chief Commercial places in Europe, India, Australia, America, China and Japan, and Circular Notes issued for the use of Travellers.

JOHN WALTER, Manager.

Yokohama, 25th August, 1880.

**The "Japan Mail,"**

A Daily, Weekly, and Fortnightly Journal,

ESTABLISHED, 1865.

## TERMS OF SUBSCRIPTION.

WEEKLY EDITION. The "Japan Weekly Mail," a Weekly Review of Japanese Commerce, Politics, Literature and Art.—Per annum, \$24; Six months, \$13; Three months, \$7.

FORTNIGHTLY Edition, being a Summary of the foregoing, is published for transmission by the American Mail Steamers via San Francisco. Per annum, \$12; Six months, \$7; Three months, \$4.

THE JAPAN DAILY MAIL is published every morning (Sundays excepted) and contains the Arrivals and Departures of all Shipping, Passenger lists, Cargoes, Vessels on the Berth and in Harbour &c., &c. Also the latest Telegrams, Japanese news, Reports of Trials in the Courts of Law, Meetings of public bodies, and all matters of interest to the Community. Special attention is called to this Journal as a medium for circulating local advertisements. It has a large and constantly increasing circulation, its low price bringing it within the means of all classes of the community. It therefore affords exceptional advertising advantages, and secures to all announcements the utmost publicity, the object aimed at by advertisers.

SUBSCRIPTION PER MONTH—ONE DOLLAR.

## AGENTS OF THE PAPER.

## PATENT LAWS.

WE have before called attention to the importance of providing for some recognition of the rights of foreign inventors, whenever the long delayed revision of treaties takes place. It is scarcely necessary to do more than call attention to the fact, which is apparent to the most casual observation, that at present the whole patent-granting world is laid under involuntary contribution by the imitative and skillful workmen of Japan, for any apparatus, process, or material, for which a demand seems likely to arise, or which comes within the scope of their ability to construct or compound; irrespective of the fact that the imitated article is in many cases protected in half a dozen countries by as many patents or brevets. It is no doubt too much to expect that private workmen or manufacturers should respect the rights of the foreign inventor so long as these rest upon purely moral grounds, the more as the Government itself, which should stand as the guardian of those rights, from the magnitude of its operations, and from the controlling interest which it holds directly or indirectly in all extensive manufacturing corporations, is the greatest offender against them. The necessity and value of patent laws of an international force have long been recognized in Europe and America, and such restrictions are in full operation in all western countries of importance. The operation of these laws has been found to be easy, beneficial to all concerned, and in the highest degree stimulative to original invention and improvement. The injustice to foreign inventors and manufacturers, inflicted by the wholesale imitation carried on in Japan, is a grave one, and indirectly operates not only to the serious detriment of the business of the foreign mercantile community but to the injury of the native consumer as well, for good and reliable foreign manufactures are in many cases excluded from the market by shabby and inferior copies, resembling the original only in appearance

and lacking all the qualities which give value to the foreign article.

Any Japanese who may originate an invention instead of resting satisfied with the too ready imitation of the ideas of others always characteristic of this people, and more especially so during the past decade of progression, can obtain protection for his invention from any important state of Europe or America, equal in every respect to that granted to their own people under similar circumstances, and with the same facility. The ordinary courtesy of nations should dictate reciprocation, while policy demands that a nation seeking to stand upon an equal footing with the most enlightened should not perpetuate such a system of piratical appropriation of the brain work of others as now exists in Japan. Whenever the treaties are revised, Japan, which from all indications will have much to ask for, must be prepared to grant something in return, and we believe that the protection of the foreign inventor, including of course that of trade marks and copyrights, should, and will, be one of the points most strenuously insisted upon by the foreign representatives on behalf of their respective nationalities.

But there is another aspect of the question which may perhaps have more weight with the Government than any consideration of the injustice inflicted upon the citizens of foreign countries, or the injury received by its own people from base and worthless imitations of valuable foreign articles. We allude to the undoubted influence of a properly organized system of patents in fostering and developing domestic invention and industry. The value of this influence is so great, and so much exceeds in importance any possible benefit likely to accrue to foreign inventors, that, if properly appreciated, this consideration alone should lead the statesmen of Japan to act at once in the matter without waiting for the revision of treaties.

England and the United States may be taken as affording an example of the highest development of human ingenuity and as the best exemplifications of the working of a system of protection to original ideas. The very differences, existing in the systems in force in these two countries and in the results of their action, will serve to point the force of an argument in favor of the fullest and readiest protection of invention. The following statistics of patents, granted in Great Britain and the United States during the year 1879, are of interest in this connection:—

	British Islands.	United States.
Receipts.....	\$947,270	\$703,980
Expenditure .....	\$226,120	\$529,640
Profits .....	\$721,150	\$174,295
Stamp Duties on one Patent ...	\$875	\$85
Duration of Patent.....	14 years	17 years
Number of Patents applied for*	5,398	19,381
Number of Patents granted* ...	8,461	12,348
Percentage of Applications granted .....	65	64

\* Not including re-issues and design patents.

Number of Applications refused or abandoned .....	1,877	7,043
Percentage of grants paid \$250 duty .....	80	...
Percentage of grants paid \$500 duty .....	11	...
Population .....	84,500,000	50,900,000
Number of persons to one Patent granted .....	9,968	4,124
Ratio of amount of duties on one patent .....	25	1
Ratio of number of patents granted .....	1	2.42
Average cost to inventor for one patent, including patent agent's charges .....	\$950	\$95
Technical examination of application .....	None	Careful
Inventions invalidly reported .....	Frequently	Rarely

It will be observed that the total number of patents granted in the United States during the year was considerably more than three times that of similar issues in Great Britain, and out of all proportion to the difference of population of the two countries. This is no doubt due to some extent to that superior ingenuity which has become proverbial as characteristic of the typical Yankee, but chiefly to the vastly greater ease with which patents are obtainable in the United States. The comparative cost of patents is correctly given above as in the ratio of 10 for Great Britain to 1 for the United States, but even this great difference in expense does not entirely represent the essential variation in the systems in force. In the United States not merely the letter of the law, but the spirit in which it is executed encourages and invites application for protection. In Great Britain, on the contrary, though the intention of the law is the same, its execution is so hampered by the useless and injurious obstructions satirized by Dickens as the work of a supposititious Circumlocution Office, that should the inventor be able to sustain the heavy expenses involved, he but too often abandons his perhaps invaluable idea, disgusted and worn out by official delay and discouragement.

We believe that the ease with which patents may be obtained in the United States has been an important factor in the development of that ingenuity to which we have already referred as forming part of the typical American character, though other causes stimulating invention have no doubt sprung from the demands arising in the course of the settlement and improvement of a new country.

In Japan, old as is its civilization, the progress of events requires that new industries shall be fostered, to enable its people to take and maintain a place among the advancing nations. The immense tracts of unused land in the interior and in the north must be reclaimed and utilized, new exports must be found, and the resources of the country should be called upon to supply much that is now imported. Surely here is a sufficient field for native invention and it is difficult to believe that a people so exquisitely skilled in art and industry, and which has already in time past originated many most valuable appliances and methods, appropriate to the circumstances of its life, will be found wanting in ingenuity and original design when once the laws shall protect and reward the inventor, and the Government not only discourage slavish and dishonest imitation of foreign products, but cease to interfere with, and throttle, the efforts of private enterprise.

The patent system of the United States is that which should form the model for Japan, not only because, as we

have just stated, the circumstances are somewhat similar, but because the profit to the Government arises from the general development of the industry of the people and is consequently, though perhaps insusceptible of being reduced to figures, immensely greater than the sum, large as it appears, derived in Great Britain from a direct tax upon invention, which but too often proves prohibitive.

#### A RECREATION CLUB.

THE time of Merry Christmas, which brings to all its joyous family and friendly gatherings, recollections of old times in the old country, and memories of the days that have fled, brings to Eastern residents other thoughts, reminders of duties, regrets for the past and hopes for the future. Our friends here, at least the younger members of the community, find in the dead season of Athletic Sports, time to make arrangements for the renewal of "friendly rivalry" among themselves, and while conning over the successes of past seasons, to think out in what way mistakes, which will inevitably occur, may be remedied in the future, and their successes be rendered in every way more complete. It is now therefore a convenient time to give a few words of encouragement to those to whom we have to look for the continuance of those sports and pastimes to which we owe many pleasant days during the greater part of the year, and which are in themselves so necessary, in our opinion—and we believe in the opinion of all cheerful minds—for the health of all of us; the ready means by which *Mens Sana* is perpetuated in *corpore sano*; and at the same time, a word of advice to those who are entrusted with the management of those sports.

We are encouraged to choose the present time for repeating the advice we have again and again given, the cry for reform in the constitution of the management of those sports that we have frequently advocated,—*amalgamation*—by the announcement that the Amateur Athletic Association is dissolved. We regret to have to sing the requiem of this departed entity, for in its time it has done good work: but if by its dissolution the way is paved for the foundation of a recreation club on a broader and surer basis, then shall we have reason to rejoice; to be proud of our old Athletic Club which has in the course of a very prosperous career been the means of bringing out some excellent runners, many of whom had never set shoe on a cinder path before they joined its ranks: in after years to be thankful that from its sacrifice we have gained the advantage of an United Recreation Club. Founded in the Spring of 1872, for the laudable purpose of encouraging athletic sports,—a purpose which even then might have been well undertaken by the Cricket Club,—the Association has had a prosperous, almost a brilliant career. The defeat of our athletes, in 9 events against 6, by the members of the Kobe crew who came to Yokohama in 1871, to row against crews of the Yokokama Rowing Club, and of the Nippon Rowing Club, determined a few gentlemen to form an athletic association, that they might have a better chance of turning the tables on their conquerors at the first opportunity: and this they eventually succeeded in doing: but by one of the strange fatalities that often attend human efforts, the year 1876, in which the Yokohama men succeeded in beating the "flyers" of Kobe, and Mr. A. H. Dare made the *best mile time in eastern record*—4m. 45s.—was the "Julian age" in its career; thence the interest in competitions and the numbers of the competitors have, unhappily steadily declined, until this year has witnessed its collapse. Peace to its ashes!

It is not our purpose now to record all its glories or to much bewail its fate, but rather, to show how good may be drawn out of evil.

The balance of the funds, and whatever property the late club possessed, are to be offered to the Cricket Club and we sincerely trust that club will avail itself of this opportunity to make an attempt to draw into itself the members of other clubs who take their pastime on land, and become the parent to them all. The old difficulty of want of ground is not now felt; with increasing members and funds, a larger field could be obtained without difficulty from the Japanese Government, so that Cricket, Base-Ball, Lawn Tennis, Quoits, Rifle shooting and the varied exercises pertaining to athletics could proceed simultaneously during the spring and summer months. In the winter there could be no difficulty, as Football alone is continued. It will perhaps be objected to the scheme we advocate that the funds at the command of the Cricket Club would be insufficient to provide these amusements: for of course it would be part of our scheme that the entrance fee and subscription to the Cricket Club should not be materially increased; but we do not think any apprehension need be felt on that score: it is one of the evils of the present division of work that subscriptions press heavily upon the members, the consequence is that some men who would like to compete refrain, while others pay their money, grumble, and do nothing else. We are not disposed to hold up Kobe to be revered in everything; but the Kobe Regatta and Athletic Club manages to do well on an entrance fee of \$15 with a subscription of \$10 per annum, and for this the members are provided with Rowing, Cricket, Football, etc.; why should not we do the same? It is true that there would be a great difficulty in amalgamating the Rowing Club with the others, but our community is more numerous, and individually and collectively wealthier than that of the sister port, and we could well sustain two clubs. Let us put our shoulders to the wheel and try! Inaugurate a "Yokohama Cricket and Recreation Club:" it will succeed if we make up our minds to deserve success. With our club on land, the Dramatic department itself would be a source of constant revenue, if enthusiastically sustained; Look at the Dramatic Association now! Is there one of the gentlemen who appear on its boards who is not also a member of at least one of the other clubs? And does anybody suppose that less enthusiasm would be felt by the actor, less interest taken by the public, in the deserving efforts of these gentlemen to amuse us, if it was known that any surplus that remained after defraying expenses would go to swell the general recreation fund? But this is a sordid consideration. What is required is a "longer, stronger pull, and a pull altogether, as they say at sea," to draw the scheme to a successful issue. There is no need to fear want of funds; many a man now pays yearly in subscriptions to the numerous clubs more than would ever be required of him, even if an unusually bad year under the proposed scheme should render a donation necessary. But this is not all, what was written in this journal after the defeat by Kobe to which we have alluded, and on the eve of the foundation of the Athletic Association in 1871, is in some respects true now. "Money for any well deserving object can always be found, . . . But this is not all that is required. Is the community willing to have Kobe believe that the comparatively scanty proportions of our rowing clubs contain all our rowing men, or that our pedestrians worthy the name can be counted on the fingers of one hand? And yet we made a poor show on Wednesday, and the best Kobe men did not compete. One man

says 'it is too much trouble,' another lays the onus of refusal on the doctor. A third has not time; a fourth does not think he can run, and so on throughout the settlement; each is ready with an excuse, and while thinking that his neighbour should make an effort to sustain the reputation of the place, refuses to help himself!"

Since that was written one step has been taken. The Rowing Clubs have been, practically, amalgamated; with what success let any pay a visit to the French Hatoba and see. Let the land clubs take a lesson from the same book, and in a very few years time, if the Committee of the Recreation Club be asked for a record of their success, they too will be able to say "Circumspice!"

AFFAIRS in China are evidently fast approaching a crisis, and the European population of Shanghai are beginning to intertain some fears for their personal safety should war commence with Russia. The *North China Herald*, reviewing the position, and the results likely to follow in the wake of an outbreak of hostilities, makes the following remarks as to the steps that should be taken by the foreign population of Shanghai for their own protection:—

"The news given us by Reuter's Company on Monday last, that the Kuldja negotiations had failed, only confirmed what has been the general impression in the Settlement during the past few weeks. No one has professed to know anything definitely as to the probability of war between China and Russia; in fact, it is doubtful if anyone in China does know or has any means of knowing whether peace will be preserved or not. But the constant massing of Chinese troops near the eastern end of the Great Wall, the tidings of large ironclads being built at home for the Chinese Government, the steady increase to the Russian fleet in these waters, and stories as to the intention of the Russians to survey immediately the coast of Corea; all these things make in favour of war, but we know nothing certain, because in no case would operations be commenced before the spring. There is a chance still, therefore, of the two would-be belligerents coming to terms; and we might almost wish that further difficulties in Europe would restrain the Russian desire for a campaign that would cause us so much loss and leave Russia so little glory.

"What the effect of a war will be on the Empire politically, it is impossible to forecast. Colonel Gordon has endeavoured to show to the Chinese the danger they run by having their Government at Peking, so near to the coast, exposed to the chance of an invasion which would probably result in the capture of the Forbidden City itself, and the flight of its inhabitants, as in the last war, to Tartary. There is great fear that this would be followed by general anarchy; the country is permeated through and through with secret societies; the present dynasty is not a popular one; in fact, a regency never is popular, for the personality of a ruler is always a great assistance to his stability. It is doubtful if the Taiping spirit is altogether dead, and the Empresses must not expect Russia to be sustaining their authority in one part of China while destroying it in another, as the allies did twenty years ago. There are doubtless ambitious officials in many provinces who would be ready to seize the opportunity which the capture or flight of the Court would give them. We might even hear the cry of "China for the Chinese!" and see a general movement made to expel the Manchus and restore or create a national dynasty. Whatever form revolt took if the authority of the Central Government were weakened, we must remember how readily a mob is raised and excited in China, and what temptation to robbery the treaty ports, and this one especially, offer. We have hinted at worse consequences of the commencement of a war than we expect, but we do it in order to draw public attention to the necessity of looking to our means of defence. Volunteers have never been behind-hand here when there was any chance of their being required, and we have, even during the present peaceful times, the nucleus of very respectable force. The new uniforms which the Council have provided, and the regulations under which they are acquired by the Volunteers, have had an excellent effects in attracting men to drill, but if their services are required at all, they will be required in

much larger number than ordinarily turn out to parade. Considering the numerous distractions and recreations which Shanghai offers, it is a creditable thing that so many should turn out to the comparatively monotonous marches which parades here necessarily become; and it is a very happy thing that the Corps should have so excellent a staff of officers, with the material at hand with which that staff may be trebled or quadrupled as soon as the men come forward. Without being alarmists, we think it only prudent to advise those who own their readiness to volunteer to join the ranks at once; for with every willingness to learn, the recruit cannot be considered more than half as valuable as the trained man. In these latitudes, thunder-storms get up in a wonderfully short time; and if a mob collects here, there will be little notice given, and little time to drill the recruits who are sure to flock to the Corps. We repeat that no one knows that war is imminent, or even that it will commence in the spring; but high officials who have reached this from Peking lately are little confident of the maintenance of peace. Men best informed, and most conversant with Chinese politics, fear that a war with Russia will entail a state of anarchy through all the sea-coast provinces of China, and it is on these grounds that we consider the situation grave enough to deserve this warning. As we have seen before, the men-of-war on which we rely for protection may be called away to other ports by some unexpected necessity, and we are always liable to be thrown on our own resources; and the more we show our readiness to defend ourselves, the less likely, such is the contrariety in human affairs, are we to have to depend on our unaided efforts. It is unfortunately the nature of the English people to be unready; let us hope that the mixture of more fiery blood in our Settlement will counteract the English dilatoriness. We know by Liu's diary, as by a thousand other warnings, that a large portion of the population, and especially the literary class, which have so great an influence over the people, hates us, and would gladly see us driven to our ships: let us therefore be prepared. Heaven helps those who help themselves, and it is when the strong man armed keepeth his house, that his goods are in peace. Twenty years ago it would have been a small matter, in the event of a riot, to put all the women and children on a man-of-war at short notice, for a gunboat would have taken them all: it would be a much longer business now. The necessity for such a step is not likely to arise: but he who wishes for peace prepares for war."

IT has been lately ascertained that fast steaming merchant vessels, armed, and manned with a crew of men well instructed in the use of artillery, will play an important part in the next war in which any foreign country may be involved. At the present moment we have in the harbour of Yokohama a vessel of this description, belonging to the Russian Government. That their utility, under certain conditions, has been well recognized in England is beyond question, and we now read in the *World* that "The Surveyor of Shipping, Captain Brownlow, O.B., who has been inspecting some of the finest steamships at Liverpool, in connection with the proposal, emanating jointly from the War Office and the Admiralty, to temporarily arm merchantmen in the event of hostilities ever breaking out between England and any other country, is now engaged in making arrangements to continue the inspections at the northern ports."

ACCORDING to latest advices the present condition of affairs in Ireland has assumed a very serious complexion. The home papers abound with accounts of cold-blooded murders; of brutal cruelty to poor helpless dumb animals who, unfortunately for their comfort, happen to be owned by landlords who are foolish enough to ask for their just dues; of threats against tenants honest enough to pay their rents, and of land agents who are forced to secure an armed guard before daring to leave their homes. It seems certain that before order can be restored the misguided peasantry, led by ambitious and unscrupulous leaders, are

likely to come into open and serious collision with the military, although it is to be sincerely hoped that this may yet be averted. From our latest exchanges, however, there appears to be but small chance of such a consummation; the 'Shan van Vogt' and other seditious songs, alluding to the prosecution of the leaders of the Land League, are being sung throughout the disaffected provinces. The following extracts from the *World* will conclusively prove that Ireland is anything but a comfortable residing place for a number of our fellow creatures:—

"Lord Cloncurry, who has received warning from the police authorities that his life is in danger, is one of the most improving landlords in Ireland. On his fine property in Kildare he has introduced high farming, employs a large amount of labour, keeps an immense herd of stock, which he feeds high (his bill for food last year amounted to between 2000*l.* and 4000*l.*), and yet he is considered as a worthy victim by the followers of the Land League.

"The Marquis of Waterford, who spends the greater part of the year on his Irish estates, was told not long ago that if he attended a certain agricultural show he would not leave it alive. He went there, and happily the foul threat turned out to be merely a cowardly device to intimidate; and Lord Waterford regularly hunts his pack of hounds, as he has done for years, with this difference, that instead of carrying a flask and sandwich-case, the pouches of his saddle are given up to six-chamber revolvers, one being carried on either side.

"Perhaps the most extraordinary outrage of the kind was the threat to assassinate Lord Lismore, with the intimation that if he were not obliging enough to go over to Ireland to meet his doom, the sentence would be carried out in the streets of London. Lord Lismore has been for twenty years in possession of the estates attached to Shanbally Castle, and during the whole of that period has spent the greater part of his time in Ireland, and the greater part of his income in attempts to improve the well-being of his tenants. Lord Lismore is well known as one of the kindest and most generous of landlords, and one of the most fearless among men. He, moreover, voted in favour of the second reading of the Irish Disturbance Bill in the House of Lords, and yet he is to be shot down!"

Again, the editor of *Vanity Fair*, commenting on the same subject, writes—"the West of Ireland land question may be put in the form of a 'Hard Case,' such as those with which readers of *Vanity Fair* are familiar.

"Lord A has, we will say, 100 acres of poor land. For this a large farmer with capital would willingly give him, say, ten shillings an acre—for sheep grazing—and make a fair profit. He therefore justly enough expects to get £50 a year for the land. But it has unfortunately been let to ten small tenants, who have made potato-gardens, on the produce of which they manage to exist, but who have the greatest difficulty in scraping together the seven shillings per acre which they have agreed to pay as rent. Lord A has been therefore receiving £35 a year instead of £50; is looked upon and denounced as a land shark and a tyrant for exacting this lesser rent; and when a pinch of hard times comes, has to forego his rent altogether, and even then stands a fair chance of being shot. What should he do? The large farmer, notwithstanding the hard times, is still willing to take the land, but the small tenants cling to their starvation and their potato gardens, while the bulk of the land is absolutely producing nothing. Put aside sentiment and surely this is the answer: Let the small tenants give up their holdings, receiving (either from the in-coming tenant, who can take it out of his yearly rent, or from the landlord) fair value for their mud cabins and so-called improvements in the shape of potato-gardens; let the landlord borrow a sufficient sum from the Board of Works in Dublin (at 5 per cent. if paid off in 30, and 6 if paid in 20 years), to build a sufficient number of labourers' cottages for the needs of the then 100-acre farm; and then—it may seem hard, but starvation at home is hard too—let those who it has been shown cannot exist on the farm seek their fortunes elsewhere. By a proper system of State-aided emigration, such as that advocated by Lord Dunraven, there really need be little or no hardship in this. At any rate, so long as the system of small holdings on bad soil is perpetuated, so long shall we have periodical famines and nearly constant discontent or veiled rebellion."

"Sentiment is a very pretty thing, but it loses its beauty when allied to starvation; and it is not quite as strong in the Irish peasant's heart as the agitators would have us believe."

"I have spoken to many Irishmen in America, and I have never met one who regretted his emigration, though most of them still cherish the theory that they ought to have been rooted in the soil, and permitted to live on potatoes if they had so chosen."

#### MY RESIDENCE IN LONDON.

By M. S. NAGASAKI.

(Continued.)

IN, December of 1878 I went down to the palace in Gloucester by invitation of His Lordship the Bishop and Mrs. Ellicott to pass the new year there. The palace is a large building, and located near to Gloucester Cathedral. The Bishop and Mrs. Ellicott had several visitors, among them the Messrs. Hamphry, the daughters of the Rev. Mr. Hamphry of London, Mr. James A. Hervey, a son of the Bishop of Bath and Wells and many others, all excellent as well as pleasing people. The Bishop and Mrs. Ellicott entertained their guests with all possible attention and courtesy. The Bishop is a man of great erudition and wide culture. I have experienced striking proofs and have been charmed with the extent of his knowledge. His views are always based on the general principle of broadness and comprehensiveness and additionally with his intellectual excellence, he possesses a true christian character and a general disposition, which lent to his society, so attractive and endearing a grace. Scarcely any lady can equal Mrs. Ellicott in natural liveliness and sympathetic nature, she is very good hearted and extremely musical, and also possesses the rare gift of pleasing society. Her daughter, Miss Rose Ellicott is a highly accomplished and excellent young lady, she has now devoted herself entirely to singing; in fact she deserves great merit and praise, being so unselfish and good and always ready to render a pleasure to the whole company by the display of that delightful accomplishment. Mrs. Ellicott is a lady of society, she has a large circle of friends in Gloucester and in London; while I was at the palace, she had several dinner parties and evening receptions; One evening I went with the family party, to the Gloucester ball which was held in the Bell Hotel, the room was splendid for dancing and well decorated with evergreens and flowers. Being a party in ourselves we had no difficulty, as often occurs in large balls, in arranging our partners; moreover I was fortunate enough to meet several of my friends and acquaintances there, which I did not expect, and that added to my pleasure on that delightful evening. The palace is overflowing with the atmosphere of christian hospitality and kindness and any one who has once experienced their agreeable society cannot but remember it with delight in all future times. During my numerous visits to country houses, I have learned much of English country life and perceive there is a *greatness*, in that life itself, I mean that well regulated home life. Every morning behold a heap of newspapers, piled on the table, and everybody reading news of the world and thus becoming as informed on all the questions of the day, as if they were in the centre of the metropolis and thus being in nowise backward in civilization; this convenience being afforded by the facilities of transport, which indispensably adds a true and real comfort. After breakfast everybody separates and pursues his own avocation, reading, letter writing or something else suitable to his or her taste, at the reunion of lunch, we usually exchange our news and talk over a plan of recreation for the afternoon, either driving, walking, or some sort of outdoor amusement. The re-assembly at dinner is quite social, the topics of conversation being general and suitable to the occasion, and as a rule we have conversational and musical evenings and sometimes dancing; of course the forms of entertainment depend on those who are invited in the evening. But whatever the form may be, it tends alike to the growth and development of healthy morals and intellects. This grandeur of country life is peculiar to the English nation and is a beautiful trait in the character of its life. I was frequently invited by Monsieur and Madame de Bunsen, who are descendants of the great Baron von Bunsen, at one time a distinguished Prussian minister at the court of St. James's, and whose life was so

much connected with the present reign of the Queen of England. Through their family connections and well established house, they have a centre of re-union and are intimate with the social and political world. Their house is not exactly on the English social model, but pervaded with the continental atmosphere: however, they are adorned with the reserved English dignity and grace, they have much continental promptness and instinctive sympathy, so much so indeed that their society is truly easy and charming. Monsieur de Bunsen is Chamberlain to His Imperial Majesty, the Emperor of Germany. He is a man of culture and of broad, religious, and scientific principles, and he often impressed me with his unwearied activity and exhaustless flow of conversation, he is so well informed on all the questions of the day. Madame de Bunsen too, impressed me strongly by her ardour and by her christian and philanthropic disposition, and she has the rare gift of appearing interested in every one and every thing. She was a great friend of Madame Wooyeno, they exchanged visits frequently, and though this medium, I had the opportunity of very often seeing her, and her daughter Mademoiselle de Bunsen, who is so natural and unaffected, and whose manners, bland and easy, stamp her with a mark of rank; she is a great favourite in general society. Madame de Bunsen entertains a great deal, and her society combines the aristocracy, the political, and literary classes. I have also seen German Royalty, on several occasions, at her house, when they visited in London. The social atmosphere there, truly charms the soul as well as refreshes the mind, there is a great deal to amuse and also to interest, which makes society truly pleasurable. One evening I had the honour of being included in the list of guests at his Royal Highness the Duke of Cambridge's dinner party. His Royal Highness being the Commander in Chief, the party naturally consisted of several generals, amongst them Sir Doyle Percy C. B. (who was the minister to the Mexican Republic, which post he resigned on account of losing his sight) and many others. At that time the British public was much excited over the dismissal, by the Khedive of Egypt, of the representatives of France and Great Britain, M. de Blignières and Charles Rivers Wilson C. B., who had been appointed to superintend the administration of Egypt. In his proclamation the Khedive announced that he had formed a ministry composed entirely of the Egyptian element, which act France and England considered a great insult and humiliation. The respective Governments adopted a strong course, demanding the Khedive to sign his abdication. After a long deliberation this resulted in the dethronement of Ismail I, in favour of his son Mahomed Tewfik, who was at once proclaimed Khedive of Egypt. The table talk naturally led to the question of the day. Between his Royal Highness and one of the generals, the question was discussed, with much animation and spirit, on the part of the general, but it seemed to me that he was only affected with the fever of the day and his arguments were not well grounded, whereas, his Royal Highness was so impartial and all his remarks were just and reasonable and impressed the hearers with his clear ideas and firm convictions: it makes me think how deeply interested and well informed the English Royalty are on all national questions. When the conversation turned to general topics His Royal Highness, and Sir Doyle Percy, took leading parts and amused the company with their overflowing wit; Sir Doyle Percy is as brilliant a talker as can be found in the London world of today, in spite of this I noticed His Royal Highness; the Duke was equally brilliant in his conversational powers. Mr. J. Reed M. P., C. B. has visited Japan and is so well known to the Japanese community I will refrain from dilating on his genius and attainments, but I cannot help speaking of Mrs. Reed, whose sympathetic disposition and kindness always impressed me during my numerous visits to her house. She is now staying in her country house in Kent, about 17 miles from London, for the sake of her health, being somewhat of an invalid. The house faces a beautiful avenue with a row of tall trees on each side: at the back there is a pretty garden, the green grass exquisitely trimmed, the side of the borders adorned with various flowers and the air genial and fostering. It is a place well chosen for Mrs. Reed, as she requires a quiet, airy and healthy location. Nothing else attracts so much the attention of foreigners, when they visit a house, as when the hostess displays sympathetic feelings and hospitality and where the tone of society is highly polished and agreeable, like Mrs. Reed's house. She is invariably

courteous and attentive, whenever she has visitors and her conversation is so pathetic and kind, as to truly render her society easy and agreeable, and she creates, in visitors the feeling of being perfectly at home. Her daughters, the Misses Reed, are exceedingly charming and agreeable, being highly cultivated and accomplished ladies. The eldest daughter, Miss Rose A. Reed, is a great reader: she composes poems, music, and plays the piano with consummate skill, in fact she is a beautiful player for an amateur if she cannot be called an excellent artiste, being a lady of rank. The second daughter, Miss Louisa Reed, is quite a devotee to singing and literary pursuits. They both are beautiful dancers: without this accomplishment, in the present days a lady can scarcely enter into the society of European capitals, at all events it is seldom agreeable for her to become a wall-flower. Besides, dancing is an indispensable social attainment, for it trains manners, and imparts movements of perfect grace and ease, which are as highly important in life as any kind of culture and accomplishment. To sum up, the Misses Reed invariably attract much admiration in society. Before I quitted London they had a dancing party, to which many ladies and gentlemen from London were invited; moreover, as many as twenty-five persons were staying at their house, including myself, and several others came for the evening from the neighbourhood. The room is admirably suited for dancing, as the floor is parquet. The gathering was charming and everything excellently arranged. I enjoyed it very much and in future years, the scene itself being long over, many happy and pleasing memories will linger around me of that most delightful occasion. The Baron and Baroness de Reuter entertain a great deal, during the season, at their town residence in Kensington Palace Gardens, one of those wide, airy streets which are found in the best parts of Kensington. Their drawing and reception-rooms are magnificently decorated, the drawing-rooms on one side opening into a large conservatory, where rare plants and flowers abound in profusion. Baroness Reuter is a lady of society and has numerous friends and acquaintances in the social and political world. Her house is a place for meeting foreign representatives, English politicians and general society. When she has afternoon parties the rooms are crowded, sometimes ladies and gentlemen promenade in the conservatory, about which a fragrant and delightful air lingers. I noticed on several occasions many men of note, sitting or standing together in that enchanting place, exchanging views, opinions and arguments amongst themselves on political topics: no doubt these arguments result in a satisfactory solution, as nothing irritating could possibly exist in that delightful place, where the nervous system is calmed down and the mind is set on a proper and sound state. Between business and society my time was much occupied in London, but during the leisure from my duties I frequently paid visits to Dr. and Mrs. Vincent Ambler, who stay at home on Sunday afternoons to receive their friends. Dr. Vincent Ambler was on the medical staff of the English army in Russia and Turkey during the Crimean war in 1854-1855-1856, where he became acquainted with many Turkish notabilities and esteemed them and loved them, in fact he had a strong Turkish bias in every way, from his close friendship with the oriental race; he sincerely sympathized with the Eastern Nations, and appreciates them in no ordinary degree. In his house I always found men of mark, from the Western and Eastern continental countries. This shows that he is cosmopolitan to a degree and loves his fellow creatures regardless of race or religion. My friend Mirza Michal Khan, a brother of the Persian minister in London and Premier secretary to the Persian Legation, one day, said "Dr. Vincent Ambler's house is an International Hotel." This remark rightly expresses the exact condition of the doctor's house. Dr. and Mrs. Ambler being extremely sociable and hospitable to their circle, I experienced every courtesy and kindness from them, and with them I have passed many pleasant and happy hours. When I was seriously attacked with liver complaint, Dr. Vincent Ambler attended me day and night and shewed me all possible attention, not only as a friend; and I have duly appreciated the friendship he manifested towards me, during my stay in London. It is this rare quality of heart he has, which has drawn me so closely to him and moves me even to this day, for I retain the full impression of it. On Sunday afternoon's I sometimes finished my round of visits by calling at Mrs. Cornnell's house in upper Phillimore Gardens. She is also at home on Sunday's and receives her old friends and intellectual acquaintances;

and it was always most delightful to me to find her and her two charming daughters, the Misses Cornnell at home, and to become a member of their circle. The Misses Cornnell have a continental education, speaking French and German like their mother tongue; besides they are highly accomplished, graceful and pleasant in every way, having additionally, ingeniousness, sincerity and sweetness of disposition, which crown their other good qualities. The drawing-rooms display much continental taste, and habits having more ease, variety and complaisant sympathy than is displayed in the greater part of the English circle. A lively moment of social ravishment and animation induced me to throw off my political thoughts and enjoy a short but delightful recreation from their preoccupation.

The Misses Cornnell were presented to Her Majesty the Queen, at the first drawing-room this year by Mrs. Dalrymple Bruce, and they attracted much admiration at court: indeed they are objects of special attention in society. To a young lady, a drawing-room is an event of the greatest importance, for until she has been presented, she is not held "to be out," nor strictly speaking to be capable of being invited to any social entertainment of greater importance than children's parties; but when the ordeal is over, and she has been presented to the sovereign, she at once takes her place in the great social sisterhood, in which she is henceforth entitled to play a part. The Corps Diplomatique in London are well received and welcomed everywhere, in the classes of English society. The English accord the foreign representatives all due respect in the manner in which they receive them at their hospitable houses, and feel great pride and pleasure in extending every attention and courtesy towards foreigners, for the honour and reputation of their country. Whenever I entered the salons of the *élite* London society I have always experienced extreme kindness and courtesy from many whose friendship I will ever be glad to retain in my memory. Judging from my observations on English life, I find quite the contrary to what I have always read and been informed as to their cold disposition and repulsive manners. Instead of these I have not only met with persons of lofty sentiment and polished ideas, but with many capable of that profound sympathy which renders social relationship easy and agreeable. In the general state of English society, moral laws are observed, and manners have of late become softened. One rarely meets with any violent excesses, and this applies not only to the high or middle circle, but also extends to the masses. Great social progress has manifested itself, and domestic and regular life is extending its empire. The people have learned to seek after and enjoy more honest and more delicate recreation than the brutal quarrelling and drunkenness which at one time existed in great towns like London, Glasgow and other places. In the nineteenth century, England has accomplished vast strides. Civilization is elevating the moral sentiments, while softening the tone of society which it adorns with its grace. I now turn my observation upon the Orientals in London Society; what a contrast they present to the refinement and brilliancy of European Society. They receive the same welcome and courtesy which the English accord to the Western nations, but there are difficulties in the way for them to avail themselves of the opportunities offered to them, owing to the differences of education, habits and manners of society in the East, and besides they are not accustomed to the great social and political usages of European Society. Occasionally they commit unpardonable offences against good taste and decorum and they cannot give the same impression and pleasure to general society as Europeans. Such being the state of affairs, they can seldom establish any personal importance in society, or acquire steady friendship in influential circles: however, I have observed that many Eastern nationalities are now rising from their traditional seclusion and successfully overcoming the difficulties I have mentioned and thus, acquiring the benefits of social and political intercourse, they cultivate the taste and manners of society, which cultivation enables them to adapt themselves to the circumstances and customs of the country where they reside. By pursuing this course they will ensure success, esteem, and sustain their social position, and uphold the honour of their respective countries and make them advantageously known in the West. It is a fact that awkwardness of attitude does one the same ill service as awkwardness of speech, while on the contrary good manners impress as they indicate real power and have due weight in society. Some may consider these matters minor and trifling, but in this world trifles in the aggregate

are the key to great social force, and influence the minds of the people. The present Persian minister, Prince Nazem Michel Khan, always commands due respect from society, as his personal appearance is prepossessing and marked by ease and dignity. His sobriquet is "The oriental urbanity." On the whole the representatives of Eastern nations, and also individual orientals in London, are advancing in the course I have described, and thus elevating the character of their monarch in the eyes of the European peoples. No doubt the true interests of a country can only increase by acquiring new ideas and further knowledge of the world, and the true prosperity and happiness of a nation can only be secured by improving the facilities of commerce. In every way the oriental representatives are making continuous development having, with a steady tendency, a determined end in view; and this gradual extension of power is a real revolution in the minds of the Eastern nations. The remark which I have made about the Orientals in London are in reference to their general character and the tone of manners which they shew in society, and relative to their social development. I have received much kindness and experienced warm friendship from a large circle of friends, and in this minute summary, it is impossible for me to mention the names of all persons to whom I owe a sense of gratitude, but I am equally sensitive of the kindness and courtesy which they shewed me when I was in London. The nearly five years residence in London from which these reminiscences are taken, have been years of great political movement, but I have abstained from reference to them owing to my position, which is one precluding me from freedom of action; as may be seen, so I have limited myself to observations on social life and conditions, avoiding anything which verges directly on political topics; my motive being, when penning this sketch, to shew my countrymen how foreign representatives are received in London and also to fulfil my promise, given to English families, and to shew to the world, as far as lies in my power, their magnanimity, their generosity, their splendour and their state.

#### REUTER'S TELEGRAMS.

LONDON, 20th December, 1880.

£10,000 has been subscribed for the defence of Paruelli. Greece has declined to negotiate with Turkey.

LONDON, 23rd December, 1880.

The Transvaal Boers are establishing a Republican Government.

A strong body of London police are ordered to Ireland.

[SUPPLIED TO THE "HONGKONG DAILY PRESS."]

LONDON, December 8th.

The Chinese Government has ordered a formidable iron-clad.

The Times publishes a telegram to the effect that the Greek Government is intriguing with Turkey.

JAPANESE ERA 2540, MEIJI 13TH YEAR, 12TH MONTH, 24TH DAY, KIN-YO-DI.

#### NOTES OF THE WEEK.

The English mail came to hand on Tuesday last. American despatches, for San Francisco and beyond, went forward this morning in the O. & O. steamer *Gasic*, and the

M. M. steamer *Tanais*, is advertised to leave for Hongkong, at 9 a.m. on Sunday morning next.

We have been informed that the P. & O. steamer *Sunda* left Nagasaki, for Yokohama, last Wednesday at noon.

We are informed that a telegram has been received stating that the s.s. *Flintshire*, left London for Yokohama, on the 8th instant.

A severe and prolonged shock of earthquake was felt last Monday, a few minutes after noon, both in the Settlement and on the Bluff. Another of less violence was experienced in the earlier part of the morning, and it has been suggested to us that the disastrous fire in Honmura Road may have originated in the shock having upset some lamp which may have been burning.

There was another very strong shock last night, at 10.57, and the vibrations were particularly distinct. The duration of the movement was just one minute and a half, as taken by a stopwatch, and the direction was from N. W. to S. E.

The fire season appears to have set in this year with terrible earnestness. A large fire, which destroyed nearly the whole of Fujisawa, opened the ball, so to speak, and though of course a long way from Yokohama, still the place is so well known to most residents that the disaster attracted much attention. Not many weeks after, the fire at No. 66 broke out, which was considered at the time as one of the most serious which had happened for years. The excitement consequent on this had barely subsided, when another conflagration occurred in the native town, by which many of the leading curio stores were completely destroyed. Two other fires occurred in the neighbourhood of Matsukagicho, and it was only by a fortunate accident that a fire, which originated in one of the rooms in the Custom House, was nipped in the bud. To crown the list, however, we have now to chronicle what was undoubtedly the worst fire ever witnessed in Yokohama, with the exception of "the great fire." Just before four o'clock on the morning of the 20th instant, the settlement was awakened by the clang of the fire-bells. The locality was soon found out to be Honmura Road, where a fire had broken out in No. 123, the well known Golden Gate Livery Stables, kept by Mr. A. Jaffray. How the fire originated is at present a mystery, as Mr. Jaffray was away on a shooting excursion and the house was untenanted. The alarm had not been given many minutes when the house was completely gutted; the bettoes had the greatest difficulty to save the horses, carriages and harness, as some of the ponies were mad with fright and would not leave their stalls on any consideration. Eventually, however, they were all removed. The flames leaped across the road to Lots Nos. 106 and 107, occupied by a host of Chinese and Japanese storekeepers, carpenters and painters, shops &c., &c., whose contents and material greatly tended to feed the flame. The fire now spread by way of Mr. Jaffray's stables to the Star Tavern, which speedily succumbed, and the houses next each fell in their turn. The flames were arrested in this direction by the bakery brick building but only to seize upon the Hotel de Univers, which, as the steam engines were busily engaged elsewhere and the hand engines proved ineffectual also, was the next to go. Fortunately for Main Street, the fire did not catch the British Queen, as with the wind blowing as it was at the time it would have been impossible to tell where the conflagration would have stopped. We have frequently had occasion to comment upon the utter confusion and want of management which characterizes a Yokohama fire, but that of Monday last was the worst we have ever seen. Imagine a densely populated quarter, teeming with Chinese and Japanese, foreign and coloured merchant seamen, inmates of houses of ill-repute, &c., &c., all herded together like rabbits in a warren; flimsy wooden tenements, many of them filled with paints, turpentine, oils, wines, and spirits: add to this the panic caused by a fire breaking out at such a time, the manner in which natives lose their heads and run aimlessly anywhere: half maddened horses galloping through the streets; the Babel of languages, the numerous sailors, men-of-war's men, and even Japanese police, who had helped themselves to liquor from the burning grog shops, and were rolling about in a state of beastly intoxication: all this, with the crowd, confu-

sion and utter want of any attempt at organization, formed a scene which we can but feebly suggest. The engines worked their best and at last got the conflagration within limits, but not before a godown on Lot 104, occupied by the China and Japan Trading Company, caught fire. It was eventually destroyed. We cannot help thinking that had a salvage corps such as we recently advocated been in existence, most, if not all, of the valuable contents of the godown might have been saved. The prompt action of pulling down some sheds prevented the fire from spreading to the coal stock of Mr. P. Bolm, or the fire might have extended far in that direction. At about 7.30 a.m. the fire was mastered, and it was possible to make a survey of the damage done. Every house on Lots 102, 103, 106, 123 (where the fire originated) 124, 135, 136 is destroyed, and the godown and other buildings on Lot 104. The actual amount of insurance is not accurately known, but considering the nature of most of the buildings it will not be so heavy as might be anticipated from the magnitude of the area destroyed. There was at one time a strong N. W. breeze which carried large flakes of blazing shingle &c. up in the direction of the Bluff. Much anxiety was felt in consequence, but fortunately no damage was done. An American man-of-war's man was seriously hurt, and several Japanese firemen received injuries of more or less grave character: fortunately, as has been the case with our other great fires this winter, there are no deaths to report. The recurrence of these fires, with the well-known facilities they afford for plunder, seems almost to suggest that they are the work of incendiaries belonging to the lower classes, rendered desperate by hard times.

We hear that there is to be a public pigeon-shooting match at the White Horse Tavern, Totsuka, on Christmas Day. The proprietor has secured a sufficient number of strong young pigeons and proper traps. Competition will commence after tiffin, and an enjoyable afternoon should be spent.

We have been requested to draw the attention of our readers to the fact that, at half-past eleven o'clock to-night there will be a solemn service at the Catholic Church, in Main-street. As many musical amateurs have promised to assist, a mass by Mercadente, will be performed. At the close of the service, a collection is to be made for the poor of Yokohama.

The charities performed by the Catholic Church in Yokohama are too well known to need particularizing, and, at the approaching festal season, we would remind our readers, irrespective of sects, that "he that giveth unto the poor lendeth unto the Lord."

An inquiry into the manner in which Olai Olsen, seaman on board the British barque *Buston Vale* met his death during her outward passage, was held on Wednesday last, at the British Consulate. Evidence went to prove, on the whole, that the man who was ill, was neglected by the captain, and the following was the

#### FINDING.

"I find that Olai Olsen, a native of Bergen, Norway, died at sea on the 15th December, 1880, in latitude 32 N. and longitude 134° 46' E. on board the British barque *Buston Vale*, of London, official No. 47,765, from natural causes: that the conduct of the master, George Buckingham, during the illness of the deceased, and more particularly on the 5th November, betrays an absence of feeling for the sufferings of a fellow-being, which I consider to be highly reprehensible.

"(signed) GEO. J. L. HODGES,  
"British Pro-Consul."

The *Hiogo News* of December 21st contains the following paragraph:—"Following Mr. Trescott, his colleague, Mr. Swift, joint American Commissioner to the court of Peking, is passing through Hiogo on his way to San Francisco. He is accompanied by his wife and niece; and, we believe, returns to the United States with the happy consciousness that the object of his mission is fully accomplished, and that his treaties only require the ratification of his government. Mr. Cole, who accompanied the delegation as special correspondent of the *New York Herald*, returns with Mr. Swift and his party." They arrived in Yokohama yesterday by the *Takago Maru*, and the Commissioner and his lady left for San Francisco in the *Gaelic*, this morning.

From the columns of the *Shanghai Courier* we take the following items respecting the Russo-Chinese difficulty:—"We have it on good authority that the Chinese Government intend, in the event of war, immediately to lay down torpedoes at the entrances to all the Treaty Ports, and to stop all ships from coming in or going out, whether war vessels or traders. It is difficult to exaggerate the importance of this news to all engaged in trade in China.

"In connection with the present state of politics in China, the whereabouts and probable movements of 'Tao are matters of the greatest possible interest. We have made careful enquiries and the following information is from the best source. 'Tao has left Haini, and gone to Lan Chow-fu, where, it is said, he intends to spend the winter, proceeding to Peking in the 2nd Chinese moon. In the letter giving this information, it is not clear whether he intends to reach Peking, or to start from Lan Chow-fu in the 2nd moon, but we think it probable that it is meant that he will reach Peking. The distance is about 9,720 li, we believe. If he travels by chair he could cover about 60 li per day, and reach the capital in 62 days.

"There is an idea prevalent amongst the Chinese that with the declaration of war, the Russian tactics would be immediately to endeavour to seize the Chusan group of islands, and that if successful they would be permanently annexed. This move would give the Russians the complete command of the seaboard of this part of China. To meet this danger, the Chinese Government are now engaged in making vigorous efforts for the defence of the Chusan group and Ningpo. It will be remembered that the Taiping rebels strove hard for the possession of the Chusan islands, which are regarded as the key to the position in this part of China, as commanding both Ningpo and Shanghai, and the entrance to the Yangtze river.

"Liu Shen Shan, former commander-in-chief in Chibli, at present in retirement, had an audience with the Empress on the 2nd of this month, and was asked to give his advice on the situation. He is said to have replied that "the best course is war, the middle course is peace." The word "middle" is used as being more polite than the word "war."

"In well-to-do Chinese circles it is reported that the Russian Government has within the last fortnight doubled its demands on China as the price of peace. Rather than pay the money, it is said, China will go to war."

Appearances indicate that a severe winter will be experienced this year. A Shanghai contemporary writes on the 9th instant, that "the thermometer was ten degrees below freezing point last night. We heard the mournful cry of the Turkey to-day brooding over its anticipated fate at Christmas, but if the present severe weather lasts, the cold will kill them before that festive season arrives."

When the history of our present time comes to be written, the name of Sir Frederick Roberts will appear prominently among those whom we already know as pillars of our Eastern Empire. It is well understood that "nothing succeeds like success," and this dashing officer is a standing proof of the truth of the saying. We notice in the *World* that "Sir Frederick Roberts will be in London this month (November), accompanied by Major-General John Ross, C.B., who is decorated for the Alma, Inkerman, and Sebastopol, the Central Indian, North-West frontier, and Perak campaigns, and commanded the Indian expeditionary force sent to the Mediterranean in 1878; and by two of his staff-officers—Major Pretymann, Royal Artillery (who was Sir Frederick's aide-de-camp, and was with him in the Koorum Valley at the battle of Peiwar-Kotal, and also at Cabul and Candahar), and Major Kennedy, Bengal Staff Corps, who has served both in the 18th Hussars and the Royal Dragoons, was wounded in the Bhootan campaign, was Lord Napier of Magdala's aide-de-camp in Abyssinia, and was deputy-assistant Quartermaster-general in the late Afghan war. The hero of Afghanistan will be invested at Windsor by her Majesty with the Grand Cross of the Bath, and will also be presented with the freedom of the City and a sword of honour. Feasted, and the observed of all observers, Sir Frederick will not, if I am not mistaken in my estimate of his character, forget the regiments which served under him; and when any

of them reach Portsmouth, he will, I am convinced, be one of the first to welcome them back to the old country."

It seems strange that in these days of railways, telegraphs, and other improvements to read of continual brigandage in Europe. Such a state of affairs seems more suited to the habits of fifty years ago. However, we notice in a home paper that "brigandage, though seldom active, is always latent in Greece. During the last Turkish War a retired brigand, Karalambos Lelondas by name, known as "The Terror of Asia Minor," who was living as a butcher in Athens, judged the opportunity to be a good one for resuming his old profession. He quickly recruited a band of twenty men, chartered a barque at the Piræus under the very noses of the authorities, provided himself with plenty of arms, ammunition, and medical stores, and set sail to 'plunder and to ravish.'

"He had however some quarrel with two or three of his comrades before starting, and they, being left behind, laid information against him. The telegraph was set to work, and one of the three gunboats comprising the Greek Navy went in pursuit, and discovered the piratical craft becalmed in a small bay. On boarding her only a few innocent-looking fishermen were found on deck, but the whole of the crew were discovered in the hold, and "The Terror of Asia Minor" was found buried in the sand-ballast with only the tip of his nose exposed for the purpose of breathing.

"The entire band was escorted to Athens and lodged in the prison, where they had liberty to walk about the courtyard among some 150 others, many of whom had been there for several years, and eight of whom were under sentence of death. This liberty is given on account of the unhealthy state of the overcrowded cells. Lelondas boasted that he should start again as soon as 'circumstances brought about his release.'

Writing on the subject of the different styles of dining which prevail among various nations, and their dissimilarity, "The Chiel" in *Vanity Fair* says:—"It is curious to note the various peculiarities of different European nations in the manner of taking their meals, and the way in which they borrow customs from one another and mix them up without rhyme or reason.

"The Russian and the Swede begin, as is well known, with the 'zakouska' or 'smörgost,' generally served in an ante-room and composed of all kinds of appetising snacks. Raw herring, caviare, smoked salmon, anchovies, oysters, and many similar dishes belong to the 'zakouska,' and cheese is tasted then instead of after dinner. A glass of vodka or spirits of some kind, or more frequently two or three, accompany this ceremony, 'to open the appetite.' Excuses are never wanting for repeating the dose. 'One cannot walk upon one leg,' says the Swede. 'The Trinity is sacred,' says the Russian for his third glass; and 'Every room has four corners,' for his fourth. Probably the origin of the 'zakouska' may be found in the fact that hungry guests, arriving some little time before the dinner-hour, would be offered a snack in the meanwhile and a glass of vodka after their journey in the cold. Where things are done on a large scale, the 'zakouska' reaches colossal proportions. I have seen as many as thirty-seven plates on the table. Both Russians and Swedes attack the board with voracious energy. Foreigners have before now mistaken this for the actual dinner, and, though surprised at the kind of repast and at its being eaten standing, have made a very good meal before discovering their error. The Swedish word 'smörgost' I believe to be derived from 'smör-or-gost' (butter and cheese). The same custom obtains in France in a modified form, in the shape of *hors d'œuvres*—generally radishes, butter, sardines, &c., but without the glass of brandy, which is replaced in England by sherry and bitters. The French custom of eating melon after the soup is, I believe, derived from Spain. Then as to the order of serving the courses. Every country has some different arrangement, and there is no universal rule for any particular viand or beverage to make its appearance at any special stage of the repast. The French and ourselves eat macaroni as a third course. The Italians, to whom the dish belongs, treat it as soup, calling it and its kindred condiments 'dry soups.'

"Now supposing we give a dinner to foreigners of different

nationality, and wish to suit each one as to the order of the courses, according to the custom of his country; either many dishes must appear twice at different times during the meal, or we shall be quite at a loss when to serve them. The Northerners commence with brandy and cheese, whilst we take cheese before dessert, and brandy after dinner with the coffee. The Italian considers macaroni as a soup, the Spaniard and the Frenchman eat melon before the fish; and lastly, the, to me, outrageous fashion of taking an ice in the middle of dinner has been introduced, under the plea of reviving appetite.

"Another branch of the subject presents equal difficulties. When shall salt or sugar be used? When shall fruit or jellies accompany the meat? With what things is mustard to be eaten? The Germans serve stewed fruit with many meat dishes. We take currant-jelly with mutton, hare, and venison, and apple-sauce with goose and pork. The Italians put grated cheese into almost every kind of soup or stew; they never eat mustard with macaroni. Some take pepper with melons, others sugar. Some make fish into soup, others make minced-meat into pies. Where shall we choose?"

#### ASIATIC SOCIETY OF JAPAN.

A general meeting of the Asiatic Society was held at the Sho-bei-kuwan, Seido, Tokiyo, on Tuesday, December 14th, Dr. Divers, President, in the chair.

It was announced that Prof. H. M. Paul and Mr. Naibu Kanda had been elected members.

A paper was read by Professor J. A. Ewing, entitled "Notes on some recent Earthquakes." The earthquakes noticed were those which occurred during the month of November; they were of the usual slight kind, but had acquired some interest from the fact that they afforded the earliest tests of a new seismograph of the author's design. The instrument had proved successful in giving complete records of the horizontal motion, in conjunction with the time, throughout the whole of each disturbance. Mr. Ewing gave only a short description of the new seismograph, but stated that it would soon be more fully described elsewhere. It consisted, he said, of two horizontal levers at right angles to each other whose short ends were kept steady by their own inertia during the shock, while their long ends traced on a revolving glass plate a magnified record of the movement. The moving parts of the levers were proportioned so as to be supported at their centres of percussion, so that when they were displaced by a motion of the earth they had no tendency either to return to their original position or to continue moving. The instrument had been at work for some time in the Engineering Laboratory of the Tokio University.

The first earthquake described was that of November 3rd (5h. 45 m. a.m.). Here the disturbance lasted for a minute and a half and consisted of more than one hundred and fifty complete waves, or motions backwards and forwards. The greatest extent of the motion was however very small, less than one-third of a millimetre. During the earthquake the extent of the motion varied much, sometimes increasing and sometimes diminishing, but it never fell to zero until the whole disturbance was over. The earthquake began gradually—so much so that one could not say to which side the first deviation took place. The motion reached its maximum at the third or fourth wave from the beginning of the shock.

A record of the earthquake was also given by the long pendulum seismograph which was described before the Seismological Society some months ago. It was found that the pendulum had been set swinging by the shock through an arc about one millimetre long; but superposed upon this slow motion the much quicker vibration of the earthquake could be distinguished. The results showed how little reliance could be placed on the indications of pendulums when no provision was made for recording their indications in conjunction with the time. In this instance, the swing of the pendulum, although more than three times as great as the actual motion of the surface of the earth, was absolutely so small that it might very readily have been confused with the latter had not the continuous revolution of the glass plates on which the record was traced afforded a means of distinguishing them.

The next earthquake mentioned was that of Nov. 10th (1 h. 9 m. a.m.). This gave the impression of being of much greater violence than the one already described. The records showed that in it the motion was actually less; but the period, or time occupied by each complete oscillation was much less:—the result being that this earthquake was more "intense" than the first, in the ratio of six to one. The undulations were of a very irregular character, varying much both in frequency and in extent.

The other earthquakes noted were similar to these with generally a still smaller amplitude of motion. After describing them the author concluded as follows:—

"It would be hazardous to draw general conclusions from these examples which are neither numerous nor individually important. The most striking features appear to be, (1) the very gradual beginning and ending of the disturbance. In none of these observations did the maximum motion occur until several complete oscillations had taken place. (2) The irregularity of the motion. The successive undulations are widely different both in extent and in periodic time. (3) The large number of undulations in a single earthquake, and the continuous character of the shock. (4) The extreme minuteness of the motion of the earth surface."

The President congratulated Professor Ewing on having obtained what were, he believed, the first complete trustworthy records of the horizontal motion during an earthquake. The accuracy of the results would of course depend on whether the part of the apparatus which was intended to remain stationary during a shock did really remain stationary. If it did not then the records would contain an element of error due to the proper motion of that part.

Professor Ewing replied that the possibility of instrumental error, to which the President had alluded, had been carefully considered by him, and he had made experiments in order to find whether it existed and to what extent. The question was whether the bob or mass of metal at the short end of each lever did or did not remain steady during an earthquake. To test this he placed the apparatus on a table, by the shaking of which artificial earthquakes could be produced. The two levers were placed side by side. The bob of one of them was held absolutely fixed by means of a bracket from a neighboring wall, while that of the other was left free, as it is in the actual use of the instrument. The table was then shaken and two records of its motions were given side by side on the revolving plate, one by the free lever, the other by the lever whose bob was held fixed. The two records were found to agree with remarkable closeness. This proved that the bob of the free lever did actually remain very nearly at rest during the experiment. The motions of the table were made to resemble as closely as possible those of an earthquake. Professor Ewing added that he expected to exhibit the new seismograph at the next meeting of the Seismological Society, when he hoped, by repeating this experiment, to be able to satisfy the members that the instrumental error was insignificantly small.

Professor J. Milne then read a paper entitled "Evidences of the Glacial Period in Japan." The general conclusion which Mr. Milne arrived at, was, that in Japan there are evidences to shew that in recent geological times the climate has been colder than it is at present and that this period of coldness was probably synchronous with the period known as the glacial period in Europe and America. Previous to this period the climate was warmer than it is at present, and it is not unlikely that Japan, Yezo and Sagalien were then united. The line of argument which Mr. Milne followed was briefly as follows:—

First, because we find so many evidences of ancient glaciation in countries lying in the same latitude as, and to the south of, Japan, it would, on the assumption that any of the present accepted theories which are given as an explanation for the glacial period are true ones, be contrary to reason that Japan altogether escaped the effects of the glacial period. Next it is shewn that Japan is admirably well situated to experience a change in climate by a slight variation in the direction or strength of the ocean currents which wash its shores, or by an alteration in the winds which sweep across its mountains. The districts in Japan where small glaciers still exist were

next spoken about and the districts where we should be most likely to find traces of glacial action were pointed out. After this the terrace formations of northern Japan were spoken of as evidences of a change of climate. If terraces were formed by the drawing off of waters to the poles, the height of the terraces which lie in northern latitudes ought to be greater than those farther to the south, and this is shewn to be the case for Japan. Also the average height of sea-terraces on the two sides of an open sea at places in the same latitude ought to be of the same height. If certain peculiarities in the distribution of fauna and flora in Europe can be explained on the supposition of a glacial period, similar peculiarities as observed in Japan, may possibly be taken as an indication of somewhat similar conditions in Japan. After this these peculiarities were pointed out and it was shewn to be probable, that previous to a time at which we can suppose a glacial period to have taken place, Tsugar Straits, and those of La Pérouse had not been formed, and also it was shewn that from fossil remains the climate of Japan was tropical. These being the conditions, the main island of Japan received a tropical fauna and flora, coming from the north. As the climate became colder the territory of these first emigrants was invaded by others coming from the north, and all excepting the more hardy of the first comers gradually died out. Conditions like these explained the curious mixture of semi-tropical and palæartic species which are now found in Japan. As evidences of the extinction of tropical forms and also of a climate colder than the present, certain fossils of the alluvial deposits were referred to. The most important evidences of cold conditions are markings on Gassan, a mountain in north Japan, which seem to shew that its present snow fields once extended further down its sides, but instead of being in the form of snow, were in the form of glaciers.

The President having invited discussion,

Dr. Brauns said the paper fell rather short of giving evidence of a glacial period in Japan. It would have involved such a lowering of temperature that a sheet of inland ice must have existed, which the author had found not to be the case. All the instances of animals and plants which had been mentioned to prove the presence of a state of low temperature might be matched by others which would equally prove the contrary. In fact arguments from flora and fauna were always rather hypothetical. He considered that the evidence brought forward in Mr. Milne's valuable paper tended rather to shew that there had been no glacial period in Japan.

Professor Milne replied that he quite agreed with Dr. Brauns. His own conclusion was, that although there were evidences that the temperature had once been lower than it is now, there were no conclusive evidence of a glacial period, properly speaking.

Dr. Faulds said that Professor Milne seemed to have expressed himself cautiously. The evidence derived from the vertical distribution of the mountain flora was often very dubious. Even within the same area of distribution varieties of moths and butterflies of the same species might be notably limited to the narrowest patches of a particular soil, the subtle colour or food relations of which had perhaps helped to develop the variety. Even more readily might plants have their areas of occupancy determined by degrees of temperature &c. on the simple basis of natural selection without the vast machinery of a glacial age. The speaker had not yet seen any veritable glacial scratchings even on hard rocks in the ranges near Tokiyo—where, however, appearances were to be observed not very unlike those sometimes attributed to glacial action in Scotland.

No doubt the distribution of the fauna of Japan had not yet been very minutely studied, but known facts were as yet perhaps capable of being explained without the agency of ice. Species had been known to die out of a district utterly in a short time, through such changes in cultivation or population of a country, as would involve diminution of special food or increase of special enemies. A curious and suggestive fact had been communicated to him by Japanese friends interested in natural history viz, that the fox is quite unknown in the island of Shikoku. The author had done well to call attention to the subject, and had contrived to give us an interesting and suggestive paper.

A paper by Dr. Geerts "On the mineral springs of Ashi-no-yu in the Hakone mountains" was taken as read. The President

said that in it the author gave a number of analyses of the waters and pointed out their hygienic value, which the author said was so great that he advised the erection of a well arranged sanitarium and bathing establishment with a specially trained native doctor attached to it.

This was all the business.

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

#### COURT, POLITICAL AND OFFICIAL.

The *Mainichi Shinbun* says that His Ex. Prime Minister Sanjo, after leaving his office on the 16th instant, invited Their Excellencies Privy Councillors Ito, Inouye, and General Yamada to his country-seat at Imado, where he had a conference with them, and afterwards entertained them at a banquet.

On the same day His Excellency Privy Councillor Okuma invited a number of the officials of the Foreign Department, with whom he had a secret conference.

Reduction of expenses continues to be the order of the day. We now hear from a native source, that the number of subordinate officials belonging to the Japanese Legations at the different Courts abroad is, after the 1st of January next, to be considerably diminished.

We read in the *Nichi Nichi Shinbun* that alterations are contemplated in the present official etiquette observed in the reception of Foreign Representatives by His Majesty the Emperor.

The same paper states that His Excellency Junior Prime Minister Iwakura, intends visiting Yesso in February or March next.

The Governors now in Tokio, as we notice in a Tokio paper, have recently handed in some petitions to the Minister for the Interior, by whom they were transmitted to the Cabinet. The Governors are well agreed as to the importance of advising everyone to attempt to save up money as a precautionary measure against famine, &c., but as regards two or three other public questions, various views have been expressed.

We notice in the *Mainichi Shinbun* that the Italian Minister entertained His Excellency Prince Councillor Okuma, at the Seiyoken Hotel, Tsukiji, on Sunday last.

The *Nichi Nichi Shinbun* says that there is a rumour that the Public Meeting Regulations are being revised, and that the new code will be published in a few days.

The *Mainichi Shinbun* publishes the following:—"We hear that the Department for Foreign affairs has opened a strong correspondence with a certain Consulate, with regard to the tone of one or two of the foreign newspapers."

According to a vernacular journal an order has been given that all the mothers and wives of all officials of the 1st, 2nd and 3rd class are to be presented in audience to His Majesty the Emperor on New Year's day, every year, in order to offer their congratulations.

The *Nichi Nichi Shinbun* informs its readers that the Cabinet will close its sitting on the 25th instant, for the New Year's vacation.

According to the *Mainichi Shinbun* His Majesty the Emperor will visit the Naval College on Christmas Day, to witness the evolutions of the naval cadets at present being trained on board the *Konko Kan*.

The same paper has been informed that His Excellency Yoshida, Minister at Washington, is pronounced to be suffering from disease of the lungs.

The *Mainichi Shinbun* is responsible for the statement, that from motives of economy, the Foreign Department will cease to subscribe to all the various papers, native and foreign, copies of which have up till now been posted to all the Japanese Legations abroad.

A local contemporary reports the arrival at Fusan, on the 5th instant, of H. E. Hanabusa, Minister to Corea, accompanied by his staff, in the *Amaki Kan*. His Excellency the same day visited the capital, where he will remain for six months.

The *Nichi Nichi Shinbun* says that Their Imperial Highnesses

Junior Prime Minister Field Marshal Prince Arisugawa, and Princes Kita-Shinkawa and Fushimi, visited the Italian Corvette *Vettor Pisani*, on Tuesday last.

The same journal writes as follows:—"General Torio, who is now residing in the village of Tennoji, Osaka, has lately addressed a petition to the Government on the subject of the financial administration of the country. We hear that he has sent in a further memorial as to the constitution of the Government, and the present policy of administration. His memorial shews him to be a true patriot."

His Excellency Prime Minister Sanjo, having recovered from his recent indisposition, resumed his office in the cabinet on Tuesday last.

The *Hochi Shinbun* says that the Spanish *Chargé de Affaires* for Japan, and the Spanish Minister for Annam, visited the Naval Department on Tuesday last, where they had an interview with His Excellency the Minister of the Navy.

The *Nichi Nichi Shinbun* states that on the termination of the present year, there will be a festival at the Awoyama palace, which Their Majesties the Emperor and the Empress will attend.

According to the *Mainichi Shinbun*, His Excellency Privy Councillor Okuma visited the United States Legation at about 4 p.m. on the 21st instant, and returned home at about 7 p.m. His Excellency daily receives several visits from officials connected with the above-named Legation, and the whole matter is reported to be in connection with the negotiation of a foreign loan.

The *Hochi Shinbun* says that the Japanese Government has been invited to contribute specimens of metals, minerals, &c. to the forthcoming Mineral Exhibition, to be shortly held at Frankfurt.

#### NAVAL AND MILITARY.

A native contemporary states that thirty naval cadets, who lately returned from America in the *Tsukuba Kan*, have been appointed midshipmen in the Japanese Navy.

The *Banjo Kan* will sail for Corea in a few days.

A native paper states that the new Naval Arsenal at Mitamura, Meguro, will probably be completed in the course of next April, when work will be commenced. It is intended that all naval requisites are to be made in this new arsenal, which is to be connected with the one now in Kagoshima. The buildings are to be very extensive, their cost being estimated at about five hundred thousand yen.

Another paper notices that from the barracks at Sakura, no less than twenty-one prisoners have been sent to court martial, one of whom, named Suzuki, is charged with having robbed and murdered his uncle.

We see in a native journal that the naval cadets practised firing experiments on Tuesday last, in the forts.

Mr. Kondo, a 6th class officer of the Navy, has been appointed superintendent of the Translation and the Navigation Offices in the Naval College.

His Excellency Admiral Enomoto, Minister of the Navy, accompanied by Rear Admiral Akamatsu, paid an official visit to the Russian men-of-war in harbour yesterday.

We see in the *Nichi Nichi Shinbun* that H. I. H. Prince Arisugawa Sawa (the younger) who was once a Naval cadet on board of H. B. M.'s *Iron Duke*, and is now a midshipman in the Japanese Navy, is about to visit London to complete his education. In consequence of this, the higher ranks of Naval officers intend giving a farewell banquet in his honour on Sunday, at the Yaomatsu Restaurant. This resort is on the banks of the Sumida-gawa, and therefore there is to be a series of boat races and torpedo experiments, and a display of fireworks in the evening.

#### INDUSTRIES, TRADE AND FINANCE.

The *Mainichi Shinbun* writes as follows on the existing state of trade in Yokohama:—"The cotton yarn business is now being gradually brought up to a prosperous state. Prices are going up and contracts between native dealers and the buyers in the interior are also numerous. Tea is daily improving, but as the foreign merchants still offer low prices, no contracts are made at present and both the buyers and sellers are therefore idle."

The *Akaho Shinbun* writes:—"Since the recent riot in the Takashima coal mines, on which occasion all the machinery was either broken or damaged by the rioters, work was temporarily stopped, but gradually repairs have been made and the store-houses &c. that have been burnt down are now being rebuilt. It is intended to construct them as solidly as possible, with roofs of either plate or corrugated iron. Mines No. 1 and No. 2 are both unharmed, and are producing an outturn of about seven or eight hundred tons of coal per day.

The same paper says that paper money is so scarce in the central provinces, that many holders of old Japanese money have applied to the Osaka Mint to have it recoinced. From the 1st ultimo to the 5th instant, 721,431 ryo, the greater part of which was composed of nibu and nishu, were sent in by applicants from Osaka and Hiogo.

We notice in the *Akaho Shinbun* that a two yen, and a half yen (counterfeit) were discovered at the office of the 60th National Bank at Kobun-cho, Tokio. Information was at once given to the authorities.

The following remarks on the tea trade are from a native source:—"The total quantity of tea shipped to America from Japan this year was 83,000,000 chests. As a rule the quantity shipped in former years has averaged 65,000,000, so that either too much has been exported, or the demand has considerably increased. Again, until this season the export of China tea to America has always exceeded that of Japanese, but the reverse has been the case this season."

The *Nichi Nichi Shinbun* publishes a letter from a correspondent who states that "the total value of goods of various kinds exported abroad from the prefecture of Gumbu alone last year amounted to over two million yen. If this be added to the value of goods exported to other prefectures, it would give a total of fifteen million yen, from which we can make an approximate average of the value of the products of every other prefecture. If proper measures are taken by our financial administration, they need never be troubled even if there should be a deficit of ten million yen in the treasury." Our contemporary, commenting on this statement, pertinently asks what their correspondent considers "proper measures."

We notice in the columns of another journal that the villagers of Shimamura, (a place at which a large business in silk is done) having observed how rice is steadily rising, have unanimously subscribed to purchase a stock of rice to be stored in their village, so that any future enhancement of prices will not affect them, and they will be able to bestow their fullest attention to the silk-worm industry.

If the advertisements which appear in native journals are correct, the newly founded Direct Trading Company has already established itself with a capital of 300,000 yen. The premises are in Sakai-cho, and the firm will trade under the style and name of the *Fuso-shokwai*. The company announce their intention to export Japanese articles direct to foreign ports, and also to import, direct, foreign goods to Japan. Moreover, it will execute indent business, and will have the support of the government.

A native journal states that the Savings Bank established in Osaka by Mr. Godai, is prospering more and more everyday, and that the number of depositors is now very considerable.

#### MISCELLANEOUS.

We read in the *Nichi Nichi Shinbun* that on the 17th instant, at noon, a most deliberate murder took place in Tokio. Mr. Ichinohe Naohisa, the assistant judge of the Tokio Saibansho, was just leaving Mr. Kuroda's residence, at No. 10, Saichome, Sanjikenbori, Tokio, when a man named Usui Rokuro rushed up and seized him, exclaiming—"You it was who killed my father. I thus revenge him." The assassin then stabbed the judge through the neck with a Japanese short sword about eight inches long, which he had concealed in his clothes, killing his victim at once. The judge fell to the ground, when his murderer deliberately severed the head from the body, and then went and gave himself up to the police, stating what he had done. It would appear that during the restoration, thirteen years ago, the murderer's father was killed by the judge during some disturbance. The murderer for many years

could not discover the name of the man who had killed his parent: ascertaining this recently he tracked his victim from place to place, and at last effected his revenge. After killing the murderer's father, the deceased judge had travelled in various provinces, and finally settled down in Tokio, only to meet his death.

The residents of Shimizu, Suruga, have subscribed several thousand yen for the purpose of applying to the authorities for the establishment of a branch telegraph office in their town.

The *Hochi Shinbun* publishes a telegram, dated the 15th inst., from Secretary Kumano of Ishikawa, to Governor Chizaka of the same prefecture, now in Tokio, to the following effect:—"The ceremony of opening the Sakai harbour was performed yesterday, the 14th instant, to the great delight of the inhabitants."

The *Kinji Hiron* and the *Fuso Shinshi*, both of which have been suspended for a long while, have, as we notice in a native contemporary, been permitted to re-appear since the 17th inst.

According to a local paper, the native operators of the Telegraph Department having become so proficient in their business that they no longer need the assistance of the foreign employes, and a number of the latter will be discharged at the end of the year.

We read in another local paper that the tramway in Tokio, which has been repeatedly talked about, is shortly to be built. The carriages are not to exceed the size of those generally used by His Majesty. Messrs. Tanimoto Michiyuki and Taneda Seichi, are said to be the manager and the vice-manager of the Tramway Company.

A steamer called the *Hoku-un Maru No. 1*, built at Mr. Hirano's dockyard at Ishikawa-shima, for the North-rn Shipping Company, was launched on Sunday last; she will run between Fushiki, in Etchū, and Nawaya in Ichigo from the 1st of January, which will afford great facilities to travellers, who will in future be able to travel to these respective ports by steamer, instead of having to proceed overland. The Company proposes to increase its ships, and extend its lines to Niigata and Tsuruga. This enterprise is expected to prove of great benefit to the trade of the Northern Provinces.

We read in another paper that a fire broke out in the 1st ward of Kuwagasaki, Miyako-ura, in the Iwate prefecture at about 1 a.m. on the 17th instant, and extended to the 2nd and 3rd wards. It was eventually got under control, but not before having destroyed about 320 houses. Another fire took place at Namamugi-mura on the 15th instant, at about 10.40 p.m., by which 38 houses were destroyed. A third conflagration happened at Inuma-shin-machi, in the town of Kofu, at about 4 a.m. on the 18th instant. It was extinguished after destroying about 13 houses and materially damaging three more.

The *Hochi Shinbun* publishes a denial of the statement published in one of its recent numbers that a suspected assassin was found in Mr. Okuma's Yashiki lately, and declares that the whole report was utterly incorrect.

According to a native paper sixty two of the Chinese residents of Yokohama, intend subscribing the sum of one thousand yen, towards the re-construction of a temple over the statue of Daibutsu at Kamakura.

According to the *Hochi Shinbun* a number of priests of the Shinto and Buddhist sects have formed a relief society and intend establishing a poorhouse, for the destitute classes, on the old parade ground of the Navy Department, at Tsukiji. A large workshop will be established, and the inmates of the charity will have to work for their living. Application has been made to the authorities for the loan of the ground, free of charge.

## THE JAPANESE PRESS.

## WHO SAYS OUR GOVERNMENT IS NOT FREE?

(Translated from the *Sei Dan*.)

CONSTITUTIONAL laws limit the power of a King or Queen, and the influence of Parliament. Public opinion, however, controls these also, and this is the system upon which the whole framework of English Government is based. Consequently no undertaking can be entered upon until it has been carefully discussed. Such a Government cannot possibly be free: we consider it a very limited Government.

What a contrast is the style of the Japanese Government. There is not a single thing which they cannot accomplish, from increasing or reducing taxation, or cutting down the pay of supernumerary officials. The wish of the Government is sufficient reason for any step it takes. The Public Meeting Regulations, made in order to prevent the expression of severe and seditious remarks against the Government, and in fact to control our freedom of speech, flashed upon us like a thunder clap. The English Government could never have done such a thing, but would have had to discuss the matter first of all. Although these Regulations and the recent notification respecting petitions have a most important bearing on public rights, yet no resistance was attempted; not even our best educated men tried to excite any opposition to this, but sat still and allowed the Government to carry out its wishes. Oh! in this vast world, where can there be found so free a Government as ours? All who love liberty must praise its excellence. Our Government is, as we have asserted, most decidedly free, and anyone who denies it must, of course, be utterly mistaken.

## INQUIRY.

An inquiry was held yesterday in H. B. M.'s Consulate into the circumstances connected with the death of J. W. Williams, O. C. Andersen, Sophius Pettersen, and S. Taylor, four of the crew of the British barque *Victoria Cross*, on the 23rd of July last, during her passage from London to Yokohama.

Mr. G. J. L. Hodges read an extract from the ship's log to the effect that during a violent storm the ship was struck by a heavy sea, which washed three men overboard, and killed the carpenter, on board.

David Tweedie stated:—I am Captain of the *Victoria Cross*. The extract read from the log is quite correct. At the time of the sea breaking over us, I had just entered the cabin, and was washed on deck through the skylight. Sophius Pettersen, who was lashed to the wheel, was washed overboard. We pulled him on board, but another sea broke over us and he was washed overboard again, and we lost him through the rope parting. We had only one boat left, boats life-buoys and everything moveable having been swept away. It was utterly impossible to do anything to save the men.

Christian Everson A. B., stated:—I have heard the extract read from the ship's log and it is quite correct. I was in the fore-castle when the sea struck the vessel. I went aft and found the Captain and mate trying to haul in the man at the wheel, who was overboard.

K. W. Petersen stated:—The entry in the log is quite correct. I was in the fore-castle. Nothing could be done to help those who were washed overboard.

R. A. Bridenstadt also testified to the accuracy of the log.

## FINDING.

I find that John Williams 2nd mate, George W. Taylor, apprentice, Sophius Pettersen, A.B., of the British ship *Victoria Cross* of Liverpool, Official No. 47,550 met their deaths by drowning from that ship in lat. 48° S. and long. 17° 30' E. on July 23rd, 1880; and that Ole Christian Andersen, carpenter, of the same vessel, met his death at the same time from injuries caused by his being struck by a sea, and that no blame attaches to master, officers and crew.

(Signed) GEO. J. L. HODGES.  
*British Pro-Consul.*

A further inquiry was next held as to the disappearance of Auguste Demere, the first mate. An extract from the log stated that he managed somehow to get hold of some liquor from below, on the 27th of July, and was very intoxicated. Considering that he was setting a bad example to the men, the Captain ordered him to go to his bunk, which he did but afterwards returned and got rather quarrelsome, whereupon he was once more ordered to his bunk, under threat of being put into confinement. He then complied, but muttered something about jumping overboard, of which, as he was drunk, no notice was taken. He entered the galley, and was seen shortly afterwards to go in the direction of his bunk. In about half an hour he was missed, and though the most careful search was made he was never seen again.

Captain Tweedie testified to the correctness of this entry, and his evidence was corroborated by the other witnesses.

## FINDING.

"I find that Auguste Demere met his death by drowning from the British ship *Victoria Cross* of Liverpool, official No. 47,550, on the 27th July, 1880, in latitude 43° South and longitude 17° 30' East and that no blame attaches to master, officers or crew.

(Signed) GEO. J. L. HODGES.

## LAW REPORTS.

## IN H. B. M.'S COURT FOR JAPAN.

Before R. T. RENNIE, Esq., Judge.

Monday, December 20th, 1880.

E. C. KIRBY & Co., vs. C. H. COBDEN.

The defendant was brought up to shew cause, on oath, why he had not complied with a previous judgment ordering him to pay an outstanding account due to the plaintiff. Mr. Bellasis appeared for the plaintiff; the defendant appeared personally.

C. H. Cobden, sworn, stated:—In May, 1874, I was a clerk in E. Fischer & Co. in Kobe. At that time my salary was \$200 a month. I was single at that time. I contracted \$82 of the debt at Kobe in 1874-75. I had to pay for my living, and had other calls on my salary which prevented my paying the debt. My income continued at that rate until I left Kobe, which was in March, 1875, when I came to Yokohama. I then entered the firm of Messrs. Jardine, Matheson & Co. as a clerk, at \$200 per month. This salary was increased, I believe in 1876, to \$250 per month. It has continued at that rate until the end of November. Between the date of my arrival in Yokohama until the commencement of this action I purchased articles from the plaintiffs to the full extent of the debt claimed. I had however paid them \$40 on account. I hoped to pay the debt as soon I was out of debt to Messrs. Jardine, Matheson & Co. who had advanced me some money when I first joined them, to pay off old outstanding liabilities. I am getting nothing now, but am working to put the accounts straight, &c., &c. I have no money to come from them, in fact, I still owe them about \$300. I have no property beyond personal effects, such as clothing. I now live in the International Hotel, and sleep at the Club. The proprietor has kindly agreed to let the account stand over if I cannot pay it. I shall have to meet the club bill somehow. The last club bill, which is still unpaid, was about \$76. It included rent, wine and occasional dinners. The room costs \$1 per day. Since this judgment was delivered on the 30th ultimo, I have paid no one, except for my food. I gave the International

Hotel \$25 on account. As far as I remember, I have paid nothing else. I think I paid something to the Club on the 30th but I believe that anyhow it was before judgment was given. I have no receipt for the account. The secretary promised to send me one, but I have not received it. I cannot swear when I paid it. It was after the present action was taken. I am not continuing in my present position in Jardine, Matheson & Co. I have not a cent due or coming to me from any source whatsoever. I am sure that those are the only payments I have made. It is not true that some of my friends have offered to find me money to pay this account. I wrote to you (Mr. Bellasis) to say that I was not going to "rob Peter to pay Paul" and therefore would not borrow money to pay the account. I could have got the money at the time. Not having any situation at present, I cannot do so now.

His Honour here remarked that he could not see that the defendant was wrong in this; by contracting a fresh debt he would not have improved his affairs, but would simply have transferred his indebtedness.

Witness continued:—I went recently up country, to Mianoshita: the trip did not cost me one cent, except twenty cents for a passport. That is the only occasion I have been out of Yokohama.

Mr. Bellasis:—Considering that the defendant has made payments to the club I wish your Honour to give an order to have the money paid to defendant, or in default that plaintiff be committed.

His Honour:—I do not see that I have the power to do this, and I should be particularly reluctant to use it if I had, in such a case as this. Payments for food to support a debtor are surely allowable.

Mr. Bellasis:—I have no further evidence to adduce but would like the case adjourned for the production of the club receipt to see on what day the money was paid.

His Honour:—Very well: the case is adjourned until the 22nd instant.

Before M. DOHMEN, Esq., Acting Assistant Judge.

D. MACKENZIE vs. W. CAVANAGH.

The defendant was charged with creating a disturbance in the complainant's house on Saturday last: he said that he admitted being a little drunk but did not think he was doing any harm.

David Mackenzie, sworn, stated:—I am a publican. On Saturday evening defendant entered my house. He was intoxicated and commenced insulting and abusing everybody. I tried to quiet him but it was no use, so I thought the best way was to lock him up, and I handed him over to the police.

Aronmehiba, the Japanese policeman who arrested the prisoner, was called and testified to the arrest; at the time he entered the house, he saw the prisoner creating a disturbance, but did not observe anyone strike him.

Defendant again pleaded drunkenness, and provocation. It was the first time he had ever been locked up.

His Honour said that the prevention of such trouble was in a man's own hands. Keeping sober meant keeping out of trouble. Defendant could now see what his conduct had brought him to. He would be fined \$2 and costs of court.

The Court then adjourned.

Wednesday, December 22nd, 1880.

E. C. KIRBY vs. C. H. COBDEN.

In this case, which was adjourned from the 20th inst, when defendant was ordered to produce the receipt for the money he paid to the Y. U. Club, he produced it as ordered.

Mr. Bellasis, who appeared for plaintiff, said he would like the evidence taken of

John Goddard, who was sworn, and deposed that defendant paid \$100.00 to the Y. U. Club. He thought the payment was made on the 30th ult. in the morning, but he would not swear that it was made on that day, as he was not certain, or at what hour the money was paid.

Defendant said he admitted paying the money on the 30th ult.

His Honour said as Mr. Rennie, the Judge, had gone into the case, he should adjourn it.

Mr. Bellasis said he was not sure that defendant would not leave Yokohama in the meantime.

Defendant said he was on his oath, and he would promise not to leave for a week.

His Honour thought this sufficient, and adjourned the case till Monday morning next, at 10 a.m.

#### IN THE U. S. CONSULAR GENERAL COURT.

Before T. B. VAN BUREN, Esq., Consul General, Judge.

Messrs. A. S. FOBES and E. R. SMITH, Assessors.

Wednesday, the 22nd day of December, 1880.

SIDNEY M. SMITH, of San Francisco, by his Attorney F. C.

SPOONER versus ISAAC BUSH and AUGUST LANGFELDT.

#### JUDGMENT.

This action is brought by Mr. F. C. Spooner, as the attorney of Mr. Sidney M. Smith the owner, by assignment, of claims from several parties in the United States for goods, wares and merchandise purchased by defendant Bush, amounting to \$24,460.00 Mexican.

The Petition alleges that on the 27th of March last, the defendant Bush executed an assignment of his goods and merchandise, accounts and credits to the defendant Langfeldt, purporting to be for the benefit of his creditors, which assignment the plaintiff charges was fraudulent, for that the assignor "unlawfully and fraudulently concealed and sequestered and kept from his creditors a large amount of money," the proceeds of the merchandise mentioned, and he asks among other things that defendant Bush be arrested and examined touching his indebtedness and his disposition of the proceeds referred to, and that he be ordered to deliver said proceeds into Court; and also that the assignee deliver to the Court all the property and monies conveyed to him by the assignment, and all monies that he has since received for the sale of any of the said goods, to be disposed of by the judgment.

The indebtedness and the assignment are proved and admitted.

The evidence is voluminous, but the only questions left for the Court to determine are whether the defendant Bush, actually and in good faith, delivered to his assignee all the property and money in his possession or under his control, or whether on the other hand he fraudulently concealed and keeps possession of an amount of money which belongs to his creditors.

It is clear that neither the whole amount of goods purchased in the United States nor their proceeds in money are delivered to the assignee or clearly accounted for by the assignor. The latter endeavors to account for about \$10,000 by alleging that he lost that amount in speculations in Japanese paper money, and the main question to be decided is, is it satisfactorily proven to the Court that such speculation and loss really took place.

The evidence on this point is that of Bush himself, who swears that he lost the amount in question in such speculations, through the agency of a Japanese broker; that he put up margins during the months of November and December, 1879, and January and February, 1880, for the purchase of between 300,000 and 400,000 yen, all of which amounting to over \$10,000 he absolutely lost.

When questioned, however, he is unable to state the name of his alleged broker, or the situation of his office, and announces that he is unable to find him or produce him in Court. He said one of the man's names was Takajiro, but he never heard any other name and never went to his office. All the said transactions took place in his (Bush's) store. Never kept any account in his books of these transactions and never kept any written memo concerning them. His son, a lad of 13 years of age, had charge of his books and entered whatever defendant told him to.

On page 1 of the ledger are a number of entries of cash drawn by Bush, which he says are the amounts used by him in the speculations referred to, but no mention whatever is made in any of these entries as to what use was to be made of the sums drawn or any of them. He admits that he took receipts from his broker for the different sums paid to him, but says he destroyed such receipts a short time previous to his assignment, and when asked why he thus destroyed them, he says, "because I did not want any one to know of my speculations."

The cause was adjourned from day to day and every effort was made on the part of the counsel for both parties,

and by the Court and its officers, assisted by the Japanese officials to discover if possible the whereabouts of Takajiro, the alleged broker through whom Bush claims to have speculated, but no such person could be found, nor could any information be obtained that any such person ever existed or did business in Yokohama.

Takajiro was shown to be a very common name among the Japanese, but no one of that name could be heard of who did business as a broker, or as a dealer in kinsatz, who had ever had any dealings with the defendant Bush, and even since the evidence was closed and the cause submitted the judgment has been delayed, each member of the Court indulging in the hope that some additional evidence would come to light which would sustain the testimony of defendant Bush, or at least afford some colorable opportunity of giving it credit, because we are all loth to fasten upon him the badge of fraud and perjury; but we have now come to the reluctant conclusion that no other course is open to us.

If the losses were incurred as stated by him he was guilty of a great wrong to his creditors, but not of a fraud which the law punishes.

I confess to no very warm sympathy for creditors who, without hesitation, place large quantities of goods in the hands of irresponsible parties, without the slightest security that they will be paid for in the future. Such indiscriminate credit is a temptation to fraud and is a wrong to responsible and honest merchants, but I cannot permit property thus obtained to be fraudulently disposed of if the facts are properly brought to my knowledge in a proceeding in this Court.

It is possible that Bush made the losses as he says; others in this community, who should have known better, have done the same thing, but the evidence of his having done so is wanting. If it ever existed it has been voluntarily destroyed by himself.

His books were so kept as to afford but little information as to his business, but what can be gathered from them establishes either reckless expenditure or an abstraction and concealment of money entirely inconsistent with honest dealing.

An abstract from the Ledger shows that from Sept. 1878 to March 1880 he received monies to the amount of \$54,445.61, while his Bank account, for the same period, shows deposits amounting only to \$25,674.95.

From duplicate bills of exchange presented in evidence and entries in the books and the testimony of Bush it would appear that the latter remitted to San Francisco, as he states, to his agent to be used in the payment of goods, monies, merchandise and drafts amounting with the duties to \$26,868.14. Of this the seconds of exchange in evidence show that by drafts or bills were transmitted the sum of \$14,077.34, in American gold.

As to these bills or drafts, it does not appear whether they were paid for here by check against his deposits in the Bank or in cash, or what proportion was paid for in either.

The difference between the receipts as shown by the books and the deposits is \$29,370.66. The value of merchandise received by Bush during the same period was \$53,253.05.

In the months of November and December, 1879, and January and February, 1880, the receipts appear to have been \$12,266.00 and the deposits \$2,035.64 a difference of \$10,230.79 about the amount he claims to have lost in kinsatz, but had he said he expended it in a railway to the moon, or in warranted fire-proof safes which never burn except in a fire, there would have been as much proof of the assertion as we can find of any kinsatz speculations, except as to an amount of \$1,000.00 entered on one page of the Journal as expended for that purpose. The fact that this \$1,000.00 is entered as used in the purchase of kinsatz and the absence of any other entry of the kind, is a strong circumstance going to show that no other transaction of the kind took place.

Large sums of money rightfully belonging to creditors which disappear from the assets of a debtor cannot be thus slipplantly explained away, and in this case we are driven to the conclusion that Bush has not satisfactorily accounted for the monies in question.

The Court therefore finds that he has fraudulently concealed either property or goods to the value of at least ten thousand dollars, Mexican, which amount he is ordered to pay into Court.

It is also adjudged that the plaintiff recover of defendant Bush the sum of \$24,460 with interest at 10 per cent from the 2nd day of June, 1880, and costs; and that the said defendant also pay the costs of Court, and the fees of Geo. E. Rice and W. H. Talbot, accountants, who examined and made up accounts from his books and papers by order of the Court.

As to defendant Langfeldt, he was made a party to the action, as appears upon the papers, and as has been frequently stated in open court by the counsel for the plaintiff, simply in order that the assets and property of Bush in his (Langfeldt's) hands, as assignee, might be placed under the jurisdiction of the Court.

The action of the said Assignee under the assignment, so far as it appears in the testimony, is fully approved, but the assignment being hereby set aside on account of the fraud practiced by defendant Bush it is ordered that all the monies, goods and assets of every description conveyed under the assignment be, above all legal charges fees and expenses, paid into this Court to be appropriated in such manner to the payment of the judgment in this cause and to the remaining creditors of said Bush as the Court may, in a hearing to be hereafter held, determine.

Yokohama, December 22nd, 1880.

#### OCCULT PHENOMENA, OR TOMFOOLERY IN SIMLA.

The Europeans are frequently in the habit of being astonished at the superstition, credulity, and gullibility of Natives, but it would seem from recent extraordinary proceedings in Simla, which have created great sensation all over India, and have been commented upon everywhere by the press, that the superior Western mind is as prone to be imposed upon and to be as imbecile in its blind credulity as the despised Eastern mind. India has recently been visited by an American gentleman, a Col. Olcott, and a Russian lady, a Madame Blavatsky, with the avowed object of connecting what is called a Theosophical Society, founded five or six years ago in New York, with Native Societies of kindred doctrine. Col. Olcott is President and Madame Blavatsky is Secretary of the Society, the chief objects of which seem to be, so far as they are intelligible, to deify man, and to inculcate a mild sort of Atheism and hatred of Christianity. There is some good, according to the Society, in Buddhism, Brahminism, Confucianism, Mohammedanism, Heathenism, &c., but Christianity is altogether detestable. The pair established themselves first in Bombay, and paid a visit to Ceylon, but dissensions broke out at last between the two and their Bombay disciples, and so they winged their way to the Indian Olympus, Simla,—where their reception seems to have astonished themselves, as it is certainly calculated to do the whole world. It is almost incredible that men and women of position and education, and of sane minds, should allow themselves to be duped as the Simlites appear to have been by this Col. Olcott and Madame Blavatsky, who are the friends and patrons, by the way, of the notorious Dr. Henry Slade. Here is the account of what happened, furnished by Col. Olcott himself for the edification and encouragement of the members of the Society.

##### ONE DAY WITH MADAME BLAVATSKY.

(Times of India, Oct. 19.)

"Extracts from a private letter of Col. Olcott to Damodar K. Malavankar, Assistant Corresponding Secretary, dated, Simla, Oct. 4, 1880.

"Printed for private circulation for the information and encouragement of our Fellows, who will be glad to learn of the deep impression that has been created in official circles by the present visit of Madame Blavatsky and Colonel Olcott to Simla. The undersigned also congratulates his brother members on the fact that the Foreign Office of the Government of India has, under date of October 2nd, addressed a most friendly letter to President Olcott, assuring him that the work of the Society may proceed in India without the slightest interference by the authorities, once it does not meddle in politics either in India or elsewhere. On the whole, the prospects of our Society were never brighter than at present.—D. K. M."

Great day yesterday for Madame's phenomena. In the morning she, with Mr. Syed Mahmood, District Judge (Raibarsilly), Mr. Reed of Ajmere, and myself, went on a pic-nic. Although she had never been at Simla before, she directed us where to go, describing a certain small mill which the Sinnetts, Major Henderson, and even the *jampanis* (*yalki wallahs*) affirmed, did not exist. She also mentioned a small Tibetan temple as being near it. We reached the spot she had described and found the mill—at about 10 a. m.; and sat in the shade and had the servants spread a collation. Mr. Mahmood had joined our party after the baskets were packed,

and so when we wanted to have tea we found we were one cup and saucer short. Somebody asked Madame to produce one by magic. She consented; and, looking about the ground here and there, finally called Major Henderson to bring a knife and dig in a spot she pointed to. He found the ground hard and full of small roots of a young cedar tree near by. These he cut through and pulled up, to a depth of say 6 inches, when something white was seen in the black soil: it was dug, and lo! a cup decorated in green and gold, exactly matching the others Mrs. Sinnett's servants had brought. Madame told the Major to dig more: he did so, and at last found a saucer to match the cup. They were imbedded in the ground like stones naturally there, and the cedar roots grew all around them like a network, and one root as large as your little finger had to be cut away to get at the saucer. Then Major Henderson asked her to explain the science of it, but she said she could not, as he was not yet a Theosophist. He said he meant to be one. "When?" said she. "To-morrow," he replied. Mrs. Sinnett said "Why not to-day?" "So I will," said the Major, "come, Madame, produce me a diploma on the spot!" "If I do, will you really join us?" "I will." "Then you shall have it." She looked here and there and walked about near us a few moments, then sat down on the edge of a little bank. "If you want the diploma, you must hunt for it yourself: the 'Brother' who is helping me says it is rolled up, tied with about 50 feet of blue twine and covered with creeping vines," she said to the Major. The party all went to searching, and presently Major Henderson, raising the low branches of a cedar shrub and parting the grass, said, "I have it!" He really had—one of our diplomas filled out to Major Philip D. Henderson as Corresponding Fellow, and an official letter on my Head-quarters letter paper, written in my own hand writing and signed "Faithfully yours—(the name in Tibetan characters) for H. S. Olcott, President of the Theosophical Society!" Fancy my astonishment. The letter was dated October 23, that is, at the point (or night) between the two days, and it referred to a conversation that had taken place between Major Henderson and Madame Blavatsky only the preceding evening.

As Mr. Mahmood and Mr. Reed were with us at the Sinnett's until midnight, and at 3 a.m. Madame sent Babula to enquire what Mr. Sinnett was calling a servant for and waking her up, you see that not even an enemy could suspect her of any fraud: the more so, as it was the Major who asked for the diploma in the wild woods, three or four miles from home, and got it himself from beneath a small tree which Madame had not even approached. Later in the day, stopping on the way home at the Tibetan temple (which by the way, you will see the very image of in a coloured painting on silk that lies on my bureau in my bedroom, and that was magically produced by her for me in New York one day), and wanting a cup of tea, we found we were out of water. Servants were sent in various directions, but could get none. While Babula was off on a second search, Madame quietly went to the lunch baskets, took an empty water bottle, put it in the loose sleeve of her gown, and came straight to where we were sitting on the grass. The bottle was full of filtered water, of which we all partook.

At 8 p.m. yesterday, we, with the Sinnetts and other ladies and gentlemen, dined at Mr. Hume's as usual. While at the table Madame asked if anybody wished for anything. Mrs. Hume said she did. Madame told her to fix in her mind a very clear and definite image of the thing. Mrs. Hume said it was a breastpin set in pearls and that she had a perfectly clear idea of it. "It has just come to me like a flash!" she said. Madame looked at her fixedly, took a blank card and pencil, and drew the representation of a round pin set with stones of some kind. She said after musing a while, "It will not be brought into this house but into the garden—I am told by a brother." After a pause she asked Mr. Hume if in his garden there was somewhere a flower bed shaped like a star. Mr. Hume said there were several. Madame pointed in a certain direction and said she meant over there. Mr. Hume said there were two such beds there. Madame then told him to come with her and get it himself, as she had seen it drop like a bright point of light into a certain bed. Thereupon Mr. Hume and all the rest of us accompanied her into the garden (a place she had never entered or seen before, as she had always been to Mr. Hume's by night, to dinner at 8 o'clock, and always was carried in the jampan). Searching about here and there with lanterns we found the star-shaped bed she wanted, and, after we had all pulled up a lot of nasturtium and dahlia vines and plants that made a perfect mat of verdure there, Mrs. Sinnett and Captain Maitland (Deputy Assistant Quartermaster-General) at the same moment saw a small white package. Mrs. Sinnett took it. Mr. Hume opened it, and it was then identified by Mrs. Hume as the lost brooch, that she had not seen since long before she ever heard of Madame Blavatsky. Every one present was so amazed and delighted that Mr. Sinnett and Mr. Hume, after consulting together, decided that an account of the affair should at once be drawn up and signed by all present (except of course, Madame and myself) and published in the *Pioneer*. So those two gentlemen retired to another room, drew up the paper, and you will see it in the *Pioneer* shortly. A scientific ornithologist present—Mr. Davison—and a young officer of the 11th Bengal Cavalry, Mr. Beaton, at once applied for admission, as they said that the Theosophists alone knew the science of nature and the powers of man.

Here is the document referred to above as signed by the witnesses to the brooch trick, and published in the *Pioneer*:

On Sunday, the 3rd of October, at Mr. Hume's house at Simla, there were present at dinner Mr. and Mrs. Hume, Mr. and Mrs. Sinnett, Mrs. Gordon, Mr. F. Hogg, Captain P. J. Maitland, Mr. Beaton, Mr. Davison, Colonel Olcott, and Madame Blavatsky. Most of the persons present having recently seen many remarkable occurrences in Madame Blavatsky's presence, conversation turned on occult phenomena, and in the course of this Madame Blavatsky asked Mrs. Hume if there was anything she particularly wished

for. Mrs. Hume at first hesitated, but in a short time said that there was something she would particularly like to have brought to her, namely, a small article of jewellery that she had formerly possessed, but had given away to a person who had allowed it to pass out of their possession. Madame Blavatsky then said if she would fix the image of the article in question very definitely in her mind, she, Madame Blavatsky, would endeavour to procure it. Mrs. Hume then said that she vividly remembered the article, and described it as an old fashioned breast-brooch set round with pearls, with glass at the front and the back made to contain hair. She then, on being asked, drew a rough sketch of the brooch. Madame Blavatsky then wrapped up a coin attached to her watch-chain in two cigarette papers and put it in her dress, and said that she hoped the brooch might be obtained in the course of the evening. At the close of dinner she said to Mr. Hume that the paper in which the coin had been wrapped was gone. A little later, in the drawing room, she said that the brooch would not be brought into the house, but that it must be looked for in the garden, and then, as the party went out accompanying her, she said she had clairvoyantly seen the brooch fall into a star-shaped bed of flowers. Mrs. Hume led the way to such a bed in a distant part of the garden. A prolonged and careful search was made with lanterns, and eventually a small paper packet, consisting of two cigarette papers, was found amongst the leaves by Mrs. Sinnett. This being opened on the spot, was found to contain a brooch exactly corresponding to the previous description, and which Mrs. Hume identified as that which she had originally lost. None of the party, except Mr. and Mrs. Hume, had ever seen or heard of the brooch. Mr. Hume had not thought of it for years. Mrs. Hume had never spoken of it to any one since she parted with it, nor had she, for long, even thought of it. She herself stated, after it was found, that it was only when Madame asked her whether there was anything she would like to have, that the remembrance of this brooch, the gift of her mother, flashed across her mind.

Mrs. Hume is not a spiritualist, and up to the time of the occurrence described was no believer either in occult phenomena or in Madame Blavatsky's powers. The conviction of all present was that the occurrence was of an absolutely unimpeachable character as an evidence of the truth of the possibility of occult phenomena. The brooch is unquestionably the one which Mrs. Hume lost. Even supposing, which is practically impossible, that the article, lost months before Mrs. Hume ever heard of Madame Blavatsky, and bearing no letters or other indication of original ownership, could have passed in a natural way into Madame Blavatsky's possession, even then she could not possibly have foreseen that it would be asked for, as Mrs. Hume herself had not given it a thought for months.

This narrative, read over to the party, is signed by.

A. O. Hume	Alice Gordon
M. A. Hume	P. J. Maitland
Fred. R. Hogg	Wm. Davison
A. P. Sinnett	Stuart Beaton
Patience Sinnett	

The Simla correspondent of the *Pioneer* explains as follows in all seriousness how the brooch trick was done:

"I fear I am going to say something which will seem the merest gibberish to the ordinary mind; but for any of the twenty million Spiritualists who may read these lines and who have vainly pondered over their unaccountable experience concerning the instantaneous transmission of objects from a distance, the suggestion will perhaps afford them a ray of welcome light. Objects transmitted or propelled by Indian occultists through space,—or, similarly brought by the agencies at work at spiritual seances, are not propelled bodily. They are disintegrated in the first instance, by the exercise of that superior knowledge of the laws of matter of which I spoke just now, and conveyed as infinitely minute particles or currents of psychic force to any given place, and then re-integrated so as to become once more the solid tangible bodies they were at first."

It is explained in another more intelligible way by a correspondent of the *Times of India*, by making known that a young gentleman, who was intimate with Mr. and Mrs. Hume, on his way home stayed with Madame Blavatsky, in Bombay, and Col. Olcott arranged for his passage home. Another correspondent writes to the papers to ask how Madame Blavatsky, when she lost some gold buttons in Bombay, was obliged to apply to the Police and then did not recover them. Well may the *Times of India* comment as follows upon the folly and gullibility of the actors engaged in this tomfoolery:

We should have taken the letter published elsewhere for a hoax, had we not also been inclined to take the first authentic narrative for a hoax too. But it unfortunately was not a hoax. There is nothing in the second narrative to render it more improbable than the first, and whether it be true or not, we hope that "official circles in Simla" are proud of such of their members as have lent themselves to the practice of such insane tomfoolery. We scarcely know how far officials of position are justified in lending their names as an advertisement to the magical powers of Madame Blavatsky; but they undoubtedly bring their office as well as themselves into contempt, for it is impossible to have much faith in the official utterance of any gentlemen who allow themselves to believe that cups and saucers, fresh water, brooches, documents, yards of twine, cigarette-papers, and a variety of other articles can be produced at the mere volition of an elderly lady from Russia via America. But an undue devotion to magic promises to become a nuisance, socially as well as officially. A night or two since a well known gentleman in Bombay was awakened by a long telegram from Simla, coming from one of the "nine witnesses well known in Simla society," praying him to start forthwith and climb one of the public statues of Bombay. In a certain position of the statue he was told he would find a cigarette tied with three hairs. The transmitter of the telegram added that the dis-

covery of this cigarette was of immense importance, and concluded with the very pertinent remark, "I am not mad." The gentleman who received the telegram very good naturedly carried out the absurd instructions, but no trace of the cigarette tied with three hairs was to be seen. Something had gone wrong, perhaps a hungry crow pounced on the cigarette; but if everything had gone right, we should still fail to see anything in it, but a silly attempt to hoodwink an individual whose name and position might make his testimony useful. It is high time that "official circles at Simla" voted the whole thing a "bore" as well as a "sell." Even at home men of position would not be permitted to make a public parade of their folly, and out here, where so many millions of ignorant natives are ready to swallow any nonsense that bears the faintest impress of official sanction, it is still more desirable that the official devotees of Magic should keep their strange doctrines to themselves.—*Straits Times*.

### MISS BIRD'S JAPAN.\*

Miss Bird is one of the most indefatigable and the most adventurous of travellers, male or female. The love of wandering seems to have grown upon her, till each record is more astounding than the last. She tried her prentice hand at the Sandwich Islands; then she took to the rough mining tracts of Western America; and now she presents us with her notes of travel through untrodden Japan, and of visits spent under the hospitable roofs of those mysterious and interesting savages, the Ainos or aborigines of the northern island. Her book abounds with pleasant reading, while her natural quickness of observation and the novelty of her subject often give more than a passing value to her remarks.

Miss Bird went to Japan for the benefit of her health. But, having arrived there, her naturally independent and somewhat eccentric spirit would not allow her to settle down quietly amid the comparative comfort of Tokio or Yokohama. She wanted to "rough it" in the interior; and she probably found the opportunities of "roughing it" were quite sufficient even for her venturesome fancy. After a short stay in the capital, where she picked up such scanty information for the route as was obtainable, she engaged a young Japanese man-servant for her escort and body-guard, and started for the north without any other society than that of this faithful courier. Dressed in her American "mountain dress" supplemented by Wellington boots, and mounted, sometimes on a sorry Japanese horse, sometimes even on a pack cow, she made her way, with the occasional aid of a native packet-boat, from Tokio to Yezo, and lived for several months wholly among unsophisticated Japanese rustics and the aboriginal Aino savages. Her picture of Japan is not quite so rose-coloured as that given by most European travellers; in fact, it is not rose-coloured at all. The simplicity of Eden mingles in rural Japan with the unconquerable filth of St. Giles'; the children are dirty and ill clad, the men can only be induced to wear clothing by fear of the police; and the general aspect of the towns and villages is mean and squalid. Buddhas, noseless and lichen-covered, standing neglected by the wayside or prostrate among grass and weeds, bespeak the decay of the only old creed which had any vitality left in it; while the well-known indecorum of Japanese manners, was sometimes too strong even for so unprejudiced a traveller as Miss Bird, whose Hawaiian experiences must have already prepared her to endure some laxity in matters of etiquette with comparative equanimity. But the total want of privacy was annoying to the last degree, and was aggravated by the natural curiosity of the people to behold so strange a phenomenon as the foreign traveller. Yet when Miss Bird met a medical missionary on one of his expeditions, drawn in a sort of Bath chair, "with a tandem of two naked coolies who were going over the ground at a great pace," she could not help wishing "that some of the most staid directors of the Edinburgh Medical Missionary Society could have the shock of seeing him." Perhaps however, the bravest of all the gallant lady's brave deeds was the fearless manner in which she entrusted the care of her health during a passing feverish attack to a native doctor of the old school, who treated her to a dose of medicine from the genuine Japanese pharmacopoeia. Yet, after some months of local cookery, even these marvellous drugs may become palatable enough.

Uncomparably the most interesting part of a most interesting work is that which refers to the Ainos, of whom we have never before had so full and accurate an account. Miss Bird spent several days and nights in the huts of these remarkable people, sharing their daily life and making minute notes of their doings. Her pictures of them represent their faces as very European in type, agreeing in this respect with those already published. As to the famous hairiness of the Ainos, which Mr. Darwin regards as a reversion to a primitive type, Miss Bird thinks it has been somewhat exaggerated by the smooth-skinned Japanese. Nevertheless, she herself was ferried across a river by one Aino "completely covered by hair, which on his shoulders was wavy like that of a retriever, and rendered clothing quite needless, either for covering or warmth;" and in another place she met with a second old man, whom she emphatically describes as "the Missing Link." His face was vacant and apathetic, his arms and legs were unnaturally long and thin, he squatted with his knees tucked into his arm-pits, and his whole body was covered with black hair "more than an inch long" and slightly curly on the shoulders. He had, however, a bare patch on each side, probably marking the parts on which he rested when asleep: a peculiarity found in the gorilla, who has a bare spot on his back where he leans against trees. It is remarkable that in the few drawings which we still possess of palæolithic men, rudely carved by themselves on bits of reindeer-bone or mammoth ivory, they are represented with hair covering their bodies, and with

beard and poll of the Aino type. These peculiarities are strikingly unlike those of the smooth-faced Eskimo, with whom the palæolithic men have been identified on the evidence of their works of art, and strikingly like those of the aboriginal inhabitants of Japan. It would be instructive if we could compare an Aino skull with that from the Neanderthal.

In habits and manners the Ainos appear to be very inoffensive savages, with only the most rudimentary arts and religious beliefs. Their creed does not apparently go much beyond ancestor-worship. They believe that the fins of their fishers turn into wolves and snakes; and they venerate the wolves and snakes accordingly. Their gods are wooden posts, decorated with shavings. Their only act of public worship is the offering of *sake*, the favourite Japanese spirit, to these rude deities; and they do not make offerings of food, not considering it of sufficient value. As the living Ainos are hardened drunkards, they perhaps judge correctly of the tastes of their deified ancestors. Many particulars as to the Aino huts and mode of living show them to be rather connected with distant races than with the neighbouring Mongoloid peoples. Miss Bird gives a considerable vocabulary of the Aino language, which may assist philologists in settling the true affinities of this interesting tribe. In an age when so many aboriginal races are fast dying out, it is some comfort to know that the Ainos are not decreasing in numbers and may survive till the scientific ethnologist has had time to collect full information with regard to their tongue, their beliefs, and their relationships. After that there can be no particular reason for wishing to preserve them; for their lives can hardly be regarded as happy, and the women at least seem to spend their days in melancholy and hopeless drudgery. Miss Bird has done good service in adding so much to our knowledge of these curious people, while they are still within the reach of observation.—*St. James's Budget*.

### WHAT SHALL WE THINK OF THE KURDS?

Worshipful patrons of "young nationalities,"  
Ardent promoters of "movements of race,"  
Learned in Destinies, Forces, Fatalities,  
Help us to settle a troublesome case.

For proper bestowing  
Of sympathies glowing  
We feel a solicitude stronger than words;  
So, please, a suggestion  
For solving the question  
Of what should be thought of the Kurds.

How should it act on our moral economy  
Tidings to get of Abdullah the Sheikh  
Boldly proclaiming a Kurdish autonomy,  
Just as it might be Slavonic or Greek?  
This being read of him,  
What's to be said of him—  
He who this national movement has stirred?  
How should we meet it,  
How properly treat it—  
The raid of this vigorous Kurd?

Turkey we all of us know is "unspeakable;"  
Persia is "cruel, corrupt, and effete;"  
Should we, then, hope that Abdullah's a Sheikh able  
Sultan and Shah and their armies to beat?  
Does he, like Hofer,  
A tyrant to "go for,"  
A sword of deliverance valiantly gird?  
Ought we to pray for him?  
Ought we to say for him  
Go it, my patriot Kurd?

Or shall we check sentimental intensities  
While we recall the repute of the tribe,  
Persons to whom certain ugly propensities  
Common report has been wont to ascribe—  
A proneness unpleasant,  
To harry the peasant,  
His homestead to wreck and to seize on his herds,  
To ravish and slaughter  
Wife, grandam, and daughter—  
For that is the way of the Kurds.

Say, shall we then to an infamous State or to  
Infamous subjects our favour refuse?  
Answer us, sweet casuistic *Spectator*, do!  
Prithee enlighten us, good *Daily News*!  
Let us know whether,  
Comparing by feather  
These most disagreeably similar birds,  
Morality's letter  
And spirit go better  
With blessing or banning the Kurds.

Can we wish well to the cause of autocracy,  
Knowing the sins of the Sultan and Shah?  
Can we for triumph of Kurdish democracy—  
Triumph of murderous brigands—hurrah?  
Or would it be moral,  
In view of this quarrel,  
Impartial dislike to distribute in thirds?  
Two parts of aversion  
For Turk and for Persian,  
Remainder reserved for the Kurds?

—*St. James's Budget*.

## BREAKER POINT LIGHT-HOUSE.

NOTICE IS HEREBY GIVEN that the Light on Breaker Point was exhibited for the first time at sunset on the 8th December, 1880.

The illuminating apparatus is a First Order Dioptric Occulting Light alternately showing for *eight seconds* and suddenly disappearing for *two seconds*. It shows *white* from S. 55° W. round by W. to N. 53° E., and *red* in shore of both these bearings as far as the land. The bearings are magnetic and taken from seawards.

The light is elevated 152½ feet above the level of the sea, and in clear weather it should be visible at a distance of 19 nautical miles.

The tower is round, of iron, 91 feet high, with a total height from its base to the lantern vane of 120 feet.

The tower is painted in black and white horizontal bands, and the dwellings and boundary wall white.

Approximate position—Latitude.....N. 22° 56' 30".

Longitude.....E. 116° 28' 10".

By order of the Inspector General of Customs.

## 1880.

ISSUES so numerous and momentous seem to await us beyond the threshold of the new year that we can scarcely find either leisure or patience for a deliberate retrospect of its predecessor. Not indeed that 1880 has by any means lacked its own share of those troubles and turmoils which seem to be the heritage of the century's old age, impelling us sometimes to think that the machinery of life has grown too cumbrous for the purposes to which it is applied, and that jarless motion in the smooth well-ordered grooves of bygone days can never again be our happy lot. In this respect the past twelve months have more than satisfied the average, nor is it to be denied that of unforeseen emergencies and stirring events they have furnished history with a goodly quota. But for all that the impression their reminiscence conveys is one of incompleteness. Their incidents seem but the earnest of outcomes immeasurably more critical, so that one almost fears to forecast the changes another round of seasons may accomplish in the world's landmarks.

For the moment, however, our concern is with the past, and as we bid farewell to the dead year our first thoughts are for those whose names have been added to the long list of friends we may not meet again. One above all there has been of whom we dare not trust ourselves to write, lest by any chance we should seem to measure her worth with words. So closely was her name associated with the brightest phases of our exile, and so large a share of our affections did her life of wide sympathy and gentle ministration win, that we have scarcely yet learned to realize her loss, nor to discern anything among the memories of other days save the shadow of her newly made grave. Bereavements touching us more closely and of which the outer world knows little, have no doubt fallen

to many of our lots since the old year was young, but it can hardly be that the guardian angel has conducted any nobler spirit through the road with many windings, or that the future has less promise of solace for any than her mourners.

The formal record of Lady Parkes' decease did not reach us till last January, though the event really belongs to the preceding November, and within a very short interval of the same date, a year later, occurred the death of Mr. Sameshima, Japanese Minister at Paris, a gentlemen whose loss will be felt not less keenly by his country than by his friends. A man of large erudition and most enlightened views, he was preëminently one of those who with few opportunities and little leisure, have been able by sheer force of industry and resolution to place themselves abreast of the progress their country had so long ignored, thus winning for Japan repute such as has seldom fallen to the lot of any nation. If under an effort so arduous some, like Mr. Sameshima, have sunk exhausted, shall they merit scantier gratitude or a less enduring tribute of praise?

For the rest the circumstances of our social life have undergone no very noteworthy change during the year just expired, except perhaps that we have been somewhat rudely roused to a sense of the perils attending a residence in this country. Never since the terrible earthquake that laid half the Eastern Capital in ruins has Japan been visited by such a shock as that experienced on the 22nd of February last. Chimneys twisted or overturned, roofs untiled, walls cracked or denuded of plaster, bore witness to the intensity of the phenomenon, and probably many of us who had previously been wont to regard these capricious vibrations with comparative indifference, have since then experienced a considerable change of sentiment. It is indeed a curious fact, and one which the experience of our readers will no doubt endorse, that in the case of earthquakes, familiarity has the effect of intensifying rather than mitigating the alarm their occurrence produces. The fortitude that enables us to sit calmly through our initiatory trials seldom survives many repetitions of the ordeal, and it would probably be found, if we had any statistics to consult, that the disturbing effects of last spring's 'shake' were certainly not least appreciated by the old residents. Another shock, less violent indeed but quite sufficiently severe to be alarming, was experienced on the night of the 23rd of December, while from the island of Iki it is reported that in the month of May, a similar visitation resulted in the destruction of many houses and the loss of several lives. All this, added to the fact that earthquakes have unquestionably become more frequent of late years, disposes us sometimes to contemplate rather unpleasant contingencies. Meanwhile one benefit has accrued from our February trouble. The following month witnessed the formation of a Seismological Society, which has already done some good work, and for

which we do not hesitate to predict a distinguished future.

Our relations with the Japanese too are apparently unaltered. The long deferred question of treaty revision is still in abeyance; shorn indeed of half its interest by procrastination, but none the less vital both to our commercial welfare and to the prosperity of this empire. It is no longer possible for Japan to regard her foreign trade either as an excrescence that can be lopped off at will or as a fortuitous means of providing unneeded luxuries. A time there was, no doubt, when conservative statesmen deemed it feasible to circumscribe the irksome growth of international intercourse, and acted in obedience to their faith. Whether they were altogether unwise in their dream of a peaceful people drifting contentedly on the tide of traditional routine, and holding always aloof from the verges of that ever accelerating maelstrom of distraction and discontent into which the western world has irrevocably plunged, who shall take upon himself to say? Not we at any rate, who have known Japan as it was and is, and who can recall the days when the ring of a very few coins sufficed to scare the wolf from the door, and the sunshine made its way into places now brooded over by the shadow of sorrow alone. But the barrier is broken down and no mortal power can stem the torrent that surges over it to-day. The old has come into sudden and sharp collision with the new, and like a ripple on the surface of still water, the wave of the vibration has crept gradually over the face of the land, until its influence has been felt for good or for evil in every corner of every province. Nothing can now be gained, though much may be lost, by perpetuating a policy of seclusion, however appreciable the motives that dictated it originally, and in saying this, we may at the same time record our persuasion that similar opinions are held by those who are in a position to give them effect. The present staff of the Foreign office includes an amount of ability and practical experience from which we cannot but anticipate large results, and it is a matter for congratulation that such a personnel has been available at such a juncture.

This part of our subject suggests a point deserving of special notice, not only because its nature renders it liable to be overlooked, but also because we regard it as one of the happiest reforms the past year has witnessed. We refer to the change that has been effected in the fashion of conducting diplomatic relations with the Japanese. It is not necessary to consider here whether anything short of the imperious policy once pursued would have sufficed to break down the barriers of obstruction and evasion circumstances or prejudice had set up. Neither are we by any means prepared to endorse all that has been written on this subject by travelling politicians. Honest criticism and partial censure differ widely, and though we cannot persuade ourselves to believe that liberty is a just pretext for the oppression of extra-territoriality, or that a country's right to regulate her own tariff varies directly as the aptness of that tariff to alien ends, we can and do appreciate in the abstract the zeal that has hitherto upheld those principles, no less than the extreme difficulty of maintaining such a cause with any show of suavity. Other counsels, however, have prevailed, and whether their resultant action has proved either perfunctory or inadequate, is a question the future may be left to answer. For the present we are content to include amongst eighteen hundred and eighty's most valuable legacies the discovery, that courtesy may prove a factor not wholly superfluous in dealing with a people themselves eminently courteous.

Since the War of the Restoration no year has been so free from political assassination and popular disturbance as the

last. There cannot now be any doubt that the old elements of agitation and discontent are gradually disappearing and that the sword will in future perform a very secondary rôle in the solution of national problems. Considerable activity has nevertheless been exhibited by the various 'Reform Societies' throughout the country, so much so indeed that the Government has been compelled to exchange its somewhat nominal censorship for measures more directly prohibitive. And we have no hesitation in endorsing the wisdom of this action, for though the choice of a people's opinions by its rulers, or the establishment of any barriers to the free exercise of men's thinking faculties, is a function of government that has been long pronounced pernicious, the present case seems to be altogether exceptional. Nothing can be more contemptible than the real motives of these patriotic (!) agitators. Their outcry indeed is for a representative Government, and in this we could heartily sympathize, were it possible to accredit them with anything of the spirit that animated our own forefathers. But the truth is far different. It is not that they have suffered anything under the present régime, or that they have any just cause of complaint against their rulers, but that the very reforms for whose extension they clamor, have deprived them of the ability to remain idle roisters. Something they have forfeited, but whether they are likely to recover it under the institutions they advocate, and whether it would be for the benefit of the country that they should recover it, are questions we leave them to consider.

Of course our words are not intended to apply to the Reform Clubs *en masse*. Many a man of real heart and ingenuous purpose is no doubt included amongst their members, but for such we can only feel pity. Nine out of ten are dazed by a jargon of aphorisms they have been trained from their childhood to revere, and the tenth follows because it has always been his habit to be led. What can these men, whose education was limited to the interpretation and construction of hieroglyphics, until chance or artifice placed in their hand a few socialistic diatribes and radical pamphlets; what can they possibly know of a representative government's machinery or requirements? The whole thing is a farce, and were fitter food for mirth than censure under different conditions. As Japan is circumstanced at present, however, it would be an unpardonable piece of folly on the part of the Government to permit the free dissemination of revolutionary doctrines amongst men incapable of discerning their mischievous tendency; men who have not yet learned to abjure the old creed that made a fief the first object of its vassals' patriotism, and who are still ready to espouse any cause that possesses a semblance of association with the principles of hereditary allegiance. So long as anything of this now erroneous confidence remains, it is surely the duty of those in power to prevent its abuse by every possible means, and in this motive will be found a justification of many official acts that might otherwise seem to savour of frivolous, nay almost tyrannical, interference with the freedom of speech and thought. As a matter of fact the proceedings of these so called patriotic clubs do not merit a tithe of the attention they attract, but for our own part we heartily share the hero of the "Golden Butterfly's" aversion to 'shoddy,' and when we find a reputable newspaper declaring that natural laws make it obligatory on every citizen to take part in politics, we are irresistibly reminded of Plato's democracy, in which the very beasts became so gorged with freedom that they ran at everybody who came in their way!

It were well indeed for Japan if we had nothing more disheartening to record of the past year than these shadowy agitations and the measures they have entailed, but unfortunately other and graver subjects of concern are not wanting. Foremost of all is the depreciation of the currency; a depreciation which has not yet attained anything like the dimensions of its trans-Pacific type, but is still of sufficient magnitude to threaten disastrous consequences, if left unchecked. In the immediate presence of a great evil there is need of remedy, not recrimination. That no satisfactory system of finance can possibly be built on the basis of an inconvertible paper currency, is an axiom of political economy few will now be found to deny, and certainly not the ministers of modern Japan, whose too close adherence to the theoretical principles that obtain elsewhere has already proved a not unfrequent source of embarrassment to themselves. But it has become too much the fashion with foreign critics to forget the stupendous difficulties that beset the Government of the Restoration at the outset of its career. With an empty exchequer, scant moral support from without and amid a multitude of conflicting counsels, they were called upon to undertake a work of reconstruction that would satisfy the demands of western canons and at the same time conciliate national prejudices, while the only materials available for the purpose were the debris of a system scarcely yet demolished, and whose parts had been fashioned into most obdurate forms by centuries of habit and intergrowth. To expect anything like complete freedom from error under such conditions would plainly be ex ravagant. Mistakes there have been, many mistakes in truth, now easily discernible by the light of the wisdom that succeeds the event, but whether they have been disproportionate to their causes and how many of them are attributable to advice well recompensed but ill considered, it scarcely comes within the scope of this article to consider. Their sequel is unhappily what we have to record, and a sad sequel it is for one section of the community. For all the necessities of life have attained a value so utterly disproportionate to their cost of production and consequently to the means of procuring them, that while producers have enjoyed unprecedented prosperity, consumers have been driven to straits which often make death seem preferable to the hopeless struggle for a miserable existence. It is well, at the same time, to remember that this indigence is entirely confined to the humbler classes of the urban population. The condition of the rural districts is exactly the reverse. There the present high prices, supplementing a succession of plentiful harvests, have brought about such welfare as no living man can remember to have experienced before. Articles of luxury, nay even objects of virtù, that once knew only patrician possessors, now find their way to the villages and hamlets, while farmers who formerly wore cotton girdles, go to market to-day in silk coats. Thus if the distress and crime of which the city annals supply so many instances be laid to the charge of the depreciated currency, the prosperity of the agricultural districts must, with equal justice, be set down to its credit.

Nor would it be just to ascribe the ruling values entirely to an abasement of the medium of exchange. Another factor, commonly overlooked though of no little moment, is the great diminution of domestic manufactures brought about by the abolition of the feudal system. Under the old régime the pay and allowances of the men-at-arms never sufficed for their maintenance, so that they themselves, as well as their wives and families, were invariably producers of home-made articles in large quantities. After

the establishment of the central government this of course became impossible, and though perhaps the immediate effect was an increment of similar industry amongst the rural classes, to restore the equilibrium of demand and supply, it would appear that the prosperity of later years has either checked this activity, or enabled producers to abstain from sale in a rising market, so that for the moment the effect of domestic manufactures in reducing prices has been almost completely eliminated.

Meanwhile the government has been busily engaged in devising methods of economy or preparing schemes for the reduction of the paper money in circulation. Their task is beset with difficulties, for the very causes that recommend retrenchment interfere with its practice, and the steady depreciation of the currency has induced conditions that forbid anything like precipitancy of reform. We shall take occasion to examine these points in detail hereafter. For the moment it is enough to say that sincere effort is generally attended by success, and that we have every faith in the honest purpose of Japan's present statesmen.

In this connection we are naturally led to consider the state of the foreign trade during the past year, and on the whole it must be pronounced prosperous. Two causes have operated to produce this result. The first is the augmented wealth of the agricultural classes—wealth which has largely multiplied their purchasing power. The second is the decreased value of money resulting from the depreciation of the currency, a decrease which has naturally fostered a speculative demand for imported articles.

Exception may be taken to this estimate on the grounds that sudden and rapid fluctuations of the circulating medium tend to disturb contracts and render all pecuniary engagements of long date completely precarious. This is undeniably true, and under the immediate pressure of these evils, many have perhaps failed to share the more general advantages accruing from a well-stocked money market, while at the same time transactions of a fictitious character, such as invariably accompany an unstable condition of the currency, have diverted speculation from the legitimate channels of trade, and frequently resulted in losses more prominent than the less speedy profits of ordinary commerce. Still we believe that the balance has been in favor of the latter, and earnestly as we desire a rapid appreciation of the currency, we cannot fail to foresee that its earliest effects will be debilitation of the import trade.

Exports on the other hand have of course been influenced in the other way, and a more considerable diminution would no doubt have been witnessed but for increased activity and gradually improving processes of production, combined also with the insatiable appetite of the American markets. In the case of silk for example, the United States have absorbed large amounts of the best qualities, and it seems not unreasonable to predict that the great bulk of this staple will hereafter find its way to the 'land of limitless resources'; as for Europe, a steady decline in prices has prevented her from receiving her usual proportion, while the ameliorated condition of the agricultural classes has, on the contrary, enabled Japan herself to retain more than her wonted amount. The production has however kept pace with both the home and trans-Pacific demand. The mulberry plantations have been largely extended in the great silk districts and elsewhere, while accidents that formerly interfered with regularity of supply, are now in a great measure prevented by more scientific arrangements.

Of silkworm eggs the supply for exportation has been much less in the past than in the preceding season, and we have witnessed a successful combination on the part of the Japanese merchants against the Italian graineurs. Some profitable sales having been achieved in Milan by native dealers, who had themselves accompanied their wares westward in the spring, about fifty-seven thousand cards of the very best quality were subsequently withdrawn from the Yokohama market by the producers, and shipped direct to Italy under the charge of a leading provincial merchant. This diminution of the supply naturally enhanced the value of the residue and enabled holders to realize very lucrative figures.

The tea trade too has been steadily expanding. Low prices certainly rule at present in America, but the consumption has increased in perhaps a more than compensatory proportion, so that altogether the year just closed may be counted favorable both by exporters and planters. The quality of the leaf has somewhat deteriorated, but whatever change America may demand in this direction can always be effected by Japan. Moreover a fresh impulse to production will be furnished, should the manufacture of Black Tea for export to Europe experience any development. Previous efforts in this direction have been on too small a scale to yield any considerable profit to the producer, but the low prices ruling in America will no doubt suggest a more persistent appeal to the consumers of the Old World, and we can scarcely question the issue, seeing that Japan has proved herself competent to manufacture teas of all grades and of the best qualities. It is a cardinal error for any nation to have only one market for her productions, and an increased export of Black Tea to Europe could not fail to exercise a beneficial effect on the trade generally.

A salient feature in the commercial history of the past year has been the steady development of native companies directly engaged in foreign trade. The most noteworthy examples are the Bussan-gaisha, Okura & Co. and the Kosho-gaisha. The success attending their business transactions in Europe, America and elsewhere, has provoked imitation, and not a few associations for similar purposes have lately been established, or are in process of formation.

As a token of independent efficiency alone this is of course a subject for congratulation, but it has another aspect also not less felicitous. It is only through the influence of such guilds that the art manufactures of Japan can be restored to anything like their ancient excellence. Of late years the great bulk of the articles destined for the foreign markets, whether porcelains, bronzes, ivories, lacquers or enamels, have exhibited a minimum of careful workmanship and a maximum of deceitful showiness; attributes diametrically opposed to the principles that obtained in bygone days. This deterioration has gradually been growing more and more perceptible, until at last it became apparent that the æsthetic canons of Japan would presently exist only in the memory of their fast diminishing disciples, and that a few cherished relics would soon be the sole evidences of a perished power. Nor could it well be otherwise, seeing that the munificent patronage of the feudal nobility is no longer exercised, and that the purpose of the manufacturer has been changed from perfection at any cost of time and toil to profit at any sacrifice of tradition and reputation. From so lamentable a decadence no salvation is more probable than the action of native merchants associated in large bodies for the purpose of carrying on a direct foreign trade. It is their interest to pro-

vide for exportation something better than the trumpery with which their country's markets are now stocked, and under their patronage art may find leisure to purge itself from catchpenny conceits and bastard garnishment. That such a result is likely to be attained—in part at least—any one can assure himself by a walk round the bric-a-brac stores of Yokohama and a subsequent visit to the warehouses of the Kosho-gaisha. Let him be ever so little versed in matters of art, he cannot fail to perceive a vast difference between the wares exhibited in the two places; a difference not merely technical but æsthetic, and one which makes us hope that the company will soon cease to seek a market for its exports in America alone.

With regard to the constitution of these associations, an impression seems to prevail that they have been established under Government auspices. This is an error. They are for the most part companies of limited liability, without any guarantee whatsoever of official assistance. If in the distribution of the public business a preference should be shewn in their favor, it will probably be justified by their superior efficiency, and can scarcely be counted too partial patronage even by the staunchest advocates of the *laissez-faire* principle.

We have not ventured in this retrospect to turn our eyes toward the story of the outer world, though, as we stated at the outset, it contains elements of absorbing interest. The sequel seems too momentous to be calmly contemplated. Whether the Eastern question can ever be peacefully extricated from its present entanglements; whether we have confirmed our supremacy in India or roused the agents of its ultimate overthrow; whether the integrity of China is on the verge of destruction, and whether Ireland, poor erring, suffering Ireland, is to be brought back to her allegiance by love or the lash; what prophet can possibly predict? Let us hope, at any rate: hope that a second Athens may rise on the ruins of Constantinople; that the 'scientific frontier' may be definitely attained and for ever maintained; that Russia may remember to be magnanimous as well as mighty, and finally that Ireland by some happy device may be taught the truth of Lowell's lesson:

'If you take a sword an'dror it,  
An'go stick a feller thru,  
Gov'ment ain't to answer for it,  
God'll send the bill to you.'

#### OLD SCHEMES REVIVED.

WHEN amongst the contingencies of its origin the Central Government found itself saddled with a small foreign debt, there were not wanting men of the old 'Joi' party who fancied they discovered in this liability a source of imminent peril to their country's freedom.

The idea was not unnatural. They had not yet learned that no war can be more unwelcome to a civilized nation than one undertaken to avert mere pecuniary loss—a barrier of blood against treasure—and still less did the traditions of feudal obligations permit them to comprehend, that a wise state no longer pledges itself to support its subjects' claims, when those claims emanate from accidents which it is fairly within the province of individual volition to avoid. Even the very pertinent precedents of Turkey and Egypt probably failed to beget much assurance when considered in connection with the ring of shot and steel that constantly pervaded western diplomacy in matters much more trivial, and we, who appreciated these conditions, were rather amused than astonished by the multitude of quaint projects devised in

those days as liquidators of present, and panacea against future, foreign debts.

It was not long, however, before the Japanese began to understand that European capitalists are as a class tolerably facile, and that a forfeiture of national honor, not a sacrifice of blood or territory, is after all the only serious barrier to repudiation. The debt so far from being discharged was increased, and ceased to give the state much concern, beyond the occasional inconvenience of collecting and transmitting interest. The old scare was for the moment dispelled and Japan seemed content, like other countries, to indulge freely in the luxury of national mortgages.

It is therefore somewhat curious to find the long-buried question once more resuscitated in the form of a proposal to extinguish the debt by a general contribution, amounting to one yen and a half for each household, or thirty-eight sen for each individual of the whole population. We do not for a moment doubt the feasibility of such a scheme. It would appeal to a sentiment of unreasoning patriotism largely possessed by the Japanese people; a sentiment capable of being fanned into something very like fanaticism, and which has already proved itself competent to dictate even greater sacrifices for less obvious reasons. Were it otherwise indeed, we should scarcely feel justified in detailing arguments that have long passed into aphorisms, and which must be sufficiently familiar even to Japanese economists.

The propriety or impropriety of contracting a national debt depends above everything on the source from which the funds are obtained. If they are abstracted from capital engaged in production, the proceeding is equivalent to a diversion of the same amount from the wages of the labouring classes, and is consequently one of the very most pernicious expedients to which a government can resort. If on the other hand they are procured from the surplus accumulations of the world—that is to say from foreign capital—the operation cannot be charged with any more serious objections than those common to all pecuniary liabilities. Now the latter is the condition that exists at present, while the former is the one that would be attained were the proposed scheme carried into effect. In other words, the wealth-producing capabilities of the country would be suddenly and seriously impaired for the sake of abolishing an encumbrance objectionable principally on romantic grounds. Moreover, to distribute the debt in equal proportions among the individuals of the nation would be an obvious and gross injustice. If any system of general assessment were advisable, it ought to be in the nature of a property tax, for this is not open to the same exceptions in the case of a debt recently contracted, as in that of one inherited from previous generations. Perhaps too such a system could be applied with peculiar advantage in Japan, where the whole of the land is the direct property of the state, and where, as at present, the land-holders are enjoying an exceptional degree of prosperity.

All these considerations, however, sink into utter insignificance in view of the incomparably greater burthens that oppress the country to-day. The moral obligations of a state towards its own subjects take precedence of all other responsibilities, and so long as the present depreciated condition of the currency continues, not a single cash of the public funds can equitably be devoted to such a purpose as the liquidation of a foreign debt. Rather, far rather, let that debt be increased, if only the funds so obtained can be judiciously applied to the amelioration of the intolerable evils entailed by a fluctuating medium of exchange. No really serious mischief has yet been worked. Measures moderately palliative—measures at any rate much less violent than those proposed by these visionary abolitionists of foreign debts—might soon produce

an appreciation of twenty or even thirty per cent, and what then would be the effect on the national finances as compared with deliverance from some paltry payments of annual interest? Truly it is well for those that have leisure to dally in such a fashion with the troubles of their country.

## COREA.

THE buildings on the Japanese Concession at Fusan in Corea are now nearly completed, and according to the latest advices, the christening of wards and numbering of streets has commenced, such names as Honcho, Yamato-machi, Hiyo-shicho and so forth apparently being the favorites; names that will presently no doubt become famous in the records of globe-trotters and curio-hunters.

It seems a strangely ironical reflection on the justice of nature's dispensations that the old age of the nineteenth century should witness Japan's first permanent settlement in a country from which she originally derived almost all the arts of civilized life: letters, medicine, astronomy, chronology, architecture, ceramics and a multitude of minor matters. For such are undoubtedly the facts, and in view of them we may safely assert that the history of nations furnishes no more marvellous example of immutability than that of Corea. There was a time when the peninsula was known to Japan as the 'Treasure Land of the West,' and as the troops of the Empress Jingo Kogu turned their galley-prows seaward in the first year of the third cycle of our era, they surely saw many golden visions beyond the perils of sea and sword. The 'casus belli' was one that would scarcely be approved by modern jurists, for it was nothing more than the alleged detention by Corea of a hundred pieces of silk destined for the Chinese court, a pretext scarcely more frivolous, however, than that assigned by Hideyoshi in support of a similar proceeding some thirteen hundred years later. But the Coreans of old times seem to have been gifted with very accurate powers of observation and deduction. Of the three Kingdoms into which the peninsula was divided, one only—Shiragi—offered any armed resistance: the other two—Koma and Kudara—took warning by their confrère's discomfiture and submitted quietly to the invader.

From that time the lost pieces of silk were replaced by assortments of all the choicest productions of Korai (Corea), which were forwarded yearly to Japan by way of tribute, to the amount of eighty ship-loads. Even tradition fails to afford any accurate information as to the nature of these wares. Silks, metal-work and pottery probably constituted the staples, but nothing seems to have excited either admiration or imitation to any great extent. It was not till the thirteenth century, when the Tea Clubs began to expound their charming philosophy and build up their elaborate system of almost mysterious ceremony, that men found bowls exactly fitting their fancies in the rough looking Corean pottery, inimitably homely, yet withal suggestive of remarkable skill, however misdirected. Long afterwards, when China was producing her celadons with velvet glazes, and her brilliant blue and white porcelains, this rustic ware of Corea retained a high place in the estimation of the Japanese 'chajin,' and furnished material to the Ceramic artists of Kiyoto and Owari. One very beautiful porcelain—an ivory white—Corea did certainly achieve between the thirteenth and sixteenth centuries, but as for the pieces that Chantilly copied in 1780, and those that Jacquemart describes as

having 'un caractère de grandeur et de simplicité qui devait séduire nos ancêtres,' they have about as much connection with Corean workshops as the Haviland Imari has with the province of Hizen.

Corea's chef d'œuvres were undoubtedly her bronzes, of which some splendid specimens may be seen at the Mortuary Shrines of the Tokugawa Regents in Tokiyo, and in the collections of the Japanese nobles. Nevertheless neither in purity of material nor delicacy of execution can these bronzes compare with the Chinese works of the Min, Yuen and Song dynasties. The art character of the two is also different, for whereas the Chinese depended on beauty of form and diapers encased with marvellous clearness and precision, the Coreans preferred designs in high relief, by no means equally well executed. Both styles have been copied by Japan with considerable success, but all her best artists, as Seimin, Toun, Gido, Teijo &c., have chosen to follow the Corean fashion, largely improving on it, however, both in finish and design.

In the palmy days of the 'Cha no yu' prices almost fabulous used to be paid for choice specimens of Corean pottery, and the fashion seems to be again reviving. We have ourselves seen, enclosed in a lacquer box of rare beauty and wrapped in rich brocade, a cup of brown rusty-looking faience, entirely without ornament, and in every respect so ill-favored that even a gipsy beldame would scarcely have sipped her tea from it without cavil. Yet it had once belonged to that prince of delectanti, Yoshimasa, and when shown to us, was only waiting to be transferred to an æsthetic farmer of Jōshiu, who had already paid fifty dollars of the purchase money, and pledged himself to clear off the remaining three hundred so soon as the harvest should be sold. If it be true that the Japanese possess an abnormal perception of the music of motion, and that when they sit for hours in rapt contemplation of 'woven paces and waving hands,' they are pervaded by a sense of enjoyment to which western senses are impervious, we see no reason why the theory should not be extended, for surely nothing less singular seems a sufficient explanation. Be this as it may, Corea certainly can lay little claim to æsthetic excellence, and contrary to what might be expected, she appears to have been more completely denuded of her choice specimens than even Japan, for as yet the merchants of Fusan have failed to find anything worth carrying away. Still, when we consider the story of her past, and recall the obstinate conservatism that has hitherto persuaded her to reject all overtures of friendly intercourse, whether proposed by the cannon in conclave or the philanthropic trader, we cannot but look forward with keen interest to the day when her ports will at last be opened to foreign commerce; a day which the action of Japan is slowly but surely tending to determine.

#### THE FIRE IN TOKIYO.

IT is apparently fated that some section of the Tokiyo citizens should pass their New Year's day cowering over the charred embers of their Lares. Last year it was the inhabitants of the district surrounding Shimabara—one of the very poorest quarters in the metropolis—this year, on the contrary, it is the tradesmen of the region immediately beyond Nihon-bashi, a spot which, lying nearest the heart of the great city, has for centuries been most familiar with its inmost joys and sorrows. It was here in olden times that erring wives sat with the stories of their infancy placarded on their bosoms; it was here that the ghastly tokens of iron-handed justice were exposed to view—justice that valued a

plebeian's head at ten pieces of gold and made a vassal's life the absolute property of his lord's pleasure; it was here that roistering gallants were wont to lie in wait on moonless nights and prove their maiden swords on the necks of chance passers; it was here on the night of the great earthquake twenty five years ago, that the terrified watchman counted more than a hundred tongues of flame starting up simultaneously from different quarters—flames that ultimately crept towards each other until the whole city was one huge conflagration, and a cry, destined to echo for many a year in the ears of the survivors, went up to heaven from countless women and children that lay entangled in the debris, helpless in the heart of the fire; and it is here, finally, that we ourselves on four several occasions in the short space of ten years have seen the smoke rolling over a vast area of rack and ruin.

The fire on the 30th instant commenced in Kaji-cho, and burned its way right down to the river's edge. Some say that it owed its origin to a children's bon-fire; others, that it issued from an oven for baking sweet potatoes, but this is a matter of small moment now. Occurring in the fore-noon, it gave the people time to carry away most of their moveables and to close their godowns effectually, so that the loss of goods and chattels is comparatively small. A stone and brick fire-guard, attached to the Mitsui Bank, seems to have been the means of saving a whole street—perhaps indeed an entire ward, but for the rest, the flames were left, for all useful purposes, completely unopposed. The usual amount of daring—daring that might be called heroism if it were well directed—was displayed by the firemen, who, working always on the inmost verges of the conflagration, busied themselves stripping the roofs of their only protection against sparks, or falling occasionally through the shingles, diverted the people's attention but not the progress of the flames.

We have no heart, however, to dwell upon the details of this catastrophe. Fortunately no lives were lost, but a thousand houses in ruins and five times as many people homeless, are subjects we would fain spare our readers the pain of contemplating at a season that should be one of mirth and merry-making. Year by year we live in hopes that something of the progress Japan is undoubtedly making, will be visible in improved precautions against the recurrence of these terrible calamities. This season, indeed, measures of an unusually promising nature were taken: the municipal fire-brigade was reorganized and patrols of fifteen or twenty men were constantly on duty at night in each ward, but neither care nor watchfulness can suffice against such an enemy. In the majority of cases fires are the offspring of carelessness, but that carelessness is never willful. Nothing for example can be more careless than to put the presumedly extinct ashes of a brazier into a bag—perhaps of paper, perhaps of cloth,—and leave them under the verandah during the night. Yet such used to be—and for aught we know, is—the constant habit amongst the lower classes of a people who dread nothing more than fire; and many a grievous disaster has no doubt been the consequence. These, however, are points legislation can scarcely reach. What the Government can do, and what this fire suggests that it ought to do, is to build in suitable positions a number of solid brick fire-screens—similar to that which has just proved such a salvation to the streets beyond the Mitsui Bank—and to provide the fire-brigade with engines of the most powerful description, as well as a code of well considered rules. The cost would not be great, but even if there be any consequent question of supplementary grants or disturbed estimates, for God's sake let every public work be stopped, and every Department closed, until some reasonable measure of comfort and security be attained for the people.

BY all accounts the Japanese residents of Fusan are having anything but a pleasant time this New Year. The cold is reported to be so intense that no possible precautions can gainsay it, and as the people lie shivering in their wooden domiciles, the roaring of the hungry tigers helps to freeze their already torpid blood. Up to the present the tigers have contented themselves with inactive menace, so far as the Japanese are concerned, but the inhabitants of the neighbouring Korean villages are not equally fortunate, and from many of them terrible tales of the man-eater's raids come to comfort the exiles. Native thieves too are apparently quite as nimble and daring in Corea as in Tokiyo, but so far the policeman—that much maligned product of national progress—has not betrayed his countrymen's confidence, so that the merchants of Fusan have not yet added burglary to their nightly discomforts.

#### THE SOURCE OF CHINA'S TROUBLES AND THE REMEDY.\*

IN spite of the opinion of some foreigners, it will be generally acknowledged that the Chinese are contented and happy, that the country is rich and prosperous, and that the people are "au fond" united in their sentiments, and ardently desire to remain a nation. At constant intervals, however, the whole of this human hive is stirred by some dispute between the Pekin Government and some Foreign Power; the Chinese people, proud of their ancient prestige, applaud the high tone taken up by the Pekin Government, crediting the Government with the power to support their strong words; this goes on for a time, when the Government gives in, and corresponding vexation is felt by the people. The recurrence of these disputes, the inevitable surrender ultimately of the Pekin Government, has the tendency of shaking the Chinese people's confidence in the Central Government. The Central Government appreciates the fact, that little by little their prestige is being destroyed by their own actions among the Chinese people; each crisis thus becomes more accentuated and difficult to surmount, as the Central Government knows, each concession is another nail in their coffin. The Central Government fear that, by the taking up of a spirited position, by any preeminent Chinese, that Chinese would carry the Chinese people with him, and therefore the Central Government endeavour to keep up appearances and to skirt the precipice of war as near as they possibly can, while never intending to enter into war.

The Central Government residing in the extremity of the Middle Kingdom, away from the great influences which are working in China, can never alter one iota from what they were years ago; they are being steadily left behind by the people they govern: they know this, and endeavour to stem these influences in all ways in their power, hoping to keep the people backward and in ignorance, and to retard their progress to the same pace they themselves go, if it can be called a pace at all.

It is therefore a maxim, "that no progress can be made by the Pekin Government." To them any progress whether slow or quick, is synonymous to slow or quick extinction, for they will never move.

The term "Pekin Government" is used advisedly, for if the Central Government was moved from Pekin, into some province where the pulsations and aspirations of the Chinese people could have their legitimate effect, then the Central Government and the Chinese people, having a unison of thought, would work together.

From what has been said above, it is maintained that as long as the Central Government of China isolates itself from the Chinese people by residing aloof at Pekin, so long will the Chinese people have to remain passive under the humiliations which come upon them through the non-progressive and obstructive disposition of their Government. These humiliations will be the chronic state of the Chinese people until the Central Government moves from Pekin, and reunites itself to its subjects. No army, no purchases of ironclad vessels will enable China to withstand a First-

class Power so long as China keeps her Queen Bee at the entrance of her hive. There is, however, the probability that a proud people like the Chinese may sicken at this continual eating of humble pie, that the Pekin Government at some time by skirting too closely the precipice of war may fall into it, and then that the sequence may be anarchy and rebellion throughout the Middle Kingdom, which may last for years and cause endless misery.

It may be asked, how can the present state of things be altered? How can China maintain the high position that the wealth, industry, and innate goodness of the Chinese people entitle her to have among the nations of the world. Some may say by the revolt of this Chinaman or of that Chinaman. To me this seems most undesirable, for, in the first place, such action would not have the blessing of God, and in the second, it would result in the country being plunged into civil war. The fair, upright and open course for the Chinese people to take is to work, through the press and by petitions, on the Central Government, and to request them to move from Pekin, and bring themselves thus more into unison with the Chinese people, and thus save that people the constant humiliations they have to put up with owing to the seat of the Central Government being at Pekin. This recommendation would need no secret societies, no rebellion, no treason; if taken up and persevered in, it must succeed, and not one life need be lost. The Central Government at Pekin, could not answer the Chinese people except in the affirmative when the Chinese people say to the Central Government—"By your residing aloof from us in Pekin, where you are exposed to danger, you separate our interests from yours, and you bring on us, humiliation, which we would never have to bear if you resided in the interior. Take our application into consideration, and grant our wishes."

I have been kindly treated by the Central Pekin Government and by the Chinese people; it is for the welfare of both parties that I have written and signed this paper. I may have expressed myself too strongly with respect to the non-progressive nature of the Pekin Government, who may desire the welfare of the Middle Kingdom as ardently as any other Chinese, but as long as the Pekin Government allow themselves to be led and directed by those drones of the hive, the Censors, so long must the Pekin Government bear the blame earned by those drones, in plunging China into difficulties. In the insect world, the Bees get rid of the drones in winter.

C. E. GORDON.

#### REUTER'S TELEGRAMS.

LONDON, 27th December, 1880.

The Head-quarters of the 94th Regiment has been overwhelmed by the Boers.

LONDON, 30th December, 1880.

The disaster to the 94th Regiment has been greatly exaggerated.

Reinforcements are being sent to the Cape.

#### NOTES OF THE WEEK.

The P. M. steamer *City of Tokio* brought in the American mails yesterday. The M. M. steamer *Tamias* left on the 26th instant with the homeward mails, and the P. & O. steamer *Sunda*, is advertised to leave at 10 p.m. to-day.

\* The above was written by Colonel Gordon on his way home from China. It will no doubt be read with much interest.

The *M. M. Menzaleh*, with the European mails of November 14th, left Hongkong at noon on Saturday, the 25th December.

We have been informed by the Agent of the Company, that a telegram was received yesterday to the effect that the *O. & O. steamship Belgic*, left San Francisco for Yokohama, on the 21st instant; and that the same Company's steamer *Oceanic*, left Hongkong for Yokohama, yesterday afternoon.

Not a week, we might almost say not a day, passes without a fire being chronicled either in Yokohama, Tokio, or some of the other larger cities. Only on the 20th instant the foreign settlement was seriously imperilled by the great conflagration in Houtura Road, and now, little more than a week later, we have to record another disastrous fire in the native town. It seems incredible that all these fires can possibly be the result of accident, and we believe, as we have said before, that they are the work of incendiaries from the lower classes, whom the present hard times have rendered desperate.

At about four o'clock on the morning of the 28th instant the too familiar sound of the fire-bells was heard, and it was found on enquiry that a fire had broken out in the native town among the densely populated district by the Yoshida Bashi, where a serious fire occurred last May. The fire was first perceived in a house in It-chomi, Fukutomi-cho, and thence extended to Issezaki-cho and Sagatami-cho. The engines, foreign and native, were not long in making their appearance. There was a strong N.W. wind which caused the fire to spread in the direction of Yoshida machi, but fortunately there was a plentiful supply of water and the firemen dedicated their energies to saving the more valuable buildings, as the majority of the native wooden and paper huts burnt like so much tinder. The fire spread down the streets which lie at right angles to the creek, and as there was no water obtainable there, it was impossible to control its encroachments, the well-meant attempts of some native police and firemen, who pulled down houses with this object, proving ineffectual. After doing considerable damage, to perhaps that section of the community that could least afford it, the fire was got under, at about six o'clock. Over three hundred houses were destroyed. We regret to have to report that an unfortunate sendo perished in the flames, while a fireman received injuries expected to be fatal.

Last Tuesday, as the 6.30 p.m. train was about to leave the Shinbashi station, Tokio, a native, while coupling a carriage, fell between the train and the platform. Before he could extricate himself the train was put in motion for a few yards, and the unfortunate man was instantaneously killed, his body being cut in two.

The *Hiogo News* received a telegram on the 23rd Dec. that the steamer *Thabor* ran upon a rock near Nagasaki, at eight o'clock on Wednesday night. No lives were lost, but it is believed that there is no hope of saving the vessel.

The Osaka correspondent of the same paper, writing on the 24th instant, gives the following account of the late conflagration:—

The conflagration which occurred this morning has undoubtedly been the most disastrous which has taken place in this fine city for a long time, as the scene of the fire was in a most populous quarter, inhabited principally by poor people, who are therefore reduced to abject misery. At about half-past two o'clock flames were discovered issuing from a house occupied by hair-pin manufacturer. The wind was blowing hard from the west at the time, and the fire spread at once, increasing in breadth as it swept onwards, licking up the frail wooden structures in its path, until at last stopped by a canal. Want of water and the violence of the gale prevented the firemen from being of the slightest service, except to check the fire from extending laterally.

As their exertions were not otherwise required the firemen assisted in removing goods from houses threatened, and thus did some very good service. I estimate that the area of ground denuded of habitations is about a mile in width; all this damage was sustained by two o'clock this afternoon, when the fire literally burnt itself out.

Of course there must naturally be a considerable amount of

distress, more particularly as the weather is now so cold, but the officials have done all in their power to assist the poor sufferers by this great calamity. Shelter was provided and large quantities of food quickly prepared and distributed. I hear also that the inhabitants of more fortunate districts, have subscribed liberally to the relief fund which was at once opened.

As well as I can find out, the origin of the fire has been traced to a lamp left burning by the workmen in the shop where flames were first discovered. The owner of the place was ill in bed, and when awakened by the smoke and fire gave the alarm. Some of the other inmates were sleeping upstairs and had a narrow escape through the roof. The loss of life has not been great, considering the reckless way in which the firemen expose themselves. So far, I have only heard of two fatal accidents, but there have been one hundred and seventy-six persons more or less injured. The number of houses burnt is variously estimated at from two thousand five hundred to three thousand, but, considering the way the locality was crowded with small buildings, I imagine the larger figures are more accurate.

The *Nichi Nichi Shinbun* publishes the following from a correspondent:—"Shibatruji, a resident of Shimotsuma-machi, Osaka, and Takata, of Osaka itself, intend manufacturing 2,500 and of rifles after the old Japanese style. Such a step having given rise to much speculation, they have explained that the order for these rifles has been given by a Nagasaki man, who intends to export them to China." The journal we quote remarks that the Chinese surely cannot contemplate fighting the Russians with these obsolete weapons.

The *Nichi Nichi Shinbun* publishes a report that the United States Government has definitely resolved upon returning the Shimonoeki indemnity to Japan, and says that in the present critical states of the finances, this would be indeed joyful news, if true. Commenting upon the above report, the *Kinji Hiron* has an article to the effect that the indemnity ought not to be taken back on any consideration, although the offer of its being returned should be gracefully acknowledged.

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as make them readable and intelligible.]

#### COURT, POLITICAL AND OFFICIAL.

The *Choya Shinbun* says, that the Minister Resident for Austro-Hungary was presented in audience with His Majesty the Emperor, at 2 p.m. on the 21st instant.

The *Hochi Shinbun* states that it is reported that a telegram has been received from Mr. Secretary Inouye, of the Daijo Kwan who recently went back to China in consequence of the Lo-choo question, stating that he has brought the matter to an amicable settlement.

From the same authority we learn that in consequence of the new code for the administration of justice coming into force next year, those Assistant Judges whose annual salary is 480 yen are to be promoted to Judges, their places being filled by students who have passed their final examination.

The *Mainichi Shinbun* states that His Majesty attended the Cabinet on the morning of the 28th instant, the Prime Minister the Privy Councillors, and the Ministers of all the Departments being present. It was officially reported to His Majesty that the transaction of the administrative affairs was closed for the New Years' holiday. An adjournment was then made to the Palace, where the members of the Cabinet were entertained atiffin.

The same paper states that the Italian Minister paid a visit to Privy Councillor Okuma, at about 3 p.m. on Monday last, with whom he held an interview of about three hours.

His Excellency Inouye Kaworu, Privy Councillor and Minister for Foreign Affairs, has received permission from the Board of Decoration to wear an order presented to him by the King of Belgium.

The *Akebono Shinbun* says that as His Imperial Highness Sub-Lieutenant Prince Arisugawa Takehito the younger, of the Imperial Japanese Navy, is leaving Japan for London on the

9th of next month, he was entertained at a farewell dinner by Their Excellencies Sanjo, and Iwakura, the Prime Minister, and Junior Prime Minister, at the former's residence, the day before yesterday.

The *Choya Shinbun* states that there will be no Assembly of Local Governors next year, as the Governors of the different cities and prefectures now in Tokio held a meeting in the Home Department a short time ago.

#### NAVAL AND MILITARY.

The Commandant of the Kumamoto garrison intends, as we see in a native paper, to establish a shooting range at Toyooka Mura, in the Kumamoto prefecture.

The *Nichi Nichi Shinbun* says that Rear Admiral Maki, and Secretary Takabatake of the Naval Department, have been appointed members of the committee for the compilation of the Naval Code.

The same paper states that as the terms of contract with the foreign employes in the Naval College expire, none of them will be re-engaged, as the Japanese instructors have made such progress that they are perfectly competent to undertake the education of the cadets without assistance.

#### INDUSTRIES, TRADE AND FINANCE.

A native paper states that with a view of stimulating agriculture, their Excellencies Okuma and Sano have entered into partnership in order to start a new company under the name of *Hiro Kwaisha* (Manure Company). The head office will be in Tokio, with twelve branches in various parts of the country. The company will cultivate rice principally.

We notice in another native paper that Vice Consul Kobayashi, at Gornacoff, Saghalien, has rendered such assistance and encouragement to the fishing industries carried on by the Japanese residents there, that their profits this year were doubled.

We read in a native journal that the steady advance in the price of rice is proving highly satisfactory to the better class of farmers in the province of Ise. They expect it to reach over fifteen yen per koku before next March, and have consequently stopped sales for the present.

The *Akebono Shinbun* gives the following statistics of the imports and exports at all the open ports for the past month:—

Exports.....	Yen 3,576,511
Imports.....	" 2,388,401
Excess of Exports .....	" 1,188,110
The duties collected amounted to .....	Yen 225,336
Bullion exported.....	" 447,667
" imported .....	" 57,410
Excess exported .....	Yen 390,257

#### MISCELLANEOUS.

H. R. H. the Duke of Genoa visited Tokio on the morning of the 23rd instant.

The editor of the *Mainichi Shinbun* has been sentenced to two-and-a-half years imprisonment and a fine of 300 yen for articles published in some of his recent issues. They appeared as a correspondence "Addressed to the applicants for a National Assembly." The contents were considered inflammatory, and the following sentences were quoted as an example:—"Do not you feel ashamed when you think of Obara Yaohachi, a non-commissioned officer who committed *harakiri* lately on the rejection of his petition?" Again:—"You must act with steady determination never to give up your aim, if it should cost you your lives." Several other articles were mentioned as having offended against the press laws, but as they had not done so to any serious extent, they would be overlooked.

We have been informed that on account of the New Year's holidays the *Hochi*, *Choya*, *Nichi Nichi*, *Akebono Shinbun* and several other native papers have closed their publication from yesterday until the 4th of January next.

We read in a native paper that the Editor of the *Keizai Zasshi* has been fined 20 yen for having written against the regulations for storing grain to provide against famine.

#### IMPERIAL GOVERNMENT RAILWAYS.

#### LECTURE DELIVERED IN THE CITY HALL, HONGKONG, CHINA,

November 15th, 1880.

By Dr. FRANK WARRINGTON EASTLAKE,

Member of the Asiatic and Geographical Societies of Germany, of the Society of Biblical Archaeology, etc.

#### CUNEIFORM INSCRIPTIONS.

It has been frequently suggested to me since my arrival in Hongkong, when conversing upon my studies and special line of research, that a lecture, read before the residents of this Colony, would find interested and appreciative hearers. Certainly I have found such talent and literary ability among the representative residents of Victoria, that it is no flattery to acknowledge that my best efforts to interest you in historical and scientific researches can be, not only apprehended, but subject to able criticism. However, I appreciate the difficulty before me in endeavouring to keep up a continuous interest in a subject so greatly dependent upon dry statistics. How pleased you and I would be to think some literary or humanizing effort of ours should make our names household words, a thousand years from now; the opportunity is ours to speak of names, and dates, and records of those who lived more than five thousand years ago. There are grand archives, there are whole libraries compiled, which the lapse of ages has not sufficed to destroy. It is with a feeling of awe for the unspeakable majesty of time, that we turn to these monuments of once powerful races—monuments whose graven surfaces tell of a people, men and women, who thought, hoped, sorrowed, lived and died like ourselves. Where are their mighty kings? Where, their civilization! where their hopes and aspirations? Gone, all gone as surely as those cycles of time that were necessary for the development of the human race. Eternity within eternity—ages, centuries, decades, of whose beginning or ending none can tell—as impossible for the human mind to grasp, as the gigantic interplanetary spaces, or the immensity of the star-studded heavens.

In our day the wonderful achievements of Science are made familiar to one and all. Everybody is trying to live in harmony with the times. The sluggish torpidity of the middle ages has been shaken off and the re-awakened world springs into vigorous activity! This century of ours will long be remembered as one of superior vitality. It is but natural that we too should live in accordance with this fever heat of action. The future is the all-absorbing topic; the past, a dream that is over and gone. Few, therefore, whether in the East or at home, find in the past a field of labour. True, almost everyone will peruse, with a languid pleasure, the annals of by-gone ages. Their history, their scientific achievements, their romantic chivalry, have all a certain indescribable charm, but affect us with the same feeling of mystery and barbarism as does a painting of Van Dyke or Rembrandt. The times of the Knight-errant, the Crusades, the Minnesingers, the Medici dominion, or, further back, the fall of early Greece and the

wondrous tales of the land of the Pyramids strike an answering chord within us, but seem like a disordered dream of fantastic groupings, or move us like a Sonata of Beethoven, a Notturmo of Chopin. We open the book of the past, but to close it again with a sigh of relief. This, though natural, should not be the case. The past will ever teach this and future ages grand, deep, and ennobling lessons. Recall, only, the philosophy of the three great schools and the conflicts of Science in the middle ages, and we gain an idea of the depth of thought and feeling that was the undercurrent to the seemingly placid flow of life. The farther we penetrate into the past, does the opening vista seem more wonderful. Sculpture, Music, Painting, Church and State were then, at times in the acme of their development. Rhetoric and Eloquence, Poetry and Logic, were led captive by the sages of Rome and Athens; in fact, the vigour of thought, subtle reasonings, and deductions of our modern schools of philosophy are merely adaptations of the older philosophisms. The highest ideal of the sculptor is the Capitoline Venus or the Laocoon—the poet finds his best and most finished model in Horace, Virgil, Homer—the orator imitates the eloquent and fiery words of Demosthenes and Cicero; the architect praises, as the idealistic realization of his art, the Ionic, Doric or Corinthian column. We should indeed be grateful to those men who revealed to us the treasures of Italy and Greece by the untiring labour of a lifetime. But one vast field was for ages unexplored. The history of Egypt and Central Asia has been, until a very late date, a dead letter. True, we have in various Greek and Latin authors accounts of both countries, but there are such discrepancies in these that we hesitate to give credence to any with the exception of the *Holy Scriptures*. Herodotus, Ptolemy and Berosus—these are the only worthy sources, whereas the historian Ktesias deserves naught but indignant censure.

There was, in these countries themselves, an overwhelming amount of inscriptions, preserved in the solid masonry of their palaces, graven upon monumental rocks, slabs and tablets; but these inscriptions were all written in mystic signs, seemingly unfathomable and incomprehensible, because the language they represented was lost to human knowledge more than 2,000 years ago. For eight hundred years B. C. the Egyptian tongue was known to the learned only, and the Assyrian ceased to exist some six centuries later, while the knowledge of these at one time mighty peoples was entirely conjectural. Indeed, the little that was excerpted from Greeco-Italic authors is now almost wholly condemned.

What wonders were hidden in those mighty piles! What stupendous histories did they contain! What marvels of civilisation and science! Egypt and Assyria were shrouded too, in an atmosphere of superstition. In the times of the early Christians, these countries were thought to be the cradle of the dark sciences, and with justice. The survivors of these mighty nations still boasted a civilisation and depth of scientific research well calculated to awe the world. The few descendants of the Chaldeans and Magi who lived in lonely solitude on the ruins of ancient Babylon, and the plateau of Irania, were profoundly versed in the arts and sciences which are the boast of our age. Even in the time, when the Egyptian language was still spoken, travellers to the Pyramids and the statue of Memnon wrote in hieroglyphic characters on these monuments of their great antiquity. How much more ancient must they appear in our eyes after a lapse of more than two thousand years! If then, eighteen hundred years ago, ancient Egypt and Assyria, or Babylonia, were things of the past—unremembered, save to be superstitiously dreaded, how plausible that in our days these countries could defy every investigation!

I purpose this evening to give a brief account of the manner of rediscovery, of the way in which the history of these nations was unveiled, of the man and men to whose "Open Sesame" the secret entrance was laid bare, thus leading the way to the marvellous disclosure of to-day. It would take too long to follow up, in detail, the gradual but successful investigation.

Egypt was the first to arise from the gloom of her solemn necropolis. A decree, written on granite in Egyptian and Greek, gave the first impulse towards successful inquiry. Step by step Champollion, de Rouge and Lepsius, regained the lost ground. To-day we are enabled to read, with certainty, the most ancient annals. However, the lot of the Egyptologists was from the first better than that of the Assyriologists. Not only did they discover many bi-lingual documents in Greek and Egyptian, but they possessed that invaluable treasure of Herapollon, which criticises directly the Hieroglyphs, and, in itself, solves some of the knottiest problems (as to the choice of hieroglyphs and signs) capable of approximation. In fact, almost every Egyptologist, of note, claims a system. The discovery of the key to the Hieroglyphs is widely and well known; permit me, therefore, to call your attention to Asia, and let us look, for a time, at the mighty Kingdoms of Assyria and Babylonia.

The Assyro-Babylonian dominion lasted for fifteen hundred years. The Babylonians first wrested from the Accadians or Bactrians the extensive country from the lake of Van, southward, to the Persian Gulf. It is from these

Bactrians, a Finnish-Tartaric race—that the Babylonians received their peculiar graphic system. The Babylonians were a branch of the great Shemetic race, to which race so many oriental peoples belong, such as the Hebrews, the Syrians, the Arabs. The Babylonians yielded in their turn to the invading Assyrians, and these to Cyrus, the great King of Persia. With Cyrus began the glory of Persia; to the youthful hero's arms all Eastern Asiatic countries yielded; he founded the royal city Pasargade, and one of the most powerful monarchies Asia ever saw. Under the reign of Darius, Persia became a grand and vast Kingdom, divided into twenty satrapies, which contained nearly all of the then civilised world. Darius and his successors raised monuments, telling of their glory and renown. These monuments were inscribed in the three principal languages of the Persian Kingdom, the Persian, Median and Assyrian. It is in the Persian language, and by means of these Trilingual monuments, that the first inscriptions were translated. King Darius could have adopted no surer method of making his renown eternal than by retaining the tongue of his vassals, and not, as was the rule of other conquerors, forcing them to speak his own. Great and mighty palaces stood on the sites of Nineveh and Babylon covered inside and out with numberless inscriptions. Darius not only suffered these to remain unmolested, but added to them, and renewed and recopied those that were decayed. There were, therefore, in his kingdom Accadian, Babylonian, Assyrian, Median and Persian texts, dating from 2800—500 B. C. After the fall of the Persian dominion the graphic system fell into disuse, a newer and less difficult system was adopted, and in two centuries after the death of Darius no one was able to explain any of the monuments, whether Persian or otherwise. The palace of Darius as well as those of his predecessors was a mass of rubbish and decay: the spot whereon such beautiful architectural triumphs had stood, a heap of ruins. Bedouins gazed with superstitious awe on some colossal bull or sphinx, which half-protruding from the fallen mass, seemed the very embodiment of time. Imbedded in the ruins of Nineveh and Babylon and the ancient cities of the valley of the Euphrates and Tigris, lay thousands of inscriptions, telling tales of remote ages where history had never before penetrated, of traditions of the earliest races, of battle and conquest of half-savage hordes, of heroic deeds and mighty names, before whose sound nations had trembled. But they spoke to a deaf and careless generation. Sadness and silence appeared to brood over these mysterious ruins, such as could not be described in words, but which seemed to distil into the ear, drop by drop, the solemn secret of the past. Again centuries passed by—Rome, Asia's mistress, fell headlong from her throne of power; a barbarian horde swept over Europe, stamping out, with their horses' iron-shod hoofs, almost every trace of Latin civilization. All scientific and literary culture ceased. Gradually, however, slowly but surely, civilization and culture regained their power. Art and science found disciples and true interpreters of their wondrous beauty. Europe became populated by christian peoples, and peace and prosperity cultivated the higher and nobler instincts of the race. Pilgrims, in the times of the Crusades, penetrating to Mosul, the site of ancient Nineveh, told of majestic palaces and temples in ruins. Mahomedan fanatics had endeavored in iconoclastic fury to sweep from the very face of the earth all traces of their existence, but monuments which had withstood the ravages of time mocked their efforts at destruction.

The first traveller to the site of the ancient kingdoms, who gave a detailed description of what he saw, was Don Garcia de Fierro, and, altho' very brief his account was most interesting. Seeing these mysterious cuneiform characters in such profusion, he immediately concluded that it was the language of the times of the palaces. He made no attempt to decipher anything. His account, although very superficial, sufficed to attract the attention of Europe, and the literary world could no longer be blind to the existence of the monuments.

Shortly after, a Roman nobleman, Pietro della Valle, visited the mounds and gave a detailed description of what he saw. This gentleman was similarly astonished by the bizarre and complicated forms of the characters. He says "No one can tell what these characters intend nor to what language they belong—the inscriptions are of an awestruck grandeur, covering the palaces from base to summit. They are not written, it would seem, in groups of words, but are somewhat similar to the Hebrew; I think they should be read from left to right, as in our language, at the same time" he most naively adds, "I do not affirm this as a certainty". "Tutania non affirmo per seculo!"

Half a century later Chardin visited the ruins and gave, in a fine dissertation on the subject, the copies of three short inscriptions. In 1700 Dr Hyde, an English orientalist of note, edited a work on Persia. In the course of this volume he treats, to some length, of the cuneiform characters, and, in his own opinion, at least, eternally and irrefutably settled the question. According to his idea, these characters form no graphic system whatever. They are neither letters nor hieroglyphs, nor groups of lines like the Chinese. They

are simply a fanciful design of the architect, who, charged with the ornamentation of these palaces, essayed an infinite number of combinations, all arising from a few fundamental forms. Dr. Hyde goes even further. After casting a sweeping reproach on the simplicity and ignorance of the early travellers, he remarks that the inscriptions themselves are a proof of the utter absence of a graphic system on the part of the Persians or Babylonians, and that the inventor of them merits not just disapproval in handing down to posterity so trivial and careless a method of ornamentation. Of course this decisive opinion of the learned orientalist put, for some time, a stop to all investigation.

After this Kœmpfer, a German, copied an inscription of 24 lines, which, though roughly executed, was in itself, a proof of Hyde's total misconception. Kœmpfer gave an animated account of the traditions of the resident tribes concerning the ruins. According to these simple-minded and superstitious Nomads, the edifices were erected by Temeschid about 1600 years B.C. The inscriptions themselves were magic talismans, placed there by Solomon, guarding an immense treasure:—as indeed they did—though far different from that which the children of the desert supposed. To them the characters formed powerful and magic word enigmas, the solution of whose meanings would give power over genii and demons or insure immortality.

What then was our knowledge of the inscriptions at the end of the century?

The Greeks and Latins had given but very unsatisfactory reports, and subsequent travels had proven fruitless to a great extent. Nevertheless, it was an accepted fact, that these great ruins were once the boast of the Persian nation. It is further true, that the ancient Persian language was at that time a dead letter; but, in spite of violent persecution the descendants of Zoroaster had preserved copies of the ancient sacred works, written in that long unspoken tongue. These works began now, suddenly, to command an interest, for in them, it was believed, lay the key of the Persian inscriptions.

England, ever ready to encourage science, offered large sums for a complete translation of the ancient Persian documents, and even went so far as to buy, at great cost, several Zend M. S. S.

At last Anquetil Duperron, a Frenchman of great learning, undertook to give to the world the first translation and thus to acquaint Europe with the sacred language of Zoroaster. The Zend immediately assumed a place of great importance, and Sanskrit became an object of eager and interested research. At the same time no transition was made from the study of the language to that of the inscriptions. Niebuhr, the well-known Danish orientalist, describing his travels at the close of the last century, asserted, first of all the existence of three distinct and separate systems, now known to be the Persian, Assyrian and Median. The Persian system—the least complicated of the three—Niebuhr found to be composed of only 42 separate signs. This system was rendered all the more peculiar by the constant recurrence of a diagonally inscribed wedge or arrow, repeated in frequent and unequal spaces. Tychoen, somewhat later, supposed this (as was really the case) to be a word divider.

Every great discovery, however imposing the result, has its humorous side. In Egyptology, for instance, the violent polemics of Dr. Geyffart will always bring a smile to the face of the most sober philologist. This gentleman, now 27 years of age, is still engaged in refuting the "erroneous and monstrous ideas" to quote his own words, of Champollion and Lepsius. Similarly have the treatises of Drs. Hyde and Lichtenstein caused a great deal of amusement. Lichtenstein's translations were the result of no former study, no series of observations—far from it—they were brought finished and complete to the world. He launches headlong into the subject; and after indulging in a few witticisms at the expense of his colleagues in investigation, he says: "It is really astonishing, that no one before me should have discovered what the inscriptions are. The theory of three separate graphic systems is quite untenable, for it is always the same alphabet, more or less ornamented. One must not read from left to right, as has been supposed, but from right to left, as in Hebrew. As to the monuments being of great antiquity—absurd! They are Arabic texts, dating from the eighth and ninth centuries of our era, and contain passages from the Koran, and prayers of devout Mussulmans. The characters are those known as the Cufique—slightly,—shade of Mahomet!—slightly modified and disordered." He translated, at first sight the following: "We do put our trust in thee, O Lord, holy and true; for thou has created us—be gracious to us and nourish us for thou hast made us." To show you the absurdity of his version, I will anticipate and give the correct translation, which runs as follows: "Xerxes, the king, king of kings, son of Darius the king, son of Hystaspis, of the house of the Achæmenides." A similar inscription Lichtenstein renders: "The King, the sovereign, prince of princes, the mighty Sahh Gungis, son of Armerit, governor-general"—mark the following: "by order of the Emperor of China!" His assurance is almost incredible, and it is still more so to hear that his pretended

discoveries found any credence. However, when we take the novelty of the subject into consideration and call to mind that, at the time no one was in a position to gainsay this mountebank—for he was nothing else—we can account for what would be otherwise unaccountable.

Still no one could be unaware of the importance of these monuments, even though they dated from the seventh century. That the Arabs should have any connection with the Emperor of China at Pekin, was something so surprisingly new, that instead of Lichtenstein's impostures being a death-blow to the little interest felt in the subject, as one might easily imagine, they gave an additional impetus to the progress of investigation.

Nevertheless, the key to these inscriptions was unobtainable, save through the medium of the most disinterested devotion, the most untiring labour. A life of a man for each of the 42 letters!

Grand and imposing stood the ruins of Persepolis, Babylon and Nineveh; their unmistakable antiquity alone disproving the vagaries of Lichtenstein. Ages had rolled by, races had appeared and disappeared, but they still existed in majestic isolation. At last the time had come, when they should fire the world with their revelations. The sword was drawn to sever the Gordian knot of interpretation.

On the 4th September, 1802, Georg Friedrich Grotefend read before the Academical Society of Göttingen, his first papers on the cuneiform inscriptions, in the same meeting in which Heyne exposed his discoveries in the Egyptian. Grotefend was but very superficially acquainted with Oriental philology, and therefore all the linguistic experiments and hypotheses of his predecessor afforded him but slight assistance. He examined the inscriptions of Persepolis as a historian and archaeologist solely. As we have already seen, the texts on the ruins of Persepolis were inscribed in three distinct graphic systems. Grotefend concluded that not only each of these systems represented a different alphabet, but also a different tongue. Further, that the contents were the same in every case, so that could he but read the one, he would be able to decipher the rest. He accepted, therefore, the theory that the inscriptions were trilingual. He supposed that the group already declared by Tychoen and Münter to be a honorific or not royal title, was such in reality. This group was composed of seven signs and appeared frequently in the texts immediately after the first word, often twice in succession, the second time with a termination, which might be that of the genitive-plural, as "King of Kings," or "Prince of Princes." In fact he decided that this group was the ancient Persian equivalent of the modern Persian royal title, and that it should be read in its present form, Shah-in-shah, or King of Kings. On the other hand, the translation of inscriptions found on Sassanide coins, as well as the explanation of Pehlvi texts, which had been discovered amongst the ruins, had revealed genealogical formulae, such as might very probably be the style of the inscriptions around the palace-windows and portals of the ancient Persian Kings. Determining moreover that these texts should be read from left to right, as in other Indo-Germanic tongues, Grotefend chose two short inscriptions, the one from the door-post of a building on the second palace-terrace of Persepolis; the other from the wall of an edifice on the third terrace. In comparing the two, he found them very similar. The only difference was that in the first inscription a certain group, A, preceded the royal title; in the second, on the contrary, a different group, B. Moreover, that in the second, group A, the honorific title re-occurred, whereas in the first, a group, C, was not followed by a title. Grotefend concluded that these groups represented names, which were genealogically connected as follows: A, must be the father of B,—C the father of A, and whereas A and B were Kings, C was, on account of the absence of the royal title after his name, not born a king. A, was therefore indubitably the founder of a dynasty. As these were the palaces of Achæmenide Kings, there were only two cases possible; either A contained the name of Cyrus or the name of Darius. But the first supposition was clearly incorrect, as the father as well as the son of Cyrus bore the same name, Kambyses. Groups B and C were, however, totally different, moreover group A was much too long for the word Cyrus. Therefore there remained for group A, only the name Darius—groups B and C, Darius' son and father, Xerxes and Hystaspis, and Grotefend read, comparing well known grecian, hebraic and modern persian forms:

A = Darhawsch  
B = Khshcharscha  
C = Visschtash

The later investigations prove that he had really read them correctly: mistaking only the h, which proved to be a j. The correctness of his discoveries was placed beyond all doubt by a little vase, preserved in the cabinet of medals at Paris. On this there is, namely, a quadrilingual inscription. The first part is in Egyptian Hieroglyphics, and was translated by Champollion as the name of Xerxes; the other three parts were written in cuneiform and behold! the first of them, the old-persian, contained exactly the same signs, which

Grotefend, on the ruins of Persepolis, had declared to be the cartouche of King Xerxes.

In this simple manner, the first step was taken towards the successful discovery of the ancient alphabet, and Grotefend won the renown of having penetrated into its arcanes. Others have since disputed his laurels, but to Prof. Grotefend certainly the credit is due of being the first to open a gallery into this rich treasure-house of antiquity. In deciphering the three above mentioned names, he determined nearly a third of the entire alphabet, and thus, at once, supplied an ample and sure basis for further investigation.

I regret to tax your patience with these fragments of facts—but there is a consciousness of something real and genuine associated with these statistics. A fascination in doing justice to those exhaustive laborers who have resuscitated an extinct language! A mystic charm pervading the dull details when we realize the soul-propelling power that moved, inch by inch, the debris of ignorance from off those sculptured worlds of stone and made them legible to you and me. The busy fingers that chiselled the records in the solid rocks are still, and Kings, subjects and slaves have their long sleep in each other's company, but their phantom hosts seem to rise before us to-day eager to establish communication with us.

In 1820 Mons. Saint-Martin resumed the labor of investigation on its being abandoned by the German professor, succeeding only so far in giving additional strength to the arguments of Grotefend. Somewhat later, Prof. Rask was successful in determining two letters *M* and *N*, and this led to several most important verifications. The memoir of M. Burnouf on the Inscriptions of Hamadan, published in 1836 greatly furthered the work, and the researches of Prof. Lassen, supplying and identifying at least 12 characters, which had been mistaken by all his predecessors, may entitle him almost to contest the palm of original discovery with Prof. Grotefend.

To show how slowly the work of discovery had progressed, let us look at the following: Grotefend had read the name of a figure in bas-relief, immediately under the inscription of Xerxes, and supposed to represent some deity, Enroghde. 34 years later it was read, for the first time, correctly as Auramazda. In this word of only six different characters Münster had deciphered one (*A*) in 1800; Grotefend three others (*U*, *E*, *D*) in 1802; Rask one (*M*) in 1826; Lassen and Burnouf one, (*Z*) in 1835.

It had taken 37 years to read one word correctly, or more than six years for each letter.

So far, the scientific world of England, which had taken the lead in so many other branches of archaeology, had been content to leave the investigation of the Cuneiform Inscriptions almost wholly to Continental scholars, and what is still more unusual, the progress of discovery and the results obtained from it appear to have been but imperfectly known and appreciated amongst Englishmen. Individuals, doubtless, of all countries, whether Englishmen or foreigners, engaged in the study of Oriental antiquities, followed with a curious eye the successive discoveries, but general attention, or at any rate, attention commensurate with the value of the discoveries, had not been, in England, hitherto directed to the subject. It was in the year 1835 that Sir Henry Rawlinson, then Col. Rawlinson, first undertook the investigation of the Cuneiform characters. He was at that time only aware that Prof. Grotefend had deciphered some of the names of the early sovereigns of the Achaemenids, but in his isolated position at Kermanshah on the western frontier of Persia, he could neither obtain a copy of Grotefend's alphabet, nor could he ascertain what particular inscriptions had been examined.

The first texts that Rawlinson submitted to analysis, were the sculptured tablets of Hamadan, carefully and accurately copied by himself on the spot, and he afterwards found that he had thus, by a singular accident, selected the most favorable tablets of all Persia for solving the difficulties of an unknown alphabet, and which had in fact supplied Professor Grotefend with the materials of his original discoveries.

In 1837-38 Rawlinson published in the Transactions of the Royal Asiatic Society the first complete translation of the great Behistan inscription. This inscription is one of Darius', and of enormous size. That the Persian monarch took extraordinary pains to ensure the permanency of his record is evident by its position. Instead of being placed on a level with the spectator, where it would be subject to injury and disfigurement, it has been engraved at an elevation of 300 feet from the base of the rock, and the ascent is so precipitous, that a scaffolding must have been, unquestionably, used for the convenience of the workmen employed in its execution. In its natural state it must have been altogether unapproachable, and if it were intended, therefore, that such publicity should be attained by the independent perusal and observation of all comers, then there must have existed some artificial means of ascent either by steps or ladders. At present, nothing of the kind can be perceived, and the climbing of the rock, to arrive at the sculpture, is not positively dangerous, is a feat, at any rate, which an antiquary alone could be expected to accomplish. Darius could not have foreseen the iconoclastic passion of

I-Ism; yet it can hardly be doubted, that to the safeguard of inaccessible position, is to be alone attributed the preservation of the tablet from the fate that has befallen, at the ruthless hands of the Arabs, so many of the antique monuments of Persia.

Dr. Hincks of Dublin and Professor Oppert added to this most important translation of Rawlinson many grave and valuable dissertations, so that in 1850 the grammar and lexicography of the old Persian language were firmly fixed, and it could be justly said that the Persian inscriptions were and could be translated with accuracy and perfect comprehension.

Up to 1873 inscriptions of Cyrus, Cambyses, Darius, Xerxes and Artaxerxes had been translated with great success; inscriptions teeming with historical interest, and dealing with a time and people concerning which, "an account of differences in authorities and paucity of tradition, the world knew little or nothing. *"If men hold silence, the very stones will speak!"*

We have thus briefly reviewed the history of the Persian inscriptions. Let me again call to your mind the fact that most of these texts were trilingual, that is, each inscription was written in three different tongues. Darius himself in one of the texts, says, "All these my deeds and actions my glory and renown I have caused to be written in the Persian, Median and Assyrian languages." Herodotus assures us, as would naturally be the case, that the Persian tongue was the court and official language, and that next to this, in consequence, stood the Assyrian, as the territory of that once all-powerful race formed the larger part of the Persian kingdom. Since the interpretation of the Persian monuments had been successfully accomplished, the attention of philologists was naturally directed towards the Assyrian and Median parallel texts. All traces of these mighty races seemed to have disappeared. Nineveh, the great fortress of the Tigris, founded by Nimrod and covering many miles of ground, of whom the prophet Nahum had said that it contained as many men as the sands, fishes, as many merchants as the bays, stars, the city of Salmanassar, Sardanapalus, enmeshed; Babylon with its gigantic towers, the city of the confusion of tongues, by whose streams the Jewish exiles sat and wept for the departed glory of Zion; the wonderful rich city of the Euphrates with the many temples, the city of Buchadnezar, of Semiramis, with its hanging gardens, had departed seemingly, from the very face of the earth. True, clumsy irregular hillocks covered with Bedouin tents and low huts, stood on the supposed sites of these ancient cities, but for ages they had been passed by unnoticed.

In 1820 Rich, political resident at Baghdad, returning from Kurdistan, touched at Mosul on the Tigris and remained there several days. The two large mounds on the left bank of the Tigris called forth his attention, the more so, as the inhabitants of Mosul informed him that they had exhumed there, shortly before, a large bas-relief representing human and animal forms. This had been immediately destroyed by the priests, as an object of idolatry, nor could Rich obtain a fragment. Nevertheless, after patiently investigating the territory, he became more and more assured that the two hillocks Kujindschik and Nebi Junus covered the site of the ancient Capital of Assyria.

Rich's find was, however, very small—a box three feet square in the British Museum was all that was possessed of the remains of Nineveh and Babylon. How different to-day! Five large halls of the British Museum have hardly room for the Babylonish-Assyrian monuments! Met at the door by solemn, human-faced bull colossi, we wander through halls whose walls are covered from cornice to floor with sculptures of marvellous technical perfection, which with their life-like representations of sieges, battles, hordes of prisoners, lion-hunts, palaces and temples, seem to set us back in the very heart of Assyria; we pass by obelisks and statues of unknown kings, calixes filled with inscribed bricks and prisms of clay, thrones and coffins, arms and weights, vases and jewelry, and—what is more than all these—over one hundred capacious boxes containing that priceless treasure of Assyriology—the stone-library of Sardanapalus—Assur-banipal!

Rich had truly never dreamed that under those unsightly, yellow hillocks opposite to Mosul, there lay the ruins of twelve palaces of Assyrian Kings!

Botta, in 1840, sent nearly 250 laboriously correct copies of Assyrian documents to Europe, all the more admirable as he was entirely ignorant of what he was copying. The work of comparing and investigating now fairly commenced, and it was found, that, whereas the Persian alphabet, in its cuneiform character, contained about 42 signs, the Assyrian had more than 400. It was immediately apprehended that these formed an alphabet of no common kind. That there must needs be a pictorial or hieroglyphical trait at the foundation. I do not hesitate to avow, that, had the interpreters of the Persian texts chosen the Assyrian as the object of their examination their labours would never have been crowned with success.

As it was, however, the investigators of the Assyrian texts, were in a much better position. The Persian parallels of the Assyrian texts could be translated with almost absolute correctness, and so formed a certain and trusty guide, by the help

of which, even in the face of enormous and apparently insurmountable obstacles, it was hoped to reach a happy result.

It is greatly to be regretted that all the Persian texts had not their Assyro-Babylonian equivalents, but then all the examined inscriptions were not official and therefore not necessarily trilingual.

That this Assyro-Babylonian language was of Shemitic origin was highly probably. The names of the Kings of Assyria and Babylonia transmitted to us through the Old Testament, or the more imperfect Herodotus, Ptolemy and Berossus, were indubitably Shemitic, not more so than were the Assyrians themselves from the very position of their country.

In 1840 to 1850 the first earnest labours commenced. Up to that date the complicated graphic system, as well as the want of workers, had rendered a final success very doubtful, but, through the untiring investigations of a few determined Orientalists, a satisfactory commencement was made. Sir Austen Layard was in 1846 Consul at Mosul, the site of ancient Nineveh. Immediately upon his arrival he began exhuming the ruined palaces, and with the assistance of Sir Stratford Canning obtained funds from the Government to prosecute his labour. To Layard, chiefly, are due the incalculably valuable monuments, obelisks, tablets and bricks now in that great repository of antiquities, the British Museum.

Lowenstein and de Saulcy, both philologists of note, were the first to give a reading to some short Assyrian texts. Sign by sign, word by word, group by group they compared them with their known equivalents in the Persian parallel-texts. It were to extend this lecture to far too great a length if I should attempt to follow the gradual progress of the solution of the problem, which though of the deepest interest and importance to the student, is of little value in the eyes of the world at large. Sir Henry Rawlinson in 1857 and Hincks in 1852, in a series of articles in the *Journal of the Royal Asiatic Society* determined the value of over 300 signs—but, the great difficulties of the graphic system, the singular complication or seeming confusion of words, syllables and sounds, found much ridicule in the eyes of the public, and even of the learned—so that in 1857 the R. A. Society called for a *decisive proof* of the possibility of translation. Accordingly, the society proposed to several savants, that a long inscription of 800 lines should be translated by the leading Assyriologists simultaneously and without connection with each other. To Hincks in Dublin, Rawlinson and Fox Talbot in England and Oppert in France, copies were sent, none of these Orientalists knowing, at the time, either who were the chosen interpreters or the contents of the text. On the 25th of May, of the same year, they severally returned the copies, with their translations to the Royal Asiatic Society: whose committee declared itself, upon comparing the translations, *perfectly convinced* of the fact of successful interpretation. In order that all the world might, likewise, be assured of this great and triumphant achievement, the Committee had the translations of the four Orientalists printed side by side in a separate publication. The inscription, itself, was one of Tiglath Pileser I., King of Assyria, who flourished about 1150 years before our era.

Thus bad science, triumphing over seemingly insurmountable difficulties, proved anew that she could penetrate and lead her votaries into the very heart of the mystical history of long-forgotten ages.

We are now far from the time in which ten years were devoted to deciphering two letters of the Persian Alphabet; when Bask in determining the phonetic reading of the characters M. and N. formed an epoch in science. The progress was rapid, the march onward sure. The Assyrian tablets, like the Persian, give us the names of long lines of princes; they tell us of Nineveh and Babylon, of Borsippa and Erech, of Nimrod and Noah, Bel, Moloch and Ashtar, of Semiramis, Nebuchadnezzar and Sardanapalus, of the great wars which convulsed Asia, and give us an almost unbroken history of Kings who reigned consecutively for more than 1500 years.

Of what inestimable practical value are these stone documents; how prophetic the wisdom of their intractability! The engraved library of Assurbanipal was collected under the supervision of the wisest scholars of his realm. Over 29000 Inscriptions represented the literary activity of more than 2000 years. From all parts of Assyria, Armenia, Babylonia, Chaldea, and Accadia copies were sent of the still extant monuments. Half ruined texts,—crumbling obelisks and fallen temples were examined and recopied and then transmitted to the King's library in royal proof of his genius and civilization. Grammatical lists and syllabaries, the foundation of our present knowledge of the language, ponderous dictionaries of Assyrian and Accadian, poems, full of the fervour of the sweetest psalms, long historical and chronological lists, among which, is the invaluable Ep-nym canon, which establishes the Old Testament records and chronology (so often attacked and disputed and now acknowledged, universally, to be almost without flaw;) proving the Jews, as they appear in their sacred books, to have been the grandest type of a theistic people—the one time worthy followers of inspired leaders. Here too in the collection, were essays on mysticism—treatises on mythology and astrology and demonology, with weird charms, exorcisms and

magic formulae, works on Chaldean magic as received from the Old Accadians—the R-sacerucians of antiquity; lodgers, and diaries of private citizens and merchants, accounts of the Royal Palace and hunting parks—asronomical notices of eclipses of sun and moon—of appearances and disappearances of heavenly bodies—exhaustive treatises on religion—lists of Gods side by side with almost platonic or aristotelian essays. Lastly among the names of the cities and countries, of the conquerors and conquered, we read of Libanon and Damascus, Tyro and Sidon, Cyprus and the Mediterranean, Joppa and Jerusalem, Egypt and the Nile, Ethiopia and Abyssinia—of Manasses, Jehu, Omri, Ezekiel and Hezekiah, of Necho, Tirhaka and the Pharaohs.

Finally in our hasty retrospections of this evening is there not a sentiment of vivid pleasure, that we have now another world, populous, animated, full of new personages who may live again in our thoughts to evoke at will—and yet too a feeling of pity for the decay and extinction of the knightly races who left no luminous a track in the history of science and art, and have no descendants remaining with even a consciousness of past glory! The strong and the beautiful, the gracious and majestic, the antique dignity and simplicity, the rising and expansion of many forms: where are they?—Sad and silent all.—Our pleasing impressions of wonder and gratified curiosity are mingled with the inevitable sentiment that throws its shadow over all things and drops its bitterness into all our pleasures, for we can only feel that we have, in these retrospections, a fine scene in the spectacle, of an hour. Which is life!

#### ARRIVAL OF THE AMERICAN MAIL.

London, November 25th.—A *Times* Berlin correspondent says: A semi-official communication to the press alleges that the strength of the anti-Jewish movement was revealed in the recent debate, and that from the consciousness of that strength the movement will be likely to derive fresh courage.

Spezia, November 25th.—The steamer *Oncle Joseph* sank almost immediately after the collision. Two hundred and fifty persons are known to be drowned, and fifty saved. The fate of the other fifty is at present uncertain. Heart-rending scenes followed the collision, as the *Oncle Joseph* was wanting in means to save the lives of a large number on board. Eye-witnesses of the collision say they cannot satisfactorily explain the manner and cause of the occurrence. The passenger list of the *Oncle Joseph* shows that a total of 264 people were on board, and the sailors numbered 33. Her cargo consisted of 80 tons of merchandise. At a roll-call of the survivors 35 passengers and 30 sailors only answered to their names. The Captain also perished.

London, November 25th.—The *Oncle Joseph* was an iron screw-steamer of 823 tons gross, and the *Ortigia* was of 1853 tons burthen.

Paris, November, 25th.—Great uneasiness is felt in English and American circles here, as it is feared many Englishmen and Americans were passengers on board the steamer *Oncle Joseph*.

Rome, November 25th. Most of the passengers on the *Oncle Joseph* were poor emigrants from Calabria. The *Ortigia* struck the *Oncle Joseph* amidships while going at full speed, almost cutting her in two, and the *Oncle Joseph* sank in less than three minutes.

Rome, November 25th.—The passengers aboard the *Oncle Joseph* were emigrants for South America. The Captain of the *Ortigia* states that the night on which the collision occurred was pitch dark. The *Oncle Joseph* ran across the *Ortigia's* bow.

London, November 25th.—A *Times* correspondent believes the Montenegrins will decline taking possession of Dnieguo unless guaranteed against Albanian attack. The Albanians made a resolute stand in an olive plantation outside the town.

London, November 25th.—The Manchester *Guardian's* London correspondent, referring to the importance of today's meeting of the Cabinet, says: The state of affairs in Ireland since the initiation of the prosecution against the Land Leaguers increases the expectation that the Government will not much longer delay moving. Persons in position to be well informed believe that Forster returns from a visit to Ireland with views strengthened in favor of maintaining the law with a strong hand, and there will be a short session before Christmas solely to enact coercive measures. But Bright, Chamberlain, and Spencer, will undoubtedly make a strong effort to defer assembling till

January, when remedial legislation could be introduced simultaneously with coercion.

Dublin, November 25th.—An application was made to-day, in the Queen's Bench Division, for an attachment against the *Evening Mail*, for articles prejudicing the trials of the traversers. Monroe, law adviser to the late Government, who appeared as counsel for the *Evening Mail*, asked for an adjournment so as to enable him to prepare an affidavit to meet the charge at once. This was agreed to and the hearing was adjourned until Monday.

The Protestant Archbishop of Dublin has issued a form of prayer, for use by his clergy, for the amelioration of the present disturbed state of the country.

London, November 25th.—All the Ministers were present at the Cabinet Council to-day. Previous to its assembling, Forster, Chief Secretary for Ireland, conferred with the Marquis of Hartington and Lord Granville, and went to Windsor Castle and had an interview with the Queen.

London, November 25th.—The morning papers to-day report an attempt to shoot Captain John Mitchell, renting a large farm in Roscommon; attempt to shoot a Protestant clergyman at Tipperary; the prosecutions in Westport for illegally assembling to resist at eviction, beside various incendiary speeches.

The *Daily News* intimates that the Cabinet may decide concerning coercion, and says that if Forster shows that the Irish Executive needs some reinforcement of its power, neither the present nor any other Cabinet that is possible in England will refuse to discharge what may be a painful duty.

Paris, November 26th.—In Court yesterday not a single proof in support of the treasonable charges made against General De Cissey was produced by the defendants, and Rochefort himself admitted that his sole object in penning his virulent article was to secure a Parliamentary inquiry. When Rochefort made this cynical avowal, the indignation of the people assembled in the Court-room exceeded all bounds, and it was with difficulty that President Carlier succeeded in restoring order.

Paris, November 26th.—In the De Cissey libel case to-day, Laisant, one of the defendants, accepted the responsibility for the articles in the *Petit Parisien*, and admitted the evidence of the witness of General De Cissey. Laisant's request that the Court adjourn for a week in order that he might produce witnesses was rejected. The counsel for the prosecution dwelt upon the glorious services of General De Cissey, and declared that his accusers were persecuting in him a soldier who was the first to enter Paris during the reign of the Commune.

This was received with cheers in the Court-room, and a tumult followed, in consequence of which the sitting was suspended and the hall cleared. When the sitting was resumed, the President of the Tribunal censured the members of the Bar for participating in this manifestation of feeling. The counsel, continuing his argument, sought to demonstrate that the charges made against Gen. De Cissey were absolutely unfounded. The counsel for the defence followed and at the conclusion of his speech the trial was adjourned until to-morrow.

London, November 26th.—The *Sportsman* says: We believe that the money for Laycock will soon be found, as we have already received donations amounting to £136, and more are promised.

Vienna, November 26th.—The Montenegrins passed through Maxara, leaving a garrison there, and occupied the Turkish inurements on the heights. A detachment subsequently advanced to take possession of Dulcigno.

Ragusa, November 26th.—The Montenegrins are to occupy the town and district of Dulcigno with 4000 men and 12 pieces of artillery.

Constantinople, November 26th.—In the fighting which preceded the occupation of Dulcigno by Dervish Pasha, the Turks lost 200 killed and wounded and the Albanians 400.

Vienna, November 26th.—Official information is received that Dervish Pasha personally surrendered Dulcigno to the Montenegrins on Friday.

Dublin, November 26th.—A meeting of the country gentry and freeholders was held at

and several farmers were present. Resolutions were passed condemning the land agitation and agrarian outrages.

The Court of Queen's Bench has finally appointed the 28th of December as the date for the commencement of the trials of the indicted Land Conquerors. Healy and Walsh will be tried at the Cork Assizes on December 7th.

Captain Beemish, a magistrate of Cork country, has written a letter to Forster, stating that he has received a threatening letter, and has therefore sought the protection of the police. His object in writing to Forster is, that if his death should be added to those of other landlords who have been murdered since the present Government came into power, it cannot be pleaded that it was either justifiable or took place because Government protection was not called for in time.

The Ulster men left Lough Mask yesterday under a strong escort. There was no demonstration. The hussars remained to protect Boycott, who will leave on Saturday. The Ulster men slept last night in the barracks at Ballinrobe.

Lord Landsdowne has just been obliged to flee to England from his Kerry estate because he felt his life to be in jeopardy there. The immediate cause of his flight has not yet been announced, but no doubt it was hastened by the receipt of threatening letters, which seem to be flying over Ireland in all directions just now.

New York, November 26th.—The *World's* London special says; It is understood that when Parliament assembles Gladstone will propose a grant of £25,000 to Gen. Sir Frederick Roberts, the hero of Candahar, for his military service in Afghanistan.

Official denial is made of the rumor that the Marquis of Lorne will resign the Governor-Generalship of Canada at the end of three years, and return home.

Still another rumor about the price paid Lord Besoumfield by the Longmans for the copyright of "Endymion" puts it at £3,000. *Vanity Fair* says this, but it is altogether unlikely.

Vienna, November 27th.—A Styrian soda-water manufacturer writes to the *New Free Press* that he is ready to enter into competition with Dr. Tanner—beer against water. He asserts that he can fast on beer 44 days.

Paris, November 27th.—The trial of the suit brought by General De Cissey has concluded. The Court after admitting extenuating circumstances, condemned Lacant, editor, and Chauvin, manager of *Le Petit Parisien*, to fines of 4000 and 200 francs, respectively, and 800 francs damages for which they are jointly responsible. They are also ordered to publish the judgment in the newspapers. The same sentence was imposed upon Rochefort, editor, and De Pierre, manager of *L'Intelligence*.

Berlin, November 27th.—The police have torn down placards in the southeastern quarters of the city, directly inciting the inhabitants to the persecution of the Jews.

Constantinople, November 27th.—The Montenegrins at first demanded a month's delay before occupying Dulcigno, but Dervish Pasha and the Admirals of the fleet refused. Occupation was peacefully completed at midnight on Friday.

New York, November 27th.—A despatch from Liverpool reports the outbreak of a horrible war at New Canbar, attended with fearful butchery.

London, November 27th.—In a speech to-day at a Liberal demonstration, in Henley, Staffordshire, Earl Granville, Foreign Secretary, said: "It is a humiliating and discreditable fact that in Ireland there is a want of security for life and property. It is impossible for this state of things to continue. The public has a right to expect that the Government will not merely introduce a measure which is likely to cope with the present emergency, but will provide for the future."

After referring to the successive phases of the Eastern question, he said: "No new proposition relative to Greece has been made since that of France, but it is impossible for the Greek question to remain without solution."

He gave the particulars of England's proposal to occupy Smyrna. Russia and Greece accepted the proposal, and Austria at first promised assistance and afterward declined to take any active part in maritime operations. France, he declared that if Austria absented herself, she would be unable to join. Germany took the same course. In the meantime a rumor reached Constantinople

of the Smyrnia proposal, which acted as a stimulant to the Sultan, who categorically promised to surrender Dulcigno.

Earl Granville defended the European concert, which, he said, exists at this moment, and he hoped it would long continue. Austria, he said, has been the most anxious for a settlement of the Dulcigno question. The relations between England and Russia were most friendly. Germany and Italy hoped to maintain the concert. He concluded by saying that the Government was not ashamed of its foreign policy, and would adhere to it, endeavoring to uphold the concert of Europe while maintaining full liberty of judgment and action among the nations of the world.

London, November 27th.—Lennard Henry Courtney, one of the most advanced Liberal members of the House of Commons, addressing his constituents at Liskeard, said: The resolution to forego asking coercive powers was based on the opinion of the Irish Executive that they were unnecessary. He should bow to their more intimate acquaintance with the situation, but if it had been come to because one or two persons of eminence, sitting at ease in London (meaning Bright and Chamberlain), had registered a vow under no circumstances to acquiesce in requiring stronger powers for governing Ireland, he should say that such a resolution was a mere superstitious adherence to principles which could not command respect. If the Government had decided to introduce an Act to prevent the carrying of arms, and midnight prowling, he should have given them his strong support.

New York, November 28th.—The *World's* London special says: It is formally announced that Mr. Langtry, the husband of the "Jersey Lily," will shortly sail for America on business, and it is extremely probable that he will take with him his beautiful wife, who has done so much for his success here. Mr. Langtry's "business" in your country is of an uncertain kind, but I understand that he hopes that Mr. Sam Ward, who is thought to be up to all kinds of things, will help him on in the United States. As all the new beauties of the London season now come from New York, on the modern principle of reciprocity, is only fair that England should send you one in exchange.

The statement is once more published to-day that the Baroness Burdett-Coutts has been married. The ceremony is declared to have positively taken place yesterday. Nevertheless, the statement is not true. I believe that certain business arrangements still form a serious obstacle, but both parties are intent on the match, and it will undoubtedly take place at no distant day. Meanwhile, Ashmead Bartlett the groom expectant, goes about assuring everybody that he is quite disinterested in the matter and would marry the Baroness gladly even if she were penniless. Naturally, everybody believes him.

It has been a week of very little special interest in the stock market. The attempt to place Central Pacific shares here has met with strong opposition from the *Times* and several other journals, but the public is now much guided by the advice of bankers and brokers, and the Central Pacific, if it be really good, may possibly grow in time into popularity in spite of the oppositions of the newspapers. The old favorites were all higher during the week, but prices to-day are very flat.

De Lesseps' Panama Canal scheme was placed before the London public to-day, it being proposed to issue 590,000 shares at 500 francs each, interest to be allowed on the paid-up shares during the progress of the work. There has not yet elapsed sufficient time to enable one to ascertain how this scheme will strike the English public, but the tone in the city is decidedly not favorable to De Lesseps' project.

Beaconfield has made up his mind never to accept office again, no matter what may happen. He has bought the lease of a house in Curzon street with part of the large sum he has received for "Endymion," and he means to begin life over again on a new departure at the mellow age of 76. He will have another novel next year.

Sir Julius Benedict, the distinguished composer and orchestral leader, who accompanied Jenny Lind to America, and who is the author of the opera of "The Crusaders," was operated upon to-day for cataract. Both eyes are endangered.

Madrid, November 28th.—The Duke of Medina, brother-in-law of Don Carlos, was ordered to shorten his stay in Spain because he received the visits of prominent Ultramoun-

taines. He did not comply, whereupon he was ordered to leave the country forthwith.

Cape Town, November 28th.—The Rebels have been dislodged from Leribe Mountains. The Colonials lost four men. It is believed that the rebels lost heavily. A patrol from Mafeking found a large body of Basutos in their front, and the patrol retired without engaging the enemy.

Athens, November 28th.—The Government is determined to continue military preparations. The King is present almost daily at the drill of troops.

St. Petersburg, November 28th.—The *Golos* says: Russia will continue to support Greece morally, but cannot spend blood or money on the Greek cause.

St. Petersburg, November 28th.—The *Agence Russe* says: If Persia is unable to subdue the Kurds, Russia, considering the vicinity of her own frontiers, would doubtless feel bound to aid Persia.

St. Petersburg, November 28th.—The resignation of the Governor-General of Kasan, implicated in recent acts of cruelty to Tartars, has been accepted.

London, November 28th.—Haulan has issued a challenge to Laycock offering to row him for £100 a side, Haulan to choose the course, and the match to be made on Monday. Otherwise Haulan will sail in December.

London, November 28th.—The *Observer* understands that the first battalion of the Guards have been ordered to Ireland.

The *Observer* says: "What Irish malcontents deserve is the repeal of the Union. If the most extreme proposals of the Land Leaguers were to be carried into effect, the popular agitation against English rule would lose nothing of its intensity. It is well nigh idle to hope that the Irish disaffection can be removed by remedial legislation. Our interest and duty equally bind us to remove any real grievance, but we have also got to bring home to the Irish mind the conviction that the Nationalist demands are inadmissible. Things in Ireland are drifting toward a basis whose only possible outcome is another Fenian rising. The calamity can only be averted by making it clear that no amount of agitation will induce England to yield to pretensions inconsistent with the welfare of the Nation."

Dublin, November 28th.—There was a large land meeting at Sligo to-day. Davitt, Dillon, and Sexton, were present. Two bottles of gunpowder were found under the platform before the meeting began.

The battalion of London Guards ordered to Ireland numbers about 800 men. It contains few, if any, Irishmen. The battalion leaves on Wednesday.

Dublin, November 28th.—The magistrates of County Clare resolved to call upon the Government to take measures to maintain law and order.

Berlin, November 28th.—The *Gazette* declares Berlin and neighboring towns in a state of siege for another year. Another shipload of Socialists has left Hamburg for America.

London, November 28th.—The Chileans occupied Pisco, 130 miles south of Lima, on the 20th instant, without opposition.

New York, November 29th.—The *World's* London special says: Earl Granville's allusion in his speech at Henley yesterday, to the future course of the foreign policy of the Government, substantially means that France now unites at last with England, Austria and Italy, in the policy of compelling Turkey to comply with the terms of the Berlin Treaty in regard to the Greek frontier.

New York, November 30th.—The *World's* London dispatch says: There recently appeared in the New York *Herald* a letter from a correspondent in Dublin, in which it was stated that Parnell had fully made up his mind to abandon the Land League movement because Archbishop McCabe of Dublin condemned it, and that he would have done so but for the action subsequently taken by the Government. Parnell telegraphed to state to-day there is no truth whatever in the statement, and he adds that nearly all other assertions contained in the same letter about the Land League and his connection therewith are misleading, if not wholly incorrect. It has been decided that the Government, when Parliament meets, will introduce a Coercion Act at the same time with the new Land Bill Act and this will provide for the immediate disarming of the people. Whether this can be accomplished without bloodshed in the present temper of Irishmen, is a ques-

tion which nobody cares to answer just now. I fear it will be found sooner or later that land agitation is only an outward manifestation of a deep-seated feeling that the proper place in which to make laws for Ireland is at College Green, Dublin, and the feeling will remain in spite of all defiant land measures that the Government can introduce and Parliament pass. I learn of a movement in the west of Ireland, particularly in Tuam, Swineford and other considerable towns in Country Galway, to bring about a reduction of 25 per cent in rents of shops and town houses. As a matter of fact such rents are excessive in Ireland, but they have been lost sight of in the excitement everywhere attending the land agitation. Now that tenants in towns have begun to move, there is likely to be another rent scare, but on a smaller scale, of course.

London, November 30th.—The Press Association reports four other regiments under orders for Ireland. Early 1,000 more members joined the Land League in Kildart District. Two hundred marines go to Ireland this week.

Dublin, November 30th.—A large force of police and infantry and artillery went to New Pallas this morning to quiet the disturbance there.

London, November 30th.—Dr. Le-seps says: "I have greater confidence in the Panama Canal than I had in the Suez Canal. The Atlantic and Pacific breezes will make it the healthiest region in the world. There are already excavators made which will excavate 300 cubic metres in an hour. Everything necessary is ready to start work. The co-operation of England alone will make the canal a fact."

London, November 30th.—The Admiralty have received a telegram confirming the report of the murder of the commander and six of the crew of Her Majesty's schooner *Sandfly*, at Solomon Island, in the South Pacific. The party were attacked while some of them were bathing. A party from the schooner, under a Sub-lieutenant, landed and recovered the bodies and destroyed the village, losing one seaman killed and one wounded. The Commodore on the South Pacific Station will dispatch another man-of-war to the islands.

London, November 30th.—The Queen's Bench, without deciding on the merits of the case, have granted a writ, returnable on Monday, with a view to the release of Rev. Mr. Dale, who is charged with Ritualistic practices. The prosecution is required to prove the validity of its proceedings against Dale.

Berlin, November 30th.—The *Voss Gazette* violently attacks the *North German Gazette* for trying to palliate the persecution of the Jews. The *Voss Gazette* expresses the belief that the articles in the *North German Gazette* in question are inspired. It says: The Government are playing a paltry game. They merely throw out a card of Jewish persecution in order to strike at civil liberty, as they did with the Socialist agitation.

Paris, November 30th.—Rochefort invites signatures for application to the municipality for a site for a monument to Communists killed in 1871.

Lisbon, November 30th.—The Archbishop of Goa, Primate of the East is dead.

Constantinople, November 30th.—The Montenegrins have occupied the whole district of Dulcigno. Prince Nikita promised the inhabitants of the ceded district liberty of worship, amnesty and security of tenure in regard to property.

London, November 30th.—The Governor of Natal telegraphs that one European and fourteen natives were killed in a skirmish with Basutos.

Rome, November 30th.—It is understood that the Pope is preparing an allocution condemning the hostile attitude to the Church on the part of France and other nominally Catholic Powers.

London, November 30th.—At a meeting this afternoon, articles of agreement were signed for a sculling match between Laycock and Haulan, over the Thames Championship Course, to take place on January 17th, 1881, at 2:30, for £500 a side.

London, November 30th.—In the Callan case, the verdict was that McCallan published a libelous Sullivan, and that the libel in question was not fair comment. Justice Hawkins deferred sentence and bound over Callan to appear on the 15th of December. He said that affidavits must be exchanged a week before then, but he hoped they would meanwhile be rendered unnecessary.

Teheran, November 30th.—A report has been received here that Sadik, son of Sheik Abdallah, with several thousand Kurds, had advanced close on to Urumiah and captured two guns. The Persian commander has left Urumiah to engage in battle.

Berlin, November 30th.—Ponparliers are passing between the United States, French and German Governments for exchanging opinions relative to the employment of existing silver coin.

Rome, November 30th.—In the Chamber of Deputies, this evening, after several orders of the day had been introduced, Signor Mancini proposed a resolution signed by twenty members declaring that the Chamber, desiring to pronounce its opinion on important reforms which the wants of the country require, passed to the order of the day. Premier Cairoli said the Ministry would accept Signor Mancini's motion as an expression of full confidence. The motion was then adopted—221 to 188. The Cabinet regards the result as a complete vote of confidence, and, in view of the state of parties in the Chamber, it is considered a remarkable victory for the Government.

St. Petersburg, November 30th.—The ice in the Volga suddenly broke at Nijni Novgorod, in consequence of warm weather. Five steamers and thirty barges were destroyed, and large quantities of grain, naphtha and fish were lost. The damage is immense.

The Czar has left Livadia for St. Petersburg.

Paris, November 30th.—In the Senate, to-day, during a debate on the estimates of the Ministry of Foreign Affairs, Barthélemy St. Hilaire said the naval demonstration was undertaken to settle the Montenegrin, Greek and Armenian questions. It was the sagacious policy of France which kept the demonstration within the limits in which it had returned. A demonstration in favor of Greece was still in the region of hypothesis. The Government warmly sympathized with Greece, but England first raised the question at Berlin.

St. Petersburg, November 30th.—The police at Charkoff have seized several printing presses, together with daggers, revolvers, copies of a revolutionary organ and forged passports, and have arrested two revolutionists.

Constantinople, November 30th.—Said Pasha submitted to the Sultan the draught of a note requesting that the Powers exercise friendly pressure on Greece in view of the delimitation of the frontier.

Athens, November 30th.—Count Nony, the new French Minister, in presenting his credentials to the King, recommended moderation.

Budapest, November 30th.—It is reported that the allied fleet has received orders to sail.

London, November 30th.—The *Times* says that Shaw Lefevre, the new Secretary to the Admiralty, will be an able Lieutenant to Gladstone and Forster in the land agitation.

New Pallas, November 30th.—The police hut has been removed safely, the peasantry being overpowered by the soldiers, who will protect the erection of a new hut.

Dublin, November 30th.—The *Gazette* contains an offer of £1,000 reward for the discovery of the murderers of Wheeler at Ovia.

Cork, November 30th.—A barbarous outrage was committed near Droles on a bailiff who was in charge of a house from which the tenants had been evicted. A party of armed men broke into the house and slit the bailiff's ears. The bailiff fainted from loss of blood.

The police hut has been erected at New Pallas without disturbance.

Dublin, November 30.—A circular has been issued from the office of the Chief Secretary for Ireland to the Sessional Crown Solicitors, directing them not to absent themselves more than twenty-four hours at a time from their respective counties without special cause, and to report to Forster all communications of the police in reference to the outrages.

Portsmouth, November 30th.—Five hundred marines are to go to Ireland.

Tipperary, November 30th.—The artillery detachment which went to New Pallas, left their guns behind at Limerick. All the troops withdrew from New Pallas after the police of the Government had been trebled.

Dublin, November 30th.—At the meeting of the Land League to-day it was stated that several Orangemen were

members of the League, and that branches of the League have been established in every county in Ulster.

London, November 30th.—The Land meeting held at Bally Castle, County Antrim, yesterday, was a failure. Only two hundred persons were present, and the speakers were hissed.

Berlin, November 30th.—There is a busy agitation afoot in the Hanse cities for their inclusion in the Zollverein. At the meeting in Bremen a resolution in favour of the course was almost unanimously adopted.

Vienna, November 30th.—It is reported that the Turkish Minister at Athens has made overtures to Greece, in order to ascertain whether she is disposed to enter into direct negotiations.

Berlin, November 30th.—It is believed that there is some truth in the statement that France has negatived the proposal of England not to dissolve the International fleet for the present.

New York, December 1st.—The *World's* London special says: The Marquis of Salisbury, Secretary of State for the Foreign Department, in the Beaconsfield Government, delivered an important speech at Woodstock to-night. He attacked the Eastern and Irish policies of the Gladstone Government with great severity, and made such sweeping charges of incapacity and duplicity against them, that the Ministerial leaders must feel in duty bound to defend their course before the people. Speaking of the Greek territorial claims and of Gladstone's pet scheme of enforcing them, Lord Salisbury said the best sentiment of England was utterly opposed to the menacing of Smyrna in order to compel the Porte to fulfill its Greek compacts. As to the trouble in Ireland, Lord Salisbury ridiculed the Gladstone theory that the establishment of a peasant proprietary would be an unfulfilling panacea for many if not all of the Irish evils. The Marquis indirectly admitted that the land agitation is only a surface manifestation of the old home rule spirit, which still thoroughly permeates what may be called the rebellious sections of Ireland—the west, south and southwest, and part of the eastern coast. No amount of legislation, however conciliatory, can wipe out the Nationalist feeling in Ireland and the Marquis of Salisbury confessed as much to-night when he declared that a Government policy could never be wholly successful in Ireland until all discord had first been crowded out and the supremacy of law restored by the operation of superior force. His Lordship emphatically charged that the present Irish troubles was directly traceable to the temporizing legislation of the Gladstone Government of 1879, and he predicted that evil results would follow every new attempt to bring about harmony and prosperity in Ireland by similar methods. If Lord Salisbury's utterances are to be accepted as an inspiration of Lord Beaconsfield, Ireland can scarcely look for anything from the next Parliament except severe measures. The opposition is preparing itself for the fight early in advance, and the struggle will be a bitter one when it comes—one in which the complexion of the Government is very likely to undergo a change.

Muntz, member of the House of Commons for Birmingham, is hopelessly ill.

J. B. Thompson, Q. C., of St John, N. B., a leading member of the Canadian Bar, who was of counsel for Canada before the British Commission which sat at Halifax on the Fisheries question under the Washington Treaty, is dead.

Dublin, December 1st.—The house of the Sisters of Mercy, in Tuam, County Galway, has been destroyed by fire.

London, December 1st.—The *Agence Russe* of St. Petersburg announces that Russia has under consideration the necessary steps for converting Batoum into a free port; also, that England has submitted a proposal to the Powers for the maintenance of European concert, with a view to settlement of the remaining provisions of the treaty.

A Berlin despatch says that Prince Hohenlohe, German Ambassador to France, goes to Paris on Wednesday. Count D. Saint Villier, the French Ambassador at Berlin, gave a banquet last night to Prince Hohenlohe, on the return of the two Ambassadors from a visit to Bismarck at Friedrichsruhe, where it is believed a plan of action formulated by Bismarck for European control of the Eastern question was discussed, and Hohenlohe was instructed to consult the

French Government on a definite proposition for dealing with the Greek question.

A despatch from Athens says: Radowitz, the German Minister, remains here six months longer, which shows Bismarck's anxiety to keep Greece well in hand, but his influence cannot prevent war unless Turkey yields the ceded territory.

London, December 1st.—At a meeting of the Committee in the furtherance of the Greek cause, at Willis' rooms, this afternoon, the Earl of Roseberry presiding, resolutions were passed urging the British Government to make strenuous efforts to assure the cession of the territory recommended by the Conference of the Powers.

A body of Albanians lifted 1600 Montenegrin sheep. Montenegro protested, but the Porte declined all responsibility.

Shere Ali, who governed Candahar under British occupation throughout the war, has obtained the Sepoy's permission to retire to India with his family.

At Paris, Madame Montifond, a well-known writer, has been sentenced by default to six months' imprisonment and 500 francs fine for offences against public morals.

Laycock's friends in Sydney, Australia, have sent a cable despatch announcing they had deposited £350 to aid him in making up his stake in his match with Hanlan, and that more money will follow.

It is believed Bismarck is not disposed to decide between the plans which have been suggested for employing the stock of silver now available in Germany, namely: That the Imperial Mint should strike small silver coins in the proportion of nine marks per head of population, or that thaler pieces be continued in circulation.

Wm. Rathbone, Liberal, has been elected a member of Parliament from Carnarvonshire, to fill the vacancy caused by the appointment of Watkins Williams as one of the Justices of the Court of the Queen's Bench. Rathbone defeated H. J. Ellis, Conservative, by 1029 votes. Rathbone represented Liverpool in the last Parliament.

Gambetta did not think fit to consult the Chamber of Deputies regarding the Beaudry d'Asson letter, asking that the Chamber be requested to sanction the proceedings, under Article 341, Penal Code, against Presidents, Vice-Presidents and Questors, for arbitrarily placing him under arrest, November 11th. Gambetta considers the letter an aggravation of Beaudry d'Asson's conduct.

A correspondent at Rome, discussing the vote in the Chamber of Deputies, says: "It must be considered that fifteen of the majority are Republicans, who only support the Cairoli Cabinet as being the most favorable to their designs, and that many others voted for Signor Mancini's motion without altogether approving the policy of the Government, wishing to avoid a crisis, and hasten the discussion of reforms."

The overtures of the Turkish Minister at Athens have not been rejected, but as the condition for opening regular negotiations, Greek has asked Turkey to make a positive proposal. This conciliatory attitude is the effect of the unwillingness of the Powers to resort to force in favor of Greece and the small response on the part of the inhabitants of Thessaly and Epirus to the Greek attempt to form a volunteer corps.

The *Rome Diretto* publishes the following telegram from Valparaiso: Twenty-five thousand Chileans, 5000 cavalry, and 100 cannon, left Arica on the 5th ultimo, and arrived at Pisco on the 25th. A great battle was expected near the end of November. The Peruvians estimated number is nearly twice as large as the Chileans. The Peruvian Guano Company, at London, had a telegram dated November 29th, that the Chileans occupied Pisco, November 20th, without opposition.

## THE JAPANESE PRESS.

### THE OPENING UP OF YESSO.

(Translated from the *Hochi Shinbun*).

We have already pointed out that as long as the present industries in Yesso are conducted on a small scale, the profit arising from them are likely also to be small and not lasting, while it is very well known to all that the products of Yesso are not confined to the sea alone, but that the land is

very fertile in many ways. Anyone, however, who directs his attention towards the encouragement of any industries always commences at the easiest of them. The different metals hidden away in the recesses of mountains cannot be made serviceable to man until his intellect is sufficiently advanced to know how to handle them. As an instance of this, the discovery of America was due to the idea having gained complete credence that the world was round; and it was not until the introduction of steamers and railways that transport was effectually facilitated and commerce put into its present state of activity.

Thus, as regards the encouragement of industries in Yesso, the topic was frequently discussed by many of our most educated men several years ago, but, the nation not being in a sufficient state of enlightenment, no opportunity offered for the execution of their schemes, and although the then government occasionally compelled people to emigrate to Yesso in order to encourage industries, the action never resulted in any success.

When we formerly wrote on the subject of the encouragement of industries in Yesso we stated that there were three essentials required, the accomplishment of which would bring about the desired effect. These are: 1st, that a fund should be subscribed by capitalists; 2nd., that the means of transport should be facilitated in every-way: and 3rd., that immigration should be encouraged.

To commence any new scheme the first requisite is, naturally, an adequate amount of funds; money, however, rarely accumulates in any one spot in large quantities, so that without getting up a subscription it is almost impossible to encourage any industry on a large scale. Therefore a large fund is necessary to commence a large undertaking.

Again, by facilitating transport we encourage industries and commerce, and provide better means of inter-communication, which is one of the principal things upon which encouragement of new industries have to depend. The next question is that of the immigration of labour into Yesso, because, even if funds and the necessary means of transport are forthcoming, without an adequate supply of labour nothing can be done. When then all these three things are arranged, industry in Yesso will be properly encouraged.

It is, however, hopeless to look for the consummation above referred to at one and the same time; capitalists may be willing to advance the requisite funds if sufficient transport is available, but they will have to wait for this; and even allowing that transport and capital are both forthcoming, is work likely to be commenced until sufficient labourers have immigrated to Yesso? Consequently we must trust that if any one of these necessary requirements is provided, the other two will follow as a matter of course, so that eventually they will all come to pass, and great works can be commenced.

In our own opinion the facilitation of transport is the most probable plan by which the other suggestions of raising funds and encouraging immigration are likely to be brought about. We have been informed that since the Mitsu Bishi Company established a branch office at Hakodate, thus extending the mail service as far as Yesso, the greatest attention has been paid to the subject of transit. In the year 1878 the *Genio Maru* met with a heavy gale and was lost on the coast of Atsukishi. Another vessel, the barque *Nagasaki Maru* suffered from storms off the coast of Fukuyama. Apart from these casualties the tempestuous character of the northern sea has frequently influenced the progress of our navigation there. Yet despite all these obstacles, the before-named company has never been discouraged, but at an expense of several hundred thousand yen has constructed a pier and built a number of sampans at Hakodate. Moreover, the rates of passage between the various coast ports have been lowered with a view to encourage travelling from one port to another. We recollect that the Pacific Mail Company, when it had the monopoly of the coast trade, used to charge the following rates for passages between here and Hakodate; 1st class \$100; 2nd class \$75; 3rd class \$50. Now one hundred dollars at that time was worth nearly double what it is at present, so that even when the charges were reduced to \$15 they still appeared to us to be high. Now the Mitsu Bishi Company, even before it lowered its rate, charged only 16 yen for a first-class passage. This was afterwards lowered to fifteen yen, which is 35 yen cheaper, or three times less than the charge formerly made by the

Pacific Mail Company. When we notice moreover that the Mitsu Bishi Company has reduced its rates for 3rd class passages from eight to five yen, we are led to believe that this is in consideration for the lower and poorer part of the community, and our comparison of the rates charged by this and the other company encourage us in our belief.

We have not at present the proper facilities for transport, but as the means of immigration have been put with in the reach of the lowest classes even, it is to be hoped that the two other requisites will follow viz: funds and an improved transport. When these three things are obtained we may hope for a fruitful return of our outlay. We shall deal further with the same subject in a future number.

## THE SEALED LETTER.

### CHAPTER I.

The great road from Paris to Belgium is both long and dull, stretching away mile after mile in a perfectly straight line through a hideous country of yellow mud, without trees or hedges, and nearly perfectly flat. Yet in this uninteresting country, when I was on horseback and alone, I met with an adventure which I have never since forgotten. It was as long ago as the year 1815, when the scarcely unexpected return of the great emperor from Elbe had led to a plentiful exodus of those who had attached themselves to the fortunes of King Louis XVIII., more especially those who, like myself, had been in attendance upon the person of the king. My horse had cast a shoe, and I had thus fallen a little in the rear of my comrades, whose white cloaks and crimson uniforms were easily discernible through the blinding rain on the horizon in front; whilst behind me the lancers of Bonaparte, with their tri-colored pennants, hovered in the rear, following us step by step, with the evident intention of seeing us over the frontier. I was little more than a lad, but I had a tolerable horse under me, and a plentiful supply of money in my pockets; and although the rain came down without ceasing, and I was wet through and covered with mud, I kept up my spirits by singing one of the popular songs of the day, whilst I watched the rain trickling over my new epaulets. At last, my horse began to droop his head, and, like him, my spirits sobered down, and I began for the first time to ask myself where I was going. I had not the faintest notion, but I did not trouble myself much on that score, for my squadron was in front, and in following my comrades I was but doing my duty—a more than sufficient reason to my not very troublesome conscience. Inensibly, however, I began analyzing this curious feeling of abnegation of self, which is at the bottom of all sense of duty, more especially as it might affect a soldier, and I speculated freely upon the disagreeable positions I might find myself placed in when duty and obedience pointed in one direction, and one's own feelings in the other.

The pouring rain, the dismal country, the endless road, were not likely to give the most cheerful tone to my cogitations, and I was but too glad of the break afforded by the sudden appearance of a black object crawling along the yellow road at the distance of something like a mile and a half, and which was evidently under the control of some human being or other, who would at least put an end to my dreary *l'été-a-l'été*. I reined in my horse to examine the object more carefully, and soon made out that it consisted of a small covered cart drawn by some animal, which, from the zigzag mode of progression adopted, was evidently even more tired and depressed than the horse I was riding. The poor animal seemed as pleased at the prospect of companionship as I was, and willingly responding to my efforts to make him mend his pace, I was soon enabled to see that I was fast approaching a small spring cart, over which a black tarpaulin was stretched by means of three ribs of wood, resembling a sort of cradle on wheels, whilst the tired mule, who dragged it wearily along, was guided by a man holding the reins in his hands as he trudged stonily by its side. I had plenty of time to make my observation as I ranged up alongside of my future companion, who was a tall, athletic man of some fifty years of age, with a thick white mustache, and the slight stoop in the shoulders which is the unmistakable sign of the old infantry officer who has long carried the knapsack. He wore the uniform and epaulets of a major, and he had the weather-beaten look on his face which is so common among men who have seen a good deal of rough service in the field. As I approached him he gave me a quick glance from under his shaggy eyebrows, and slowly drawing a loaded musket from the little cart, he cocked it, whilst placing himself on the other side of the mule, which was thus unconsciously transformed into a rampart. Seeing the white cockade, I contented myself with drawing aside my cloak so as to show my uniform, and he at once replaced the musket in cart, saying, with a backward gesture of his thumb:

"Ah! that makes all the difference. I took you for one of those fellows who are following us behind there. Would you like a drink?"

"Gladly," said I, approaching him eagerly? "for it's more than ten hours since anything but rain water has passed my lips."

He had a very prettily engraved cocoon with a silver top slung over his neck, and producing this with evident pride he handed it to me filled with some thin, sour white wine, which tasted to me like nectar of the gods. I handed it back to him, and before readjusting it he took a mouthful of the contents adding:

"To the king's health! He gave me a step in the Legion of Honor, and it is but right that I should attend him to the frontier. When that's done, as I have nothing but my epaulets to live by, I shall return to my regiment. It's my duty."

He said this more as if speaking to himself than to me, and set his mule again in motion, whilst I rode slowly along by his side for more than a quarter of an hour without hazarding any remark, so fearful was I of putting an end to our newly-formed acquaintanceship by what might prove to be an indiscretion with a man who was evidently somewhat peculiar. As he soon stopped again to rest his tired mule, I took the opportunity of getting rid of the rain which had soaked down into my long horseman's boots.

"Your boots seem to stick pretty tight to your feet," said he.

"It's a long time since I've had them off," I replied.

"Bah! you must learn to think nothing of that," he rejoined, in a gruff voice. "If you mean to be a soldier, especially in such stirring times as we are likely to live in—" Then turning half round, he added, "What do you suppose I've got in the cart there?"

"I am sure I don't know," I answered.

"It's a woman!"

"Ah!" said I, with a sort of grunt, but not venturing on any other sign of astonishment, and following him at a foot's pace.

"The poor old wheelbarrow there didn't cost me much, nor the mule either. Nevertheless it's all I have got to make the march on, although the road drags out like a linen-draper's measure."

I at once offered him the loan of my horse, and as he saw I had no intention of sneering at himself or his conveyance he seemed on a sudden at his ease, and coming alongside my stirrup he gave a hearty smack on the knee.

"Well, you are a good fellow, although you have the crimson breeches on."

The recollection of the dislike with which our four favored regiments of the body-guard had been always regarded by the line flashed across my mind, and I believe I blushed at the way in which we had been preferred to the old soldiers.

"However," added he, "I won't accept your good-natured offer, for the very sufficient reason that I don't know how to ride!"

"But, major, officers of your rank are compelled to ride!"

"Bah, once a year, at the inspection, and then we hire an old hack. As for me, I began life as a sailor, and ever since I have been in the line I never troubled myself about learning to ride."

I could see he was eyeing me closely for the next few minutes, but as he found I was still silent he went on:

"So you're not curious? I thought I should have astonished you."

"I'm not so easily astonished as you think."

"If I were to tell you why I left the sea I should astonish you, whatever you may think now."

"Well, why didn't you try? At all events it might warm us up, and make me forget the rain that gets in at the nape of my neck and runs down to the heels of my boots."

The good-natured major was evidently as pleased as a child to tell his story, and forthwith prepared himself for it. He readjusted his shako covered with oilskin, on his head, and gave a hitch forward with one of his shoulders, which could have satisfied even the rawest recruit that he belonged to the infantry; that veritable shrug that the foot soldier gives his knapsack to shift the load and lighten the weight and which never forsakes him after he becomes an officer. After this convulsive gesture he drank a mouthful from his coconut, gave a dig in the ribs to his mule by way of encouragement, and began.

## CHAPTER II.

I was born at Brest, and, to avoid troubling you with details you won't care about, let me say, that I ran away to sea when I was a lad, and was found stowed away in the fore-cabin of an Indianman when she had lost sight of land. The captain was better natured than some would have been in his position, and instead of pitching me into the sea he turned me into a cabin-boy; and, for my part, so anxious was I to prove that his kindness was not misplaced, I worked away so hard that at the end of fifteen years I found myself in command of a merchant brig of some five hundred tons burden. When the Revolution broke out, the Royal Marine (which, mind you, was as good a service as a man need wish for) found itself deprived of the great portion of its officers, and the authorities were glad enough to put men like me in command, who had not only sufficient experience as seamen, but had also shown an aptitude for fighting in brushes with pirates, and such irregular warfare. However, whatever my merits were, one fine morning I found myself in command of the corvette *Marat*, of twenty-six guns and three hundred and fifty men, having just received orders to get ready for Cayenne, whither I was to take re-enforcements for the garrison, and a political prisoner, whom the frigate *Decade* which had sailed a week before, had been obliged to leave behind for want of room. On the 28th of Fructidor, 1797, I received my orders from the Directory, the first letter enclosing a second with three broad red seals, which I was directed not to break until I had reached certain degrees of latitude and longitude, which would bring me somewhere near the line. It was a remarkable letter in many ways, for it was of extreme length, and was so carefully sealed and gummed together that I found it impossible to glean the smallest notion of its contents, which I am not ashamed to say I was most anxious to become possessed of. From the first I conceived a dread of this mysterious-looking document, and after much consideration I determined to place it inside the glass of a little useless clock, which was fixed over my bed, until the time arrived when I was authorized to ascertain its contents. The rest of the furniture of my cabin was as neat and appropriate as you could find in any man-of-war; for instance, my bed at night, was shut up into a sofa in the day-time where I smoked my pipe; the floor was waxed and scrubbed until it shone like a looking-glass, and when all was in order it was as pretty a room as you could wish to see. What pleasant days we spent there, and what an agreeable voyage it was, until—but I must not anticipate.

We started with a fair wind, and I happened to be engaged in

putting my letter inside the glass of the clock when a knock came at the door, and my prisoner entered, bringing with him a pretty young girl, about seventeen years of age, whom he held by the hand. He was not much more than nineteen himself, and a good-looking lad, except that he was a little too pale and too white for a man; he was a man, however, and one who behaved like the heroes of ancient days, when the occasion arose, as you will see before I have done. As I turned round he drew his wife's arm within his own, and there they were, looking as fresh and happy as two turtle-doves, and made me quite happy to see them.

"So, there you are my children," said I; "and come to give a visit to your Captain. It's very kind of you, and although I have some distance to carry you away, so much the better, for it will give us the time to get acquainted. Forgive me, madam, for not having my coat on, but I was engaged in nailing this clock up securely so that I might get rid of this hateful letter. Do you think you can help me?"

They really were a nice little pair. The little husband took the hammer and the little wife the nails, and they passed me the one and the other as I asked for them; she, laughing merrily, called out "to the right," or "to the left, Captain," as the rolling of the ship made the clock lurch about; in fact she was making fun of me.

"You naughty child, I'll tell your husband to scold you if don't mind," and then she threw her arms around his neck and kissed him; for they were like two children, and it was no wonder we soon became great friends together. We were pretty lucky in our passage, for the weather seemed made expressly for us, and I made my two little friends come and dine daily with me. When our frugal dinner was over they would nod and wink to each other, and when I laughed at them they would join in with me. Nothing came amiss to them, and they were always merry and pleased with everything that was done for them. Although my orders were to be kind and attentive to them, I was especially told to keep them on the ordinary ship's rations, and they had their hammocks like the rest of the crew. I was like you, my friend, and I didn't bother people with questions about what did not concern them; for what were their name or their affairs to me, who was only the captain of the ship that took them over to the other side of the world? At the end of a month I had begun to look upon them as my children; whenever I called them they came and sat down by me; the young man wrote at my table (that is to say, my bed), and helped me to work out the longitude, and soon got to do it as well as I could, and then we talked about anything that turned up until the watch was called.

"Do you know," said I one day, "we make up quite a family party. I don't want to cross question you about your affairs, but probably you have not too much money between you, and you will find it hard work to dig and delve among those prisoners at Cayenne. It's a horrible country out there, but for a seasoned old fellow like me, who has been dried up by the sun, I can live there like a lord. Now, if you have any sort of liking for me, I'll throw up my commission on board this old craft and I'll establish myself out there with you, if you wish I should do so. I have not a single relation at home, and you would make me a nice little household. I can help you to a score of things, for I have not sailed the sea all these years for nothing, and I have a snug little strong box on board that I've come by honest enough, and which I shall leave to you when the time comes that I must lose the number of my mess."

They looked at each other quite astonished, as if they scarcely believed what I said: and then the little woman fell back on her unfeeling resources—she ran crying and blushing to her husband, and threw her arms around his neck. He put his arm around her waist, and I saw tears too in his eyes: he held out his hand to me, and I noticed that he was more pale than usual. She spoke in a low voice to him, in his ear, while her thick locks of yellow hair fell over his shoulders, and he answered her in the same way, occasionally kissing her forehead, whilst she wept without ceasing, until I got tired of seeing it.

"So this doesn't suit you?" said I at last.

"But—but, Captain, you are too good," stammered the husband, "I hardly know what to say to your goodness. But—how can you live with prisoners?" and then he lowered his eyes, and a blush came over his face.

"I don't know what you've done to be transported in this fashion," I replied, "but you can tell me or not some day or other, if you choose to do so. You don't seem as if you had anything very disgraceful on your conscience, and I am pretty sure I have done worse things than you. Once for all, so long as you are committed to my custody it is my duty to look after you, and I shall do so, and you must expect nothing else; for, under orders, I'd twist your neck as I would a brace of pigeons; but, once I throw off the coat with the epaulettes on it, I care neither for the admiral nor for any one else under the sun."

"It is because I thought it might be dangerous for you, Captain, to be friends of ours that I hesitate. We laugh because we are young; we are happy because we love each other; but I have very dismal half hours when I think of the future and what may happen to my poor Laura."

As he said this he pressed his young wife to his breast, and murmured:

"I ought to have said as much to the Captain, don't you think so my darling? I am sure you would have said as much yourself!"

I took my pipe and turned away, for to tell the truth I felt as if the tears were coming to my eyes, and that was not a state in which a man in my position, should be seen.

"Come, come," said I, "the future will set this all right. If the tobacco is disagreeable to the lady I will go away."

She looked up at me with her face all on fire and wet with tears, like a child that has been scolded.

"At all events," said she, looking up at the little clock, "let us take about something else; and the letter there!"

When she said this I felt a cold shudder pass over me, and my hair seemed almost to stand on end.

"Good heavens," said I, "and I had almost forgotten it! If we had got beyond the first degree of north latitude I should have nothing to do but to jump overboard."

I seized hold of the ship's log, and when I saw that we had, at least, a week before us, I was in some degree comforted, but I still felt an undefined fear in my heart.

"There is no joking with the Directory on the score of obedience," I half muttered to myself. "However, I'm all right so far, but the time has slipped away so quickly that I had nearly forgotten all about it."

Well sir, there we stood, all three of us, looking up at the letter as if we expected it to speak to us. What struck me the most was that the sun, which was now shining through the cabin window, lighted up the glass of the clock, and made the great red seal in the centre look like the features of a face in the middle of a fire.

"One might almost say that its eyes were coming out of its head," I said to amuse them.

"Oh," replied the young wife, "it looks more like the stains of blood."

"Bah, bah!" said her husband taking her by the arms; "you are frightening yourself, Laura. It looks like an invitation to a wedding. Come along and go to bed; why shall you bother yourself about the letter?"

They left the cabin and went up on deck, whilst I remained and smoked my pipe, but I could not take my eyes off the great red seal, which seemed to have the same power of fascination over me that a serpent is said to possess. At last I tore myself away from it, and went up on deck to finish my pipe. All was going well there, for the *Marat* had a favorable wind, and was doing her ten knots comfortably within the hour. It was as beautiful a night as I have ever seen in the tropics. The moon was just rising above the horizon, and the calm white sea seemed to cut her in half, looking like a sheet of snow covered with diamonds. I stood looking at the scene in silence, and the officers and sailors of the watch were gazing over the bulwarks at the shadow of the corvette in the water. I like silence, order and discipline, and I had forbidden all noise and fires aboard after 9 o'clock. Suddenly I saw a little red line almost under my feet, and I was just about to utter an angry exclamation, when I saw that the light came from the cabin of my young prisoners, and wishing to make sure of the fact I stooped down so that I could look through the skylight. The young wife had undressed and was on her knees, saying her prayers by the light of a little lamp, whilst her husband was seated on a portmanteau, with his head between his hands, watching her. Her eyes turned toward heaven, were still wet with tears, and when she had finished she made the sign of the cross with a smile, as if she were going to paradise. Without saying a word, her husband kissed her, and taking her up in his arms, lifted her into her hammock as if she had been a child. It was a very hot night, and the gentle motion of the ship seemed to soothe her, for after lying for a few minutes—

"My dear," said she, more than half asleep, "aren't you sleepy? It's getting very late I'm sure."

He remained in the same position with his head between his hands, and, finding he did not reply, she turned her pretty little head over the edge of the hammock, and looked at him with her mouth half open, and not daring to speak to him. He hesitated for a moment, and then said, with an evident effort: "My dear Laura, the nearer we approach our destination, the more apprehensive I feel. I don't know why, but it seems to me as if the happiest part of our life would prove to be the first part of this voyage."

"I feel exactly the same," said she; "and I hope we may never get there."

"And yet," he added, clenching his hands together. "My darling, I notice that whenever you say your prayers, you always cry. That worries me terribly, for I know whom you are thinking about, and I fear that you regret having come with me."

"I regret!" said she in a distressed voice, "Regret, too! and to have followed you! I, who am your wife, and who know my duty, although I am but seventeen. Why, my mother and my sisters all said it was my duty to go with you to Cayenne. I wonder how you can think of such a thing for a moment! How can you regret anything when I am with you to help you while I live, and die with you if you die!"

The young man heaved a deep sigh, whilst he tenderly kissed the pretty hand and arm she extended to him.

"Laurette, my darling Laurette, when I think that if we had only waited for four days they would have arrested me alone, I cannot forgive myself."

She leaned over the hammock and stroked his hair with both her hands. She laughed like a child; and said a number of pretty, womanish things to him which I cannot repeat, then shutting his mouth with her little fingers, so that he was obliged to listen to her.

"Are you not much better off with your wife, who loves you, my darling? I am quite content to go to Cayenne. I shall see the savages and cocoanut trees, like Paul and Virginia, and each of us will plant one, and see which will turn out the best gardener. We will work all day, and all night, too, if you like; and I am strong, too—look at my arms. I could almost lift you up. Don't laugh at me, for I am a capital needle-woman, and there is sure to be a town where they will want that sort of thing. Besides, I can give lessons in music and drawing, and, if they know how to read out there, you can write for them."

The poor lad gave a bitter cry when she said this.

"Write, indeed, write!" he said, "Why was I ever taught to write? It's only fit for a fool to do. I believed in their talk about the liberty of the press. I only wrote half a dozen lines, which were read by those who liked them, and thrown into the fire by those who disliked them, and only served the purpose of enabling

them to persecute us. It was bad enough for me, but for you, my angel, who had been my wife but four days only—what had you done? How could I have been foolish enough to let you come with me? Do you know where you are, my poor little girl, and where you are going? Very soon, my child, you will be sixteen hundred leagues from your mother and sisters, and all for me!"

She hid her face for a moment in the hammock, and although, situated as I was, I could plainly see she was crying, it was impossible he could do so. Very soon she reappeared with a smile on her face to cheer him up.

"At all events, my darling, we are not overrich just now," she said with a shout of laughter, and holding up her purse. "All I have is a single louis. And how much have you got?"

He could not resist her winning ways, and laughed like a child. "Upon my word, I don't know. I had a crown piece, but I am afraid I gave it to the porter who carried my portmanteau aboard."

"Never mind, one is never better off than when one has nothing. Besides, there are those diamond rings that my mother gave me, and they would fetch heaps of money. Do you know, too, I think that our good-natured captain is pretty well aware what the contents of that letter are and that we are recommended to the Governor of Cayenne."

"Perhaps," said she, "who knows?"

"I am sure of it. You are so good, the Government have only exiled you for a short time, and don't really mean to do you any harm."

It struck me that she might have guessed correctly the contents of the sealed letter that had so puzzled me, and jumping up quite relieved at the idea, I stamped on the deck to call their attention, and shouted out an order to extinguish the lamp. It was blown out at once, and I heard them laughing in the dark like schoolboys on a holiday. As I walked the deck in the cool night air and thought over this new idea, it seemed to gather strength, and without trying to dive into State secrets (which I should never have the wit to comprehend) I thought it very likely that one of the five members of the Directory had become captivated with the youth and grace of the young couple, and had thought it desirable to nip petty imprudences in the bud by a punishment which was more apparent than real. When I went down to my cabin to turn in, I looked at the letter in quite a different spirit, and was surprised to find that the great red seal appeared to smile good-naturedly at me. The last thing I remember before going to sleep was bestowing a cheery nod on it, in token of friendship.

### CHAPTER III.

I have always slept with one of my eyes open (as we say aboard ship), and it was not surprising that the sudden cessation of all motion one fine morning, about a week after my interview with the prisoners, sent me on deck at once to see what had happened. It was nothing more nor less than a dead calm, the sea like a sheet of glass, and the sails looking as if they were glued to the masts; and in answer to my inquiry the First Lieutenant informed me that we had reached the first degree north latitude and the twenty-seventh degree of longitude. As the officer read the entry from the log in a monotonous tone a sharp feeling of dread seemed again to pass through me, as I remembered that the time had come when the sealed letter must be opened, and all doubt and mystery as to its contents forever cleared up. As I have already said, the Directors never allowed the slightest trifling with their orders, and I had not even the excuse of press of duty during such weather to afford me a loophole for delay. As I paced hurriedly along the deck, I tried to raise my sinking courage by arguing with myself that Laura's interpretation of the mystery must be the right one; and as my mind became more firmly impressed with the conviction, I went down to my cabin, and, taking the sealed letter from its place of safety behind the glass door of the clock, I gazed impatiently at the great centre seal. My fingers were under the envelope, and I was about to tear it open, when again a tremor seized me, and I hastily replaced it, muttering to myself that there was no chance of the ship's moving before the evening, and that my duty would therefore allow me to postpone the opening for a few hours. I avoided the young couple during the day, but the hours seemed to fly like seconds, and the time for the setting of the sun was at last rapidly approaching, which would probably bring with it a breeze from the westward. I dared wait no longer, and rushing hastily into my cabin, and without looking at the seals, tore open the envelope. I read it through, and then I rubbed my eyes for I thought they were deceiving me. I read it again and again, and then I began at the last line and read it backwards. I felt my legs begin to totter under me, and I was obliged to sit down; then a twitching of the muscles of my cheeks commenced as I gazed at the letter, and I had to rub them with some rum to put a stop to it. The one word "duty" seemed to burn itself into my brain, and hastily sluicing my head in the water-jug, I went on deck into the fresh air.

Laura was then looking almost prettier than I had ever seen her, dressed in a fresh white frock, with bare arms, and her splendid hair flowing down her back. She was amusing herself with a hook and line, with which she was trying to catch some of the sea-weed that was floating around the ship. She called to her husband to come and help her, and I watched them for a few minutes without speaking; and then as I at last caught his eye, I made him a sign to come and speak to me. Looking up at the moment she chanced to detect the gesture, and dropping the line she seized her husband by the arm.

"Don't go near him," she said, "Look how pale he is! I am sure there is something wrong."

He soon quieted her and came over to me; whilst she, leaning against the mast, watched us, as we paced up and down the poop, without speaking a word. I lighted a cigar and tried to smoke it, it seemed bitter, and I threw it into the sea and watched it as it

floated away. Suddenly I took him by the arm, and as we recommenced our walk I whispered in his ear:

"Tell me your story, my friend, and what you've done to these dogs of Directors that seem like five bits of a king. These lawyering fellows have got a pretty strong grudge against you. What's the meaning of it all, and what have you done?"

He shrugged his shoulders, poor lad, and said with a sort of bitter smile:

"Not much, Captain, God knows. Three silly couplets, and very bad ones, in a vaud-ville. But they made the people laugh, because they were about the Directory, and that's all!"

"Impossible," said I.

"It is true. I swear to you. The verses were bad enough, as I have said, but I was arrested on the 15th Fructidor and taken to La Force. I was tried on the 16th and condemned to death, and the sentence was afterwards commuted to transportation."

"Good heavens, these lawyers are precious thin-skinned! Do you know, my friend, that ether orders me to shoot you, here?"

He made no reply, and he took it very well for a young man of only nineteen years of age. He only looked at his wife, and wiped away two or three drops of perspiration that would have fallen from his forehead. I had some on my face, too—and other drops in my eyes for the matter of that; I went on:

"It seems these good citizens didn't choose to murder you on dry land, and thought no one would hear much about it if it were done out here. It's an awful affair for me, but I must do my duty. The sentence of death is in perfect form, signed, sealed and initialed—nothing is wanting."

He made me a bow but his face flushed up.

"I have no request to make of you, Captain," said he, in almost has usual tone of voice. "I should not like to stand between you and your duty; all I ask is to be allowed to speak to Laura; and I beseech you to protect her so long as she survives me, which I don't think will be very long."

"Be assured of that, my poor fellow. Don't let that trouble you, for I will take her safely home to her family on my return to France and I will never leave her so long as she wants to see me. But I believe that you are right and that she will never get over it."

The poor fellow took both my hands in his and squeezed them warmly.

"My dear old friend, I pity you more for what you have to do, than I do myself for what I have to suffer. I want you to protect her, and watch over her until she is handed over to her mother." Then, in a low voice, he added, "Let me tell you that her health is very delicate, that her chest is affected, and it is necessary she should wrap herself up well at times. I know that you will be all to her that her father and mother could be to her—won't you, now? If it could be arranged that she should keep the rings her mother gave her, I should be very glad. But if it turns out that they must be sold, I think you will find that they will fetch a good sum. My poor Laura—how beautiful she is!"

All this began to be more than I could stand, and although I had hitherto spoken to him in a cheerful way to keep up his spirits I could no longer do so.

Between brave men there is nothing more to be said. Everything else is understood. Go and speak to her now and let us use no time."

I shook hands again with him as I said this, but as he still retained mine in his grasp I looked him straight in the face and added, "If I might be allowed to give a last word of advice it would be not to say a word of this to her. It shall be arranged without her, or even you, knowing anything about it. That is my business."

"Ah! well, yes, perhaps you're right. Farewells are dangerous, very dangerous."

"Yes, yes," said I, "don't be a child, and all will go well. Whatever you do, don't kiss her if you can help it; if you do you're lost."

I gave him another grip with my hand and let him go. How hard it was to bear!

It seemed to me as I watched him, that he kept the secret as we had arranged, for they paced the deck together for more than half an hour, arm in arm, and then they went over to the side of the ship and began fishing up the bits of sea-weed with the line she had dropped, and which one of the cabin-boys had managed to get hold of again. All of a sudden the night was upon us, as is usual in these latitudes. It was the moment I had selected for the fulfilment of my duty, but its mournful recollection has never since left me for an hour, and I drag it about with me as a convict does a chained shot."

The evident emotion of the old officer when he reached this point in his narrative compelled him to pause, and when he resumed it, after an interval of a few minutes, it was in a somewhat incoherent strain, in which a sort of running commentary was muttered to himself on the changing phases of his story.

I called up the second lieutenant on to the quarter-deck and gave him his orders. "Since we are ordered to turn butchers and executioners, launch the first cutter without delay. Put that woman into her, and row straight away from the ship until you hear the report of six muskets; then turn about and return."

Here he muttered to himself, "Obey a mere scrap of paper like that—for that was all it really was! I must have been possessed by some foul fiend. I saw the unhappy young man kneel down and kiss her knees and feet when the sailors approached her, and I ordered him to separate them. Oh, God, I see it all now!"

He stopped short suddenly in front of me.

I tell you I was like a madman. "Separate them," I cried, "For we are all a set of scoundrels. The Republic is dead. Directors, Directory, they are nothing but vermin. See what these villains of lawyers have forced me to do. If I had but the five wretches here I would shoot them every one. I swear I would, as the heavens are above me!" I saw the men staring at me, and evidently thinking

I had lost my wits, but what did I care for them or my life? Not so much as the rain that is falling on me now."

He turned from me and strode away, muttering to himself and clenching his fists, whilst he occasionally struck the mule with the hilt of his sword as if he meant to kill the poor animal. His face was so convulsed that his bushy eyebrows fairly met, and the weather-beaten hue of his face turned to so deep a crimson that I thought he must have a fit of apoplexy. In his excitement he threw his cloak from off his shoulders, leaving his breast fully exposed to the wind and rain, of which he seemed quite unconscious, and thus we marched along, side by side, until I plainly saw that if I wanted to hear the conclusion of this sorrowful story I must break the silence.

"I can quite unders and," said I, as if he had finished his story, "that after such an occurrence as that, one holds one's duty in abhorrence."

"Duty, duty! Are you mad! It is not duty at all. No captain of a ship ought to become a butcher, and would never be asked to, except under the government of thieves and assassins, who take advantage of the habit of a poor fool to obey blindly, to obey always, in fact to obey like a machine, and against all his better nature."

Then he drew a red handkerchief from his pocket, and burst into an ungovernable flood of tears, which he made no attempt to control; seeing which, I pretended something was amiss with the girths of my saddle, and drew back behind the little cart, fearing he might feel humiliated if he had me for a spectator of his affliction. I had rightly judged, for in little more than a quarter of an hour he rejoined me, and, with an attempt at indifference, abruptly asked me if I had any razors in my portmanteau, to which I naturally replied that it would be time enough to get them when I had some semblance of a beard. He seemed pleased at the manner in which I answered him, and, after a short pause, he said:

"I dare say you've never seen a ship in your life, and don't know the poop from the stern?"

I was obliged to confess my ignorance, and he gave me a long description of each, adding with regard to the former, "It is there a man is placed when he is ordered to be shot."

"I understand," said I; "he tumbles into the sea, and there is no more trouble."

He made no direct answer to this remark, but began talking about the number of boats a corvette generally carries, and their several positions on the deck, and thus he insensibly glided back to the subject which evidently occupied all his thoughts.

"The sailors carried Laura off into a six-oared boat before she had time to cry out or speak to me, but it is astonishing what a set of fools there are in the world who always manage to do what they are ordered in the wrong way. Poor, poor, Laura! The officer in command of the boat was actually fool enough to row away straight in front of the ship, and, as for me, I had calculated on the night concealing the work we were about, totally forgetting that the flash of the muskets must naturally light up the scene. Well, to cut it short, from the boat she saw her husband fall, shot dead, into the sea!"

"Our merciful God above alone knows how such things come to pass as I am about to tell you—at least I know that I can't explain them; but the moment the volley was fired, she raised her hands to her forehead as if a bullet had struck her, and there she sat in the boat, without fainting, without screaming, without speaking, and returned to the corvette when and as they willed. I went to meet her, and I spoke a long time to her, and said what I thought was best. Her forehead was a bright red, whilst her face was deadly pale, and she seemed as if she listened to me, and looked me steadily in the face whilst she slowly rubbed her forehead. She trembled all over as if she were afraid of every one who came near her, and thus she has ever since remained. You may call her what you like, an idiot, an imbecile, or a madwoman, and all I have ever heard her say since is, 'Take the ball away; take it away out of my head.'"

Can you wonder that I devoted my life to the fulfilment of the promise I made to that poor murdered lad and that my conscience has ordered me to cherish and take care of poor Laura so long as I am spared on this earth? When I returned to France I claimed my rank in the army, having taken a dislike to the sea, because I had shed innocent blood there; and when the arrangements had been carried out, I obtained leave of absence, and left with Laura for her old home, intending to leave her with her family. Unhappily, I found that her mother was dead! and what do you think her sisters said to me? They proposed to put her in the madhouse at Charenton, and I turned my back on them, and have ever since taken care of her myself."

"Is she inside there then?" asked I, pointing to the cart.

"Certainly she is; and you may see her if you like," and he called to the mule to stop.

#### CHAPTER IV.

The weary mule stopped readily enough, and my companion drew aside the tarpaulin and began to arrange the straw at the bottom of the cart, whilst I looked in and saw a very painful sight. I saw two enormous blue eyes, beautifully shaped, but apparently out of all proportion to the rest of the countenance. The head was perfectly formed and covered with a world of lovely hair, but the forehead was flushed as he had described, whilst the rest of the face looked like that of a corpse. She was nestled down in the straw, except her knees, upon which she was engaged playing dominoes. She looked up at us, trembled all over, then smiled faintly at her old protector, and recommenced her game. She seemed as if she was playing with her right hand against her left.

"It is a month and more that she has played that game," the major observed, "and perhaps she will continue to do so for some time longer, and then perhaps she will take up backgammon, or something like it. It is extraordinary, isn't it?" and he unlaced

the oilskin on his shako, which the wind and rain had somewhat disarranged.

"Poor Laura," I replied, "you are indeed lost to this world!" and then I held out my hand to her, which she took mechanically, with the ghost of a smile. I observed with astonishment that she had two splendid diamond rings on her fingers, which I at once identified as those of her mother, and wondered how they had been preserved through so many vicissitudes. For the whole world I would not have dared to say this to the major, but he noticed that my eyes were fixed on the trinkets, and said with a certain air of pride:

"They are fine diamonds, are they not? and would doubtless have fetched their value if necessity had arisen, but I would not allow them to be taken away from the poor child. She cries if any one touches them, and she never takes them off. She never complains, and occasionally she does a little needlework. I have kept my word to her poor little husband, and, to tell you the truth, I don't repent my promise. I have never left her, and I tell every one that she is my daughter, and is mad. That sort of a thing is respected in the army, and in more easily arranged than you people in Paris would think possible. She has been through all the wars of the empire with me, and I have always managed to get her safely through them. With plenty of straw and this little carriage, it was easier than you imagine; and as I was a major on full pay, with a pension as an officer of the Legion of Honor, and the gratuities Napoleon gave his soldiers, I have never been pushed for money. There isn't a man in the 7th Light, officer or man, who doesn't know poor Laura, and love her."

Then he touched her lightly on her shoulder and said:

"Now, my child, say a word to the lieutenant who is standing there. Just a little nod of your head."

She looked vacantly at me, and betook herself again to her dominoes.

"Ah!" said he, "she's a little put out to-day because of the rain. Luckily she never catches cold, and they say mad people are never ill. At the Beresina, and throughout the retreat from Moscow, she always went bareheaded. Go on, my child, play away, and don't trouble yourself about us. Do just as you like, Laurette."

She took the hand he had laid on her shoulder, a black, wrinkled hand, and lifted it timidly to her lips and kissed it like a slave. It made my heart ache to see it, and I called out immediately:

"Come, major, let us get on, or the night will be upon us before we reach Bethune."

He carefully scraped the yellow mud off his boots with the end of the scabbard of his sabre; then he got upon the footboard of the cart, and drew the hood of the cloak over the girl's head, and taking a black silk handkerchief from his neck, tied it around her. He then replaced the tarpaulin, started the mule, and with the customary hitch of his shoulder we resumed the march. The rain fell heavily, the sky was dark and threatening, and the weary road stretched away before us in a never-ending line, and even the frightful windmills which studded the country seemed unable to move under the universal depression. We fell into silence, and I watched the old officer as he strode along with undiminished energy when the mule appeared nearly done up, and even my horse began to show symptoms of fatigue. Every now and then the brave old fellow took off his shako to wipe the perspiration from his brow or the rain from his thin grey hair, from his white moustache, or his thick eyebrows. He did not seem to trouble himself in the least with the effect his story might have had upon me, and he had plainly sought to make it neither better nor worse than the reality, but after some time he fell back alongside of me again, and began an interminable story of a campaign he had once gone through with Marshal Massena in Spain, in which his regiment, formed in square, had beaten off three successive charges of cavalry. I could not listen to it, although he entered into a long disquisition to prove the superiority of infantry over cavalry. At last the night came down upon us, the mud became thicker and deeper, and not a hovel of even the humblest kind was to be seen near the road. We stopped at last under a dead tree, the only one near the highroad, and he at once began to tend his mule, and I did what I could for my horse. Then he looked into the cart as tenderly as a mother looks into the cradle of her infant, and I heard him say, "There, my child, put that mat round your feet and try to go to sleep."

Turning to me, he added, "That's all right. She hasn't had a drop of rain inside," and then placing some straw under the cart we crawled on to it to get out of the rain, and he produced a loaf of bread, which we shared between us.

"I'm sorry I can't give you anything better for supper, but it is not so bad as the steak of horse cooked with powder instead of salt, that we had to eat in Russia. I always manage to have something a little better for her, and she likes to have her meals by herself; for she can't bear a man to come near her since that affair of the letter."

As he finished speaking we heard her sigh and say, "Take away the bullet; take the bullet out of my head."

I started up, and he made me sit down again, "Sit still, sit still," said he, "that's nothing. She has said that all her life, for she always believes she feels the bullet in her brain. It is the only sign she ever gives of all the suffering she has gone through; and a dear, sweet creature she is."

I listened sadly to this without speaking, and then I calculated that no less than eighteen years had elapsed since 1797, during all which period this drama had been daily enacted, and I mused on the character of the man seated beside me. At last I could stand it no longer, and, turning suddenly to him, and seizing his hand, I shook it warmly.

"You're a downright worthy fellow," said I.

"And why?" replied he, with an astonished air. "You mean because of the poor girl there? Don't you see it is my duty?" Then he went off into another story about Massena. The next

morning early we reached the little ugly town of Bethune, where everything was in the greatest confusion, for "boot and saddle" had just been sounded, and the inhabitants were already beginning to stow away the white flag to make room for the tricolor. Drums were beating the assembly, the Cent-Gardes were mustering, the squadrons of the mounted body-guard were forming around the carriage of the prince, and the streets were filled with the soldiery and the baggage wagons. The sight of my own regiment made me forget my old companion on the march, and joining my squadron I lost sight of his little cart in the crowd. Alas! I never saw him again.

Often and often had I wondered what had become of him, but I had stupidly forgotten to ask his name, and such inquiries as I could make had not resulted in obtaining any information about him. One day, however—I think it was in 1825—when I happened to be describing him to an old captain of infantry, I proved to be more fortunate.

"I remember him well," said he. "He was a grand old fellow; but a bullet at Waterloo tumbled him over. He had left a little cart among the baggage wagons with a sort of madwoman in it, and when we retreated through Amiens, to join the army on the Loire, we left her there. I heard afterwards that she died in three days, raving mad."

"He did his duty, then, to the last," I replied. "When we answer to the final roll-call, I hope we may be able to give as good an account of ourselves as he will."

"Amen," murmured my friend.—*Temple Bar Magazine.*

### DOUBLE ACROSTIC.

"Christmas comes but once a year"  
And soon the Old Year's past!  
Then people who possess my first,  
Will surely get my last.

1.  
Look in the glass, what see you there?  
A wrinkle! on that brow so fair!  
A mark too surely ploughed by care.

2.  
Composer of music, well known is he;  
Italian in name as in melody.

3.  
Fair "Messenger flower" of Heaven's blue;  
A messenger girl to the Gods were you,  
Till changed by them to the rainbow's hue.

4.  
Perhaps I'm only an exclamation,  
Astonishment, or perhaps vexation!  
More often used as interrogation.

5.  
What everyone has, may be good or bad,  
Though we don't always keep the one we've had.

6.  
This article's varied in every clime,  
In Spring, Summer, Autumn or Winter-time,  
And constantly changed without "reason or rhyme."

## METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, DECEMBER 17TH, 1880.

Observatory of Daigaku, Moto-Fujicho, Hongu, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.

Light continuous line—max. &amp; min. thermometers.

.....represents velocity of wind.

.....percentage of humidity.

Max. velocity of wind 25.5 miles per hour on Wednesday at 11 a.m.

The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer for the week was 30.107 inches on Friday, at 10 p.m., and the lowest was 29.731 inches of Sunday at 2 p.m. The highest temperature reached during the week was 55° 2 on Wednesday and the lowest was 24° 6 on the same day, the range for that day being nearly 31°. This is greater than the range for any day of last year. The maximum and minimum temperatures for the corresponding week of last year were 58° 8 and 36° respectively. The temperature throughout the month thus far is considerably lower than for December of last year. No rain fell during the week; the amount for the corresponding week of last year being .520 inches.

## SHIPPING INTELLIGENCE.

## INWARDS.

Dec. 26, British steamer *Sunda*, Reeves, 1,704, from Hongkong via Nagasaki, Mails and General, to P. & O. Co.  
Dec. 26, Japanese steamer *Tokai Maru*, Hogg, 652, from Kobe, Mails and General, to M. B. Co.  
Dec. 28, Japanese steamer *Wakamatsu Maru*, Christensen, 1,343, from Kobe, Mails and General, to M. B. Co.  
July 28, Japanese steamer *Shario Maru*, Kilgour, 524, from Hakodate, Mails and General, to M. B. Co.  
Dec. 29, Japanese steamer *Kumamoto Maru*, Drummond, 1,240, from Hakodate, Mails and General, to M. B. Co.  
Dec. 30, Japanese steamer *Genkai Maru*, Conner, 1,917, from Shanghai and ports, Mails and General, to M. B. Co.  
Dec. 30, American steamer *City of Tokio*, Cobb, 5,079, from San Francisco, Mails and General, to P. M. Co.  
Dec. 31, Japanese steamer *Hioho Maru*, Moore, 896, from Hakodate, Mails and General, to M. B. Co.

## PASSENGERS.

Per British steamer *Sunda* from Hongkong via Nagasaki:—Lieut. G. Drury, R.N., and Mr. B. Kanako in cabin.

Per Japanese steamer *Wakanoura Maru* from Kobe:—3 Russian officers; 200 Japanese in the steerage.

Per Japanese steamer *Shario Maru* from Kobe:—40 Japanese in the steerage.

Per Japanese steamer *Genkai Maru* from Shanghai and ports:—Mr. and Mrs. Cameron and infant, Mrs. Kirkwood, Messrs. J. G. Walsh, C. W. Reyniers, T. R. Frazar, H. W. Lea, E. H. Tuska, Sei, Taskahashi, Nishimura, Kenmura, Sasaki, and Kodani in the cabin; 116 Japanese and 4 Chinese in the steerage.

Per American steamer *City of Tokio* from San Francisco:—For Yokohama: Lieut. A. Wyckoff, U.S.N., Shebei, Ohta, A. Huber, Capt. Paul Klupfer, G. W. Bailey, A. E. Salter, Chas. Stanford, G. B. Hulme, J. O. Smith and wife, Frank Reid, J. Hoole, Wm. Musgrave, Pedro del Rio, and E. J. Smithers. For Hongkong: U. E. Edwards, John Sohn, John Smith, C. E. Cassels, C. Berger, and 690 Chinese in the steerage.

## OUTWARDS.

Dec. 25, Japanese steamer *Niigata Maru*, Walker, 1,603, for Hongkong via Kobe, Mails and General, despatched by M. B. Co.

Dec. 25, Japanese steamer *Toyoshima Maru*, Hubbard, 946, for Kobe, Mails and General, despatched by M. B. Co.

Dec. 26, French steamer *Tanis*, Reynier, 1,735, for Hongkong, Mails and General, despatched by M. M. Co.

Dec. 29, Japanese 3-masted schooner, *Awajishima Maru*, Crichton, 944, for Nagasaki, Ballast, despatched by M. B. Co.

Dec. 29, Japanese steamer *Tokai Maru*, with hulk *Undine* in tow, Hogg, 1,042, for Kobe, Mails and General, despatched by M. B. Co.

Dec. 29, British steamer *Radnorshire*, Davies, 1,201, for London via Japan and China ports, General, despatched by Adamson, Bell & Co.

Dec. 30, British ship *Eidenhope*, Flett, 1,498, for San Francisco, on home charter, Ballast.

Dec. 30, Japanese steamer *Takasago Maru*, Young, 1,230, for Shanghai and ports, Mails and General, despatched by M. B. Co.

## PASSENGERS.

Per Japanese steamer *Niigata Maru* for Hongkong via Kobe:—Mr. and Mrs. Imai, Messrs. Fennelosa, Mason, Williams, Kano, Mitsui, Michigi, and Seki.

Per French steamer *Tanis* for Hongkong:—Mrs. Lisa Josephine, Mrs. Julia Bruck, Messrs. Marmot, Deunard and 2 children, Von den Steinen, I Bush, and A. Park.

## MISCELLANEOUS.

## W. &amp; A. GILBEY'S WINES AND SPIRITS.

W. & A. GILBEY have special facilities for carrying on an extensive Foreign Trade, having held for many years in their Excise Bonded Stores, for the purpose of their Home Trade, a stock of not less than 12,000 Casks of Wines and Spirits, which are equally available for Export. These stores are by far the largest private Duty Free Warehouses in the World, and are under the supervision of a staff of Excise Officers specially attached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them to give the best VALUE to the public, as a twentieth part of the Foreign Wines consumed in the United Kingdom is supplied from their stock. In the year 1876 W. & A. Gilbey paid duty on 1,881,049 gallons of Wines and Spirits, and the average quantity bottled and sent out by them daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same whether the Wines or Spirits are obtained direct from their Head Establishments or from any of their Agents. The purity and genuineness of every article in this list are guaranteed in accordance with Act of Parliament, 38 and 39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the standard of Bottle Measure recently recognised by the Government, namely—

6 bottles contain one gallon; 12 half-bottles contain one gallon.

SECURITY is ensured to the purchaser, each bottle bearing W. & A. Gilbey's seal and label guaranteeing quality and measure, and the strength also in the case of Spirits.

EDWARD FISCHER & Co.,  
Agents for Japan.

## AVERILL MIXED PAINT,

MANUFACTURED BY THE

## CALIFORNIA PAINT COMPANY.

WE desire to call the attention of the trade in Japan and China to a few of the special features of merit of superiority of the AVERILL PAINT manufactured by us. It is

## MIXED, READY FOR THE BRUSH,

Requiring no addition of anything. It is of Pure White and all Shades and Colors. It is put up in 1-4, 1-2, 1 and 5 gallon cans and sold by the gallon. It does not require skilled labor in using as any one can apply it who can handle a brush. It is applicable to all kinds of work; on wood, stone or iron. It dries with a Rich, Glossy Finish, unequalled by any other paint.

In dry and hot climates, so destructive to ordinary paints, the AVERILL is found specially desirable, as the "Soluble Glass" used in its composition chemically unites the lead and oil, so that they cannot separate but form a covering which is not only brilliant in finish but is entirely impervious to heat or moistures, and will last fully twice as long as any other paint in the world.

It has been thoroughly tested and in general use for twenty years; and throughout the United States, Mexico, Central and South America, the Australian Colonies, and wherever known, is universally admitted to be the best paint for all uses in the market.

We are confident that when introduced into Japan and China its features of merit will be promptly recognised.

# CHINA SEA.

## S W A T O W DISTRICT.

### BREAKER POINT LIGHT-HOUSE.

NOTICE IS HEREBY GIVEN that the Light on Breaker Point was exhibited for the first time at sunset on the 8th December, 1880.

The illuminating apparatus is a First Order Dioptric Occulting Light alternately showing for *eight seconds* and suddenly disappearing for *two seconds*. It shows *white* from S. 55° W. round by W. to N. 53° E., and *red* in shore of both these bearings as far as the land. The bearings are magnetic and taken from seawards.

The light is elevated 152½ feet above the level of the sea, and in clear weather it should be visible at a distance of 19 nautical miles.

The tower is round, of iron, 91 feet high, with a total height from its base to the lantern vane of 120 feet.

The tower is painted in black and white horizontal bands, and the dwellings and boundary wall white.

Approximate position—Latitude.....N. 22° 56' 30".

Longitude....E. 116° 28' 10".

By order of the Inspector General of Customs.

Engineer's Office,  
Shanghai, 9th December, 1880.

## THE GREATEST

## WONDER OF MODERN TIMES

### HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakey that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

## SIMPLE, SAFE AND CERTAIN!

### HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World May 17th, 1873.

## MISCELLANEOUS.

July 26, 1879.

**THE BEST REMEDY FOR INDIGESTION.**

TRADE

**NORTON'S**

MARK.

**CAMOMILE PILLS** are confidently recommended as a simple Remedy for indigestion, which is  
the cause of nearly all the diseases to which we are subject, being a medicine so uniformly grateful  
and beneficial, that it is with justice called the "Natural Strengthener of the Human Stomach."  
"Norton's Pills" act as a powerful tonic and gentle aperient; are mild in their operation, safe  
under any circumstances, and thousands of persons can now bear testimony to the benefits to be  
derived from their use, as they have been a never-failing Family Friend for upwards of 45 years.  
Sold in Bottles at 1s. 1½d., 2s. 9d., and 11s. each, by all Medicine Vendors throughout the World.

**CAUTION.***Be sure and ask for "NORTON'S PILLS," and do not be persuaded to purchase an imitation.*

November 11th, 1878.

## MISCELLANEOUS.

**BUGS, FLEAS, MOTHS, BEETLES,**

and all other insects are destroyed by

**KEATING'S INSECT POWDER,**

which is quite harmless to Domestic Animals.

In exterminating Beetles the success of this Powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application.

Ask for and be sure to obtain "KEATING'S POWDER," as Imitations are Noxious, and fail in giving satisfaction.

SOLD BY ALL CHEMISTS IN BOTTLES, 1/- &amp; 2/6 each.

**KEATING'S WORM TABLETS,**

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL** or **THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for Children.

## TESTIMONIAL.

Medical Hall, Gildersome, Nov. 28th, 1876.

MR. KEATING,

Dear Sir,—I think it nothing but my duty to inform you of the immense sale I have for your Worm Tablets, which I may justly say is enormous, and in every case gives the greatest satisfaction. I have now in stock two bottles containing the Round Worms brought me during the last few days by customers, one Worm 40 yards long. I dare not be without the remedy.—Yours respectfully,

M. A. WALKER.

SOLD IN BOTTLES, BY ALL CHEMISTS AND DRUGGISTS.

Proprietor—THOMAS KEATING, London.

**REWARD AND CAUTION.**—Whereas fraudulent imitations of this unsurpassed remedy have been sold, I hereby request anyone knowing of the vendor of the same to communicate with me, on conviction of the offender a liberal reward will be paid.
